REPORTS

FROM

COMMITTEES:

THIRTEEN VOLUMES.

—(3.—PART I.)—

COLONIZATION AND SETTLEMENT (INDIA).

Session

3 *December* 1857 —— 2 *August* 1858.

VOL. VII.—PART I.

1857-58.

REPORTS FROM COMMITTEES:

1857-58.

THIRTEEN VOLUMES:—CONTENTS OF THE

THIRD VOLUME.—PART I.

N. B.—*THE* Figures *at the* beginning of the line, *correspond with the* N° *at the foot of each* Report; *and the* Figures *at the* end of the line, *refer to the* MS. Paging *of the Volumes arranged for The House of Commons.*

COLONIZATION AND SETTLEMENT (INDIA):

261. FIRST REPORT from the Select Committee appointed to inquire into the Progress and Prospects, and the best means to be adopted for the Promotion of EUROPEAN COLONIZATION and SETTLEMENT in INDIA; especially in the Hill Districts and healthier Climates of that Country; as well as for the Extension of our Commerce with CENTRAL ASIA; together with MINUTES of EVIDENCE - p. 1

261—I. MAP of INDIA, showing MINERAL and VEGETABLE PRODUCTS, and course of TRUNK RAILWAYS - - - - - - - 159

326. SECOND REPORT from the same; together with MINUTES of EVIDENCE - - - - - - - - - - - 165

415. THIRD REPORT from the same; together with MINUTES of EVIDENCE - - - - - - - - - - - 373

COLONIZATION AND SETTLEMENT (INDIA):

MINUTES OF EVIDENCE - - - - - - - - 5

SECOND REPORT - - - - - - - - - - 167
MINUTES OF EVIDENCE - - - - - - - - 169

THIRD REPORT - - - - - - - - - - - 375
MINUTES OF EVIDENCE - - - - - - - 377

FIRST

REPORT

FROM THE

SELECT COMMITTEE

ON

COLONIZATION AND SETTLEMENT (INDIA);

WITH THE

MINUTES OF EVIDENCE

TAKEN BEFORE THEM.

Ordered, by The House of Commons, *to be Printed,*
6 *May* 1858.

Martis, 16° *die Martii*, 1858.

Ordered, That a Select Committee be appointed to inquire into the Progress and Prospects, and the best Means to be adopted for the Promotion of European Colonization and Settlement in India, especially in the Hill Districts and Healthier Climates of that Country; as well as for the Extension of our Commerce with Central Asia.

Lunæ, 22° *die Martii*, 1858.

Committee nominated of—

Mr. William Ewart.
Mr. Baillie.
Mr. Campbell.
Mr. Gregson.
Mr. Kinnaird.
Mr. Knight.
Mr. Lowe.
Mr. Lygon.
Mr. Mangles.
Sir Erskine Perry.
Mr. Seymour.
Mr. John Benjamin Smith.
Mr. William Vansittart.
Mr. Villiers.
Mr. Willoughby.

Ordered, That the Committee have power to send for Persons, Papers, and Records.

Ordered, That Five be the Quorum of the Committee.

Jovis, 25° *die Martii*, 1858.

Ordered, That the Committee do consist of Sixteen Members.

Ordered, That Mr. De Vere be added to the Committee.

Jovis, 6° *die Maii*, 1858.

Ordered, That the following Petitions be referred to the Committee, viz.:—From Landed Proprietors, Indigo Planters, Merchants, and Traders in Calcutta and the Lower Provinces of Bengal;—and, Indigo Planters' Association in Bengal;—and, British Subjects resident in Calcutta and the Mofussil Districts of the Residency of Fort William, in Bengal.

Ordered, That the Committee have power to Report the Minutes of Evidence taken before them, from time to time, to The House.

REPORT - - - - - - - - - - - p. iii

MINUTES OF EVIDENCE - - - - - - - - - p. 1

FIRST REPORT.

THE SELECT COMMITTEE appointed to inquire into the Progress and Prospects, and the best Means to be adopted for the Promotion of EUROPEAN COLONIZATION and SETTLEMENT in *India*, especially in the Hill Districts and Healthier Climates of that Country, as well as for the Extension of our Commerce with Central Asia, and who were empowered to Report the EVIDENCE taken before them, from time to time, to The House:

HAVE taken Evidence on the Matters to them referred, and have agreed to Report the same to The House.

6 *May* 1858.

LIST OF WITNESSES.

Jovis, 15° *die Aprilis*, 1858.

MINUTES OF EVIDENCE.

Jovis, 15° *die Aprilis*, 1858.

MEMBERS PRESENT:

Mr. Baillie.	Mr. Mangles.
Mr. Campbell.	Sir Erskine Perry.
Mr. De Vere.	Mr. Danby Seymour.
Mr. Gregson.	Mr. John Benjamin Smith.
Mr. Kinnaird.	Mr. William Vansittart.
Mr. Knight.	Mr. Villiers.
Mr. Lowe.	Mr. Willoughby.
Mr. Lygon.	

WILLIAM EWART, Esq., IN THE CHAIR.

Major-General *George Borlase Tremenheere*, called in; and Examined.

Major-General *G. B. Tremenheere.*

15 April 1858.

1. *Chairman.*] WILL you have the goodness to state what rank you hold in India?—I retired from the Bengal Engineers about two years ago, with the rank of Colonel; I am now a Major-general.

2. In what part of India have you been?—I was 25 years in India, two of which I spent on the banks of the Jumna, two at Alighur, six at Delhi; and after my furlough I was five years in the Tenasserim provinces, and 10 in the Punjaub, where I held the position of superintending engineer of the whole of the Punjaub.

3. When did you leave India?—In 1855.

4. You are aware that the object of the Committee is to inquire into the question of settlement by Europeans in India: do you conceive that, on account of the peculiar desirableness of applying European capital to India, there is a material distinction to be taken between colonization in India, and what we call colonization in other countries?—There is a very great distinction. Colonization cannot proceed in India as it does in Australia or Canada; it must spring from the upper, rather than the lower ranks of society, by the settlement of capitalists; that is, from the capitalist rather than from the labourer.

5. You consider that, whereas emigration generally moves from below upwards, in this case it would have to move from above downwards, by the settlement of capitalists in the country who shall employ the labourers, not by that of labourers who work for capitalists?—Exactly.

6. In fact, the employment of Indian labour by English capitalists?—Yes.

7. In the order of reference made by the House for the direction of the Committee, the first subject refers to the progress of settlement in India. Have we any proper means of knowing what the progress of British settlement in India has been?—The progress of settlement in India has been very slight beyond the settlement of a few gentlemen engaged in the indigo manufacture and in sugar. Very little progress has ever been made in settlement in India.

8. Have we any means of knowing the number of British settlers in India?—I believe, at present, no means exist.

9. Sir *Erskine Perry.*] Have you seen a return made to this House in 1852?—No, I have not seen it. Formerly, every settler in India was registered by the

Major-General *G. B. Tremenheere.*

15 April 1858.

Government; but since permission has been given for any one to settle in India, I am not aware that any record has been kept.

10. *Chairman.*] Formerly, the East India Company kept a register of Europeans who settled in India?—I believe so; but that is a subject of which I have no personal knowledge.

11. You are aware that previously to the passing of the East India Charter Act of 1833, the question of European settlement in India was very much agitated in this country, and excited a great deal of interest?—Yes.

12. The Act of 1833, by the 86th clause, allows the settlement of British subjects in India, by giving permission to all natural born subjects of Her Majesty to purchase and reside on lands within the territories of the East India Company?—Yes.

13. The Indian Act, which was passed in conformity with that Act, which allowed British subjects to hold land in India, was passed in 1837, was it not?—I believe so.

14. The next subject referred to in the order of reference which directs the proceedings of this Committee, is the best means of promoting European settlement in India. What do you consider the best means of promoting European settlement in India?—The state of the existing means of travelling in India is sufficient alone to prevent the country and its resources from becoming known to capitalists. The ordinary mode of travelling is either by marching in stages from 12 to 14 miles a day, or travelling by dawk in a palanquin. Capitalists will not submit to this tardy mode of progress. I conceive that if railways existed, places holding out prospects of profitable investment would be readily visited, and capitalists would then judge for themselves of the advantages to be gained by settlement.

15. You consider that the want of good communications is the first obstacle?—The first and chief obstacle.

16. Do you consider another to be the want of capital?—Yes, capital is a *sine quâ non*; but I conceive that before capital can be attracted to India, it is necessary to give the greatest facility for intercommunication. Both the agricultural and the mineral resources of the different localities could then be readily inquired into on the spot. Those resources would not only be accessible to capitalists, but would be placed within easy communication one with the other, which is not the case now.

17. Mr. *Campbell.*] Would you apply that remark to the transit of commodities when produced, as much as to the introduction of enterprising men with capital, with a view to settlement?—Yes, certainly; the fertility of one part of the country, or the increased means of production arising from means of irrigation, would not only be beneficial to one district, but the advantages would be spread over vast tracts of country, and the present serious effects of drought and famine would be effectually prevented.

18. *Chairman.*] Can you give us your general views as to the resources, mineral and vegetable of India, which you think would be developed by enlarged facilities of communication?—As to the mineral resources of India, the chief are coal and iron, copper and tin.

19. Can you state the principal localities of those?—The principal localities of coal which is worked in India are those of Burdwan, and on the Nerbudda river: the whole of Burdwan (as is well known) furnishes a great deal of the steam coal which is used in India. The coal of the Nerbudda has only been recently visited by professional mineralogists, and a coal and iron viewer was sent there last year by desire of the East India Company.

20. One great object of establishing an improved means of communication would be to bring out the mineral and vegetable resources of the country?—Yes.

21. Would it not also be a great object to bring them into a state of connection with each other?—Undoubtedly; and without railways it would be impossible to effect that.

22. Besides the coal regions you have mentioned, are there not others; is there not coal in Assam?—There are several other localities in which coal is found in India; but from observations of my own, I conceive that it is coal of recent formation, and not probably so well adapted to commercial purposes as the coal beds of Burdwan and of the Nerbudda. It has not been economically produced in any other district, that I am aware of. A small working was made

in

in the Tenasserim provinces, which I myself visited and reported on, but it is very distant from the coast, and there are difficulties in transporting it, except at one season of the year; the coal itself is not mineral coal, but a lignite.

23. There is a generally prevailing difference between English coal and the coal of India?—Yes.

24. Does the coal of India approach more to the anthracite or the lignite character than the coal of England?—It approaches more to the lignite character; not to the anthracite.

25. What are the principal iron districts of India?—Iron is distributed almost universally in India; I have seen it in many of the different localities, both in the Himalaya and in the Tenasserim provinces. I have seen large blocks of ironstone projecting from the hills in the Tenasserim provinces, which are so rich in magnetic iron ore that the particles actually followed the hammer when applied to the rock. The best iron localities I imagine to be those in the Nerbudda, which have been only recently reported on by the mineral viewer who was sent to Bombay, Mr. Blackwell.

26. Have you any further information to give to the Committee with respect to the mineral resources of India?—In the Tenasserim provinces tin abounds, and is worked by Chinamen. Copper also exists in the Himalayas, but has not yet been profitably produced by Europeans. In Kumaon, and in the Gwalior territory, there are large deposits of iron, also in various other parts of the Himalayas; but from their being utterly inaccessible to capitalists, no attention whatever can be paid to those minerals at present.

27. Is there not a great want of fuel in Kumaon?—No; there is plenty of fuel, which, if economically managed might be made available for the smelting of iron; that is, wood fuel. There is no coal in that portion of the Himalayas.

28. Does it not require a great quantity of wood for smelting iron?—There are immense forests of wood which, by proper supervision and renewal, would, I conceive, serve the purpose.

29. Has not the wood been very much cut down in Kumaon?—Not that I am aware of.

30. And has it not been allowed to fall into a state of waste?—There are immense tracts of forest upon which no cutting that has hitherto gone on can have made the least impression.

31. Is it not a great point to bring those different mineral products into contact with each other; for instance, the coal and the iron?—It is the only manner in which they could possibly be made available in an economical point of view.

32. Will the railway that goes from Calcutta in the direction of Delhi, bring together much coal and iron?—The railway which traverses the continent from Bombay to Mirzapore will pass through Jubbulpore, which is close to one of the principal deposits of coal and iron.

33. Will not the railway which goes from Calcutta in the direction of Delhi, bring together the coal of Burdwan and the iron of Monghir?—Yes, it might be effected by short branches. Monghyr is one of the principal localities for the production of indigenous iron in India. It is worked by the native methods, and there is a considerable annual export from Monghyr towards Nepaul and our own provinces. There is also a native manufacture of fire-arms on the spot, which has existed for a long period; so that, besides the raw material, you have, to some extent, a population accustomed to the manipulation of iron. The coal of Burdwan is not far off, and limestone exists in parts of the same range of hills. I have long thought, and have endeavoured to make known my opinion, that if the district in the vicinity of Monghyr were thoroughly investigated, and the iron, the coal, and the limestone brought within easy access of one another, the most valuable results might be obtained.

34. One peculiar advantage which England possesses of course is, that the coal and iron and lime are found in contiguity, thereby giving you at once a means of smelting and a means of flux for the article. Is that the case in India?—I believe it to be the case on the Nerbudda. The three materials are in closer proximity to one another there than any where else in India, so far as we are at present informed.

35. Is it, then, of great importance to establish ready means of communication, so as to bring these invaluable articles into contact one with another?—It is the only way of making them useful.

 36. I believe

Major-General H. B. Tremenheere.

15 April 1858.

36. I believe there is, generally, a great want of lime in India?—There is in some parts of the country, but there is a peculiar concretion called kunkur, which is made available for building purposes.

37. I believe it is a carbonate of lime?—It is an impure carbonate of lime.

38. Is that available as a flux for iron?—I am not prepared to say that it is.

39. Is there not lime in the neighbourhood of Sylhet?—I believe there is.

40. May not communication, partly by railway and partly by road, bring that lime into contact with the iron, so as to be useful as a flux for iron?—Yes.

41. Has kunkur been tried as a flux?—I am not aware that it has. I should doubt its being procurable in sufficient quantities to be used as a flux in any one locality; it exists in thin beds in different parts of the country, but not in large deposits.

42. With regard to the vegetable productions of India which might be elicited by the application of capital and improved means of communication, will you state what are the most important of those?—The principal vegetable productions of India are wheat and other cereals, cotton, sugar, indigo, opium, hemp, flax, tea, and timber. With regard to wheat, I imagine that there is no limit to the production of wheat at a very cheap rate in India, and especially in the north-west of India, and in the Punjaub.

43. I believe that country is a splendid country for corn?—The Punjaub is certainly a splendid country for corn. I have seen it one vast sheet of corn in the spring, especially in the upper part of the Punjaub, in the vicinity of the Himalayas; there you may look over miles of country, one continued field of corn, which is bounded only by the base of the Himalayas.

44. Mr. *J. B. Smith.*] When you speak of corn, you mean wheat?—Yes, wheat. When the projected canals are completed in the Punjaub, that country will, I imagine, become the granary of India, if not of other countries.

45. *Chairman.*] Do you think that corn might be exported from India in consequence of the abundance of its production there?—I should consider that it might. I had occasion to inquire into the agriculture of the Punjaub in 1853. A series of questions were circulated by the Government to all the civil officers in the district, and from their replies I framed a general report on the subject, which I now hold in my hand. I will mention, with regard to the price of corn, that in one portion of that report I stated that the prices of wheat at Lahore and Mooltan were equivalent to 1*s.* 6*d.* and 1*s.* 3¾*d.* per Winchester bushel of 60 lbs. In North America, at the shipping places on Lakes Erie and Michigan, the prices of wheat, the produce of Ohio and the west, as stated by my brother, Mr. Seymour Tremenheere, in 1851, were from 2*s.* 2½*d.* to 2*s.* 8½*d.* for the same weight, and it sold at Liverpool for 5*s.* 9*d.* per bushel.

46. I believe that a considerable portion of the corn grown in that part of India is what the Italians call *grano duro*?—I believe it is, on the authority of a botanist.

47. It is the same corn of which the Italians make the maccaroni?—I believe so. When canals are introduced in the Punjaub, the prices which I have mentioned, I have no doubt, will be considerably lower.

48. Mr. *J. B. Smith.*] Have you any idea at what price it could be brought by canals to a port of shipment?—I have not. Both railways and improved water carriage are in progress, and when the means of communication for the whole distance to Kurrachee are completed, it will very much diminish the cost of conveyance.

49. Sir *Erskine Perry.*] But you do not imagine that water communication will exist the whole way to Calcutta?—No, to Kurrachee, by the Indus.

50. *Chairman.*] Will you continue your statement with reference to the other vegetable products?—There is cotton. The subject of cotton is a very large one, and I imagine the Committee would not desire me to go at length into that; what I wish to advert to particularly is the value of European superintendence, and European settlers, with reference to every one of these agricultural productions. The want of improved communications also is a general want, which is applicable to every one of those productions, whether mineral or vegetable.

51. Will you state how far, in any particular district, improved facilities of communication would have the effect of largely developing cotton or indigo?—I am not aware of any particular indigo or cotton district that would benefit more than others by improved facilities of communication. To return to the subject of European supervision, with regard to cotton, the Committee will no doubt

doubt remember the speech of Mr. Turner last year, and the statement which he made with reference to the value of European supervision. That gentleman informed the House of Commons that Mr. Landon had sent to him a specimen of his yarn, to show that if cotton could only be got in this country as clean as he had made it in India, the same results would be arrived at.

52. Has not Indian cotton the advantage of swelling more, and also taking the dye more easily than the American cotton?—I believe that is the case; at present its chief defects are very well known. Mr. Turner stated at the same time that his house lost 7,000 *l.* a year by the dirt and refuse with which the cotton is mixed; that loss would be altogether prevented if Europeans were living on the spot, and superintending its picking, its cleaning, and its transmission to England.

53. Would you apply the same principle to the development of sugar in India?—The same remark applies to all. The great example, with regard to vegetable products in India, as showing what may be made of them, is in the production of indigo. The planter has resided in the country; he has purchased from the cultivators the plant in its perfect state, or has made advances to secure the crop, and has applied his own science and skill to the manufacture of the drug, which now is not equalled in any other market.

54. Is not indigo a singular instance, not only of the successful application of European capital and skill, but also of the power of transfer from one place to another which capital gives; was not indigo originally Indian in its production, and was it not afterwards transferred, by European skill, to the West Indies, and again retransferred by European capital to India?—Yes, it was first improved in the West Indies by European skill and superintendence, and was then transferred to India. By the same means by which the market was removed from India, it was again planted there, and the indigo of India has now taken the best place in the markets of the world.

55. That therefore shows that European skill and capital are independent of locality, and that cultivation follows them, whether in the eastern as well as in the western parts of the world?—Yes; while on this subject I will mention what has been done by the natives themselves with regard to the cultivation of opium. The Committee are aware that opium commands a very high price in India, and it is found to be worth the while of the native cultivators to take pains with it, and it is a very popular and profitable article. I do not give this on my own knowledge, but from an officer who resided in the district of Behar, and had an opportunity of observing the cultivation of opium over a period of 14 years. I will read an extract from his letter on the subject. He says, "They have paid the greatest attention to the tilling of those fields, and the taste the natives displayed would do credit to a lady's flower garden. From the improved system of cultivating the poppy, the crop is about 50 per cent. more certain than it used to be formerly; and so it would be in the wheat and barley fields if the same attention was paid to irrigation and manure?—I merely mention that circumstance to show that the natives are capable of great perfection in cultivation.

56. Are there any other vegetable products to which the same remarks apply?—Yes; there are other vegetable products; there is sugar. The sugar cane is grown nearly all over India, but the natives do not, in my opinion, cultivate it in a scientific manner. The cane is frequently of a small kind, but containing much saccharine matter. There is another variety which grows much larger and higher; but in all cases it is planted closely together, which prevents hoeing and weeding after a certain time, and the free access of light, upon which the formation of saccharine matter greatly depends. The method of cultivation in the West Indies is entirely different.

57. Has the palm sugar been cultivated in India?—No, not to any extent; it is all the cane.

58. Has not the palm sugar been tried with some success?—I have not seen any; all that I can speak of is the sugar cane. The cultivation of sugar has never been attempted on a large scale by Europeans, but it has been left to the natives themselves. Where capitalists have undertaken the manufacture of sugar I understand that they have pursued nearly the same course as the indigo planters, by purchasing cane and goor or coarse sugar from the native cultivators. In an instance where an opposite course was pursued, which is within my

Major-General *G. B. Tremenheere.*

15 April 1858.

own knowledge, in the Tenasserim provinces, where hired labour was used, the manufacture was a failure, not as to the description of sugar produced; that was very good, but commercially it was a failure. In the upper part of India, sugar is more plentifully produced than in Bengal, especially in the Punjaub. I may say that there exist great facilities for the production of sugar in the North-West Provinces. At Shahjehanpoor there is a sugar manufactory, which is successfully carried on.

59. To what do you attribute the failure of which you spoke in Tenasserim?—To the high price of labour in Tenasserim, which is peculiar in that respect as compared with the rest of India, and to the mistake which was made in attempting the cultivation, rather than purchasing the produce of the natives, who can grow it much cheaper; and there were other causes of failure.

60. Would not improved facilities of communication be a very great benefit in preventing famines, which sometimes prevail in India?—Yes: years of scarcity have recurred at Bengal at regular periods, with intervals of from 18 to 19 years. Thus the years 1733, 1752, 1770, 1807, and 1836 are recorded as those of the greatest distress within the last century. In the North-Western Provinces the intervals have been shorter, the principal years of scarcity having been 1782, 1792, 1802, 1812, 1819, 1825, and 1832, the intervals being from seven to ten years; canals and irrigation alone will not prevent the disasters caused by these oft recurring famines, because all parts of the country are not adapted for the construction of canals; it is only by affording the greatest facilities for the transport of produce that the true remedy can be applied.

61. With respect to the cultivation of tea, your residence in the north part of India probably gives you some information as to whether by the application of British capital the cultivation of tea could be developed in that country?—There are good facilities for the cultivation of tea in the lower ranges of the Himalayas. The Committee are aware probably, that there is a company carrying on the cultivation and production of tea in Assam, and I believe that from Assam to the northernmost part of Hindostan, at similar elevations and within similar climates, no limit exists to the cultivation of tea in the Himalayas.

62. Is there not a probability that India will be a very large consumer of tea hereafter?—Undoubtedly; the natives are very fond of tea. If it can be produced at a low price (about 6 *d.* per pound), the consumption will be very large. There will also be a market for it in the Trans-Himalaya territories.

63. Are they not great consumers of it on the other side of the Himalayas, the tea at present being supplied at a great distance from China?—Yes. I would mention one or two facts with regard to it which I have extracted from Mr. Jamieson's Report. One of the plantations now yields 235 lbs. of tea per acre, which, if sold at 6 *d.* per lb., would yield 5*l.* 17*s.* 6*d.* from land, the annual rent of which paid to Government is only 1*s.* 6 *d.*"

64–5. You think that by the application of British capital and skill, the cultition of tea could be developed to a great extent?—Undoubtedly; it is perhaps one of the most important points of all.

66. Mr. *Knight.*] Do you know the amount of labour required to be expended on an acre of tea?—No, it depends on local circumstances.

67. Mr. *Baillie.*] Is not labour in that country exceedingly scarce?—In that part of the country which I now speak of Dr. Jamieson mentions in his report that there are 10,000 rajpoots who have no ostensible occupation who would be willing to turn their hands to the cultivation of tea. They are now idle, and obtaining a precarious subsistence.

68. Mr. *Danby Seymour.*] Are you acquainted with that country yourself?—Yes.

69. You speak of it from your own knowledge?—Yes.

70. *Chairman.*] Referring to that part of the country with which you are personally acquainted, should you say that there is a very evident want of knowledge upon the subject of the proper application of manure, which would probably be remedied by the introduction of capitalists?—I should not say that there is a want of knowledge of the utility, but that there is very great neglect of the available resources of manure; that is, there is a want of economy. A great deal of manure is burnt as fuel.

Major-General *G. B. Tremenheere.*

15 April 1858.

71. If Europeans were settled in the country would the application of manure be attended to in a very superior manner to anything which exists at present?—Undoubtedly, if it were superintended by Europeans, and if the science and experience of England were transferred to India.

72. Is there any great extent of waste land in that part of India with which you have been acquainted?—There is a great deal of uncultivated land at the base of the Himalayas.

73. Is there not this difference between the waste land of England and the waste land of India, that in India the waste land is very often land which might, with great advantage, be brought into cultivation; whereas here the waste land is generally land that is least capable of being brought into cultivation?—Yes.

74. Science and skill must of course accompany capital in developing the resources of India?—The application of science and modern improvements. I should like to say a few words on the application of European skill to the cultivation of land. I have some information on the subject from an officer who resided at Poosah, on the Ganges, for 14 years. He had charge of the Government stud, and he has given me a practical illustration of what might be done with regard to farming in India. The subject is so important, and the facts he mentions show so clearly what may be accomplished in that country, that I will read the letter, if the Committee please: "Some time ago I promised to send you a little memorandum, showing what was done by an improved system of cultivation on the Poosah Stud Farm (which contained 2,300 beegahs) during the 14 years I had the management of that depôt." "From 1833 to 1840 the lands under the management of my predecessors only produced 458,281 bushels of fodder. In 1840 I took charge, and in the next seven years increased the out-turn to 480,017, showing an improvement of only 26,666; during this period the lands were thoroughly cleaned, manured, deeply ploughed, and all thistles and other weeds collected and burnt. During the succeeding seven years, viz., from 1847 to 1854, I had the satisfaction to reap 702,224 bushels off the same fields, minus 100 beegahs, which had been taken from the farm and converted into paddocks. This shows an increase of produce in seven years amounting to 248,942 bushels more than the lands had ever produced before; or, I may say, four average crops in addition to the regular old out-turn." He mentions another fact with reference to the cultivation of carrots. "I once cultivated 16 acres of carrots for the horses, using the common country carrot seed, which usually, in Benares, produces a vegetable resembling a small turnip in shape, with a few thin carroty tails attached to it. I trenched this land 18 inches deep, and laid a deposit of six inches of manure at the bottom of each trench, gave it one ploughing, put in the seed and harrowed it down; the produce amounted to 9,066 bushels; many of the carrots were 14 inches long, and weighed four pounds each. The average cost of them, when fed off, was about two tons per rupee" (that is, 2*s.*). That letter is from Colonel Apperley.

75. Sir *Erskine Perry.*] Had not that gentleman the resources of a stud of 300 or 400 horses, whose manure was applicable to the land?—Yes, that is very true.

76. Mr. *Campbell.*] Had not the former superintendents of those studs the same facility of applying manure?—Undoubtedly.

77. Is not the manure generally thrown away or wasted?—Yes, it is generally wasted by the cultivators of the soil; the manure is thrown outside the village; it is there left exposed to the sun and rain, and all its virtues are evaporated or drained off before it is applied to the land, and cattle are not kept up for the sake of producing manure; no litter is thrown under them. Altogether there is a great waste of manure; there are no precautions taken whatever to increase it, or to preserve it. You will see in the neighbourhood of a village heaps of bones scattered, which might be ground into bone dust, and there they lie, and have lain for ages. Dead carcases of animals are allowed to rot in the neighbourhood of a village, infecting the air, whereas if mixed with soil and other substances they would produce most excellent manure. I will mention another circumstance; the surface of the land in India is very often covered by a saline efflorescence, which is an impure carbonate of soda. I believe that to this moment no one knows the correct chemical properties of that substance, or what might be made of it; but I have no doubt that if it were mixed with the carcases of animals, it would produce nitrate of soda, which is very excellent manure,

Major-General *G. B. Tremenheere.*

15 April 1858.

manure, for the nitrogen given off by the decaying substance would combine with the soda in this saline substance. I have no doubt that through the prevalence of this substance, lands which have been rendered sterile might be turned into fertile tracts.

78. Mr. *Mangles.*] What is the native name of that efflorescence?—In the Punjaub it is called "Kuller."

79. Is there not a sort of infection of the land which is stated in some districts to be spreading over the country?—I have not heard of that.

80. *Chairman.*] You have spoken of the extension of railways and canals; would works of irrigation also greatly increase the productiveness of India?—I think works of irrigation are of the greatest importance with regard to vegetable productions, and that they might be extended by means of private capital; they have hitherto been constructed out of the revenues of the country. There appears to be no reason why private capital should not be applied to public works of this nature, as well as to railways.

81. That would be another means of developing the resources of the country, by the application of European skill and capital?—Yes.

82. Do you think that the want of development of India has been very much caused by the absence of good roads in the country?—I think by the absence of railways; but the ordinary roads have not been an impediment, because the produce is transported at seasons of the year when the country roads admit of the passage of carts.

83. Mr. *Mangles.*] In fact, at that season the whole country is a road?—The whole country; there is no obstacle at that season.

84. Sir *Erskine Perry.*] Is it not the fact that for many hundred years India was superior to Europe as it regards the facility of transit from one part of the country to another during a great part of the year?—Yes; but still you find rivers to cross in India. If the Committee wish a general description of the roads of India, I shall give it in a few words. The main lines of road in India are not yet completed. There is one very excellent road from Calcutta to Delhi, and which is in progress to Lahore and Peshawur; but there are many breaks in it, which are in the course of being supplied. With regard to the district or cross-roads, they have been of late years provided for by a cess at one per cent. on the revenue. Very great improvements have taken place of late years in the district roads.

85. *Chairman.*] But it is not very long that the roads have been much attended to in India, is it?—I am not aware of the date at which the ferry funds were set aside for the express purpose of improving district roads. I think it was in the time of Lord William Bentinck.

86. How long has the Grand Trunk Road been finished?—The Grand Trunk Road is not finished; the trunk road was commenced by Lord William Bentinck.

87. Do you remember in what year it was commenced?—I think about 1830.

88. Do you assent to this observation of a very intelligent, impartial foreigner, Mr. De Valbezen, who has written upon India with regard to the state of the means of communication in that country. He says: "The system of communication by means of roads in India has remained up to recent times in a state of nature. Even to this day the movement of commerce, outside the artery of the grand trunk road, is conducted along little frequented pathways, or on dangerous rivers navigable only at certain seasons of the year;" is that the case?—That is not quite the description I should have given of the means of communication; there are certainly not perfect branch roads; but a great deal has been done of late years since the ferry funds have been devoted to that purpose; many miles of road have been constructed, and many bridges have been made; but I conceive that there has been a want of economy in the application of those funds, simply from the want of engineering assistance.

89. Mr. *Vansittart.*] Are the roads under the surveillance of the magistrates?—They are.

90. *Chairman.*] How are the roads maintained?—The roads are maintained by the proceeds of the ferry funds, and by a cess of one per cent. upon the revenue of new settlements.

91. Are they maintained to any extent by local taxation?—Not beyond the cess of one per cent.

92. Mr. *Danby Seymour.*] But they are also maintained partly by Government grants, are they not?—Not that I am aware of. The district roads are maintained by the ferry funds, which have been set aside for the purpose, and by a tax of one per cent. upon the revenue of the country. The main roads of the country are maintained entirely by the Government. There is a distinction between the main lines of communication and the district roads.

93. They are now removed from the magistrates and collectors to the Board of Works?—The district roads remain under the supervision of a local committee, of which the magistrate or collector is a member.

94. *Chairman.*] Are there any impediments to the employment of capital existing now, in the form of objectionable local transit duties?—I am not aware of any; they have been entirely abolished within our own territory.

95. Are there any objectionable transit duties between our territories and the territories of independent states?—I have no means of stating that of my own knowledge; that is not a subject to which I have paid any attention.

96. What is the state of the police for the protection of property in that part of India with which you have been acquainted?—The protection of the property of travellers is, I think, very complete at every halting place; the police arrangements are such that robberies very seldom occur, either of merchandise or the property of private individuals.

97. I suppose you would not extend that observation to other parts of India?—I am alluding to the trunk lines of communication.

98. One portion of the inquiry which has been devolved upon this Committee by the House of Commons is the possibility of availing ourselves of the climate of the hill stations of India for colonization and settlement; have you ever turned your attention to that subject?—I think one of the most important things that could be done would be to make the hill stations accessible by railway from the plains.

99. You mean of course by carrying railways to the foot of the hills?—To the foot of the hills.

100. Sir *Erskine Perry.*] Do you mean for commercial purposes?—For commercial purposes, as well as for the purposes of settlement in the hills.

101. Mr. *Danby Seymour.*] To what hill stations do you allude?—I allude to the hill stations of Simla and Mussooree, Almora, and Darjeeling; there are others also to the northward of Simla, such as the station of Dalhousie, which was formed a few years ago, and Murree for the Punjaub.

102. Do they all lie near the East Indian Railway?—No; it would be necessary to have branch railways from the East Indian Railway to have access to any of those stations.

103. They could be easily reached by branches?—Easily.

104. Are you aware that a new road has been made to Darjeeling, which is constructed in such a way that rails could be laid down upon it?—I am aware that it has been sanctioned, but I am not aware that it has been made.

105. Is it not in course of construction?—I am not aware of that; I am aware that such a road has been sanctioned.

106. *Chairman.*] In a military point of view is it not very desirable to have access to those hill stations?—Undoubtedly it is desirable on every account to have access to them; I conceive that means of speedy access to the hill stations is one of the chief wants in India.

107. Do not a great portion of the families of our soldiers absolutely die for want of access to a place where they can have cooler air than they can get in the lower regions of India?—Yes; we have a large number of English soldiers in India. Taking a period of 13 years, ranging from 1839 to 1851, I find, from the returns, that the average number in the country in any one year of that period was 38,146. The average annual decrease by deaths, invaliding, and all causes, was about 11 per cent., of which one-half, or about $5\frac{1}{2}$ per cent., is due to mortality alone. So that, within this period of 13 years, no less than 27,267 Englishmen have passed away. By the rules of the service at that time, only one-tenth of this number could have been married men, and of the progeny of these it is known that only one out of every five survive the effects of climate during their early years. In round numbers, it may be stated that 2,000 English adults have annually perished without contributing in any appreciable manner to the increase of that element of the population of India which is so much required.

Major-General *G. B. Tremenheere.*

15 April 1858.

108. Mr. *Danby Seymour.*] What are your calculations grounded upon?—Tabular returns.

109. Who made those tabular returns?—I obtained them at the India House.

110. *Chairman.*] Will you proceed with your remarks on this subject?—The climate of the plains of India is decidedly adverse to the settlement of English families of the labouring class. In illustration, I need only refer to the care which is necessary to preserve the health of our soldiers in the East. For a great part of the day, during summer, they remain in their barrack-rooms, which are darkened by wetted mats fixed in the doorways to cool the air. The sun's rays at that season are so powerful that the economical employment of European labour in the plains of India is, I conceive, impracticable. In the hill districts the case is different. As you ascend the slopes of the Himalayas the climate, and with it the character of the vegetation, changes gradually, till, at elevations of 4,000, or from 4,000 to 6,000 feet, they become entirely of the European type. Here you feel at once that the temperature and climate are adapted to the European constitution. One of the peculiarities, however, in the form of the Himalaya mountains is the general absence of table land on their southern face. The distinguishing features are sharp ridges succeeding one another with long slopes and deep valleys. Upon the ridges themselves there is little or no culturable land, and consequently no population. The cultivation is confined to a series of ledges or steppes along the mountain sides, and to the valleys which are exceedingly hot, and not very healthy. While the air in the elevated ridges where our sanataria are situated is pure and invigorating, that of the cultivated valleys is not so, and I should consider it very doubtful whether an Englishman could labour long out of doors, with impunity, among these mountain valleys and slopes. Some portions of elevated table land might be found where the conditions are more favourable for a settlement; but so far as my observation goes, the Himalaya mountains are not adapted to European colonization on a large scale. Of mere manual labour there is no deficiency in India; on the contrary, native labour is abundant and cheap, and at equitable rates, proportioned to the distance men are required to go from their own homes, it is available for any part of our possessions. What is chiefly desirable is, the settlement of European capitalists, and that the indigenous labour of the country should be skilfully and profitably directed. The true function of the European in India is not as a labourer, but as a director of labour. It is very important that some plan should be devised to increase the number of the English in India. As a nation, we are too small a body there; and this perhaps, as much as any other cause, has led to the recent attempt to exterminate our rule. The conquest of the country by the Mahommedan powers, was followed by a large mixture of Mahommedans with the native population; new cities were founded, and a community of feeling sprang up between the conquering and the conquered race; whereas we live in cantonments, or standing camps, apart from the people, and there is no identity of interests between us. We do not, as a body, understand the native character, its habits of thought, and springs of action. This experience has been seldom gained except by such men as the Skinners, the Forsters, and Van Cortlandt, who have been born in the country, and have grown up in daily intercourse with the natives. When it is combined with the natural superiority of the European, its influence on the natives is irresistible, and may be turned to the best account. It is like the mixture of two chemical substances, by which all their latent qualities are developed. If the Committee will allow me, I will now state my views as to the means of increasing the European element in India, in which colonization to a certain extent is involved. I have already stated that we have a large number of English soldiers in India, and that both among them and their children the mortality is very great. My proposition would be, to rescue the young offspring of our soldiers from the fate which awaits them in the plains, and place them in asylums on the hills, where they would be trained in health and in industrial habits, and become in time an integral part of the population of India. For the same reasons, and with a view not only to improve the soldier but to benefit the country, I would suggest the extension of the permission to marry beyond the present limit of 12 per cent. The condition of the private soldier in India, as compared with that of his officer, is entitled to much consideration. The officer obtains leave to the hill stations, and at stated periods he may visit his native land; he can send his children, either to the hills or to England, whenever he thinks necessary. For the private soldier no such advantages are within

Major-General *G. B. Tremenheere.*

15 April 1858.

within reach; even if sick himself, there may not be accommodation for him in any of the depôts in the hills, and as for his children, there is nothing for them but to take their slender chance of life in the plains. The permission of marriage should be conditional on an agreement that the children arising out of it should be sent to one of the proposed establishments in the hills so soon as they are four years old. I am aware that an objection is likely to be made to the separation of parents and children, but it is one of the necessary conditions of residence in India. The children of officers of all classes, and of civilians, are sent to England; therefore there would be no hardship in insisting upon the soldier sending his children away, especially if it were made a condition of his marriage. It would be necessary that those children should be maintained there at the cost of the Government. The Lawrence Asylum is an example of the kind of establishment proposed. There might be another at Murree, one at Dalhousie, and one at Dhurmsalla for the Punjaub; one or two in the Almorah hills for the North-west Provinces, and another at Darjeeling for regiments stationed in Bengal. The children, being thus collected at these hill stations, would grow up as healthy and robust as they would have done if reared in England, and in all probability with a ratio of mortality lower than it would be here. I may mention, in passing, that at this moment there are, at the station of Dum Dum, 900 children of soldiers who are employed in the field. What will become of them is very clear from the rate of mortality which usually prevails amongst them. The most important question of course would be, what to do with those children when grown up. If they are properly instructed and trained, with reference to the material and social progress of India, no difficulties will arise on this score; honest, virtuous, well instructed European subordinate agency, is one of the leading and most pressing wants. It is the first difficulty by which every enterprise, every branch of business, every Government officer, and every public employment is met. I do not hesitate to say that a body of well trained mechanics, supervisors, practical agriculturists, and teachers of all the useful occupations of life, from which selections could be made by employers, would be one of the greatest boons that could be conferred upon India. Children so brought up would be familiar with the language, and habits, and prejudices of the natives. They would be inured to the climate, of temperate habits probably, and with the energy of character, and moral influence of the European. Many of the young men might choose to enlist in the army, or might be formed into corps of militia, which would be a direct saving to the State. When those trained overseers, or subordinates are ready for employment, I would make the railway companies, or capitalists, or agriculturists, pay a premium for those they require, which would in some measure remunerate Government for the cost of their instruction. I believe that settlers, and railway companies would employ them to a very large extent, instead of procuring such aids from England, which they are now obliged to do at great expense and risk; that a very extensive demand is likely to arise for them as the great resources of India become better known and more accessible.

111. You conceive that if properly educated, there will be a European race, possessing great moral and intellectual superiority to the natives, permanently established in India?—Undoubtedly; they would look to India as their home, and they would be a most invaluable element.

112. Sir *Erskine Perry.*] Do not you contemplate that in such establishments the greater portion would be half-caste?—I do not think so, if soldiers were permitted to marry before they left England; in fact, I think they ought to be encouraged to marry within certain limits. I would take every precaution possible to prevent the mixture of races.

113. Then your plan involves that marriage should be encouraged in this country before the soldiers leave for India?—Yes.

114. Do you mean that a regiment under orders for India, should have the limit as to marriage enlarged?—Yes.

115. So that in the case of a regiment under orders for India a certain portion of the men would have to contract marriages at once?—As soon as it was known that a regiment was likely to go to India the men would give attention to the matter.

116. Mr. *Campbell.*] Might not the introduction of the half-caste element be discouraged by preventing a soldier, who marries a native, from getting the allowances which he would get upon marrying a European?—I think a rule of

Major-General *G. B. Tremenheere.*

15 April 1858.

that sort would bear hard upon the soldier; I think that if a European wife is available there is no fear of his taking a native.

117. You are perhaps aware that recently the Government has encouraged volunteers to marry in Canada, by the formation of a volunteer corps of married soldiers in Her Majesty's army; do you think that similar volunteer corps, or married soldiers, would answer at the hill stations in India?—I should see no objection to married corps; but it appears to me, that in making a change of that kind there might be some danger that the collecting together so large a number of women might at first produce some inconvenience. I would rather increase the number of married men in each regiment. I think that would be a preferable experiment.

118. Mr. *Danby Seymour.*] To what extent would you propose to increase the married men in each regiment?—I conceive it should be done gradually. It is now 12 per cent.; it might be at once increased to 20, and if the result were satisfactory, a further extension might be made.

119. Mr. *Mangles.*] Would it not greatly add to the expense?—I do not think it would; I do not think the expense would be so great as might at first sight appear. Our barracks are now constructed in India upon a very large scale. I think there would be no difficulty in accommodating even 25 per cent. of married men with the numbers that now form the regiment without any additional accommodation; the scale of accommodation is so liberal.

120. But surely you have seen very large expense incurred in providing quarters for married men?—That is very true. I was permitted by Lord Dalhousie to build married barracks for soldiers in India, and I can truly say that it was followed by very great advantages. As soon as they obtained possession of those married quarters, which consisted simply of two small rooms, I was at once satisfied that a change of habits would take place amongst the married men. Instead of being cooped up together, 50 in a barrack-room, with merely sheets and blankets hung up between the beds, they had a respectable and convenient lodging; and there can be no question that a married man will prefer a place of that kind, fitted up by his wife, and made comfortable and convenient, rather than go to the canteen.

121. But what do you say as to the expense?—The expense I do not think would be so great, because the present barracks provide for 12 per cent. of married men; and the barracks for the unmarried men are so large, that I am satisfied that accommodation could be made for a greater number of married without crowding the unmarried men; and that they would be willing to give up a certain portion of accommodation for the married families. Many of the barracks have been made on so liberal a scale, that I think no crowding would be caused by extending the permission to marry to 20 or even 30 per cent. of the men.

122. Would not the expense of the passage from England be considerable?—The passage from England would be increased; but if this scheme was entertained, the wives would come from the hill stations in India after a time; there are many there now that are likely to become so. The Lawrence Asylum now contains 400 children, about one-half of whom are probably female children.

123. Mr. *Villiers.*] What is the objection to having a native woman as a wife; do the children degenerate?—I think the character they produce degenerates. Although the half-castes possess occasionally many qualities of the European, still they have many of the vices of the natives. Probably that arises from defects in early training; but certainly the half-caste in India cannot be compared with the pure European for any purpose whatever.

124. Is not it easier to rear in India the children of native women than the children of European mothers?—Not if you send the children of Europeans to the hill climates; they are just as easily reared as the children of natives. I think you could not reckon upon raising a population in the plains from the European soldier with any success whatever. By keeping them in the plains they grow up generally lanky, degenerate looking men.

125. Mr. *Kinnaird.*] Are half-caste admitted into the Lawrence Asylum?—I think so.

126. Mr. *Villiers.*] Have you any experience of children reared in the hills?—Yes. I have seen the children in the Lawrence Asylum; those I have seen are just as robust, and eat as much beef as children in England.

127. At what age have you seen them?—I think nine or ten.

128. After being there how long?—After being there four or five years.

129. Have you ever seen the children of European parents who have been born and kept in the plains?—I have.

130. Do you say that they decidedly degenerate?—Not always; at the same time, I think that, as a general rule, it would certainly lead to a deterioration of the race. It has been stated, though not proved, that at the end of three generations, a European family would become extinct in the plains of India.

131. *Chairman.*] Are you aware of the height of the Lawrence Asylum at Mount Abo above the level of the plains?—Five thousand feet.

132. Mr. *John B. Smith.*] Have you had opportunity of seeing the effect of the hill stations upon half-castes in a physical point of view?—Only so far as they are mixed with other children at the Lawrence Asylum.

133. Do you think that they are physically inferior to Europeans?—I think so.

134. Even at the hill stations?—Yes. They will improve, physically, by being reared on the hills.

135. They feed in the same way as the Europeans?—Yes.

136. Mr. *Danby Seymour.*] Will it not depend very much upon who the mother was; would not the child of an Englishman and an Affghan mother be very different from the child of an Englishman and a Bengalee mother?—Yes, undoubtedly. The principal reason for preventing mixture of races is that we should be enabled to draw soldiers from the progeny of an unmixed race. That would be a decided advantage.

137. Mr. *Campbell.*] Would not the advantage that would be derived by establishing an European militia force in the hills from the progeny of European parents to a great extent counterbalance the cost of sending those European married soldiers to India?—Undoubtedly, and that would in a great measure counterbalance the expense of rearing them in the hills. I have heard that the transport of a soldier from England to Meerut costs about 130 *l.*

138. You are aware that a considerable allowance is given to all regimental schools of European regiments on the plains at present?—Yes.

139. Can you state what that allowance is?—I know that the schoolmaster is provided for, but what the allowance to the school is I do not know.

140. Do you think it would be desirable to abolish those regimental schools on the plains, and to establish in the hills asylums for the children of the European regiments, after the example of the Lawrence Asylum?—Undoubtedly.

141. You do not think it would be attended with any material increase upon the existing cost?—That would be a matter of detail; but I think the cost would be less than might at first sight be imagined.

142. Sir *Erskine Perry.*] Do you anticipate that the class to be educated in the hill asylums would be available for filling stations in the Government of India?—No, only subordinate stations; such, particularly, as superintendents of mechanics, and railway officials.

143. Have you had much experience of the educational experiments which have been made in India; do you know anything of the Martinière Institution?—I have not seen the Martinière. I was a member of the education committee at Delhi, and I watched the progress of the Delhi College, where the English language was taught, and, I am sorry to say, not much else of a useful kind. The education given is not, in my opinion, adapted for the future condition of life of the natives.

144. Is not it the case that in these establishments, in which the children of soldiers are educated in India, it is found that they have a great objection to accepting anything like mechanical employments?—They like such situations as overseers, not to work with their own hands, but to be placed over others. There is a great demand for that class of people in India, and a great difficulty in obtaining such agency in public works.

145. Is it not the case that the engineers and contractors have been obliged to bring their own men of that class over from England?—Yes; they are not obtainable in India.

146. Do not such schools as you describe exist all through the Presidencies; are there not public schools for the children of soldiers?—There are regimental schools for the children of soldiers.

147. Mr. *Danby Seymour.*] Are not many ind ependent institutions now rising up

Major-General *G. B. Tremenheere.*

15 April 1858.

up for the education of children in the hills?—Some exist, which I have seen, but their progress is not very great.

148. Within a few years, have not several been established in the Neilgherries?—Some may have been established there.

149. Sir *Erskine Perry.*] Does it consist with your general information that youths brought up in those establishments (I particularly allude to the Martinière, at Lucknow) are found to be altogether averse to engaging in anything like mechanical operations?—Probably, as to working with their own hands, but I am not sufficiently acquainted with the Martinière to say what is the particular class of instruction that they receive there. If we took upon ourselves to educate those children in the hills, we should give them that particular kind of training which would make them particularly adapted for the purpose for which they were designed.

150. Mr. *Mangles.*] Are there not moral reasons why the soldiers, if they are permitted to marry in large numbers, should marry Europeans rather than natives?—I think so.

151. If they married natives, would not the children run a great risk of being brought up as heathens or as Mahomedans?—Yes; when the father died I think it would lead to the demoralisation of the children left behind.

152. *Chairman.*] You have been in the province of Tenasserim; what is the climate there as affecting European constitutions?—The climate of Tenasserim is generally very favourable to the European constitution; it is a climate moist and damp, and at the same time generally healthy. It is an exception to other parts of India in most respects. There is a very small population in Tenasserim, amounting to not more than one-half or three-fourths of a man per square mile; the consequence is, that labour is very dear, and although the soil is unusually healthy and fertile, and covered with the densest vegetation, it is comparatively an uncultivated waste.

153. What resources does Tenasserim offer to the British capitalist?—To the British capitalist I should say the first resource there would be the production of tin. Timber also occurs. Teak timber is tolerably abundant, but it has been a great deal worked out, and it is now only obtained from rather distant and less accessible localities.

154. Has it ever occurred to you that there might be some mode of transferring labour beneficially from the more populous parts of India to Tenasserim?—The chief want of Tenasserim is an addition to its population. There is voluntary emigration from the Madras coast, but it is carried on under great difficulties and at great expenses. Three years ago I was proceeding from Calcutta to Rangoon, and in the Gulf of Martaban we overtook a native craft of about 150 tons burthen, filled with native emigrants from the Madras coast, and in the greatest distress from want of water. Those people pay, on an average, about 3*l.* a head for their passage to Tenasserim; they are generally not in a position to command so much money, and on their arrival at Rangoon or at Moulmain, to which place generally they proceed, they pledge their labour, that is, they sell themselves for those 30 rupees, and pay it off gradually by working out the sum. One of the greatest advantages that could be conferred upon that province would be to transport labour at a very cheap rate, or even at no rate at all, landing the people in the province, where there is ample employment.

155. Would not individual enterprise do that, instead of the Government being obliged to do it?—I doubt whether it could be done at a remunerative rate. Probably 1*l.* a head might be remunerative, if carried on in a systematic way.

156. Do you think that there is opportunity for the development of British capital in Tenasserim?—In consequence of the difficulty of procuring labour I am doubtful upon that point. I think, except with reference to tin, there is no very cheering prospect for a capitalist in Tenasserim until the population is very much increased.

157. Mr. *Campbell.*] Knowing the Tenasserim provinces, of course you know the capabilities of the port of Ackyab?—From general acquaintance with the country. I have touched only at Ackyab.

158. You know that 20 years ago it was a place which imported its own rice?—I cannot speak with confidence on that point. I believe that in former times, rice was to some extent an article of export from Arracan.

159. Are you not aware that at present it exports many hundred thousand tons of rice in a year?—Yes.

160. Are

160. Are you not aware that that rice has been entirely produced by the enterprise of Colonel Bogle?—Akyab is in the province of Arracan, of which I have no personal knowledge; I have been only there a few hours. I know Sir Archibald Bogle, who was for many years Commissioner in charge of that province; he is an energitic officer, and has done much towards the developement of the resources of Arracan. I believe he introduced Carolina rice into that province; but the indigenous rice is of an excellent quality.

161. Mr. *Mangles.*] Colonel Bogle is an officer of the Government, not a merchant?—Yes, he is a Government officer. The province of Arracan being connected with Bengal by land, or by a short coasting voyage, there are more facilities for emigration there, than there are in the Tenasserim provinces. To Tenasserim and Pegu, every one must be transported by sea.

162. Mr. *Danby Seymour.*] What is your opinion about making grants of land to officers and soldiers, when their term of service has expired in India?—I do not anticipate great advantages from that; I think that the European capitalist or speculator would be more successful if he possessed no land at all, and simply availed himself of native labour, and native agriculture under his own direction and superintendence. By giving adequate prices and adequate encouragement to the natives, almost anything may be produced in India. If he attempted to cultivate the land himself, I think the chances are, that he would fall into difficulty and fail.

163. You are aware that officers of the East India Company's army have asked for special advantages in Australia, and have received grants of land from the governments of those countries?—I am aware of that.

164. Do you not think that if they had grants of land given to them in the hill country in India, that would be of greater use to India than sending them to Australia?—It would be of greater use to India, but I doubt the advantages to the holders of the land. I think that if they had means at their command they would employ these means to greater advantage, by not becoming landholders or possessors of lands themselves. Indigo planters possess land occasionally, but I believe it is generally avoided by them.

165. What I meant to ask you was, whether you think that the Government of India should hold out the same encouragement to those officers to settle in the hill districts of India as the Governments of the Australian colonies do?—I see no objection whatever to it if people are inclined to settle there, but till you have those aids to capitalists which I have alluded to, namely, subordinate European agency, consisting of men acquainted with the language and habits of the people, I think that settlers would be under a disadvantage in the country.

166. With regard to private soldiers do you see any objection to giving them grants of land in the hill country, when their term of service has expired?—I do not see any particular objection to it if they are willing to take it in the hills; I see no objection to their attempting the cultivation of tea, or hemp or flax, or any products of that kind.

167. You are aware that in the establishments of the old military pensioners in India, it is found that there is a vast deal of drunkenness and immorality, which is to a great extent ascribed to their having nothing to do; do you know whether they have asked for land to cultivate as gardens?—I am not aware that they have asked for land; I know there is a great deal of drunkenness and great evil, but soldiers, when not pensioners, are not very ready to cultivate gardens; they are not very fond of it.

168. But still if they are willing to do so, it would be a great advantage to make them grants of land for that purpose?—Certainly.

169. Mr. *Villiers.*] Why do the indigo planters avoid taking land?—They find it more to their advantage to buy the crops.

170. You think that that will generally be found to be the case, and that there would be no preference for taking land?—I think not; I think their preference would be for purchasing the produce of the soil, because they can then induce the natives, by assuring them a market, to cultivate in any manner that they please; they are very tractable, and will do any thing, provided it is worth their while.

171. Is that the reason why the country has not been settled to any extent by Europeans since 1833, that it is not profitable? Do you think that if land had been sold at a fixed price, as it is in the colonies, land would have been bought by Europeans?—There are no obstacles to purchasing land now.

Major-General *G. B. Tremenheere.*

15 April 1858.

172. Where can you purchase land in India at 1 *l.* an acre?—As to the price, I am not prepared to say; but occasionally, when a native is a defaulter for his rent, his land is put up to auction.

173. Mr. *R. B. Smith.*] What province are you speaking of?—The Bengal provinces.

174. Mr. *Danby Seymour.*] But when the land is put up to auction in that way, it is still subject to the Government assessment?—Yes.

175. Mr. *Mangles.*] Is the assessment a heavy one generally in relation to the value of the land?—I should say not.

176. You have stated that the most profitable way, in your opinion, for an European capitalist to deal with the land is by purchasing the produce from the natives, in the case of indigo and sugar. Would there be any difficulty in doing the same with regard to cotton to any extent?—None, whatever. I think it most desirable that the European should purchase his cotton, and look after its production and packing and cleaning.

177. Do you suppose that if European agents were established at the great cotton fields, making advances to the ryots and taking the cotton at certain prices, they would have any difficulty in getting any amount of cotton that they might require?—I think not.

178. Sir *Erskine Perry.*] You think very highly of European superintendence and science of cultivation in the case of indigo; do you think that the same advantage would accrue in the case of other products, and especially in the case of cotton?—Yes.

179. If that is so, and if the profit has been so great in the case of indigo, how do you account for European capital not having been applied to other products of India?—I do not think that the profit will be so large in other cases as in the case of indigo; because indigo is a very valuable product, and is contained in a small compass. Cotton is a bulky product, and the means of cheap transport are absolutely necessary to make it profitable.

180. Is not the produce of sugar per acre a great deal larger than the produce of indigo?—That I cannot say. I think that one of the first things that should be done to develope the resources of the country is to permeate the land with railways. Before many years have passed we shall have a system of trunk lines of railway, but that is only the foundation of the system which ought to be constructed in India; feeders must be supplied to those trunk lines, just as the feeders of a river are necessary to swell the main stream, and until that is done in every portion of the country, and all the productive parts of the country are penetrated by railways, there will be no progress in the development of its great resources.

181. Have you calculated the period in which such a net-work of railways could be established in India?—It is impossible to calculate the period if the authorities do not extend their patronage to it by giving the guarantee of Government, which I consider necessary to attract capital to India. The guarantee of a certain rate of interest is absolutely necessary.

182. Suppose the Government gave a guarantee to an unlimited extent of railways, would the results you speak of be accomplished in less than 500 years?—I would not advocate an unlimited guarantee. I would work through the principal existing channels of commerce, and I would penetrate them with railways in the shortest possible time. I would guarantee the revenues of the country to a reasonable extent; of course, taking the most important lines first.

183. Mr. *J. B. Smith.*] Are you not aware that 70 miles of the Madras railway is open, and that cotton is still carried to Madras by the road that runs by the side of the railway?—I have heard that so stated, but it is not likely that for a small portion of a journey, the natives will transfer their cotton from their carts to the rail.

184. Mr. *Mangles.*] Is it not the fact that the railways which are now planned and contracted for penetrate to the principal seats of the cotton growth, and of iron?—That is quite true.

185. Have they not been planned with reference, not merely to the military, but to the commercial wants of the country?—Yes, they have.

186. And you think judiciously?—I think judiciously.

187. As far as they extend, do they come up to the conditions you have mentioned?—Certainly, as far as they go; but I conceive that they are but the skeleton of what is wanted.

188. Are

188. Are you aware that orders have gone out to the Government in India to make good roads to the principal stations of those railways, so as to form feeders to them?—I am not aware of that; but I should not think that would answer the purpose you have in view. I think the feeders to those main lines of railway communication must be by railways themselves, but of a light construction. I think that where the country is rich enough, and where the minerals are sufficiently abundant, any road at all in connexion with the railway ought to be a railway, and that if a tramroad were constructed, the produce would overwhelm it; you would only have to do the work over again. Major-General *G. B. Tremenheere.* 15 April 1858.

189. Mr. *Campbell.*] It is an extension of the system now existing that you advocate?—An extension of the system through all the principal channels of commerce.

190. Mr. *Villiers.*] Are any of the products which you have mentioned exclusively products of India, with the exception of indigo?—I should say not.

191. Therefore one of the difficulties that they have to contend with is, that they have to meet the same products in other countries in neutral markets?—Yes, undoubtedly.

192. That is, of course, one reason why the cost of production should be reduced as much as possible?—Yes.

193. The facility of transmission is an item in the cost of production?—Undoubtedly; one main item.

194. Mr. *Mangles.*] Do not you think that the work on hand in railways in India at present is as much as can be done at once?—No, I think not; I think a great deal more might be done. I am aware that one of the reasons for limiting the present exertions, with regard to railways, is the prevailing idea that sufficient dead weight could not be sent out: but I am satisfied, from inquiries I have made, that that difficulty would disappear, and that the rails and rolling stock, or whatever might be necessary to be made in England for the extension of railways, *ad libitum*, might be sent out as fast as the embankments and bridges could be made in India. I think the resources of this country are quite adequate to supply to any extent all that might be required.

James Ranald Martin, Esq., F. R. S., called in; and Examined.

195. *Chairman.*] YOU have, I believe, been engaged as a surgeon in the army of Bengal, and you have had very great experience on the subject of climate in India?—I have. *J. R. Martin*, Esq., F. R. S.

196. I believe that you planned a system of sanatary reports on stations, cantonments, and districts throughout India?—I did.

197. Your experience has extended both to natives and to Europeans, and you addressed the Government of India on the advantage of occupying the island of Negrais, on the coast of Pegu, as a sanatarium?—Yes.

198. In fact, you have had great experience on the subject of sanataria?—I have. It was my fortune, during some years, to serve in some of the most unhealthy climates in India.

199. Have you ever addressed the local Government of India with regard to a plan for the removal of European troops from the plains to the mountainous districts?—Yes, I have; both in India in framing statistical reports, which I submitted to the Government, and in August last, in a very detailed manner, I addressed the Court of Directors on the necessity for the preservation of the European army, of its removal, if possible, permanently, to the mountainous districts of India.

200. On what ground did you urge that measure?—On the ground of the very great mortality and the injury to health sustained by British troops in India, even in time of peace, and of the enormous extent to which sickness and mortality are increased under all military operations in the field.

201. As a medical man, what should you say are the effects of the climate of the plains of Hindostan on the European constitution?—The diseases produced by residence in the plains of India are chiefly fevers, dysenteries, liver diseases, and cholera.

202. Do the effects you describe attach to all the level grounds of India alike, or to what parts do they particularly apply?—They apply more especially to the alluvial plains throughout India, and the plains subject to annual inundation; they apply less to the arid plains of Hindostan.

J. R. Martin, Esq., F. R. S.

15 April 1858.

203. What are the effects of mountain climate on the European constitution, and what are the peculiar advantages which you think may be derived from it?—The peculiar advantages of the mountain ranges throughout India will, I conceive, at all times, be found in the prevention of disease very much more than in the cure of disease. There are, indeed, certain diseases that seem to be engendered by residence in the elevated ranges of India: I mean certain forms of bowel disorders; and it is on that account that I submitted to the Court of Directors of the East India Company the propriety of determining the respective climates of the medium ranges throughout India, as well as of the high elevations which we have hitherto occupied, in order to determine their respective advantages.

204. Do you draw any distinction between mountain ranges and mountains in isolated situations?—I conceive that an isolated mountain has an especial advantage, very much the kind of advantage that is to be obtained from an insular situation; and I believe an insular situation of considerable elevation to be the best of all.

205. For what conditions of health are the mountain climates favourable in your opinion?—They are especially protective against the diseases of the plain; they are curative in simple fevers, unaccompanied by organic disease; visceral diseases are rarely cured in the mountains.

206. For what conditions of health are the mountain climates unfavourable?—For bowel complaints generally, and for chest ailments, owing to the cold and damp of the high elevations.

207. Is residence in the hill climates a substitute for the advantages of a voyage by sea, in your opinion?—I found, practically, in Calcutta, that sending a European on a sea voyage of one-half the duration was more effective to the restoration of health than double the time passed in any one of the mountain ranges.

208. Have you any experience of the effect of mountain climates on Europeans, born or reared in the mountain ranges?—Yes, I have; but it is fair to state that the means of observation that any person can have of that kind, are as yet very limited; I should therefore speak with much diffidence as to what I have seen on that subject; but I think I have observed this, that European women brought up in mountain ranges (I speak especially of great elevations) have been of delicate temperament.

209. Mr. *J. B. Smith.*] What elevation are you speaking of?—Seven thousand to 8,000 feet, or thereabouts. They have been of delicate constitution, and have taken to child bearing and child nursing indifferently; and they were not so long lived as their brothers, nor so robust apparently as their brothers; but I repeat, that the amount of observation upon this subject is not as yet sufficient to arrive at any fixed data.

210. *Chairman.*] Experience remains to be acquired upon the subject?—Quite so; but as compared to the plains there can be no question that the children reared in mountain ranges will have a long duration of health, and a vastly improved constitution, compared with children reared in the plains.

211. Have the hill districts been sufficiently explored for sanataria?—I think not at all; I conceive that the whole thing has to be scientifically ascertained.

212. What means would you take of ascertaining the facts which are wanted?—In the way suggested to the Court of Directors, in my memoir, by the employment of a commission of selected officers, consisting of engineers and medical officers.

213. To ascertain the comparative healthiness of different districts of India for European constitutions?—Quite so.

214. Can you recapitulate the hill districts which are at present resorted to for health?—The one nearest to Calcutta is Darjeeling, which is very promising.

215. Can you state the height of the different stations?—I cannot accurately; some are between 7,000 and 8,000 feet. There is Landour, Simla, and others in the mountains of the Punjaub. Then there is Neuraelia on the summit of the Ceylon ranges, and the Neilgherries. They all possess the same kind of climate with the same influences on European constitutions.

216. At what height do you fix the position at which European health shows itself, or the tendency towards it?—That has not been ascertained; but we know from observation that in South America and the West Indies, even a low elevation

elevation of 2,500 feet is sufficient to raise the European soldier out of the fever range, while, unlike the high elevations to which we have hitherto resorted in the East Indies, they are not high enough to have the effect of producing bowel complaint.

217. Should not you draw a great distinction between countries to the eastward and to the westward of the river Gogra in the Himalaya range on account of the much greater quantity of rain falling eastward than westward?—Yes; I observed when in Burmah, during the first Burmese war, that the rains were such as we from India had never seen.

218. Do you think that when the facilities for communication are greatly increased in India, it might be possible for a parent employed at some distance to have his children reared in the hills, so as not totally to separate parents from their children?—There can be no doubt about it to my apprehension.

219. You are aware of the extent to which schools have been established in those hill districts?—I am aware that endeavours have been made very successfully during several years past, and that two asylums in particular were founded by the late Sir Henry Lawrence, which have been most successful as far as they have gone.

220. Can you give the Committee any statistical information respecting the number of European children who die now in the plains?—The mortality of European children, as well as of the fathers and mothers, depends entirely upon the locality. It is stated by a distinguished army surgeon whom I know in India, that over a range of years, the mortality of European children in Fort William, Calcutta, was 168 per 1,000 per annum. But it is right to say that he declared that to be the highest mortality at any station in India, unless it were Secunderabad in the Deccan. It depends upon the station. There is another point in respect to climate which I have noted in India, and which I believe to be quite true, that the injury to European health is not so much from the amount of heat as from the long duration of residence in it. That is what eventually destroys the European constitution.

221. Therefore, when there is a greater facility of communication, and Europeans can more easily resort to healthier places, the duration of European life in India is likely to be much increased?—Very much.

222. Are you acquainted with the climate of Ceylon?—Only by observation on persons who have lived there.

223. What is its effect upon the European constitution?—Very good; but the station which I particularly mentioned, Neuraelia, is liable to the same objection to which our own high ranges in India are liable, namely, that it occasions bowel complaint.

224. But both in Ceylon and in India it remains for the test of time to prove how far the European constitution can be improved by permanent residence on the hills of India?—Quite so; and more particularly what advantages might be derived from residence in the medium elevations of from 3,000 to 4,000 feet.

225. You prefer medium elevations?—I should begin my investigations there assuredly. I think it is most important to determine that question, especially when we see what the effect was of removing the British troops in the West Indies even 2,500 feet above the sea level.

226. Is there not an objectionable part of the inclination of the Himalayas, called the terai, which is a haunt of malaria?—What are called the tarais of India, namely, the plains reaching to the base of great mountains, are usually extremely humid, and are overrun with rank vegetation. They are inhabited only by wild beasts; they are extremely injurious to health, so much so that to sleep in any one of them for one night is death to an European.

227. Will not the establishment of railways give the traveller the advantage of passing rapidly through those districts where now he may be obliged to linger, and so to avoid the danger of disease from that cause?—The advantages would be very great indeed, by enabling Europeans to traverse with safety that which is now an extreme source of danger.

228. Sir *Erskine Perry*.] The breadth of the terais is only a day's journey generally?—Yes.

229. *Chairman*.] With regard to isolated hill stations, which you recommend, is it not the fact that the climate is sometimes determined by the nature of the prevailing wind; for instance, is it not in the case of the heights of Camaldoli, near Naples; is it not generally considered that the malarious air from the Lake

J. R. Martin, Esq., F. R. S.

15 April 1858.

of Agnano is felt on the heights of Camaldoli?—Yes. The same fact is observed in the West Indies, but the extent is limited. Certain posts at an elevation of 500 to 700 feet have been found quite deadly, so that no soldiers who went on guard there have survived; whereas those on the plains below were comparatively healthy. That is accounted for by the malaria being wafted upwards, and by the elevation fixed there; but I do not believe that that can exist at any great elevation.

230. Mr. *Campbell.*] You say that bowel complaint or diarrhœa has been engendered in the hills. Has that remark reference to Europeans who may have been sent there after suffering in their health on the plains, or to those who have been permanently resident on the hills?—It applies very much to Europeans in every class of health, inasmuch as diarrhœa, of a very intractable form, is found to originate in the high elevations. Men present themselves to me every day, who have gone up to the mountain ranges of those high elevations, suffering from what is the least dangerous form of fever that we have in India, intermittent fever, and they have contracted bowel complaint there so intractable that they are obliged to come home. It is so with the European soldiers to a great extent, so much so that a memoir has been written by a very intelligent surgeon of the Bengal army, Mr. Grant, upon the bowel complaint of the hill ranges.

231. According to your experience, would that apply to men who have been resident from their infancy in the hills, as well as to those who with impaired constitutions have gone from the plains to the hills?—It applies particularly to persons who have gone there with impaired constitutions, but also to a certain extent to Europeans who have gone there in health.

232. You think that if the permanent residence of European troops on the hills were impracticable, looking at the military necessities of the country, judicious reliefs of European troops from the plains to the hills would be attended with great benefit to their health?—Very great; it has become, in my opinion, a state necessity. The greater the amount of the European army in India, the greater will be the difficulty of maintaining troops in a state of integrity without such periodical removal.

233. Was Darjeeling established as a sanatarium when you were in India?—Yes, it was. I had frequent opportunities of seeing the influence of that climate upon the European establishments, as well as upon military officers who were there for the restoration of health.

234. Mr. *J. B. Smith.*] At those heights that you speak of, of 7,000 or 8,000 feet, is not there snow a considerable portion of the year?—There is snow always at that elevation during the winter months.

235. At what portion of the year is the snow there?—November, December, and January.

236. Not more?—Not more.

237. To what do you attribute that tendency to bowel complaint at those high elevations; is it from sudden changes in the atmosphere?—More especially, I think, to the influence of the cold and damp upon a constitution previously relaxed in the plains.

238. There is a great deal of damp there?—There is a great deal of damp in the mountain ranges, at the high elevations.

239. Are they very liable to sudden changes of temperature?—I do not think they are so liable to sudden changes of temperature as to the continuous influence of cold and damp. Of all the injurious influences of the atmosphere, those conjoined of heat or cold with damp are the worst.

240. Sir *Erskine Perry.*] Have we any reliable statistics as to the mortality of the natives in India; as to the length of native life?—Except in the native army, I do not think we have. Statistical observations referring to the civil population have not been done with accuracy.

241. Can you give any opinion as to the relative value of native life in India, as compared with the life of Europeans in that country?—The value of a sepoy life serving in the plains of Hindostan, his own native climate, is about the value of the best life in England of a native Englishman.

242. Mr. *J. B. Smith.*] Do you mean an English soldier?—No, in civil life.

243. But that is not the case in the Madras army. Is there not a remarkable contrast, in that respect, between the Bengal army and the Madras army?—Yes; the Bengal army, when stationed in Hindostan, is much healthier than the Madras army.

244. The Madras army is very much unhealthier, something in the proportion of 5 per cent. to 2 per cent.?—Yes.

245. With regard to drawing any general conclusions as to the aptitude of India for European life from the mortality that occurs there, may not the fact be that life is not so long in India, generally, as it is in healthy countries in Europe?—The value of European life in India I have no doubt would be greatly raised above what it is at present, by the removal of European settlers and European troops to the mountain ranges, but on the plains I believe that the value of European life never can be high.

246. I understand you to state that we have no experience as to the power of the European race to perpetuate itself in India?—We have not sufficient extended experience necessary to fix any data.

247. Is there not a general opinion that no instance can be brought forward of a third generation of Europeans born in India?—That applies to those born in the plains; a third generation of European race is not to be found in the plains of Bengal; it does not exist.

248. Is it not generally stated that there is no example of a third generation of Europeans, born in India, being alive there?—That is quite true, but it applies solely to the plains.

249. Do you think it is possible that if stations were made at the hills you would be able to keep Europeans living there during three generations?—I have doubts whether they could be maintained in their native vigour as Englishmen; but I have no doubt also that they might be protracted through several generations by residence in a mountain climate.

250. Must not the establishments in the hills be almost entirely establishments, which would not be of a self-supporting description, consisting either of hospitals or bungalows for the residence of the rich; as there would be no means at the hill stations for settlers to obtain their living permanently there?—That would depend upon the capabilities of the soil; as to the climate I have no doubt about it.

251. Have you visited those stations yourself?—No; I speak from extended experience of the influence of those climates upon the European constitution.

252. But we understand that upon the whole of the Himalaya range there is no level ground at all?—No, that is one of the difficulties; it exists, I believe, only in the elevated ranges in Central India, about Nusseerabad and Mhow, where there are great plateaux, where there would be exercising ground for large bodies of troops, with facilities for water and good vegetation, and they are very healthy.

253. But in the Himalaya stations there is no level ground whatever; the only cultivable grounds, we understand, are valleys which are by no means healthy?—Not at all; if there be any extended grounds I believe they would be found in the district of Kumaun.

254. Therefore, if establishments are made in the hills it seems very improbable that the European inhabitants would remain there for three generations; they would probably only remain there for a certain period, either for education or for health?—But even for those more limited purposes they would be very valuable.

255. Mr. *Kinnaird.*] You were present while General Tremenheere was giving his evidence, with respect to the mortality among the troops being 11 per cent., or 168 out of 1,000; does that tally with your experience, as a medical man, attached to the army?—Yes; but I understood that to include the loss both by deaths and by invaliding.

256. Do you suppose that by improved methods of placing the troops, the mortality might be materially diminished?—I believe that it might be reduced to the level of England. On the removal of the European troops from the pestilential plains of Jamaica to the Blue Mountains (which was done by Lord Metcalfe), it was found, as was anticipated by the old army surgeons, that the mortality was reduced from 130 per thousand per annum, over a long extent of years, to 22 per thousand per annum.

257. Are you decidedly of opinion that by adopting the same measures, the same results might be obtained in India?—I believe that the same results which have been obtained in the West Indies, may be exceeded perhaps by the adoption of the same measures in the East Indies.

258. With reference to the suggestion of a larger proportion of the soldiers being

J. R. Martin, Esq., F. R. S.

15 April 1858.

being allowed to marry with a view to their sanatary condition, do you also confirm the evidence of General Tremenheere upon that subject in a sanatary point of view?—I do. It has been found in the European regiments of the Indian army, and particularly in the Bombay European Fusileers, which have been a remarkably well ordered corps, that by permitting an increase in the proportion of marriages, and allowing the soldiers to do for themselves what they may do without injury to their health or discipline, their health is improved, and crime is very much diminished. They are said to be better men in every way as well as better soldiers.

259. Do you think they would cheerfully accept the offer of having their children removed to the hills for education and healthful employment?—I think that with a little explanation they would willingly.

260. Do you think the children so reared in those hill districts might, as General Tremenheere says, be made available both as troops, and for other purpose of superintending work?—Assuredly.

261. Mr. *Willoughby.*] Do your remarks concerning the sanatary stations in India refer particularly to their being a convenient place of resort at particular seasons of the year for residents in the plains; or are the Committee to understand that you consider that they are adapted for colonization, in the usual acceptation of the term, for Europeans?—I conceive them to be adapted to colonization by grown up Englishmen, and also very advantageous for the rearing of the children of the colonists.

262. How are the colonists to be supported in those hill districts?—In the higher grounds where there are not table lands, they must be supported from the plains; food must be imported there.

263. They would not be self-supporting?—They would not be self-supporting except upon the great plateaus.

264. You alluded to great plateaus in Nusseerabad; what particular plateau do you allude to there?—I allude particularly to the stations of Googoondah and Goona, both of them on elevated plateaus with an abundance of good water, trees and grass and vegetation, and facilities for cantoning troops, provided they are found healthy; and having also the necessary facilities for exercising grounds.

265. Is that in British or foreign territory?—I think that, unless affected by recent political movements, they are in foreign territory.

266. Do not the approaches to almost all the hill stations in India lead through tracts of country that are peculiarly unhealthy?—Generally they do through deadly terais; but those could be overcome by railways.

267. Would it not be rather difficult to construct railways in a country in which to sleep one night is death?—That is to an European.

268. Mr. *Mangles.*] That is only at certain periods of the year?—Yes.

269. In the dry seasons do not the Europeans go there for tiger shooting without suffering much from the climate?—Yes.

270. Mr. *Willoughby.*] Are you acquainted with the Mahabuleshwar hills?—Not personally. I have seen many who have resided there.

271. Do you know what the average fall of rain is on those hills during the months from June to October?—It must be very great on account of its being on the west coast, where the south-west monsoon is arrested by the elevated ranges. The falls of rain on the Malabar coast are very nearly as great as they are beyond the eastern part of Bengal.

272. Are you aware that, in consequence of that, every European deserts the Malavelly station from June to October, being unable to reside there during that time?—Yes, owing to the geographical circumstance that I have stated; the arrest of the south-west monsoon by the great western ghauts.

273. Mr. *Lowe.*] What other places are there, besides this place, near Mahabuleshwar, where you think sanataria might be placed?—I am not acquainted, because investigations have not been hitherto instituted on that subject.

274. Is there any one on the Vindhya chain?—Yes; I believe there is hardly a province throughout India where there are not mountain ranges which can be made available for the residence of Europeans, civil and military. The question would be the best elevations; that is the cardinal point.

275. You are inclined to think that an elevation of from 3,000 to 4,000 feet is more likely to be salubrious than a higher one?—Yes; I should be especially anxious to determine that question.

276. You think that the violent effect on the frame of such a great change of climate

climate more than counterbalances the good effect of a cooler temperature?— Not quite so; but it is so violent as to produce bowel complaint, owing to the cold and damp. *J. R. Martin*, Esq., F. R. S.

15 April 1858.

277. Mr. *Danby Seymour*.] Are you aware that sometimes, at a medium elevation, a fever is found to prevail which does not prevail above or below that elevation?—It is found, in the West Indies, that an elevation of 2,500 feet raises the European soldier out of the range of yellow fever and remittent fever, which ar the two deadly fevers in Jamaica. That point is not ascertained in the East Indies; but, in a memoir which I submitted to the Court of Directors, I especially recommended an investigation of the diseases of the mountains, and the kinds of fever that may be found there.

278. I asked that question because I have been told that that was the case with respect to some hills resorted to near Trichinopoli; can you state whether that is so?—No doubt there are fevers at different elevations, but they are not of the deadly malarious character of the yellow fever or the remittent fever.

279. Are you aware that the question of the salubrity of the medium range of hills between 3,000 and 4,000 feet has been tried at the Javadie Hills, about 180 miles from Madras, in the plains of the Carnatic?—I am not aware that any detailed investigation, extending over them, has been made.

280. You are not aware that they have been largely settled by European settlers, and have been found to be perfectly healthy?—If that is so, that is an illustration of the theory that I have propounded.

281. Are you aware of another chain of hills near Pallamcotta and Tinnevelly, which are very much resorted to by Europeans, and are found healthy?—Yes, I have heard of them.

282. With regard to the terai; the terai are the richest lands, are they not?—I have no doubt whatever that they might be made very productive by scientific agriculture.

283. Are you aware that the terai, going up to the Neilgherry mountains, is cultivated on each side of the road, as far as the reduction of the assessment will allow it?—Yes, that is so. I have no doubt that in the terais the land might be made not only useful but perhaps even healthy; for of all improvers of climate, agriculture is the greatest.

284. Are you aware also that on the slopes descending from the Neilgherries towards Calicut there are coffee plantations, on which Europeans live the whole year?—Yes. I knew several coffee planters.

285. What is your opinion of the climate of Bombay and the country about Bombay, in comparison with that of India generally. Do you consider it healthy?—No, not healthy; but I believe it to be healthier than Calcutta.

286. What part of India would you consider more healthy than the part around Bombay and going up to Malwa?—I should say that, in general, the salubrity of any district or station would very much depend, first, upon the geological character of the soil, which I believe to be the most important element in climate; and, secondly, upon the elevation and latitude.

287. Should you consider the Concan and the south Mahratta country a healthy country?—Yes; where dry, and facility is given for the water to drain off.

288. Do you consider the west coast of India generally more suited to the European constitution than the east coast?—Generally speaking, the western district of India I should consider more suitable to the European than the valley of the Ganges, for instance.

289. And the Carnatic?—In the Carnatic the heat is very great; the heat is greatest in the plains of the Carnatic.

290. I understood you to say, that you consider that, if Europeans were enabled from time to time to leave the plains for the hills, their health would be very much benefited by it?—Assuredly; if they were to leave the plains for the mountain ranges during the hot and rainy seasons, their health might be excellent, and they might be long lived.

291. Might not settlers in India be able to do that, to a considerable extent, when railways are established?—Yes, assuredly.

292. Have you ever known Europeans born in the hills of the third generation?—No; my acquaintance has been with Europeans of the first generation.

293. If you were asked by a gentleman proposing to go to India, to settle there with his family, whether there were any reasons arising from the insalubrity of the climate, why he should not do so, what advice would you give him?—

J. R. Martin, Esq., F. R. S.

15 April 1858.

That question comes before me every day; and I determine it on these grounds: I ascertain whether the person has any organic disease of any of the three great cavities. If he has, I state that India is altogether unsuited to that person. Further, if he labours under any functional disorder of importance; in that case, I say that he ought not to go to be restored to health; but provided there be neither the one nor the other, I should say that a European may go to India with an average prospect of good health.

294. With reference to what General Tremenheere said about the encouragement of marriage among the troops; do you think that would have the effect of promoting a greater amount of health among them?—I think so; it would save them from many contingencies which now afflict them.

295. Do you see much difference in the Eurasians, according to the different races to which the mothers belong?— My principal experience has been of the Indo-British, whose mother was a native of Bengal proper; a diminutive and inferior race. I have, however, seen others, the sons of more robust mothers of the north, and they were powerful men.

296. *Chairman.*] Do you mean of the hill districts?—The elevated plains of Hindustan, not especially the hills, but in the northern latitude.

297. Have you seen an Eurasian of a Telegoo, or Tamul mother, or a Canalese, or Malabar mother?—I have, but only in passing through Hyderabad and Madras.

298. But you think there would be a great difference in the vigour and intellectual capacity of the Eurasian, according to the race from which the mother sprang?—According to the race and the locality.

299. Mr. *Vansittart.*] Do fevers and dysentery and liver complaints prevail to a greater extent in Bengal than in the Upper Provinces?—They prevail immensely more in Bengal Proper, as compared with the plains of Hindustan.

300. We have only two hill stations in Bengal, Cherrah-Ponjee, and Darjeeling?—Yes; the former is in Assam, situated in a country where the rains are so exceedingly heavy, and of such long duration, that I question whether it can ever be a proper sanatarium or place of resort even for healthy Europeans.

301. You would recommend that the 900 children at Dum Dum should go to Darjeeling?—Darjeeling is far preferable.

302. Mr. *Mangles.*] You heard General Tremenheere's evidence; do you think it would be possible to rear English children in the Himalayas, and to continue the race, so as to retain much of the energy of the European character and habits?—I very much question that on moral and physical grounds; in the first place, however excellent the climate of the mountain range may be as an equivalent for the native climate of England, there would yet be on moral grounds educational difficulties; those however might be got over.

303. You mentioned that you had given in a memorial to the Court of Directors, recommending that a commission should be appointed to ascertain the most healthy stations for European troops, with reference to the large numbers of them now serving and likely to serve in India; are you aware that the Court of Directors have sent out orders upon that subject in accordance with your representations?—I received a letter in reply from Sir James Melvill, informing me that the Court of Directors had been pleased to forward my memoir to the Governor-general for his favourable consideration.

304. Were you not shown a copy of the letter which the Court of Directors sent out to the Government of India, desiring them to appoint such a commission and to institute inquiries?—Yes; you were pleased to show me a copy of the despatch.

305. Mr. *Villiers.*] May we collect from your evidence that you consider that there is nothing in the climate of India that necessarily conduces to the physical degeneracy of our race?—I believe that the residence of Europeans on the plains of Hindustan, in every part of it, even in the very best districts, leads to a persistent deterioration of the European physical frame, by inducing diseases which belong to malaria and a high range of temperature; and that it is only upon the mountain ranges that the European may hope to live in a state of integrity.

306. But you consider that the Europeans may settle in the mountain ranges consistently with their prosperity, and also with their not degenerating?—In the mountain ranges, I think so to a certain degree not yet determined.

307. What are we to understand you to say with respect to the women who have gone to the hills; have they appeared not to thrive so well as the men?—

My

My observation was on a limited number; but it was that the brothers (as I inferred), from being more out in the open air, were more robust than the sisters. They were persons of the better class, and the ladies did not bear child-bearing and child-nursing well.

308. Are those adult women who have gone to the hills after having lived in the plain, and having been more or less affected by the climate?—My observations refer to the children of European officers brought up in the mountains.

309. You have observed that the female children are not reared with the same advantage that the male children are?—That was my observation over a limited range.

310. If that is the case, is that consistent with your opinion that the European race, if settled in the hills, would not degenerate?—If that were generally the case, it would not be consistent.

311. Is it not a general observation that European women going out to India suffer much more than the men?—It depends entirely on the class to which the European women belong. The European soldier's wife, I believe, suffers very nearly the extent of injury that the soldier himself does; but I should say that European women of the better classes enjoy far better health in India than their husbands do; and there is a curious circumstance with reference to them: when I came back, I ascertained, in framing a work which I published on the influence of tropical climates, that it is found that the widows of our Indian officers come at once upon the select scale of life in England, whereas a retired officer does not, until after some years of residence at home.

312. Is that the result of the general experience of medical men who have given attention to the physical condition of women in India?—That is the result of the experience of the Bengal Military Widows' Fund, a very old standing institution.

313. Is it in consequence of the greater care that females of the bettermost class take of themselves in India that they suffer much less, as you say, than the wives of soldiers?—I believe so; that in the case of the wife of an officer, in the first place, her habits of life are better than the average of officers; and, secondly, that she is not exposed to direct solar or malarious influences, as the husband is often obliged to be.

314. Do you confirm the opinion expressed by general Tremenheere, that it is greatly preferable for a soldier to bring out his wife from home rather than to marry a native woman?—I should say greatly preferable.

315. For what reason, if European women suffer as much as the men from climate?—I do not consider that it is of advantage to increase very largely the race of Indo-British. And if the European soldiers are removed to the mountain ranges, I should consider that they would be accompanied by their families greatly to the benefit of themselves, and also of the State.

316. When they marry native women, do not they live well with their families?—They do, but it spoils the soldier; he becomes domesticated in Indian habits; he volunteers to remain in India when his regiment comes home; he becomes an old Indian, in fact, an indolent man, and too much domesticated in India.

317. Then, in fact, a considerable portion of the Indian army, that is to say, the troops that are raised by the East India Company, do not return home?—They do not return; but they have a better mode of arrangement in respect of the health of recruits than Her Majesty's regiments; they have traditional modes known to themselves; and I think that their habits are of late years healthier than those of the Queen's troops.

318. Do you mean that there is a better system adopted in the East India Company's army than in the Queen's army in India?—I believe with regard to the sanitary condition of the soldier generally, and of the recruit in particular, that it is better in the Company's regiments, the foot and the artillery, upon the average than in the Queen's regiments.

319. Are the East India Company's regiments now removed to the mountain ranges?—No; but I hope they will be, in common with the rest of the European force. I hope and believe that in a very few years the great bulk of the European army in India will be permanently located in the mountains.

320. Has it been the habit of the soldiers of the East India service to marry native women?—Very much.

321. With respect to the religious influence of their marrying native women,

J. R. Martin, Esq., F. R. S.

15 April 1858.

is not it generally the case that the native women become outcasts, and very often adopt the religion of their husbands, if they have any religion at all?—I suppose they do; but a great portion of the wives of the European soldiers that I have seen have been Eurasians or Portuguese, not pure natives.

322. Are they Christians?—A kind of mongrel Christians.

323. Assuming that the soldier is a Christian, the children are brought up in his faith?—They are; and in the event of his death, they are provided for in the orphan institutions.

324. Then there is no important religious objection against European soldiers marrying native women or half-caste women?—No more than has been stated.

325. You said that it is the long-continued application of heat which is so particularly injurious to European health?—It is the long-continued application of heat that is particularly deleterious to the European frame, even more than its intensity.

326. Therefore it is inconsistent with your view that our race can be propagated with advantage in any of our settlements in India?—Yes, on the plains: it is not inconsistent on the mountain ranges.

327. Your idea seemed to be that there must be Europaan settlers on those mountain ranges without having any productive employment; but is not it possible to cultivate portions of those mountain ranges?—Yes; a large extent of superfices of course will admit of cultivation and great improvement.

328. And they could exchange the results of that cultivation for the grain or food grown on the plains?—Assuredly, that would be a great advantage.

329. Mr. *Willoughby.*] Did I rightly understand you to say that the South Mahratta country, on the Bombay side, was adapted to European colonists, by reason of its being a healthy climate?—No, I did not mean that.

330. Are you not aware that the mortality amongst the European troops in that part of the Bombay Presidency is greater than at almost any other station?—Yes, I am quite aware of that. I meant that some of the arid plains were healthy as compared with other plains.

331. You did not mean to say that you thought they were adapted for the colonization of Europeans?—By no means.

332. Mr. *Danby Seymour.*] With regard to the general unhealthiness of the Company's European troops, do not you think that if a certain stimulus were held out to them, by employments under the Company, either as overseers of works, or in some other manner, it would contribute materially to promote their healthy condition?—Very much. In the case of the Bombay Fusileers, the habits that they have got into by being permitted to do various things for themselves, and to pursue various trades, have tended to improve their health and their morals.

333. *Chairman.*] Do you think that the health of the soldier suffers very much from the unemployed state in which he is kept during the greater part of his time?—It operates most dreadfully to his injury all over the British possessions, as well as in the East Indies. The monotony of barrack life is destructive both to his mind and body.

334. Mr. *Mangles.*] With regard to the possibility of rearing persons of English blood on the hills, with the stamina and strength of Europeans, your answers to different questions appeared to be hardly consistent with one another: what are we to understand your opinion to be upon that subject?—My impression is rather against a European child being brought up with the same vigour as in the climate of England, but still that he may be brought up in excellent health comparatively in the mountains, as compared with the plains.

335. You think the race might be perpetuated in the hills for several generations without deterioration?—I think so, without very much deterioration; but that must be determined by the result of experiment.

336. Mr. *Campbell.*] Are you aware that the same facilities of returning to this country are allowed to the soldiers in the Company's service as are allowed to the Queen's troops, that is to say, that they are invalided in the same way as the Queen's soldiers are?—If that is the case, it is only very recently; they had not the same facilities of returning to England a few years ago.

Martis, 20° die Aprilis, 1858.

MEMBERS PRESENT.

Mr. Baillie.	Mr. Lygon.
Mr. Campbell.	Mr. Mangles.
Mr. De Vere.	Sir Erskine Perry.
Mr. William Ewart.	Mr. Danby Seymour.
Mr. Gregson.	Mr. J. B. Smith.
Mr. Kinnaird.	Mr. William Vansittart.
Mr. Knight.	Mr. Villiers.
Mr. Lowe.	Mr. Willoughby.

WILLIAM EWART, Esq., in the Chair.

Major-General *George Borlese Tremenheere*, called in; and further Examined.

Major-General *G. B. Tremenheere.*

20 April 1858.

337. *Chairman.*] YOU gave us evidence, on the last occasion, in regard to the productions of India, and the best means of calling those productions into active development?—Yes.

338. Can you assist us in the composition of a map which would lay before the public very clearly the objects of the inquiry of this Committee, with the districts in which the different articles are produced; indigo, cotton, sugar, and so on; and the mineral productions, coal, iron, and lime, &c.; and showing how far the establishment of railways and canals and roads will bear upon those productions?—I shall be very happy to assist in any manner in my power.

339. In what other way besides the ways you mentioned at the last meeting of the Committee, might European settlement be encouraged?—European settlement in India might probably be promoted by a further increase of the members of the uncovenanted civil service. Their ranks are recruited from young men who, in many instances, have been brought up in India; they have small pensions, and, after serving the Government for a period of years, are very likely to become good settlers. Their local experience will induce them to take advantage of opportunities for profitable investment, which in the course of their career would be surely forced upon their observation. The strength of the regular civil service is too small for a country of such vast extent. They work hard, and are a most exemplary body of men; but there is a limit to individual exertion, and they look to England as their ultimate home. A certain proportion of highly-educated civilians is absolutely necessary; but much of the ordinary civil business, both revenue and magisterial, might be better administered if a larger number of moderately paid officials were employed.

340. You think that they would be brought into more immediate contact with the natives?—Yes, they would become acquainted with the resources of the country, and by retiring on smaller pensions, would be more likely to settle in India than the civilians of the present day.

341. Besides the advantages which you have already proved, what advantages do you think might arise from the training establishments in the Himalayas which you have suggested?—Besides the benefit to be derived, in a material point of view, from establishments in the Himalayas for training Europeans in the practical sciences, other advantages would follow which might be of the greatest value to the future of India. At present the standard of morality amongst all classes of the native community is so low, that the pure stream of English law is polluted by the corruption of the native officials, who compose the machinery of the civil courts, and are the only instruments which our civil officers can employ. Ability, a fair reputation, quickness in writing the Persian and Hindostanee languages, and an aptitude for business, secure employment to a native. High moral qualities, if only based on the principles inculcated by their own religious creeds, would have influence if they could be found; but, unfortunately, these native subordinates and the whole class from which they are derived are notoriously deficient in good principle, and they counteract the efforts of Government to administer strict justice to the people. The people themselves have no greater

Major-General *G. B. Tremenheere.*

20 April 1858.

respect for truth or upright dealing; they will institute, against one another, prosecutions of the most serious character, on the most false pretences, and support them by a cloud of witnesses; even when they have a just cause for litigation, they know that if they do not possess the means to bribe freely, they cannot succeed; and the feeling among them is, that the party who can pay the most to the subordinate officers of the court, is sure to gain the day. The best way to cure this evil is to make moral worth, and character, the chief qualifications for employment by the State. It is not by books, nor by teaching, that any appreciable progress will be made towards improvement in the national character of the natives. More may be done by the living example of numbers of Englishmen, trained up among them from their infancy in the principles of the Christian religion, who, by reason of their moral superiority, will obtain the precedence in all public employments, and in the favour of the State.

342. Are there not strong reasons why agricultural improvement should be attended to in India?—The application of science to agriculture has made such progress in Europe during the last half century, that the extraordinary results produced are a standing rebuke to all authorities connected with India, where not even a first move has been made in this direction. Although the Government cannot undertake farming on its own account, there are methods of transferring the experience of one country to another, which, as landlords of the soil, the Government of India ought to do. More than one-half of the revenues of the country, that is to say, 15,500,000 *l.* out of 28,000,000 *l.*, is derived by rents from the land; and four-fifths of the whole value of the annual exports, namely, 17,500,000 *l.* out of 21,500,000 *l.*, are the direct produce of the soil. Of India it may be truly said that agriculture is at once the greatest, the simplest, and most obvious of her resources. Some years ago, the Indian Government were urged to provide trained agricultural teachers, and to establish model farms in different parts of the country; but the most promising results might be anticipated from an extension of the railroad system, and the settlement of capitalists. They could be assisted by trained agriculturists from one of the proposed European establishments in the hills, who would combine a knowledge of the native methods with all the aids which science can afford.

343. Will you state some of the advantages which would arise from the introduction of branch railways communicating with the central East India line?—In nearly all the thickly inhabited parts of India, especially in the level countries on either bank of the Ganges, in the North-West Provinces, as well as in the Punjaub, the scarcity of wood fuel is much felt; when procurable at cheap rates, it is consumed by every one for cooking purposes; but the scarcity is in some districts so great, that cowdung is the only available fuel for the poor, and the land is thus deprived of its natural supply of manure. The consumption is much increased by the influence of caste, as nearly every man will eat only what is cooked by himself, or by a relation, or by another of precisely the same caste. Wood fuel is deficient where there are no jungle or brushwood tracts, nor forests within a moderate distance, from which roots and pieces of dry wood can be readily brought to market. I may also mention, in regard to the advantages of branch railroads in the Bengal Presidency, that the line of railroad which is now in progress passes through a country which cannot be said to be the most productive part of India; the line is rather situated along the centre of commerce. The productive part of the North-West Provinces lies immediately to the northward of the East Indian Railway. The great marts of India, such as Delhi, Agra, Benares, and Mirzapore, are upon the line, but the produce comes from Rohilcund, from Oude, and Jeypone; and in those countries, at seasons of scarcity, the people of the country flock towards the centre of the Gangetic Valley. The lines of traffic, and of the great produce of the country are immediately at right-angles with this line of railway: for instance, the produce of Rohilcund comes from Bareilly to Agra and Delhi; the produce of Oude comes towards Cawnpore, Allahabad, and Benares; and other produce comes towards the Ganges, nearer to Calcutta: therefore the line of railway is more in the line of commerce than of production.

344. Was not the line made with the view of following the line of commerce?—It was laid out with a view to convey the products of the country along the line of the valley of the Ganges towards the sea.

345. Mr. *Campbell.*] The line of railway is more in the line of the ancient marts of commerce than in the line of production?—Yes. In some parts of India,

India, in the plains, for instance, which skirt the base of the Himalayas, and in other hilly districts in Central India, there is an inexhaustible abundance of wood, which by the aid of railways might be made available for ages, at a moderate charge for transport, to supply abundant and cheap fuel to the inhabitants of the long exhausted plains.

346. You stated that colonization in India must proceed from the upper or middle classes to the lower; that is, that English capital and enterprise would be most successfully applied in the employment of native labour, which is cheap and abundant?—Yes.

347. Would it not be practicable for small intelligent farmers, possessing a knowledge of soils, manures, and crops, to settle in India with advantage to themselves and the people of India?—Yes, I think so, decidedly.

348. There is a great deficiency at present in that respect?—Yes.

349. In fact, the knowledge of agriculture altogether is very small in India?—It is about in the same position as when Alexander invaded the country.

350. On the banks of the Ganges they depend upon the alluvial deposit of that stream, and inland there is no attempt at agriculture?—It is simply an empirical art, and no improvement has been applied to it.

351. Is there anything to prevent colonists, if they were established in the hills, from pursuing labour in that country; and do you think that tea could be produced there?—Tea could be profitably produced in the hills, I have no doubt. Whether European labour could be profitably applied to its production is a point that I am not decided upon.

352. Is there anything in the climate to prevent it at an elevation of 7,000 or 8,000 feet?—The climate is not very favourable to European labour, even in the hills. There are parts undoubtedly where a European could labour with advantage; at the same time the valleys in the hills have not exactly a European climate. The sun is extremely hot, and I should think that a European labourer would be rather exhausted.

353. Could not the productions of the hills be sold with advantage in the plains, and the production of the plains in the like manner in the hills, and would not the possession of property in both, enable the owner to command his own climate?—Certainly; an interchange of products would be an advantage in any country, and especially in India.

354. You think it would be an advantage if you could produce on the plains articles of commerce suitable for the hills, and *vice versâ*?—Yes; an interchange of that description takes place in the Kangra Hills, where rice of a very good description is produced, and there is a considerable traffic between these and the plains.

355. Are agricultural and other employments under Europeans popular with the natives of India, and do not they prefer it to service with their own countrymen; that is to say, do they prefer employment by the Indigo planters to employment by natives?—No objection exists on the part of the natives to employment where regularity of payment is certain.

356. They can depend more upon the Europeans than upon the natives?—Yes; I think they are very willing to work under Europeans.

357. Is not that attended with advantage to the people of the country?—Decidedly.

358. Is not it the fact, that several commodities grown in India are produced on the same soils under European superintendence at from 10 to 30 per cent. more value in the manufactured state, than similar staples grown by the natives?—I have no doubt of it; Indigo is a particular example of that improvement arising from European superintendence.

359. The police of India has, you believe, been an impediment in the way of settlement in India?—I have no information on that subject.

360. You have never heard that the police operate prejudicially to settlement?—No, not in the Upper Provinces.

361. You stated that the colonists might be very advantageously employed in the uncovenanted civil service; do you think that the Lawrence asylums might form a good nucleus for young men adapted for that service?—Certainly; I think also that the establishment of training institutions in the hills would probably lead to the formation of others of a higher character.

362. Do you think that the establishment of an agricultural college would form a practical and useful finish to the education of boys in the hills?—Yes; either an agricultural

Major-General *G. B. Tremenheere.*

20 April 1858.

agricultural college in itself, or instruction of that description should certainly form a leading feature in any public institution in India.

363. Do you think that the extension of the English language among the people of India and in the courts of India would be attended with beneficial results?—I have doubts upon that subject; I would rather look to the use of the vernacular, the ordinary Hindostanee language, both for the courts, as well as a medium of instruction to the natives; that is, I would turn our own books of science and learning into the ordinary language of the country.

364. Do not the natives of India generally prefer being tried by an English magistrate or judge to being tried by one of their own countrymen; have not they more confidence in him?—They have great faith in the uprightness and the sense of justice of the English judge; at the same time they have a great horror of the native subordinates whom he is obliged to employ; and I feel no doubt, that of the two they would rather prefer their own courts to ours; but if we could obtain an honest and native subordinate agency, or an honest subordinate agency of any description, they would prefer the English courts; I think they would have much greater confidence then in the proceedings.

365. And you do not think that the scope for bribery would then exist that does exist at the present time?—Certainly not.

366. Mr. *John B. Smith.*] You stated that at Mooltan wheat was selling at 1*s.* 3*d.* a bushel, whilst at the same time it was selling at 5*s.* 9*d.* in Liverpool?—Yes.

367. Are you aware what was the produce of that wheat per acre at Mooltan?—No; I dare say it is contained in a Report which I have here, though it is some time since it was published. Here is a table showing the estimated amount of certain crops produced on an acre of land of different kinds.

368. What is it as to wheat?—It was not exactly in the Mooltan district, but in the district of Thanesur, in the North-West Provinces. The produce of wheat per acre is given at 16 maunds, which is equivalent to 1,280 lbs. per acre.

369. And you say that the wheat weighed about 60 lbs. per bushel?—Calculating the Winchester bushel at 60 lbs.

370. That would be twenty bushels an acre?—Yes, about 21 bushels.

371. Are you aware whether the land that grows wheat is irrigated land?—Yes, it is generally irrigated from wells, but it grows, frequently, without irrigation, when the seasons are favourable. Wheat land does not require much irrigation; at the same time, the cultivator generally has it in his power to irrigate wheat land if he desires a good crop.

372. Do you happen to know what is the produce of wheat on irrigated land, and what is the produce of wheat on unirrigated land?—I cannot state it from memory. The produce here is given, but not the distinction between irrigated and unirrigated land. I should doubt whether it was obtainable with respect to wheat.

373. Is there more than one crop grown on the land in the year?—Yes, two, almost invariably.

374. Does that refer to irrigated as well as unirrigated land?—There is a winter crop, consisting of cereals, a crop of the European type. The summer, or the rain crop, is exclusively of an Asiatic character.

375. Sir *Erskine Perry.*] Is that grown off the same acre?—Yes; off the same land.

376. Mr. *John B. Smith.*] The land does not produce two crops of wheat per annum, does it?—No; but wheat is grown continually, year after year, on the same land in various parts of the country.

377. Twenty bushels an acre seems to be a very small produce; do you consider that it is capable of great increase by the adoption of improved agriculture?—Certainly, a very considerable increase; I have seen in some parts of the Punjaub crops of wheat so thin, and the ears of wheat containing perhaps not more than six or eight grains, that it seems almost unaccountable that it should be worth their while to cultivate such land; but no pains were taken to manure or to irrigate it; 16 maunds is rather a low average. I find here in various parts of the country 24 maunds, 20 maunds, 19 maunds, and 16½ maunds; 20 maunds is the common produce per acre.

378. But that report does not state whether that is the produce of irrigated or unirrigated land?—No, it does not.

379. Sir *Erskine Perry.*] In the course of your Indian experience have you come

come in contact with many European settlers?—No; I have amongst the indigo planters in the district of Allighur, but not in the lower provinces of Bengal at all. I have known also a sugar planter or two.

380. Had you sufficient intimacy with those persons to learn whether there were any obstacles in the way of English settlers?—No, my impression is that there are no obstacles; that anybody can settle in India; I am not aware that there are any obstacles.

381. Have you ever heard any complaints as to the administration of justice, in deterring British capital and enterprise from settling in the country?—I have heard complaints, but it being a subject with which I was in no way concerned, I have not taken pains to investigate the truth or otherwise of those complaints. I have heard that in Bengal great complaints have been made; at the same time I could not give the Committee any reliable information upon that subject.

382. Mr. *Willoughby.*] You alluded to the uncovenanted service in India; has not that service very much increased of late years, and has not their sphere of employment been very much enlarged?—Yes.

383. Is not the character that you have given of the native officials rather too general, or do you intend the Committee to understand that there are no trustworthy members among them?—By no means; I believe that there are exceptions, as in almost every class of society, but I speak more of the general character. There are good natives; there are moral men amongst the Mahomedans as well as amongst the Hindoos, but I believe the instances are rather rare in which that morality or principle would come up to the English standard.

384. To what part of India do you refer?—To the parts of India in which I have been, in the North-west Provinces; in fact, I think it is applicable to all parts of India. I think that the character of the natives generally is untrustworthy.

385. Is it not the fact that the natives in their commercial dealings with Europeans, are celebrated for their probity and trustworthiness, generally speaking?—I think, with regard to merchants, that remark may be correct; but with the natives generally, if you order a native to do a thing; take a small matter as an instance; if you order your servant to buy an article, you never can be satisfied that he will not charge you more than he gave, and the same remark applies to purchases on a large scale. If an officer requires materials for a public work, he can never be satisfied that he is doing justice to the Government by the amount that he pays for those materials, because so many influences are against him; in fact, he is surrounded by a set of people on whose word he can place no reliance whatever. I believe, with regard to native bankers and merchants, and men of that class, that faith is kept very strictly.

385*. As a question of policy and justice, do you advocate the employment of Europeans in offices which are now filled by natives of the country in preference to the natives?—I do as a first measure, until you can obtain those qualities which, I presume, the Europeans would possess. I think that the quality of the instrument should be looked to, and not the mere national character of the employed. If you could obtain natives possessing the same principle as Europeans, I would have them employed by all means, and I would give them the preference; but until you can do that, let them see that those are the qualities which are required.

386. I presume you are of opinion that we should not govern India for our own purposes solely, but for the benefit of the inhabitants?—I conceive that the employment of high principled instruments under the Government, would be doing more justice to the people of the country than the employment of others who are corrupt, although they may be of the same nation.

387. Although you advocate, as every one acquainted with the requirements of India must do, the construction of branch railways, do you object to Lord Dalhousie's plan, that attention should be first paid to the Grand Trunk lines which are now in course of construction?—By no means; the Trunk lines are absolutely necessary as a foundation.

388. Those lines have been projected as much for a commercial as political and military purposes?—They have.

389. You advocated rather the employment of Europeans in the offices which are now filled by natives in our courts of law; do you consider it possible to obtain Europeans properly qualified to perform those duties?—Not at present; but my idea was, that they should be trained for the purpose.

Major-General *G. B. Tremenheere.*

20 April 1858.

390. You would not recommend that they should be employed till they were trained?—Not till you could find men duly qualified by possessing a sufficient knowledge of the languages, habits, and customs of the people.

391. In your examination on the first day, you alluded to the case of Mr. Landon as an example of the benefits of European supervision; are you aware that Mr. Landon, after having established by great energy a profitable cotton factory in that district, has returned to England?—I am not.

392. Is it not the fact that very few persons settle in India with a view to permanent residence, but the large majority keep in view an ultimate return to their native country?—Yes; I have no doubt that that is the case now, and that is the very evil which by the increase of Europeans in India I should wish to see remedied.

393. With regard to the stud farm which you quoted as to the great increase of produce, does that statement show the means by which the farm was cultivated and the expense incurred?—No, it does not enter into a statement of the expense; I read the whole of the statement from Colonel Apperley's letter; of course the advantages of manure there were peculiar.

394. Probably also he had the assistance of his establishment?—No, I should doubt that. The establishment was employed in the care of the horses; with the exception of an unlimited command of manure, I should say there were no exceptional points in that case.

395. Did I rightly understand you to say, that you would relax the rule in regard to marriage to the extent of 25 per cent. in each regiment?—Yes.

396. Would that occasion no additional expense in accommodation?—Yes, but I think it would be very little, provided the barracks for European regiments were constructed on the scale on which they now exist in the Punjaub.

397. In many stations in India, are not the quarters of the married soldiers distinct from those of the single?—In the Punjaub, only with regard to the Bengal Presidency.

398. Did you also recommend that the children of the soldiers should be separated from their parents at the age of four years?—Yes.

399. Do you think that that would be readily acceded to by the parents?—I think so, provided they have the means of visiting them in the hills by railroads to the foot of the hills; they might obtain leave, and see their children occasionally. I think that the hardship would fall chiefly upon the mother, but at the same time, if she married on those conditions, that would be partially remedied. She would only have to submit to what every mother and father has to submit to in India, in another rank of life. They cannot keep their children in the plains without imminent risk, and the wives of the soldiers would, I think, readily concur in that arrangement.

400. How would you get over the difficulty in regard to regiments stationed in the lower provinces of Bengal or Burmah?—By establishing a sanatarium at Darjeeling, which should be accessible to the foot of the hills by a railway.

401. Mr. *Kinnaird.*] By the tenor of your evidence, and by the answers you gave just now, did you not recommend the employment of Europeans in those different posts, with a view to the benefit of the natives, and not with a view merely of advancing the interests of England?—Undoubtedly. I have no idea whatever of advancing the interests of the English in India apart from the interests of the people of the country. My object in suggesting the employment of Europeans was to insure a pure administration of the law, by means of high moral character which you cannot obtain, as a general rule, from the natives.

402. Do you think that by proper attention and care that result might be easily obtained?—I think so, by proper training and instruction.

403. Do you think that a better police might be secured?—Yes. I refer to all the subordinate native agencies which the Government officers are obliged to employ.

404. With regard to the great cheapness of production and the price of wheat, do not you suppose that the effect of providing outlets and of giving a market for the produce, would be not to lower, but to raise its value; must not that be the effect of canals and railways?—Yes, provided they have ready means for sending it out of the country; otherwise, the value would be depressed. The canals will have a tendency to depreciate the value, because the production will be so enormous that the market will be glutted on the spot; but if they had a ready means of sending that produce away, the price probably would be enhanced.

405. The effect of a good harvest at present is really against the ryot?—Yes; the effect is to render it more difficult for him to pay his revenue.

406. And the very fact of reducing the price would materially improve the condition of the people?—Yes.

407. Mr. *Villiers.*] I think we may collect that the resources of India could be much more developed than they have been hitherto?—Yes.

408. Do you account for their not having been developed to the extent that they might have been by the want of European capital, or the want of an intelligent superintendence in the employment of that capital?—With the present facilities, I do not think that the absence of European capital has been the first cause; it is the absence of facilities for communication and for the transport of the products which are raised.

409. Do you believe that if Europeans were to go out there they could develope the resources of the country with any profit to themselves?—Yes, I have no doubt they could.

410. Do you say that there are no obstacles whatever to settlement in India which present themselves to a capitalist?—I am not aware that there are. I think that a manufacturer of sugar, for instance, can carry on his business in the most productive part of India without any obstacle.

411. Have you ever attempted to find the cause why the English people, who go to the uttermost parts of the earth, with a view to get profit upon their capital, do not settle more in India, with the object of acquiring riches in that way?—I think I mentioned on the last occasion that one of the first obstacles was the absence of any ready means of obtaining access to those parts of the country where it would be to the advantage of a European to settle and invest his capital. He arrives at Bombay or Calcutta, and finds that he has to go 1,000 or 1,200 miles before he can reach the point to which his inquiry is directed. The only means by which he can reach that point is by a tedious journey, occupying six weeks.

412. Those are difficulties which present themselves to the colonist or settler, wherever he may go, provided it is a new country. Why does not he go to India as well as to Australia?—There are more enticing objects in other countries. The finding of gold, the production of copper, and mines generally, offer much greater inducement than the slow profits derived from agricultural produce.

413. I suppose that in every new country the greatest possible disadvantages are presented at first to the settler; do you consider that the Government in India offer any obstacles to settlers, or do you think that the laws and regulations in the different Presidencies deter a European from settling there?—I am not aware that the Government offer any obstacles whatever. If you compare the absence of enterprise with Canada or the United States, I may remark, that the climate is a sufficient answer. The climate in those countries is suited to the European constitution, but the climate in India is not suited to the European constitution.

414. Do you think that that is a sufficient reason to account for the very few persons that have settled in India?—I think that that is one of the chief reasons, and also the absence of facilities of communication.

415. Is it an erroneous notion that those persons who have attempted to settle there, and who have employed their capital for the development of some of the principal products in India, have generally failed?—I am not aware of any instances of failure myself. We know that there are a great many instances of the reverse with regard to indigo. Many fortunes have been made in the production of indigo.

416. How is it with regard to the production of sugar?—One instance of success I know very well. I have used the sugar of the manufactory, and it is used all over the North-west Provinces, and is as good as any sugar that can be produced.

417. For the markets of the interior it has been successful?—I think so for the plains of India.

418. Do you know of any instance in which where the products of India come into competition with the same products from other countries in neutral markets, the products of India have succeeded commercially, with the exception of indigo?—I know of many products which are capable of being brought into successful competition. I should enumerate sugar, hemp, flax, and linseed. Linseed is an

Major-General *G. B. Tremenheere.*

20 April 1858.

article which has been profitably imported into this country, and commands a very extensive market.

419. Does that continue, or was it occasional?—I believe it increases very considerably; the increase of the exportation of linseed has materially increased of late years, and even in our newly settled country of the Punjaub, the increase both of the production and export of linseed has been very great.

420. You do not ascribe anything to the operation of the land revenue upon capitalists or occupiers of land?—No; in the part of the country where I have resided my impression is that the land revenue does not fall heavily on the people.

421. Is that in Bengal?—Not in Bengal exactly, but in the North-west Provinces and in the Punjaub.

422. With reference to the purpose of exporting the products of India, you do attach great importance to the want of communication?—I attach great importance to it.

423. Do you know whether Europeans, who have settled there for the last 20 years, have been anxious to promote public works for facilitating communication, and have been resisted by the Government of India?—I am not aware of the opinions of settlers upon that point, for I have not been much amongst them, but I know that it has been the general feeling in England, amongst people interested in India, that the want of communication by railway is one of the great obstacles.

424. It is within the last 10 years that those works have been promoted by the Government to a very great extent?—Yes.

425. You have said that settlers would have to complain of the good faith of the servants and tradesmen; do you contrast what you have observed among the natives of India, with what you have observed among the Europeans in that respect, and is that contrast unfavourable to the natives?—Yes.

426. You think that you can place implicit reliance upon that class of persons in Europe?—I would not say implicit reliance, but I think you can place more reliance upon the word of an European than of a native in all dealings.

427. I suppose the remuneration for labour is extremely low?—It is low; but it bears its usual proportion to the expenses of living, and the wants of the people.

428. Do you think that their extreme poverty has something to do with that species of dishonesty?—No, by no means; it is an inherent vice.

429. You, perhaps, speak rather in a conventional way; I suppose there are good and bad?—There are exceptions, of course; but I think, as a general rule, that is the national character.

430. We have heard, in the late insurrection, of instances of extraordinary fidelity amongst servants?—Yes; and those same servants would take advantage of any opportunity that might be placed in their way to benefit themselves at the expense of their masters.

431. Would that apply to the native master as well as to the European?—I think not. The native masters have a more intimate knowledge of the vices of the servants.

432. Do you say generally that the native has an antipathy to the European?—No, I should think not.

433. Not sufficiently so to deter the European from settling?—Certainly not.

434. Mr. *Danby Seymour.*] When you say that you compare the native and European servants, by European you mean English?—Yes, English.

435. Are you acquainted with the servants in Russia, in Germany, in Spain, or in Italy?—No.

436. You are not acquainted with the state of morality in those countries?—No.

437. It is generally supposed not to be so high as in this country?—No.

438. Therefore, when you compare the natives of India with England, you compare them with the highest standard known?—Yes.

439. Do you not think that the opinion of the servants of the Company with regard to the honesty of the natives, is lower now than it was 40 or 50 years ago?—No, I think not.

440. Are you aware of many extracts in Sir Thomas Monro's writings where he discusses that point, and disputes the opinions which you have expressed?—No.

I merely

I merely form my own opinions from extensive dealings with the natives in the course of very large operations in the Punjaub and other parts of India, where I have been employed.

441. Do you think that you could trust servants in this country implicitly if they were not looked after?—No, every one is better for being looked after.

442. Have you had much experience in employing labour in this country?—None whatever.

443. Is it not the case that in Bengal it is the practice of those who are settled there to keep 200 or 300 clubmen to assert their rights?—I have heard of such things, and I believe that to be the case, but I have no personal knowledge upon the matter.

444. Do you think that is a state of society that would tempt settlers to go and reside in that country?—Certainly not. That state of things has exclusive reference to Bengal and to the production of Indigo.

445. Bengal is the most populous province of India, and the richest?—It is very populous, but there are very thickly populated provinces in the direction of Benares and upwards, in the Gangetic Valley.

446. But there are 40,000,000 of inhabitants in the province of Bengal Proper?—It is a very thickly peopled country.

447. Are you aware whether Mr. Landon's reason for returning to this country was, that he had made a fortune?—No.

448. Are you aware whether he left any successor in his manufactory there?—No, my statement was derived solely from Mr. Turner's speech in the House of Commons.

449. Mr. *W. Vansittart.*] You say that generally you are favourable to an increase of the uncovenanted servants. Are the Committee to understand that the covenanted service is inadequate and disproportionate to the duties which they have to perform?—I will not say that they are inadequate to the duties which they have to perform, but I think that they could be done better by a larger number of men. The officers of the civil service are indefatigable in the performance of their duties, but they are overworked, as almost all other officials in India are overworked.

450. Do you think it would be advisable, generally, to have the districts halved; I believe Monghir was 120 miles long and 60 miles broad?—Yes, I should think it advisable to quarter them.

451. Would not the expense be enormous?—Not so much if men were employed who possessed rather lower qualifications, and at lower salaries.

452. Following up what you have said with regard to the native subordinates and officials, do not you think the courts of sudder ameens and moonsiffs are very unpopular?—I could give no satisfactory answer to that question. The employment of sudder ameens is a recent measure, adopted with a view to encourage the natives to look to high employment under the State. What the success of that measure may be I am not aware.

453. Are you aware that the sudder ameens and moonsiffs generally have behaved exceedingly ill during this late revolt; for instance, the judge of Futtehpore was murdered by order of his moonsiff?—Yes; that is an instance of what I have specially referred to, the want of principle, honesty, and character amongst the native employées of the Government; they cannot be depended upon.

454. Do not you think, with regard to the salaries that the sudder ameens and moonsiffs draw, that we could get young men of good education and family to go out from this country to fill those situations?—No doubt; at the same time, their instruction would have to begin in India, and they would require a long apprenticeship.

455. If we could have a sort of school for them here, similar to what Haileybury College used to be, do not you think that it might be carried out, giving a sort of preparatory education similar to that at Haileybury College?—I would rather trust to their education in India, because it is not simply book-learning they require; they require to know the character of the native population, which is a study in itself; and they can only obtain that by lessons in the country, and by close observation.

456. Mr. *Knight.*] Do you think that the being rendered amenable to the local courts in all civil matters is considered a great objection by settlers in India?—Yes, I have heard of that as an objection; I have no personal knowledge of it; I have heard it stated, and seen it in the public papers, and I have no doubt

Major-General *G. B. Tremenheere.*

20 April 1858.

it is felt as a grievance that an European should be subject to be tried by a native.

457. Then possibly, if some districts were better than others for settlement by Europeans, it might answer to place more European magistrates there?—Yes, certainly; it would be more satisfactory to an European settler to be able to refer his disputes and complaints to an officer of his own country.

458. The impression is, that there is very little or no justice to be had from a native court?—I think it is more a feeling of humiliation that the European experiences in being obliged to plead his cause before a man whom he knows to be inferior in moral qualities to himself.

459. They are supposed also to be very venal?—Yes, very venal; I do not wish to impute venality to native judges or native sudder ameens; probably the venality would not extend beyond the native subordinates of the court.

460. Mr. *Mangles.*] A member of the Committee asked you how you accounted for the very small resort of Englishmen of capital to India compared with the resort of Englishmen of capital to Australia and America, and you said you thought the climate had a great deal to do with that circumstance?—Yes.

461. Are you not aware that every class of Englishman who does go to India demands and requires a much higher salary or pay than he would be satisfied with in his own climate, or any other?—Undoubtedly. I think that arises from the great distance he has to go, and the great risks he has to encounter.

462. The civilian is highly paid?—Yes.

463. A Queen's officer directly he embarks to India has double pay?—Yes.

464. Are not the fees of the lawyers and solicitors at Calcutta double, or more than double, what they are in English courts?—They are high.

465. Is a tradesman in Calcutta satisfied with English profits?—I should say not.

466. If you hire a European nurse for your child or a European servant in your family, have you not to pay him much higher?—Yes; all European labour and all European employments are more highly remunerated in India than elsewhere.

467. Do you not think that the induction to be drawn from those circumstances furnishes a very considerable answer to the question why Englishmen do not go to India in larger numbers; that they cannot always secure that high amount of profit that would induce them to make the sacrifices, and submit to the privations and hardships of a residence in such a climate?—Yes, if you speak of the contrast.

468. Is a merchant in Calcutta satisfied with an equal profit to that of a merchant in London or New York?—I should not say that that acted as an obstacle, because it is a generally accepted idea that the profits in India, in any occupation, are higher than in England or in the English colonies, and therefore I think that the prospect of those profits would probably act, or ought to act, as an incitement to settle in India.

469. Would not a man prefer to go to a climate similar to an English climate to make 1,000*l.* a year rather than go to India, unless he was sure of making 2,000*l.* a year?—Yes, I think he would; and I think any Englishman would be more content in an English climate, or a *quasi* English climate, upon half the salary, because the pressure is very great upon the European constitution in India; at the same time there are places in India where he could escape those inconveniences when he desired to do so.

470. Do you mean in the hills?—Yes.

471. Is there much opening in the hills for the employment of British capital?—I think there is, with regard to the cultivation of tea, and the production of hemp and flax and timber for the English market. I may mention an instance with regard to resinous products. Every pound of tar which is used in India for our gun carriages comes from England or from Europe; whereas the Himalaya mountains are full of resinous woods; those are resources which European capital and labour would develop; again, there is magnificent timber in the Himalaya mountains. There is the Deodar cedar of gigantic size, fitted for mast pieces and for every purpose most valuable both in India and Europe; yet there it grows, without being touched by European or native to any great extent. The hemp also of the Himalaya has been proved to be the strongest fibre with which practical men are acquainted; and no plant is so commonly cultivated as the true hemp plant in many parts of India; if Europeans were settled there, they would

Major-General G. B. Tremenheere. 20 April 1858.

would undoubtedly develop natural resources of that kind; at the same time they will not go there for want of the ordinary facilities of travel and transport.

472. You say that you have heard objections raised by English settlers or colonists to being rendered amenable to the native courts?—I have heard of objections.

473. Do you think it would be possible to supply a sufficient amount of English administrators of justice within any moderate bounds of expense?—Yes; I think that all the magisterial duties and the ordinary police duties could be very efficiently performed by an additional number of civil servants of the uncovenanted grades, and could be satisfactorily performed at no great additional expense. I think that their salaries need not be high, and that you could secure, from amongst the young men of England, ample numbers who would administer justice of that kind in a very efficient manner.

474. Would it be just to exclude the native?—Certainly it would not be just to exclude the native; but I would simply employ the European until you could have a native of a proper standard.

475. Is it not something like the old adage of not allowing a boy to go into the water until he can swim, not employing the natives till they are fit for employment?—If you show men what qualifications are requisite for employment, it is their fault if they do not come up to that standard; if you give them an opening, and say we will employ you if you exhibit certain qualifications, I conceive there is no hardship in keeping them out of employment till those qualifications are produced.

476. Do you think that there has been no improvement in the native functionaries, the sudder ameens and moonsiffs, since they have been largely employed?—I think there has been an improvement.

477. Is not it worth while to go on with it then?—I think they have shown during the late rebellion that, as a general rule, they are not fit for the situations in which they have been placed. An instance of that has been mentioned by an Honourable Member.

478. Has it been the general rule that they have proved themselves unfit for the situations which they hold?—I am not sufficiently acquainted with the circumstances to state that it has been the general rule; there are several instances of their failing you in the hour of need.

479. You said that there were two crops of wheat and of other grain grown upon the same land in the year?—Yes, that is the general rule, two crops in the year. The crops have distinctive names; one is the rubbee, which is the corn crop, that is the winter crop; the other is the khurreef, or the rain crop.

480. Are there two crops of cotton?—No.

481. May not that account as one circumstance why the natives do not grow cotton so freely as they grow wheat, that they get two crops off their land growing other crops?—It may have some influence; but I think that the want of a certain market is more likely to affect them.

482. Still that has some influence?—It may have; but I am not prepared to say that the two crops of other produce would be more valuable to the natives than one good crop of cotton.

483. You spoke of the want of railroad feeders to the great trunk lines of railway, and you particularised the East Indian Railway, in the valley of the Ganges, going through the marts of commerce, and not the fields of production?—Yes.

484. Are you aware that the Court of Directors have sent out to the Government of India two or more plans of railways through Oude and Rohilcund for report?—I believe they have been referred to India for report, probably a year or two ago, or nearly so; but I conceive that there is sufficient information in England to proceed in those matters without waiting. The Indian Government is very much occupied at present; and I think sufficient information is procurable in England for proceeding at once, leaving, of course, the choice of the particular direction and locality to be selected by the Indian Government. But references to India are not required to enable us to know whether railways are necessary in the parts of the country to which I allude. They are, perhaps, the most productive parts of India. There is not, probably, in the world a richer valley than the valley of the Ganges. It is highly populated, and it is a level plain, and contains, in an equal area, more cultivated land and more valuable products than, perhaps, any other section of the globe of equal extent.

Major-General *G. B. Tremenheere.*

20 April 1858.

extent. Therefore there can be no question that railroads are wanted there, and that until they are constructed, the country will never progress; for the main line of railroad which I speak of does not afford any assistance to the producer in that rich country; he has still to transport his produce to the railway. The ordinary roads will not reduce the cost of transport sufficiently, nor will they enable produce to be sent into those countries on the occurrence of any scarcity.

485. Is not the valley of the Ganges very well supplied with water-carriage?—The lateral rivers are not very well adapted to water-carriage, and I am not aware that they are much used for the carriage of produce; they are used for timber. But the rivers of Rohilcund and of Oude, I believe, are not used for the transport of agricultural produce, or only to a very limited extent. Moreover, the minor rivers, such as they are, do not lead to the most frequented marts.

486. Do you think it would be safe, as there are two rival schemes for the Oude and Rohilcund railways, for the Government in this country to decide between them, without reference to India?—It would be certainly desirable to have the opinion of the Indian Government on the subject, or to issue such directions that the Indian Government would have an authority for acting at once in the matter; but delays are very prejudicial to the progress of India.

487. An Honourable Member asked you with respect to a matter connected with your opinion of the native character, and referred to Sir Thomas Munro's opinion: are you acquainted with Sir Thomas Munro's writings?—Yes.

488. Do you remember a passage in a minute or letter of his, in which he says, that of all the principal native officers he had been acquainted with for a long term of years, only two or three had eventually proved not to be corrupt?—No, I do not recollect the passage.

489. Mr. *Gregson.*] At Question No. 58, with regard to sugar, you say, "Where capitalists have undertaken the manufacture of sugar, I understand that they have pursued nearly the same course as the indigo planters, by purchasing the cane from the native cultivators." Are you aware that capital and modern European machinery have been introduced into Bengal for the manufacture of sugar?—Yes, I have heard so.

490. Have you heard of two large sugar companies, one called the Dobah and the other called the Dacca Sugar Company?—Yes.

491. Do you know whether they have been prosperous; are they still in existence?—No, I do not; I believe the Dobah works are still in existence.

492. But not the Dacca?—No.

493. Mr. *De Vere.*] In answer to Question 55, you state that the cultivation of opium in the district of Behar has been very much improved, doubled in value, I think you say; 50 per cent. more certain than it used to be?—Yes; that is by the operation of native care and labour alone. The application of European superintendence and capital has not been applied to the cultivation of opium; but in consequence of the great profits derivable from the production of opium, the natives have taken great pains.

494. The great improvement that has taken place in the cultivation of opium has been without the aid of European capital or European superintendence?—Yes.

495. With regard to the scheme of asylums for the education of children, which you mentioned on the last day of your examination, you suggested, in answer to Question 110, that there should be certain industrial asylums established upon the hills for the education of the children of soldiers; and you suggested that, in order to provide a supply of children for those establishments, certain encouragement should be given to the soldiers to marry. You said you made that suggestion with a view not only to improve the soldier, but to benefit the country; do you consider that marriage would be productive of improvement to the moral condition of the soldier, if he were relieved of those responsibilities of married life which relate to the duty of educating and providing for his offspring?—The soldier, at present, neither educates nor provides for his offspring in India; a certain allowance is made to every European woman and every European child in a regiment, which assists, in fact almost entirely maintains them, with the help of his own pay and rations. A school is also provided for the soldiers' children in the regimental lines; and therefore the soldier is at present relieved from all care and trouble in rearing his own children. Now the expense of those regimental schools, the construction of the school-room, the expense of the schoolmaster, and the ordinary current expenses of the school, would cease if the children

dren were removed and concentrated in asylums in the hills; and I conceive that the effect on the soldier would, so far from being detrimental, be certainly favourable to his moral character.

Major-General *G. B. Tremenheere.*

20 April 1858.

496. Is it not the case, according to the present system, that the children are still under the moral supervision of their own parents?—Yes; but I am sorry to say that the moral training of the barrack square is a very imperfect one; the children are subject to influences there from which it would be very desirable that they should be removed.

497. With regard to the effect that your plan might have upon the character of the women, do you think it would be beneficial to the character of these married women, the soldiers' wives, that they should be removed from the moral responsibilities attending the nurture of their own children?—I do not think it would be attended with any moral deterioration. I think if the mother was satisfied that her child was being brought up in a satisfactory manner, and as a useful member of society, and was likely to gain its own livelihood, and be a credit to her eventually, she would not feel deteriorated in her own self-respect, any more than the mother of a child in another rank of life feels so, in sending her child to England; the mere absence of the child will not loosen those bonds of affection with which she regards her children; it probably might increase them.

498. You have drawn a comparison now, and also upon your former examination, between the proposed plan of taking away the children from their parents, and the present separation of children which takes place when the children of officers and civilians are sent from their parents to England; is there not this great distinction between the two cases, that in the plan which you now propose the children would be altogether removed from the domestic element of education, and put into the hands of the State, whereas when children are sent voluntarily to England they are sent to friends and relatives, and persons who still educate them upon the domestic principle, not upon the principle of the State providing for the education of children?—That is very true; but I conceive that the results would be in favour, not only of the child, but of society in general; that the training and influences which would surround the child in such an institution would elevate his character, and improve his mind, and be beneficial to him in every respect.

499. Are not the hasty and ill-assorted marriages of soldiers productive of much evil?—They are at present, because when a soldier makes an improvident marriage, he finds on his embarkation on foreign service, that he is obliged to leave his wife behind, and throw her upon the charity of the country; but, under proper regulations, those inconveniences would cease.

500. Would not the tendency to form such improvident and ill-assorted marriages be rather increased by a plan which would relieve parents from all responsibility as to the nurture of their children?—Such an effect might ensue; it might encourage and give rise to the natural wishes of soldiers; no doubt they possess them now, and they are kept in restraint by the regulations of the service; but I conceive that for every European family you transport to India, provided you take care of their offspring and raise them up in the manner I have indicated, you attain an absolute gain for India and for the advantage of the people.

501. Have you considered the expense of these establishments at all; how do you propose the expense shall be supplied?—I have just stated that there is already a very considerable expense attending the maintenance of every child of a European soldier in India; they have a definite monthly allowance; that of course would go towards the expense of maintaining them elsewhere, the expense of the schooling, and the buildings necessary for them; there would undoubtedly be an additional expenditure, but I conceive that it would have such an ultimate bearing upon the country as to be an ample remuneration to the Government for taking such a plan.

502. I understand you to say that to meet the expense of these establishments you would abandon the present system of regimental schools and personal allowances to the soldiers for their children?—Yes; if the capitalist or the settler required subordinate superintendents from any of those establishments, he should pay a premium for obtaining it, and that also would be one mode of reimbursing the expense.

503. Do you propose that the staff of these establishments should be English, or in any degree mixed up with the native element?—I think the native element

Major-General *G. B. Tremenheere.*

20 April 1858.

ought to be combined, because you require them to be trained in the native language especially.

504. You propose, at a subsequent period, that you would make railway companies, or capitalists, or agriculturists pay a premium for those children who have been so educated, when giving them over to him; will such persons pay a premium unless you have some power to give a promise of a permanence of relation between them and the person you bind to them?—Yes, they would, I think, if they possessed qualifications that would be useful to them; they have to obtain that particular class of people from England now, at very great expense, from their passage money and the expenses attending the transport of Europeans from England, which are very great; that would only be equalised by the premium to which I refer.

505. If, on the one hand, you have persons who have received a high industrial education in these establishments, and, on the other hand, persons who could make a profitable use of them, do you not think that the persons in want of them would have to provide for themselves by paying for that labour according to what it was worth in the market?—Certainly.

506. Then you could not promise that the persons to whom you would assign them would enjoy their labour for a stated period?—I think there would be no objection to apprenticing them for certain periods.

507. Are you aware that that experiment was tried lately in the case of emigrants sent out to different parts of Australia at the Government expense, with an attempt to bind them for a certain period to the employers of labour there, and that it was found entirely impossible to retain their services?—I am not aware of the fact; but I think that there are inducements to persons in Australia to turn their attention to other branches of industry which would not exist in India, and that there would be no difficulty in obtaining the continued services of young men drafted from such institutions.

508. Would not the same inducements still continue that they should take their labour to wherever it was best paid for, and where it was most advisable for them to go?—Yes; but I think they would find the best market in the kind of industry I have alluded to. The object of the proposition is mainly to engraft European skill and energy and industry upon the practices of the natives, and upon the country in which they are placed; that is the chief point in India.

509. Have you considered whether very great difficulties would not occur as to the religious education of the children forcibly taken away from their natural guardians?—No; I conceive that if the religious denominations were properly separated there would be no practical difficulty.

510. Is it part of your scheme that there should be separate establishments for the separate religions?—I think that would be desirable.

511. Mr. *Lygon.*] You stated that the rivers were used to a certain extent for the transit of agricultural produce; is there any reason why the feeders of those rivers should not be used to a greater extent than they are now?—I have not visited the rivers of either Rohulcund or Oude, or the district of Purnea, but my impression is, that in the upper part of the country they are not susceptible of any very great improvement. The Ganges, the Jumna, and the Goomtee, to a certain extent, are navigable by boats drawing two feet of water; but beyond that draught there are great impediments, which are not removable by any skill or science. You would not reach either Delhi, Agra, Alighur, or Hattras, by means of any of the feeders of the main rivers, and these are some of the principal marts in the Upper Provinces.

512. Mr. *Campbell.*] You mentioned that the opium cultivation was carried on by natives alone, and not under European superintendence; are you not aware that the opium cultivation is under the superintendence of Government officers generally?—There is an opium agency. Several officers of the civil service are employed as superintendents in that manner; but I understand it is more for the collection and transmission of the drug than as applied to the actual cultivation. I may say that what I have stated with regard to opium is not on my own information or observation, but is simply adduced to show that the natives are capable, where their interests are concerned, of effecting very great improvements. Opium is a valuable drug, and bears much the same relation to other agricultural products, as gold to iron in the mineral kingdom.

513. I suppose you generally observe that population and production exist to a larger

Major-General *G. B. Tremenheere.*

20 April 1858.

larger extent on the banks of navigable streams in India than elsewhere, from the facilities which those streams afford?—Yes.

514. I suppose you would argue therefrom that the establishment of railways would create a similar density of population and production on their borders?—Yes, undoubtedly; that effect has already taken place even on the construction of ordinary roads in some districts.

515. In reference to feeders of rivers, are you not aware that generally those feeders, except in the rainy season, are dry, and that as a means for the conveyance of produce, they would afford no facility?—Only at that season of the year; they are much lower in the dry season, and some of them are comparatively dry.

516. Then as investments, railways in India, compared with railways in this country, present no competing lines, no cost of land, and no Parliamentary expenses to enhance their first cost, and, on the other hand, their remuneration returns are rendered sure by dense population and teeming production?—Yes.

517. So that in every point of view they hold forth to the capitalists of this country great encouragement as safe investments?—I should say so, decidedly.

518. Mr. *Willoughby.*] You made some remarks with regard to the Deodar timber; are you aware that a considerable number of spars of that timber were sent down to the dockyard at Bombay for trial there, and proved to be perfectly valueless for that purpose?—No, I was not aware of that; I spoke as to the length.

519. Mr. *Danby Seymour.*] Are you aware that there are very few Deodars remaining in the Himalayas, and that an order was sent out a short time ago to preserve those that do remain?—I am not aware that very few remain; my impressions are the reverse; but the whole subject of the existence of the Deodar timber in the Himalayas was fully reported upon by Major Longden, and full information supplied.

520. *Chairman.*] Have you read a paper on the public works of the Bengal Presidency before the Institution of Civil Engineers?—It will be ready early in May.

521. Will you allow the Committee to see it?—I will do so.

Joseph Dalton Hooker, Esq., M. D., F. R. S., called in; and Examined.

J. D. Hooker, Esq., M. D., F. R. S.

522. *Chairman.*] YOU are the author, I believe, of the well-known Travels in Bengal, the Himalayas, and the Khasia Mountains?—Yes.

523. When did you visit India?—I left England in November 1847, and arrived in India in January 1848.

524. What was the object of your visit?—It was chiefly connected with botanical pursuits, with a view of investigating the climate of India in connexion with botany.

525. What districts did you visit?—I first visited the districts of Behar and Mirzapore; I then descended the Ganges, and went to Sikkim, where I spent a great part of my time; from Sikkim I went to the Khasia Mountains, and the districts of Silhet and Achar. I afterwards went to Chittagong, and from there to Calcutta, and so home to England.

526. Were you at Darjeeling?—Yes, for a considerable time.

527. And you went to the borders of Tibet, did you not?—Yes, twice, and resided there for several months.

528. Darjeeling has been used lately as a sanatarium?—Yes; it was established about 1840, and it has continued as such ever since.

529. Was not it first recommended by Lord William Bentinck?—I think it was during Lord William Bentinck's Government of India that it was recommended, but I think Mr. J. P. Grant first drew the attention of the Government to the desirability of having a sanatarium so near Calcutta as Sikkim, which was under our protection.

530. I think Major Herbert and Colonel Lloyd were the first Commissioners that were sent out?—Yes.

531. Do you recollect that they state in their report on that occasion that such a settlement as that at Darjeeling, in the hill districts, will tend more than any other circumstance to attach English families and capitalists to the soil of India?—That is the view that they expressed.

532. To what extent has the population of Darjeeling increased within your recollection?

J. D. Hooker, Esq., M. D., F. R. S.

20 April 1858.

recollection?—I do not know the exact numbers; but there were hardly any inhabitants in it when the sanatarium was first established in 1840; and I think that there were some 4,000 or 5,000 settled inhabitants in 1848; and I know that both the European and native population doubled during the two years that I remained there.

533. What do you think of its climate and its uses as a sanatarium?—I think its climate cannot be exaggerated for healthiness, when compared with the plains of India. It is not quite equal to a European climate, an English especially; but, upon the whole, it is exceedingly healthy.

534. What is the elevation of Darjeeling?—The station itself is between 7,000 and 8,000 feet above the level of the sea.

535. What is the best elevation for the European constitution?—I think that, in that part of the Himalayas, that is the best.

536. What did you find peculiar in the climate of Darjeeling?—The climate is exceedingly healthy; but, in consequence of the long-continued rains in the summer, it is not the most agreeable to English residents. The winters are rather cold, and the summers are very rainy.

537. What effect had the institution of this colony of Europeans upon the surrounding inhabitants of the hill districts?—It caused the inhabitants from all quarters to flock into Darjeeling; and the natives of Nepaul and Bhotan and Tibet, and the indigenous tribes of Sikkim itself, all very rapidly settled permanently in the territory of Darjeeling.

538. To what extent in numbers?—I am not exactly aware, but several thousands.

539. Was the effect very considerable upon the natives?—Very great indeed, for there was hardly any person there before that; it was an all but uninhabited range of mountains.

540. Then it had a very civilising effect upon the inhabitants?—It had, at once.

541. In what way?—They came in to take service as police and domestics, and settle as cultivators; they brought provisions for sale, they aided in building houses and making erections of all kinds, and they assisted in conveying things from the plains to the hills.

542. I think you state in your publication that it was more like an Australian colony in its rapid increase, than an Indian town?—Yes; I stated that the increase during the two years whilst I resided at Darjeeling was, in point of rapidity, similar to that of an Australian colony; in saying which, I referred merely to the great increase in the number of inhabitants which took place in those two years.

543. Have you been led to view Darjeeling as a station for troops?—I had a good deal of opportunity to do so, because some considerable bodies of troops were stationed there during the time that I resided there.

544. What do you think of it as a station for troops?—It appeared to be exceedingly good; the reports to Government were most favourable.

545. Has there been any attempt to establish schools for the education of European children in Darjeeling?—There have been several attempts previous to and during my visit; the difficulty has always been to procure good masters.

546. Do you think it likely that in process of time good masters will be obtained?—I have no doubt of it.

547. Is there not a plan to establish a proprietary school at Darjeeling, similar to the schools of King's College and London University College?—I have heard of it, but it is since I was there.

548. Have you turned your attention to the subject of Darjeeling forming a basis for establishing a trade with Central Asia?—Yes.

549. Do you think that it will have the effect of introducing British products towards Central Asia?—I think so to a very great extent. There are a great many European products, which were brought from the plains of India to Darjeeling by the native population around; there are also a considerable number of important Tibet products, which have a market at Darjeeling.

550. What are the products of the hills themselves which you think might be available as traffic?—The commercial products of the hills themselves are very few, but those of the province of Tibet, to which I refer more particularly, are very important.

551. Has the cultivation of tea been attempted in the neighbourhood of Darjeeling?—It has very largely, and especially since I was there.

552. Is tea likely to be an article by means of which commerce will be established with the more central regions of Asia?—I look upon it as probable that it will be the most important of any.

553. Is it capable of much greater increase than at present?—I think the increase is indefinite; I do not see a limit to the cultivation or consumption of tea in Asia, both in High Asia and in India.

554. There are great capabilities for extending the cultivation of tea along the Himalaya Mountains?—Very great indeed.

555. In what part of the Himalaya Mountains?—In Sikkim in particular, between an elevation of 3,000 and 6,000 feet, the tea succeeds admirably.

556. Are you of opinion that, in various other parts of the mountain districts of the Himalayas, tea may be successfully cultivated?—Yes, certainly; the whole way from Assam, as far up as the Indus.

557. How many hundred miles?—1,300 miles, following the course of the Himalaya; I am speaking from memory.

558. Have the inhabitants of India ever yet developed their taste for tea; have they had the power of indulging it to the full extent to which it might go?—The inhabitants of the plains of India have not; but I understood, when I was in Bengal, that there was a growing desire for tea. I repeatedly gave tea away myself in Bengal, and it was always thankfully accepted.

559. Do you think that tea, if afforded cheap enough to the inhabitants of India, would meet with a very extensive consumption in India itself in time?—I cannot answer that question. I am not sufficiently acquainted with the habits of the natives of India, but I have no reason to doubt it.

560. So far as your knowledge of the people about the neighhourhood where you were extends, did they show an increasing taste for tea by increased cultivation of the tea plant?—Very much so indeed.

561. What is the quality of the tea?—All the Assam tea that I had was a very strong black tea; it is made in Assam itself; but I also had very large quantities of the coarser, commoner kinds of Chinese tea, which I carried about with me for the purpose of barter.

562. I think Dr. Campbell, to whom the public in that part of the country are very much indebted, established a fair for the hill tribes?—Yes; he established a fair at the foot of the hills, at a place about 30 miles from Darjeeling, and instituted rewards and prizes for improved agriculture and breeds of cattle.

563. Was that fair very much frequented by the natives?—Yes, during the time that I was in India very much indeed.

564. What commodities were brought to the fair?—From Tibet and the hills chiefly ponies, silks, and woollen cloths, shawl-wool, musk, amber, beads, and salt.

565. They were exchanged for the commodities of the plains?—Yes; they were exchanged for the commodities of the plains, but also paid for in money.

566. How far is the territory of Sikkim under British protection?—I am not aware exactly of the present state of the territory of Sikkim itself. After the Nepaulese war, I think in 1817, it was taken under British protection, and remained so till 1848 or 1849. I am not aware of our exact relations with Sikkim now.

567. It is comparatively independent under its own rajah, is not it?—I suppose it is now entirely so.

568. But a large portion of the land belongs to the British Government?—Yes, the territory of Darjeeling does.

569. Does Sikkim afford the shortest mountain passage across the Himalayas into Tibet?—Much the shortest.

570. And it is the shortest line from Calcutta to Tibet?—It is the direct route from Calcutta to Lassa, the capital of Eastern Tibet.

571. In the course of your stay in India you visited the frontier of Tibet?—Yes, I did.

572. How far is Darjeeling from Lassa?—The journey may be performed in ten days with good mules and light loads; but it takes, on the average, 30 days. My impression is, that to do it in 10 days the distance traversed daily would be equivalent to about 35 miles; I say equivalent, because it is up and down the whole way, over an exceedingly unequal country.

573. In fact perhaps nearly the most unequal country in the world?—I have never seen any to compare with it.

J. D. Hooker, Esq., M. D., F. R. S.

20 April 1858.

574. Do you go through passes of an extraordinary description?—Yes.

575. Does not the road sometimes merely consist of planks fixed in the side of the precipices?—In some cases it is so, for a very few yards only; but I think that those roads might be made a very great deal better, with scarcely any labour or expense. The difficulties of the roads have been exceedingly exaggerated.

576. What are the principal productions of Tibet?—Borax, salt, gold, shawl-wool, musk, jewels, and ponies.

577. Tibet is the principal place in the world for the production of borax?—I believe the greatest quantity of borax in the world comes from Tibet.

578. What is borax used for?—It is used in many manufactures in this country; as a flux extensively everywhere; and it is used in medicine, and in glazing porcelain.

579. The other productions are shawl-wool, gold, salt, jewels, and ponies?—Yes.

580. I believe that salt is brought to the Himalayas, is it not, from Tibet?—Almost all the salt consumed in the Himalayas is from Tibet.

581. Is that brought at considerable labour and expense?—At very great labour; it is all carried upon men's, children's, and animals' backs.

582. Do you know from what part of Tibet it comes?—The most that is introduced into Sikkim is procured from salt lakes in a part of Tibet about 15 to 20 days' journey north of Sikkim.

583. Does not it seem natural that in the process of time the salt of India, or even of England, might find its way to the north?—I think as soon as ever the communication is made easy from Calcutta to Darjeeling, the Indian or European made salt will be entirely used in the Himalayas; the natives prefer it very much to their own.

584. Is the wool of Tibet a valuable article?—Yes; it is the same shawl-wool that is woven into Cashmere shawls.

585. You mentioned gold, is not there a very considerable quantity of gold in Thibet?— According to report it must be another California.

586. I think that trade was first heard of with Tibet in the year 1774?—That is the first definite notice that I have met with, regarding the trade with Tibet.

587. A gentleman of the name of Bogle was sent over by Warren Hastings?—Yes; he was instructed to develop the trade between Tibet and Calcutta.

588. The next traveller was Mr. Turner?—Yes.

589. He was also sent by Warren Hastings, in the year 1783?—Yes, for the same purpose.

590. What does Mr. Turner say with regard to the production of gold in Tibet?—He says it is produced in great abundance in the alluvial soil of Tibet, and that the quantity is so great that during severe frost the ground opens, and the value of gold, from that simple cause, becomes very much diminished indeed; going down, I think, from 21 to nine.

591. Do you remember that the Abbé Huc, who, I believe, is the last traveller who has visited those places, mentions the quantity of gold produced?—I remember his mentioning gold as a product of Tibet, but not the particulars.

592. You yourself visited the frontiers of Tibet?—Yes.

593. Had we ever any trade with Tibet in former times?—From the report Mr. Bogle made in 1775 to the Government of India, the trade must have been a very considerable one in broadcloth, and he says the demand for it was still very great in his time.

594. Can you say whether articles of woollen manufacture are much valued or not by the Tibetans?—It was the first thing they asked me about; there was nothing they admired so much upon the frontier as the cloth of my garments.

595. You think that if they had the means of using British woollens, they would be glad to use them?—I am sure they would.

596. To what do you attribute the nonproduction of the gold which lies in such quantities under the soil of Tibet?—I speak from report; it was said that the Chinese discouraged the digging of that gold, and that the Lamas were required to represent that it was offensive to their deity that the land should be disturbed; that was the answer which both Dr. Campbell and I invariably got to repeated inquiries.

597. The Chinese exercise supreme authority through the intervention of the Lamas?—Yes, indirectly; but they also exercise independent authority, both civil and military; they have a military force at Lassa.

598. Is

598. Is tea largely consumed in Tibet?—It is a great article of consumpton.

599. And not only there, but on the whole range of country from Hindoo Kosh towards the frontier of China?—Yes, throughout Central Asia; and to a considerable extent in Siberia also.

600. And also in that region where the Abbé Huc began his travels?—Yes, both in Mongolia and Mantchuria.

601. And probably to the borders of the Great Forest which bounds South Siberia?—Yes, it is used there in immense abundance.

602. In what form is it used in Tibet?—It was always made up into a kind of soup, with salt, soda, butter and water.

603. Is it not sold in bricks?—Yes, it is always introduced and sold in the form of large bricks.

604. Is it a good tea or an inferior tea?—An exceedingly bad tea; it is reported to be the sweepings of the stores at the Chinese sea-ports.

605. Would the Tibetans and the inhabitants of Central Asia use the better Himalaya tea if they could get it?—There was nothing they prized so much as a present of a small packet of Assam or Chinese tea from myself.

606. Is the tea which they should be able to grow on the southern side of the Himalayas equal, or superior, or inferior, to the tea used in Tibet?—Infinitely superior to the Tibetan tea.

607. And the Tibetans could, of course, consume it in preference to the other tea, if they could get it?—I think they would consume the Assam tea in preference to Chinese, or Western Indian, or any other whatever.

608. I believe sections of brick tea are used as a species of currency in parts of Central Asia, are they not?—Very commonly.

609. Is that the case in Tibet?—Yes.

610. And also far away in Northern Tartary?—The whole way to the borders of Siberia.

611. The brick is cut into certain portions, and those portions represent the circulating medium?—I do not doubt it, though I never saw it cut; I have seen it used as a whole.

612. The Abbé Huc mentions its being cut?—I suppose it would be cut for small transactions.

613. The Chinese supply this tea to Tibet and Central Asia?—Yes.

614. From how great a distance does it come, to be supplied to the natives in this manner?—I do not know the distance from the seaboard of China to Lassa; but I was told that the whole of the tea that comes into Tibet is grown not far from the seaboard of China.

615. Therefore it comes 3,000 or 4,000 miles?—Yes, I think so; I speak at random, as to the distance and on the assumption that it is made where reported.

616. Are you of opinion that if we had any negotiations with China, which seem to be imminent now, it would be desirable to stipulate for the admission of our tea and the products of India and Britain generally into the Chinese dominions beyond the Himalayas?—Of very great importance indeed.

617. Do you not think that when the cultivation of tea has extended itself along the southern range of the Himalaya Mountains, it will be a very important article of trade to Central Asia?—Yes; the tea and the broadcloth would be of equal importance, and of the very greatest importance.

618. Not only Assam would come in for its share, but many other places?—Probably it would be the only tea that would be consumed in Eastern Tibet.

619. Is the frontier of Tibet closed against us?—Yes.

620. By what authority?—By the Chinese and Sikkim authorities.

621. Do they show a great jealousy of the English power extending itself in the direction of Central Asia?—I think that has hardly been tried, but I think they would present great obstacles to it.

622. Is there any ingress for commerce to Central Asia by way of Nepaul?—Yes, very considerable, as there is through Sikkim, and throughout the whole length of the Himalayas; but this commerce is at present confined to the native tribes.

623. What are our principal means of communicating with East Tibet?—We have no direct communications whatever.

624. Have any roads been made to the frontier of Tibet?—There are none so called but native paths.

J. D. Hooker, Esq., M. D., F. R. S.

20 April 1858.

625. Was it ever recommended that a road should be made up to the Tibet frontier?—I never heard of such recommendation in reference to the frontier of East Tibet.

626. Is it possible to make a road?—Not in the sense of our English coach roads, except at a very great expense, but it would be very easy to make the communication ten times better than it is now, and perfectly adapted to all the purposes of commerce.

627. Such a communication as would give, if not a highway, at least a bye-way to commerce?—Yes, and even a highway. I may mention, as a fact, that they have taken elephants the whole way from the plains of India across the Himalaya into Eastern Tibet; one of the passes seems to be a very easy one indeed.

628. Which is that?—A pass immediately to the eastward of Sikkim.

629. I believe we are very much indebted to Dr. Campbell's exertions in Sikkim for improving the trade and commerce of that place?—He appeared to be a most able and energetic man, who devoted himself entirely, and very successfully, to the development of the resources of the district.

630. You left Sikkim in 1850, did you not?—Yes.

631. And then where did you go?—I then went to the Khasia mountains, in Eastern Bengal; to the north east of Calcutta.

632. Did you go to any hill stations in that direction?—I went to the hill station of Churrah Poonjee.

633. What do you think of that climate?—It is the most rainy in the world.

634. How many inches of rain fall there in the year?—Five hundred fell the year I was there.

635. Sir *Erskine Perry.*] How many months is the rainy season?—It commences about the month of April and lasts till November.

636. *Chairman.*] Is that station a very unhealthy one?—No, not at all unhealthy; but it is far from healthy.

637. Is there not great uncertainty in speaking about the climates of India; did you or not find the climate near Silhet healthy, or otherwise?—It is remarkably healthy for a tropical climate.

638. And Cachar?—It was reported to me to be exceedingly healthy for a tropical climate.

639. Do you know it yourself?—Yes, I was there for a short time at several seasons.

640. Were you in Chittagong?—Yes; I visited that after leaving Cachar.

641. Is Chittagong healthy?—Not nearly so healthy, I was given to understand, as Cachar or Silhet.

642. Does not great uncertainty attend our knowledge of the healthiness of different parts of India; are we very well aware yet how far they would be useful as settlements for the British settlers?—I think our knowledge is very fairly complete of the climate of different parts of India, as far as my reading goes; the knowledge which we have of the districts which I visited was very correct.

643. We have not had sufficient experience to know whether not only settlers, but their descendants, can go on in Darjeeling, for instance; that was only settled in 1840?—We have not.

644. Of course in so short a time we can form no inferences with regard to how far it will suit the multiplication of the European race?—None, but there is no reason to doubt its suitability.

645. Do you know anything of the attempt to establish farms in the neighbourhood of Churrah Poonjee?—I heard a little about them, and I resided at one.

646. Can you give us any information about it?—The locality was an exceedingly bad one; the attempt was quite unsuccessful; it was about 30 miles from Churrah Poonjee; the farm was quite a failure.

647. Why?—The soil was exceedingly bad; it was a most injudiciously selected spot.

648. Do you think settlement could go on there under ordinary circumstances?—I think in many other parts there might be very good settlements.

649. Has much land been brought into cultivation in the neighbourhood of Silhet?—A great deal.

650. Has that been the case in the Gangetic Delta also?—I believe throughout the upper Gangetic Delta, including the Jheels, within the last 30 years a very great quantity of land has been brought into cultivation.

651. To what do you attribute that?—Entirely to the good rule of the East Indian Government in that quarter, and the general security of property.

652. To the repose that has been produced by a settled government in the country?—Yes.

653. Are our relations with the Rajah of Sikkim in a satisfactory state now, do you think?—I think not; I believe we are now on no terms with him at all.

654. Has the bargain with regard to Darjeeling been completed with the rajah?—Quite completed.

655. So far as Darjeeling extends, that is our own?—Yes, and it was very highly paid for.

656. We bought it?—Yes; we had the option of doing so by treaty, I believe; and we certainly paid a great deal more for it than it was worth to the rajah.

657. Are there any farms in the neighbourhood of Darjeeling?—There are small settlements where a little agriculture is carried on, but I do not think they would be called farms in this country.

658. Do you think that hill settlements generally may have a great effect in civilizing the hill tribes, and extending our commerce there?—I think they have had a great effect already, and that it will be increased.

659. You think that the good effects which you have observed in your experience in Darjeeling, may be extended along the lines of the Himalayas?—I think so.

660. There are only two principal valleys, I believe, along the southern range of the Himalayas, the valley of Nepaul, and the valley of Cashmere?—There are two or three large valleys in Nepaul, but we know nothing about them, except the great central valley, but even that is of limited extent.

661. Would British capital, if it were admitted into Nepaul, find a development there?—The valley of Nepaul is very low; it is only about 4,000 feet above the level of the sea.

662. I have been told that half the valley of Cashmere is almost in a state of depopulation; do you know whether that is the case?—I have heard that it is so.

663. And that is a very fine country for cultivation?—I think so, from what I have heard and read of it.

664. What is the soil of Darjeeling?—Chiefly a light sandy red clay, overlying mica schist, and covered with fine vegetable mould.

665. Are you aware of any obstacle that exists to Europeans settling in that part of the country where you have been?—No.

666. Mr. *Lowe.*] Do the Chinese exclude us absolutely from Thibet?—They all but exclude us from Tibet.

667. Would it not be impossible for you to go to Lassa?—Quite impossible; they did allow me to make a short cut in Tibet to avoid a long detour in our own territories.

668. That was as a particular favour?—Yes.

669. Is it the same with regard to Bhotan?—That country is in a much worse state; it belongs to independent petty rajahs.

670. It is a dangerous country to travel in?—A very dangerous country to travel in.

671. Did you go there?—Not at all, though I was for many months within a few miles of it.

672. What sort of a country is it?—Similar to Sikkim.

673. It is an available country if there was a good government?—Yes, in many parts; but as is the case with all these mountain countries, the proportion of land that is available for cultivation is exceedingly small.

674. Does it lie high?—There are elevations from 1,000 to 25,000 feet.

675. Mr. *Willoughby.*] Is land obtainable in Sikkim in any quantity?—I believe so; there is no restriction whatever as to the purchase of land.

676. To whom does the land belong?—To the British Government.

677. Of course, the whole of the land of India, in theory, belongs to the Government, but that is simply confined to the rent; there is always a proprietary lease from the Government, is there not; is the land absolutely the property of the Government, or is there another proprietor?—I believe it to be absolutely the property of the Government, except such portions as have been bought up by proprietors, which portions are comparatively exceedingly small.

678. You alluded to the summer being rainy; what is the average fall of rain there?—About 120 inches.

J. D. Hooker, Esq., M. D., F. R. S.

20 April 1858.

679. In the rainy months?—No; that is for the whole year; for the rainy months it is about 90 or 100 inches.

680. Mr. *Kinnaird.*] You stated that tea is a great object of barter; what do you think, with improved communications, good tea could be sold for there in opposition to their bad tea?—I am not able to form any estimate, because the tea in India has hitherto fetched an exceedingly high price, in consequence of the great consumption in India itself, so that I do not know the value that tea is likely to have when produced in abundance.

681. Is there any special duty upon the import of Chinese tea into India?—I do not know.

682. You stated that you still think that tea might be advantageously introduced as an article of commerce through India?—Very extensively and very advantageously.

683. You mentioned, with respect to the passes over into Tibet, one pass as being an easy pass; to what pass did you allude?—To a pass called the Pari Pass.

684. Did you make the journey yourself?—I did not, but I was for several months quite close to it.

685. What is the other pass?—There are three or four others in or close to Sikkim, some more difficult than others. I visited four of them.

686. What are the obstacles to a traveller going over; how is the frontier guarded?—The frontier is guarded by a militia. They do not draw a cordon, but they live in the villages close by, and they hear very soon of any Englishman or white person being there, and they are then upon the look-out to obstruct him.

687. The passes are sufficiently guarded to prevent our trade being introduced?—Quite, to British subjects.

688. Was any attempt made, while you were there, to revive the trade?—Dr. Campbell did all he could to revive it at Darjeeling, but he had no direct influence beyond Darjeeling.

689. Did the Government do any thing to strengthen his hands?—Not that I am aware of.

690. What are the feelings of the natives towards us?—They are very favourable indeed; they were exceedingly anxious that we should take the whole of Sikkim, and I believe now the rajah would be glad if we would do so; this would enable us to trade directly with Tibet.

691. Mr. *Villiers.*] Is the British trade only prohibited in Tibet, or is it all European trade?—All trade carried on by British subjects is prohibited.

692. Did you hear any thing of the contraband trade, smuggling?—Yes, a great deal.

693. It is not that the trade is prohibited, but that Englishmen are not allowed to go into the country, and pursue trade?—There is no objection to an Englishman at Darjeeling sending his goods, if he can get them sent, but no British subject is allowed to go the frontier and trade with Tibet.

694. Are there duties upon the frontier?—Yes.

695. Do they collect them for revenue?—Yes.

696. Is there any trade with Asiatics, or is there a prejudice against trades—No prejudice whatever; the Tibetans are most glad of the articles, and cannot exist without them; they trade with the Asiatics, that is to say, with the natives of the Himalayas who are not British subjects.

697. We trade with the Burmese, do we not?—Yes, but very little through the hills; chiefly through Siam, I suppose.

698. There is no impediment to our trade with Burmah?—Except that there is no part of any of our districts in the Himalayas that borders upon Burmah.

699. You say that there is a market for our goods in Tibet?—A very considerable one.

700. Did the Chinese conquer Tibet?—They took possession of the whole country.

701. Is it a military occupation?—It is a military occupation, quite; but I think that it was quietly done, without any great battle.

702. Are the officers very corrupt?—Very corrupt indeed; they take the salt over at night; smuggling is carried on to a very great extent. The hill rajahs trade for themselves with the Tibetans, and both their officers and their people smuggle.

703. Under

703. Under existing circumstances, is not our trade pushed as far as it will go?—No, I do not think so; it is scarcely pursued at all, for we have no access to the Tibet frontier.

704. What particular articles are they that are chiefly smuggled and consumed?—The great article is salt; that is smuggled in upon this side; and cloths and silks and tobacco and rice are smuggled into Tibet. Salt is smuggled from Tibet into Sikkim and into all the Himalayas upon this side of Tibet.

705. Do they prohibit the export?—No, they do not prohibit the export trade, but the Rajah of Sikkim levies a duty upon all salt that comes in to Sikkim, just as the Chinese levy a duty upon all that goes into Tibet.

706. What did we purchase?—A small portion of the territory of Sikkim bordering upon the plains.

707. Is that where you say a vast quantity of land was brought into cultivation in consequence of the better rule?—No, that was in Silhet and Cachar, and in the Gangetic delta.

708. What was the government before the time that you refer to?—I believe previously to the time that I refer to, part of Silhet, Cachar, Tipperah, &c. were under the Burmese empire, but I am not well informed on this subject.

709. Is it now under our rule?—It is now under our rule.

710. Is it since its coming into our rule that you have heard of the vast quantity of land coming into cultivation?—Yes; after the Burmese war these countries fell under our charge, and since then the cultivation has increased most enormously.

711. Are there great crops in that country?—Very great, and the rice crops are perhaps the most magnificent in all India.

712. You consider that the future development of that country is dependent upon better government?—I do not know that the government could be better. The people, as far as I can speak as a casual visitor, appeared to be exceedingly happy and comfortable.

713. How is it with respect to the adjoining country?—I have no doubt that if they could be brought under the same rule, their agriculture would be very much developed.

714. You do not say that Cashmere is in a very depressed state, do you?—I have heard that it is in a deplorable state.

715. It used to be a place of great activity?—I have heard so, but do not know what it was before, except from reading and hearsay. It is within the last six or eight years that I have heard of its lamentable condition.

716. Are we not answerable in some respect for the state in which it is?—Not directly.

717. Mr. *Mangles.*] Have you made inquiries about English settlement in the parts of the country that you have visited?—Only casually in the plains of India.

718. Were any impediments whatever, of any nature, thrown by the Government in the way of settlement?—I never heard of any, directly or indirectly. The great drawback in the plains is the difficulty of proving your legal title to the lands; but for that the Government is in no way answerable, in the sense of placing impediments.

719. What do you mean by the difficulty of proving the legal title?—The getting an indisputable legal title to the lands purchased.

720. Do you mean from the number of people who have a lien upon the land?—Yes, or who pretend they have.

721. You mean the number of tenures and under-tenures?—I have always understood that it is exceedingly difficult to get a legal title to the land, because of the corruptness of the native courts, not on account of the opposition of the British Government.

722. Is there a great extent of cultivation in Assam?—I have never been in Assam; I have always understood that Assam is a very improving country in every way; with regard to tea also; but that is a special subject.

723. Do you refer to the tea of the Assam Company, or to tea made by individuals?—To the tea of the Assam Company.

724. Is that sold in India largely?—Yes, it is sold in India largely, but much more largely in this country, to strengthen the Chinese teas, and it fetches a very high price indeed in our market; much higher than the Chinese, I am told.

725. Mr. *Gregson.*] You say that tea could be produced in an unlimited quantity?—Yes.

726. And of all qualities?—Yes.

J. D. Hooker, Esq., M. D., F. R. S.

20 April 1858.

727. Of the best qualities?—Yes, of the best qualities.

728. At what price could it be produced?—I understand that all the tea now drunk by Europeans in the Upper Provinces is made in the Upper Provinces, and I have heard that it averages 6*s.* 8*d.* a pound on the spot where made.

729. Is that prepared by the Chinese?—By the Chinese entirely, I believe.

730. Through English capital?—Yes, through English capital.

731. Mr. *Villiers.*] Can you say to what race the people in Tibet belong?—They are chiefly Mongolians.

Jovis, 22° die Aprilis, 1858.

MEMBERS PRESENT.

Mr. Baillie.	Mr. Lygon.
Mr. Campbell.	Mr. Mangles.
Mr. De Vere.	Mr. Danby Seymour.
Mr. William Ewart.	Mr. B. Smith.
Mr. Gregson.	Mr. William Vansittart.
Mr. Kinnaird.	Mr. Villiers.
Mr. Knight.	Mr. Willoughby.
Mr. Lowe.	

WILLIAM EWART, Esq., IN THE CHAIR.

Robert Baikie, Esq., M. D., called in; and Examined.

R. Baikie, Esq., M. D.

22 April 1858.

732. *Chairman.*] HOW long have you been in India?—Seventeen years.

733. In what part of India?—In the Madras Presidency.

734. With what portion of the Madras Presidency are you best acquainted?—With the Neilgherry Hills.

735. How long did you reside in the Neilgherry Hills?—Seven years.

736. Are you very familiar with the climate?—Yes.

737. Can you speak with reference to the question of the hill climate generally?—The most important point is the elevation; all elevations below 3,500 feet being extremely unhealthy, and subject to fever. We have some elevations of 3,500 feet that are tolerable.

738. With regard to the temperature of the hill stations, what do you conceive to be the best?—The Neilgherries again; the average mean temperature being 58 degrees.

739. What are the hygrometrical conditions which you think necessary?—That the quantity of rain shall not be too great; because all the hill stations on the line of the Western Ghauts have an exceedingly heavy monsoon, and are quite uninhabitable for from four to five months of the year.

740. What are the hygrometrical advantages in the Neilgherry Hills?—The comparative lightness of the monsoon. Although prolonged, the quantity of rain is very small; it is only about 44 inches in the year, against 120 on the Western Ghauts.

741. What is the fall of rain at Mahalabuleshwar?—Three hundred inches.

742. The maximum is at Silhet; that is about 500?—Yes; there is a place on the west coast of Africa where there is 600 inches.

743. The rain diminishes as you go eastward?—Yes; the difference is so great, that within 15 miles of Mahalabuleshwar there is only 57 inches against 300.

744. There is only a limited proportion of those hills which is suited for the residence of Europeans, is there?—A very limited proportion.

745. What are the reasons which make the proportion so small?—The reasons are, principally, the heavy fall of rain in the monsoon. And in all the western parts, during the monsoon, leeches prevail to such an extent that people cannot move about.

746. What is the extent, and the nature of the soil and surface of the Neilgherry Hills?

Hills?—The extent is between 700 and 800 square miles; 40 miles by about 15. Around the outer edge of the hills the soil is very good; in the interior, it is indifferent.

747. What is their adaptation as a locality for stationing European troops?—The very best in India, I should say, from their great facility of access, the mean rate of temperature, and their great healthiness for Europeans.

748. Do you think it would be a great advantage to have stations for European troops in the hills?—The very greatest possible advantage; you would have the troops there quite fresh and in perfect health; ready at a moment's notice to be sent to any part of the low country where they were required.

749. What difficulties are there in the way of a large number of settlers establishing themselves in southern India?—The absence of ground for cultivation; they would have nothing to do. If you restrict the question to settlers of the better class, the country is admirably adapted for them.

750. What are the main ranges of those hills in southern India?—Beginning at the south, there is a range near Dindigull which is very healthy.

751. Will you begin from the south?—Yes; next to Dindigull range are the Neilgherries; next to them, a little farther north, a range called the Shandamungalam Hills.

752. There are the Chavaroy Hills, are there not?—Yes.

753. Are they inhabitable by Europeans?—I am afraid there are none of them inhabitable, except for a portion of the year.

754. You draw a distinction between settlers of the better class and others?—The strongest possible in every point of view; settlers of the better class would be of great use, and find great advantage to themselves, which, as regards the lower orders, is out of the question.

755. Unless they were specially provided for, as in the case of soldiers?—Yes, under strict discipline. We had a small hospital on the Neilgherries, and we found it impossible to prevent the natives running about the hills, and doing themselves more harm than good.

756. Have you ever considered the question of colonisation for Europeans in the low countries of India?—Yes, that I have great doubts of again restricting it to the lower orders. The better class, no doubt, might settle with great advantage in the lower parts of India; Mysore, for instance.

757. You draw a distinction between the higher and lower classes?—Yes.

758. Do you think that persons well off in life could live in the hill districts, and that their race could be continued there?—I have no doubt the race could continue there; but whether it would deteriorate is a question we are not prepared to answer; we have not sufficient experience.

759. With regard to the table land of Mysore, have you been there?—Yes, a considerable time; several of the Madras houses of agency have coffee plantations there, which I believe are carried on with great success.

760. But those would not be available as dwelling places?—No; people would not be able to reside there more than a portion of the year.

761. Have any schools ever been established on the Neilgherries?—Yes, there are several excellent schools there for all classes; I have a book here which I published 20 years ago, and a second edition has just been issued in India, bringing up the information to the present day; the title of it is "The Neilgherries." There are several schools for young ladies, and there are several widow ladies, who take charge of children from an early age; and in connection with the chaplaincy, there is a boys' school for Europeans and East Indians, and a girls' school for daughters of the same class, and a mission chapel for the native Christians; in short, the establishment is altogether very complete.

762. Have those schools increased much; have they a much larger number of scholars than formerly?—I must speak of that from hearsay; I believe they have.

763. Can you give us any further information with regard to the Neilgherries?—In addition to other advantages, there are three very distinct climates on the Neilgherries at different elevations, so that people of the better class may escape the monsoon in the rainy season entirely. The range is divided in the middle; the south-west monsoon prevails on one side, and the north-east on the other, so you may absolutely escape the rainy season entirely if you like.

764. What is the cultivation of the Neilgherries?—Coffee to a small extent, I think, was tried, but did not succeed very well; the native cultivation is that of

R. Baikie, Esq., M. D.

22 April 1858.

the coarser grains entirely; millet and barley, and a plant called "love lies bleeding," which is cultivated to a very great extent; it is an excellent grain for human food.

765. The Committee have understood that there might be moral objections to the bringing up of families of European children on the hill districts, in consequence of their communication with the natives?—Yes; until the population is so large that you could substitute European servants for native servants, which would be very difficult, there will be deterioration.

766. How far would the establishment of railways affect settlement in the hill districts?—It would be a great advantage, for it would bring you within 10 miles of the foot of the hills.

767. What is the state of the roads in that part of India?—They are very good.

768. Are there many?—There are three excellent roads up to the hills; one from the west, one from the north, and one from the south; they are all excellent roads.

769. What is the state of the roads in the plains?—Very good in that particular quarter; all the way from Madras there is an excellent road quite to the foot of the hills, at least what we consider a good road in India.

770. Have those roads been made for military or commercial purposes?—Partly both; in Salem for commercial purposes.

771. Do you think that the climate may be found suitable for the European constitution, as regards the Neilgherries?—Yes.

772. Do you think it is favourable?—Perfectly.

773. For the duration and continuance of the race is it favourable; is that a question solved?—Not in Madras; nothing but time can solve that.

774. Have you ever been acquainted with families that have lasted three generations?—No, the Neilgherries were only discovered in 1819.

775. Mr. *Lowe*.] What is the height of the Neilgherries?—Seven thousand three hundred and sixty feet above the level of the sea.

776. Is there any climate in Europe that you could assimilate it to?—No one climate.

777. Can you describe it by a composition of climates?—From the tables of temperature on the hills, it will appear that the mean temperature of the year, the mean maximum and the mean minimum, bear about the same relation to each other as in England, but are about 10 degrees higher, while the daily range is somewhat less. The highest observed temperature, and the lowest, in England, are greatly above and below, respectively, the corresponding points on the Neilgherries; that is to say, the extremes in England are greater. The power of the sun's rays, another most important point, is considerably less in the Neilgherries than in England.

778. Is there any European climate by which you could describe them; how is the summer on the Neilgherries?—We have little or no summer; the sky is completely covered by clouds at that time.

779. You say these places are suitable for settlers of the better class; are there any obstacles in the way of their settling there?—None, that I am aware of.

780. None arising from the Government?—None; they encourage settlement in every possible point of view.

781. No obstacles from the police?—None whatever.

782. Or from the judicial system?—None whatever.

783. Or from the land tenure?—I should think not; there is no difficulty in getting grants to any extent there; always with reference to the rights of the natives.

784. Mr. *Willoughby*.] What advantages do the hills afford in India to settlers of the better class?—The advantages are, the perfect adaptation to the European constitution, that they could reside there the whole year round; that children would have the advantage of schools, and of being brought up in a European climate; while the settlers themselves, if engaged in cultivating any of the great articles of Indian produce in the neighbouring low country, would be able to descend whenever it suited their affairs to do so.

785. You have not in your observations been referring chiefly to the products on the spot?—There are none. I do not know what things the settlers could cultivate on the spot in which they would not be much undersold by the natives. The wages of the natives range from 1 ½ *d.* to 4 ½ *d.* a day; and I do not think that

that any European could compete with men that can work upon that, and support themselves.

786. To whom does the land on the Neilgherries belong?—It is considered to belong to the Government.

787. Are there no parties possessing a right of occupancy?—Yes, certainly; the aboriginal race of the hills, called the Todahs, are considered to hold a proprietary right in the soil; and they receive a quit-rent from all other natives there established, as also from the Government.

788. Was it your duty to collect the Government revenue?—No; my duties were purely medical.

789. Do not the approaches to the Neilgherry Hills pass through an unhealthy country?—On all sides they do; but the belt of the unhealthy country is so narrow on the south side that it is only six miles; on the other side it is wider.

790. Mr. *Villiers.*] You said that there were no obstacles presented in any way to the settlement of people on the Neilgherry Hills; do you state that after inquiring into the matter, and satisfying yourself of the fact?—Yes; when I was in India, 16 years ago, there were no obstacles. It is 14 years since I left India; but I have not been in the Neilgherries since 1842.

791. And you said that they had only attracted the attention of the English Government in 1819?—I believe so.

792. Did the Government seize upon the territory?—No.

793. You say it belongs to the Government?—In the sense that all land in India is supposed to belong to the Government; sircar it is called.

794. It is land which they have appropriated?—They have paid the natives a quit-rent for a portion of the ground, which has been occupied as a cantonment; it was regularly sold to us.

795. It was occupied then for military purposes at first?—As a sanatary station at first.

796. For soldiers?—For officers more properly.

797. Then the salubrity of the place had been observed by the Government, and it was selected as a station for officers and servants requiring their health to be restored?—Yes.

798. You stated that the roads were good from every quarter, communicating with the hills?—Excellent.

799. What communication do you speak of?—From Madras, from Bangalore, from Calicut, and from Coimbatore.

800. When were those roads made?—They have been made at various periods.

801. Do you speak of when you were there; were they then finished?—Yes, they were then in very good order.

802. Were they made by the Government?—They were made by the Government.

803. Are they available for commercial purposes?—Perfectly so.

804. You state that the neighbourhood of these hills is capable of producing various things?—The top of the range of the Neilgherries is capable of producing the coarsest grains.

805. Have you known any settlers go there?—Yes, there were a few there when I was there.

806. Can you tell us if they had succeeded?—I think there was a Mr. Groves, who cultivated coffee then with some success, and one or two people tried silkworms.

807. Can you tell us anything about the success attending any experiments that were made?—No; I can only speak from hearsay upon that part of the subject.

808. Probably from no experiment that has been made; can you tell us anything about the products?—No, except to a very small extent, when I was there.

809. You cannot account for the fact that no more settlers have gone there?—Except that I presume they found they could not cultivate the products to any extent with success.

810. Not with any commercial profit?—Not with any commercial profit.

811. Had you any practical experience as a medical man there?—Yes, I was there seven years.

812. Did you see Europeans there yourself?—Yes.

813. Did they recover their health?—Yes; I had 630 officers in charge when I was there, and about 300 soldiers; the large majority of the officers recovered; the soldiers did not succeed so well.

R. Baikie, Esq., M. D.

22 April 1858.

814. Why was that?—The soldiers were under no proper control.

815. They were merely sent as invalids?—Yes; and they were not under proper discipline; there was no means of restricting them to their own part of the hills; they used to go into the bazaar and get drunk, and they came into constant collision with the natives.

816. Was there nobody in command?—There was a gentleman in command, but he did not live upon the spot.

817. Had any of those people families?—No; there has been a wing of a European regiment for some years upon the hills, and I understand they have succeeded perfectly.

818. Mr. *W. Vansittart.*] You say you were 17 years in the Madras Presidency?—Yes.

819. Do you know any thing of Ganjam?—Yes, by reputation.

820. Was not there a colony of Portuguese there?—Yes, in former days, but Ganjam became so exceedingly unhealthy that it was given up as a station 40 years ago.

821. Do you know any thing about the condition of the Portuguese colonists there?—No; I presume they have become amalgamated with the natives, but I cannot speak positively.

822. The Madras railway is constructing a branch railway?—Yes, and it already reaches the base of the ghauts, about 90 miles from Madras.

823. Mr. *Villiers.*] You said that the soldiers came into constant collision with the natives; was that upon any question of the rights of the natives to the lands?—No; it was simply as Europeans of the lower class generally do come into collision wherever they are allowed to mix freely.

824. Had the Government any right to take the land from the natives?—Certainly not.

825. Therefore they could not do any thing they pleased with the land?—They might.

826. But not justly?—Not justly, and they have acknowledged the rights of the natives quite distinctly.

827. Mr. *Mangles.*] Is there not waste land there, belonging to the Government, not appropriated?—No; the original inhabitants of the hills, a very peculiar race, are completely nomadic; they shift about from one portion of the hills to another, with their flocks, and if they were much restricted they would perish for want of the means of feeding their flocks.

828. Has the Government allowed that the whole of the property belongs to the Todahs?—Yes; all they have taken they pay an annual quitrent to the Todahs for.

829. Have you seen the descendants of Portuguese with high names in India?—Yes.

830. Had not they very much degenerated?—Dreadfully; they are worse than the natives themselves, both physically and morally; I consider them very inferior to the natives themselves.

831. Do you suppose the Portuguese are pure European blood, or what they call Creoles?—At Goa, no doubt, pure European blood.

832. Have those very much degenerated?—Yes, very greatly.

833. You do not believe it is possible for the European race to be propagated in India upon the plains without degeneration?—Decidedly not in the plains; my belief is, that they would die out in the third generation.

834. In the Neilgherries do you think the race might be continued?—I think it is possible.

835. Without degeneration?—That I doubt; I should be disposed to say, speaking as a medical man, that there are not sufficient extremes upon the Neilgherries in point of climate.

836. What articles of commercial value do you think might be raised by European settlers of capital in the Neilgherries?—Nothing in the Neilgherries themselves; I do not think they could compete with the natives.

837. I mean as capitalists employing the labour of the natives?—I do not think they could raise anything with advantage upon the hills except a small quantity of coffee, but that could be grown to much greater advantage in Mysore, not far off.

838. Is the climate in that part of Mysore which is fit for the cultivation of coffee suitable for European residents?—Yes, for a great portion of the year Europeans might reside there; it is a fine climate.

839. Is it on the table land of Mysore?—Yes, on the west; coffee requires a great degree of shelter; you cannot cultivate it in the open plain; you must have shelter for it.

840. Were you acquainted with the officers employed at Mysore?—Yes.

841. Do you know Colonel Onslow?—No, I do not recollect him; I knew almost all the others except him.

842. Mr. *Gregson.*] Are there any diseases peculiar to the Neilgherry Hills?—None whatever.

843. Have you seen any old persons who have resided there permanently?—No; we have only known them since the year 1819; the first settlement was made there in 1825.

844. You speak of growing coffee, and you say it requires shelter; could not coffee be grown upon those hills?—Yes, on the Neilgherries most certainly; there it would not require shelter, because the sun is not sufficiently powerful on the hills; but in the low country coffee requires a considerable degree of shelter.

845. How many years are the coffee plants before they bear?—I think they are about three years before they bear.

William Theobald, Esq., called in; and Examined.

846. YOU are a barrister, I believe?—I am.

847. Has your experience in India been extensive?—I have been 14 years in India, and was practising as a barrister the whole time, but I had great opportunities of becoming acquainted with the country and the people. I left Calcutta at the end of 1856, on behalf of the British and Christian inhabitants, meaning by Christian the East Indian inhabitants, in consequence of the alarm into which they had been put by the apparent determination of the Government to pass measures which involved the enactment of what we have always called the Black Acts; measures for the abolition of the supreme court; and for the enactment of the Penal code, without those alterations which we, as British people, thought important; and measures which also would have had the effect of converting Calcutta from what it has hitherto been, a Crown settlement, into a Company's zillah; and my object was of course to communicate our objections to the Government. But it was not merely a negative mission, but also to press on the authorities here the adoption of reforms which we have long been asking for.

848. You appear as the agent of a considerable body of planters and merchants in Calcutta and Lower Bengal?—Yes, I do.

849. How long have you resided in India?—Fourteen years.

850. Have you become acquainted with the interests and wishes of the British in India by other means besides your instructions?—Yes; about seven years ago, I think, the planters and merchants who were agents and proprietors of concerns in the Mofussil, determined to establish an association to represent their complaints as to the local administrations, and their wishes as to reforms, and I was appointed the secretary of that association from the first; and that has led to my having a great deal of correspondence and personal acquaintance also with our people in the country, and I have also had a great deal of correspondence with the Government.

851. How long is it since you were appointed secretary?—Since 1854. I was appointed by a popular election, in fact.

852. You have had ample means of being acquainted with the interests and wishes of the British in India by other means besides your instructions?—Yes; those are the means, as the secretary of that society, and through the acquaintance which I have made with our people in the interior; my residence has been in Calcutta.

853. How are the Europeans distributed in the interior, and what are their pursuits and occupations generally?—There are Europeans in all the great towns in the Lower Provinces; and the Europeans are distributed throughout the interior, especially in those parts adapted to the cultivation of indigo, as indigo planters; and they carry on a very considerable commerce in the produce of the country as capitalists, making advances upon, and purchasing the produce; consequently they are found all over Lower Bengal. I speak entirely of Lower Bengal.

854. Will you state to the Committee the exact locality of which you speak?—In India the technical name of that part is the Lower Provinces of Bengal; I think

W. Theobald, Esq.

22 April 1858.

think that is the official designation; and it includes the whole of Bengal proper, and the part of the country which used to be called Behar; it is said to have a population of about 40,000,000, but that has never been satisfactorily ascertained. I believe that the territory is as large as France, and is the most fertile of all India, and the nearest to the great port of export.

855. You do not include Tirhoot?—Yes, and Tirhoot; that was part of Behar.

856. What are the pursuits and occupations generally of the settlers there?—They are indigo planters in the country parts; in the towns they are agents connected with the Calcutta capitalists and merchants, and produce dealers; in fact, they have every occupation which a European as a capitalist, and a man of intelligence knowing the country, can have.

857. Have the Europeans increased in number since you have been in India?—They have increased, certainly, because railroads and steam communications have increased, and many other things which originate in European enterprise, and require European management; that class of persons has certainly very greatly increased, but I am informed, and I believe it is true, and the general opinion certainly is, that Europeans in the interior connected with agriculture, and the interchange of local products, have not increased in number, and that that class is declining in numbers. The proprietors of large concerns, I understand, find a difficulty in getting the assistance of respectable Europeans; first-class young men are required for the management of these concerns; there is a difficulty in getting first-class Europeans for employment in the country, and that is an increasing difficulty.

858. Have you observed the effect of the climate on Europeans in that part of India?—The Bengal climate is a very fine climate. The doctors and some other people would make us afraid of it; it is hot, and the Upper Provinces are hotter still; but I think we have a very comfortable existence on the whole there, and I should say that the planters and people who live in the interior, from what I have seen of them, and we have the opportunity of seeing pretty nearly all of them once a year, are a very healthy and hearty set of people; and, without giving a medical judgment on the matter, I should say that Bengal would bear a comparison with countries in the same latitude in every part of the world. We do not wish to be taken care of in that respect; there are none of those small aches and pains, and none of the chronic complaints, which keep people in this country so much in the doctor's hands; no doubt the fever and cholera, and some other diseases, are rapid, but we are comparatively free from small ailments, and generally enjoy a very fair health. There is the question, of course, of the general deterioration of health, and the more rapid consumption of life, but that does not appear to be any difficulty with those who are disposed to go abroad.

859. Have not the European inhabitants the advantage of a change of air?—Yes.

860. To what place do they generally resort for that purpose?—The European inhabitants of Calcutta, when they have their regular holidays once a year, generally take a sea voyage; Darjeeling has been too far and too inaccessible for them. A visit to Darjeeling usually is for the repair of a serious injury to health; the Neilgherries now are open to them. There is a railroad open for the greater part of the way to the Neilgherries, and they are becoming a very favourite resort; but, generally, it is a sea voyage that people resort to whose health is not seriously impaired, and Darjeeling.

861. They combine the sea voyage with an expedition to the Neilgherries?—Yes, that is the case. We now have steamers twice a month to Hong Kong and the northern ports, and consequently there is a facility for sea voyages, which used not to be the case: and a trip to Europe is very easy now.

862. From the facilities of access to the hills and the greater facilities for sea voyages, Europeans now enjoy advantages which they never possessed in former times?—Yes, and which ought to remove many of the prejudices against India.

863. In respect to communication by sea as well as ready access to the hills, is it not probable that India will become a much more habitable place than it has been hitherto?—No doubt.

864. Do not persons with whom you are familiar in Bengal much more frequently visit England than was the case in former times?—Yes; the East India Company has modified its rules, and given the official class opportunities of doing so; and as for the non-officials, the Europeans can visit this country; the indigo

indigo planters can come over after the season, making the voyage to England to see their principals. The only thing we want is, that the monopoly which one great company has of the transit to England should be broken down.

865. You refer to the Peninsular and Oriental Steam Navigation Company?—I do; we now pay 100 guineas for a passage. There is a longer voyage to Australia, for which people pay only 60*l.* to 65*l.*

866. Do not you think that facilities of access to the healthy parts of India, and the facilities of returning to England by the superior speed of vessels, will still further increase hereafter, and that India will become much more connected with England than it is now?—Yes; we all of us have our children at home for education, and we should have them out earlier; and it would lead to a great increase of European settlement, supposing other circumstances to be favourable.

867. Increasing communication and increasing commerce, therefore, will greatly increase the hold of England upon India?—Yes, I think so.

868. Has any plan for European colonization ever been formed in India?—I am not aware of any plan for European colonization ever having been formed, but there was a plan for East Indian colonization in the Bombay Presidency, patronised by Sir John Malcolm; the East Indians formed a society called the East Indian Amelioration Society.

869. What was the date of the formation of that society?—I think it was in 1830, or shortly before; the object was to transfer the surplus population of the East Indian community from the town to the country, and with a view of their learning agriculture and becoming farmers. Sir John Malcolm, I believe, assisted their object to the full extent of his power; I fancy he granted some buildings belonging to the Government, and they wanted some land to settle upon. The Court of Directors disapproved of the project, and would not grant the land, I understand, on the terms which were necessary for the project of colonization, and I believe it fell to the ground: that was at Phoolshshair, a little above Poonah. I am not aware of any other scheme for colonization in India.

870. Were any objections made to that scheme of settlement?—I understand (deriving all my information from Sir John Malcolm's book on the Government of India) that the Court of Directors thought it would create a body of landlords, and they seem to have considered that the bare enunciation of that proposition was a sufficient objection. Sir John Malcolm met that by adverting to the Merchant Tailors' Company in England which had made very good landlords, and had been very useful in promoting colonization. That was, I understand, the state of the argument. I have taken the number of the page of Sir John Malcolm's book, in which the information may be found, and from which alone I have derived my information. It is Sir John Malcolm's book on the Government of India, p. 87, and Appendix (A.) p. 65. I am not aware of any other scheme for colonization. Indeed, of course, until 1833, there could be no European colonization, because Europeans were not permitted to enter without licence, and that of course only in very small numbers.

871. Are there any legal obstacles to the settlement of Europeans in India in the present day?—That is a question which is not entirely free from doubt. My own opinion on the question is, that all legislative restrictions have been removed by Act IV. of 1837, of the Indian Legislature. The case stands thus: that Act permits any of Her Majesty's subjects to hold land in any part of the territories of the East India Company in the largest possible terms. But after that Act was passed, the Indian penal code appeared; and in the code there was a chapter, "On illegal entrance into the territories of the East India Company," providing penalties for illegal entrance into the territories of the East India Company, and that chapter proceeded upon the supposition that the 82d section of the Act of 1833 was still in force, and that section prohibited Europeans from entering without licence provinces acquired during the present century. Therefore it appeared that the authors of the penal code who, by the way, were also the authors of Act IV., were of opinion that Act IV. had not repealed the prohibition, and so the doubt arises, and the British and Christian inhabitants of Bengal, in 1853, petitioned for its repeal. My opinion is that there are no legislative restrictions, but that is the doubt which arises upon the view which, presumably, Mr. Macaulay and the Indian Law Commissioners must have taken; for if that Act had repealed the prohibition of the Act of Parliament, there would have been nothing upon which the chapter of the penal code could have operated.

872. Have any practical evils arisen from that remnant of restriction which seems

W. Theobald, Esq.

22 April 1858.

seems to be preserved by the Act of 1833?—There was the case of Colonel Ouseley, who was removed by Mr. Plowden, the Commissioner of Nagpore, but whether that took place under the authority of the Act of Parliament, or from personal objections and general views of policy respecting Colonel Ouseley upon that occasion I do not know. That case was decided after I left by the Supreme Court. Colonel Ouseley went as agent of the Ranees of Nagpore, for the purpose of protecting them against the East India Company, and he was removed by the Commissioner, under the authority of Lord Dalhousie, but on what ground of law or policy I am not acquainted. The Supreme Court gave Colonel Ouseley a verdict and damages. I might also mention that I believe the East India Company does prohibit its own civil servants from holding land, on a policy which, probably, this Committee might think worth considering, because they are an important body of persons; they are wealthy and well connected, and they are not, I understand (I speak not, perhaps, on the best information), allowed to hold land while in office.

873. Can you state to the Committee the law or regulation which prevents their holding land?—No, I cannot. I think it must be in consequence of the views of the Court of Directors of the general interest of the service of the country: probably it was to check abuse. I am not acquainted with it.

874. You cannot lay your finger upon the law enacting that restriction?—No; and I doubt whether it is under a law. I think it is a general regulation for the service.

875. There is no question as to the existence of the restriction?—I believe not.

876. Supposing the legislative restriction which you have just referred to still to be in force, would it apply to East Indians and to the children of European parents born in India?—I think not; because East Indians and the children of European parents born in India are natives of India. My son, who was born in India, is a native of India as much as an Asiatic. Such persons never required a licence to reside in India, I understand; and, consequently, the restrictions of the Act of Parliament never could have applied to them. There was the case of Mr. Dickens, of the Calcutta bar, who came out without a licence because he was born in India, and the President of the Board of Control held that he was entitled to do so.

877. Can you give the Committee the result of your experience respecting the settlement of Europeans in India?—If by settlement is meant the migration, either with or without Government aid, of large numbers of persons from this country to India, the idea, I should say, is not a practical one; but I think that something like colonies ought to be established for the retirement of our invalids, and other classes of British soldiers in India; and a well-constituted colony would, I think, attract a great many East Indians and Europeans; but I have no plan. With respect to Europeans generally, what they want is to have the country put into such a state as will permit of their penetrating it in all directions; for this purpose they want roads and railroads, and improved internal communications; and they require such an administration as would afford them tolerable security for their persons and property, if they settle; that is not the character of the present administration. It is surely not too much to enforce on the Indian Government such an administration; and if that were gained, the spirit of enterprise would carry Europeans through the length and breadth of the land; they would find out the places where their settlement would be advantageous to themselves, and must be so to the natives, because they must employ native labour, the value of which they raise wherever they go; they carry capital, extend trade, introduce new ideas amongst the people, and teach them how to improve.

878. Are you acquainted with the mineral parts of Bengal; where are they, and what are the minerals which they contain?—Yes; accidental circumstances brought the question of the mineral parts of Bengal very much under my consideration; it was from the circumstance of my being early a supporter of the project for railways in India; I therefore do know what are the mineral parts. There is coal in Beerbhoom; that is commonly called the Burdwan coal. There is coal in Palamow, a little further to the north-west; there is coal in Hazaarabagh, and also in Silhet. There is iron in Beerbhoom, contiguous with the coal, in very large quantities; probably an inexhaustible stock of iron, in large blocks, and of very great richness; and there is iron in Palamow. There is copper in Beerbhoom; also in Singbhoom, Hazaarabagh, and in various parts of the Himalayas; about the latter I know very little. There is silver in the Beerbhoom jungles, and there is lime-

stone

stone in Silhet, and limestone, I believe, in Palamow; and I fancy there is limestone in some other parts. I believe, if properly explored, it is a very rich mineral country.

879. The lime may be brought to bear upon the iron and coal by the railways?—The limestone is not contiguous to the iron; and I believe the opinion, according to the calculations of the cost, is that the Silhet limestone is too far off for the purpose of working the iron. But there is also limestone in Rottasgur, which is just across the Soane, on the Grand Trunk road, and I should think not above 160 miles from the iron, certainly; whether it can be brought near the iron, I do not know, but it is very rich ore. I was told by an Englishman, accustomed to smelting works, that there was at least 40 per cent. of iron. It is called, I think, the grey-stone iron, in England. You see it cropping out in the Grand Trunk road.

880. You have not mentioned the coal of Assam, I think?—I am not acquainted with the coal of Assam; there is coal in Assam, I know.

881. Is it not of a very good quality?—I believe it is a very good coal. The only coal good enough for sea-going steamers, I understand, is the Silhet coal; that is the most distant and the least accessible.

882. Is that like the Welsh or anthracite coal?—I believe it is; it is worked on a small scale, but it is too expensive to be brought to Calcutta without better modes of conveyance. I imagine that the Eastern Bengal Railway will open a trade in that coal; the coal is worked by Europeans.

883. What is the present state of the development of the mineral resources, and what are the mining concerns in the hands of the Europeans engaged in them?—At the Damoodah coalfield, the Burdwan coal, there are five or six collieries; and the coal of Hazaarabagh has been worked, but I think that the working of the colliery at Hazaarabagh was stopped for want of a road. I knew the parties who proposed to work the coal in Hazaarabagh; they represented the want of a road to the Government, and an engineer officer was put on to make a road, but it was not carried on. The Silhet coal is worked to the extent to which the demand for it at its high price goes. The Palamow coal is, I believe, not worked; I fancy there is a deficiency of carriage, which probably railways also will partially remove.

884. Have those mineral resources been developed by European settlers, and would they have been developed without the existence of European settlers?—In the Damoodah coalfield there is one native proprietor, but the coal there was discovered by a European. The natives were not aware of the wealth that they had in that great field. The first collieries were established by Europeans. Out of five or six collieries, there is one native proprietor. The Silhet coal is worked by Europeans, and the Hazaarabagh coal was worked by Europeans.

885. In fact, the capital and skill and science, we may suppose, are generally European, and without them those resources would not have been developed?—Certainly; the natives very willingly join Europeans in those speculations and operations, but they are not the managers in the first instance. With respect to copper, which is a most important mineral, the imports from Europe amount to something like 300,000*l.* a year. The copper has only been raised by rude means and in small quantities, by native copper workers. There is a very large consumption of copper in the country for drinking vessels, and other vessels. Of course the imported copper supplies that to a very great extent, but they do raise copper in Singhboom; I know that, because I have myself seen specimens, and samples of the regulus which were sent to Swansea to be tested, and the samples were very valuable; I think the best was 37*l.* a ton; there were four samples, and the most inferior one was worth 34*l.* a ton. The copper in Beerbhoom has not been worked at all, but I know a highly scientific gentleman acquainted with the existence of that copper, and he told me that he had been, as I understood him, in negotiation with the Government for working that copper, but that he could not get any terms that he thought sufficient. I do not put that forward as a reproach to the Government, because I do not know what the terms were, but that so I was told.

886. You have mentioned that there is only a small number of Europeans settled in the interior; how do you account for that fact?—I believe it is owing to a great variety of causes, some of which operate in one part, and some in another part, and some in all parts of India. The people who go to India are capitalists and of the middle classes, and they require to be tolerably secure in their persons and property. In some parts they cannot get a footing at all as capitalists, in consequence of the land revenue system in those parts; the land revenue system in other parts does not exclude them; but where, as in Lower Bengal, the land

W. Theobald, Esq.

22 April 1858.

revenue system is more favourable for capitalists, and where, consequently, Europeans have settled, their position is one of danger and difficulty; danger to their capital from many faults in the revenue system, which still admits of their settlement, and danger both to their persons and property in consequence of the bad state of the local administrations generally. Another cause is the want of proper laws, among others, a *lex loci*, for Europeans and East Indians; and I must add to those causes the constant apprehension in which, for many years past, they have been kept, of being put in a worse condition by the repeated proposal of measures, such as the late Affray Bill, such as the Black Acts, and such as many parts of Mr. Macaulay's Penal Code, which I think would be much reprobated by all classes in England; and our position is often made very disagreeable by the conduct of the ruling branch of the civil service towards us. And lastly, there is the want of inter-communications, such as roads, railroads, &c., and the want of improvements to facilitate travel and traffic. I should be very glad to be allowed to give an explanation of those causes in detail.

887. To what do you refer when you speak about the land tenure preventing Europeans from getting settlements in some parts of India?—I refer to the Ryotwarry Settlement, as it is called, a term very well known in this country; under that tenure the Government is the immediate landlord, and in its transactions with the ryots and cultivators is represented by an army of what I should call Revenue Police, who, I think, it sufficiently appears now by the Madras torture report, are men without any principle whatever. I am now referring to the Madras territory, and I believe that the same revenue settlement, that is the Ryotwarry Settlement, exists to a great extent in the Bombay Presidency; and where that is the state of things, that is, with the Government as the landlord, and being represented by such a revenue police as exists there, an army of something like 60,000, I apprehend, it is self-evident that, with a pauperised tenantry, the capitalist cannot possibly get a footing; and he cannot get a footing for another reason, that the settlement is an exclusive settlement, and does not involve any plan for introducing a class of landlords intermediate to the Government. I state that as the conclusion of my own mind as to that settlement.

888. Would your answer be represented by the opinion that the frequent interposition of the Government agents, between the producer and the consumer, is productive of much evil?—By the interposition of the existing class that is the case. The existing class is a revenue police; large numbers of them are very ill-paid, and from what we have lately known through official reports, they are a very unprincipled, rapacious class of men, who pauperise the population; and I think it is stated in Mr. Kay's book, that the Government are of opinion that they cannot extend cultivation any further (I do not know whether they admit, under that settlement); that no more land can be brought into cultivation, although there are large tracts at present uninhabited, and large numbers of persons are constantly migrating eastward from the Coromandel Coast, where this settlement prevails, for employment elsewhere.

889. Where do they go to?—When I was down in the Straits Settlements I found that there was a regular migration of certain classes, though not in large numbers, who came to better their condition; they were sometimes cultivators of mixed classes.

890. Do you ascribe that to the Revenue system?—That would be the conclusion in my own mind; it excludes the capitalist and prevents that expansion of prosperity which the introduction of capital always leads to.

891. What is the nature of the Revenue Settlement that you refer to in Lower Bengal, and what faults do you impute to it?—The settlement is known by the name of the Permanent Settlement. It is also called the Cornwallis Settlement, because it was established by Lord Cornwallis under the authority of an Act of Parliament, and with the full consent, and, after great consideration of the Court of Directors here, it was established by Lord Cornwallis. I mention that, because I have seen publications in which it appears to have been imputed to Lord Cornwallis as rather an arbitrary act, arising out of a prejudice of that nobleman for the institution of great landlords; but I believe that was the origin of the Permanent Settlement; it was Lord Cornwallis acting on the views of the first-class statesmen of that day; and it was called the Permanent Settlement, because the settlement already established had been only for 10 years; it was a settlement already existing, which was converted from a settlement for a term into a settlement for perpetuity. Then, with reference to the faults of that settlement,

ment, the Government imposed very strong terms on the zemindars for the purpose of realising its revenue, such as if there was any default in the payment of the revenue, what we should call in England a statutory execution might immediately issue; that is, the mere fact of default entitled the collector immediately to sell the zemindary. That was done, and it had the effect, I believe, of sweeping away the zemindars, who were the proprietors, and most of the great families, who were the zemindars when that settlement was established. I think that proves that it was, as respects the terms of the settlement and the amount of the payment of the revenue, not a particularly favourable settlement. Then the condition of the settlement to which I adverted, and to which I should refer as a fault in the settlement prejudicial to us, was this, that, whenever an estate had to be sold for default of the payment of revenue, all under-tenures created subsequently to the date of the original settlement, that is, all under-tenures created after 1793, were swept away by the fact of the forfeiture; and that affects us in this way: we take parts of a zemindary, perhaps on a lease or under some other tenure, such as a putnee tenure; we become perpetual leaseholders of a part of the zemindary, and that interest is forfeited by the mere fact of the estate being sold, free from that tenure, free from our lease; our lease is cancelled by the act of sale, and as the tenant or putnee holder has not necessarily, or had not originally notice of the forfeiture, his property is lost, without his being at all aware of it. Since I have been in India there has been an improvement in that respect.

892. Does that grievance exist now?—To a much less extent than it did formerly, but it is still a very great grievance, and it has been under the consideration of the Government of India.

893. The sub-renter is affected by the default of the superior landholder, without the privity of the sub-tenant to it?—Yes, he may have given 10,000 *l.* for a valuable lease, and also be under an engagement to pay a portion of the Government revenue accruing in respect of that lease, and that is swept away. By the simple act of the non-payment of the zemindar, the estate becomes liable to be sold; it is accordingly sold peremptorily. It is a forfeiture which cannot be appealed against. The zemindar is not allowed to become the purchaser. The zemindary is sold, and, by the terms of the Settlement, it is sold, to use the language of the Regulation or the law, "free from all encumbrances created subsequent to the date of the Settlement," all encumbrances created since 1793. And under that word "encumbrance" they include all kinds of leases, all kinds of subordinate interests created subsequently to 1793; and those interests include the interests which have been obtained by Europeans for valuable considerations, the consideration being sometimes a bonus, that is a premium; the consideration being sometimes also an enhanced rent, because the zemindar pays the rent, and the leaseholder pays what he engages as rent to the zemindar, and not to the Government. That is quite a recognised inconvenience; and Mr. John Peter Grant, a man of very distinguished ability undoubtedly, brought in a Bill for the purpose of removing this inconvenience, and altering the law. The Indigo Planters' Association entirely approved of the object of the law, but it was connected with practical inconveniences. The new law would have produced practical inconveniences which obliged the Europeans to oppose that form of the law, and as too often happens where we oppose partially, and on grounds so strong that the measure is postponed, we did not get the better measure which we ourselves suggested. We are, therefore, still under the old arrangement and the old law, and that is a law which ought to be altered. And although a reform of the law was undertaken by a member of the Government in consequence of our partial opposition, the matter appears to have been dropped. That is one of the inconveniences under which capitalists suffer.

894. Do Europeans seriously suffer under the existing state of the law?—Yes, I believe they do; it affects the value of their property as a security.

895. I understand you that the grievance is simply this, that the rights of the sub-renter are swept away, together with the proprietorship of the zemindar?—Yes; all new interests created since 1793.

896. Mr. *Lowe.*] What was Mr. Grant's proposition?—I cannot give the details of it. It was a plan for registration of sub-tenures and divisions of zemindaries; but the registration involved a large amount of preliminary inquiry which we thought would be almost as mischievous as the resumption operations were formerly; we suggested a plan which would have answered all the purpose;

W. Theobald, Esq.

22 April 1858.

Mr. Grant's Bill was very just as respects the principle, but objectionable as to the details.

897. *Chairman.*] Have you any idea that a new Bill was brought in?—None was brought in.

898. Will the necessity of the case urge it forward?—We have no information that the measure will ever be resumed, and it is in consequence of that and similar things, that we have been petitioning for the enlargement of the Legislative Council: our experience is, that when the Government, in consequence of any opposition on our part, is obliged to drop a measure, although we approve the principle, it is often indefinitely postponed.

899. Do you wish to have some representative of the interest of the commercial community in the Legislative Council?—In consequence of our observation that our interests do require something better than official protection, we have wished that, and petitioned for it.

900. Are not the European commercial and agricultural community now represented in the Legislative Council?—They are not at all represented in the Legislative Council. The Legislative Council is entirely official.

901. You said that the principal superior statesmen at the time of the passing of the Perpetual Settlement Act called Lord Cornwallis's Settlement, were cognizant of Lord Cornwallis's scheme; can you give us the names of those statesmen?—It was in the time, I think, of Burke, when India was very much the subject of party discussion; I will state whence I derive that opinion; it is from a native petition; when Mr. Grant's Bill was proposed, the natives were disposed to oppose it, on the ground that it was an interference with the permanent settlement; that is, it involved danger to the principle of the settlement; the settlement is very popular with the zemindars; they call it the great charter of Bengal, and most deservedly and properly so; and they traced in this petition what I call the pedigree of the permanent settlement, and showed that it had its root in the Act of Parliament, and the sanction of the Court of Directors; I have not made any original investigation upon that question, but that is the ground of my belief.

902. Was not it under Mr. Pitt's Government?—Yes, I think so; it was in 1793; the natives generally perfectly understand the value of that settlement, and it is invaluable to them and to us too, for it has saved Bengal from insurrection.

903. In what relation is the cultivator to the landholder under the permanent settlement?—The cultivator has no relation to the Government. The zemindar is the landlord. It is a question very much disputed what is the nature of the cultivator's interest in the soil; there are certain classes of cultivators who have vested and permanent rights by the law of the permanent settlement. Those classes of cultivators are recognised in the permanent settlement, and their rights are secured against the consequences of a forfeiture. They are the old cultivators who had a customary title or an ancient title; hereditary cultivators.

904. It is a kind of Ulster tenant right in Lower Bengal?—Yes, it is a tenant right, no doubt.

905. Which they still adhere to, and it is supposed to be a remnant of the old common law of the country?—Yes; but wherever an estate has been sold for Government revenue, all excepting those classes of cultivators are liable to have their rents enhanced, as I understand; and I apprehend that where a tenant is liable to have his rent enhanced, where the landlord has the power of enhancing the rent at pleasure, the cultivator must be considered a mere tenant at will; but the law of the rights of those ryots is I think very uncertain. I myself issued some questions to many parts of the country for the purpose of ascertaining what the rights of the cultivators were, and I could not obtain a uniform or consistent answer; consequently the law is unsettled. This was elicited, that there were two views. Some people thought that the cultivator had by the common law of India, which is adverted to by Mr. Mountstuart Elphinstone, the right of occupying wherever he paid his customary rent; and no doubt a large class have that right, but a very large proportion are mere tenants at will, I apprehend.

906. The majority of the ryots are mere tenants at will?—I cannot affirm that absolutely; but where the landlord has the power of enhancing the rent, I should call them tenants at will.

907. Does the landlord exercise that power which a landlord can exercise over tenants at will: are the tenants frequently turned out of the holdings if they do not pay their rent?—Yes, they are.

908. And,

908. And, therefore, the tenant right is not a universal protection to them?—No, it is not universal.

909. Can putneedars save their tenure from the effects of a sale for arrears of revenue by depositing their own rent with the collector?—I think not by merely depositing their own rent. I think they have to deposit also the rent of the zemindar. I know what happened once to myself, when for a certain purpose I was a putneedar; my interest was a third of a putnee estate which was subject to the Government revenue. I had not merely to deposit the rent to which my portion of that estate was liable, but also the portion to which the other co-sharers were liable. I had my remedy over against the others this way. The collector in those putnee districts collected the revenue from the tenants of the whole, and paid the defaulters share to me.

910. The ryot cannot pay directly to the Government; he must go through the intermediate agency of the zemindar; the zemindar being not only the landholder, but the collector?—Certainly.

911. How are the izarahdar's rights protected?—The izarahdar's rights are entirely unprotected.

912. What is an izarahdar?—A leaseholder.

913. Under whom?—Under the zemindar, the landholder.

914. The ryot is a tenant at will, and the izarahdar a leaseholder?—Yes; the izarahdar is a leaseholder.

915. A tenant for years?—Yes.

916. Can he be a tenant for life?—The term is immaterial; that is not the form of leases in India; it is for terms of years, or in perpetuity.

917. Are indigo planters generally holders of landed property?—Yes; they are holders of landed property, both as zemindars and as izarahdars and as as putneedars; every sort of interest in the land they acquire; it gives them a position of safety.

918. By a putneedar do you mean a tenant at will?—No; a putneedar is a permanent tenant; it is a peculiar tenure.

919. What do you mean by a permanent tenant?—He has a perpetual interest, but still it does not constitute him a zemindar; these are all leaseholders.

920. A putneedar is a leaseholder?—Yes.

921. For 999 years, perhaps?—It is an interest in perpetuity; we have nothing exactly like it England. The putneedar is absolute proprietor, but is swept away if the zemindar makes default in payment of the zemindary revenue.

922. Are the indigo planters generally landlords?—Yes, they acquire by purchase that interest; it gives them position in the country, and gives them influence in the territory, and enables them to carry on with more success their operations; I believe they do not become landholders generally, for the mere purpose of being receivers of rents, but that they may carry on their operations with more success; they want security against the zemindar; the zemindar is an influential prejudiced man; is jealous of the improvements which we introduce, and is jealous of our race in point of fact; and consequently we want that stability in the country which nothing but becoming landholders will give us, as I understand it.

923. The principal object of the indigo planter is, security in holding the land which produces the indigo?—Of course; that is his primary object, no doubt.

924. And that he has not got at present?—Not to the extent desirable. Of course everything that puts capital to hazard, even theoretically, diminishes the value of security. If you want to borrow money upon your interest, a lawyer looks at your title; and if he sees that it is dangerous, although the danger may be very small, yet, owing to the defect of the security, abstractedly it has a diminished value for the capitalist.

925. Before the time when an indigo planter could hold land, what security had he for his crop?—Before that time he had the security usually of an alliance. I am now speaking only of what I have heard.

926. You speak from the year 1837, from which date the proprietorship of the land by indigo planters commenced?—Yes.

927. Before that time what security had he?—I have heard it stated that he had the security, which must be considered of an irregular kind, of an alliance with Government officers and with capitalists connected with Government officers; and before we were admitted into the country, the chief capital of Europeans, I understand, was supplied by gentlemen in the services, and they took

W. Theobald, Esq.

22 April 1858.

care, by their local and official influence of the concerns which were carried on chiefly or partly for their benefit. I am told that that was the extent of our enterprise antecedently to the opening of the country.

928. He must have been a kind of second-hand proprietor?—Yes. In fact, the domestic history of the country has not been sufficiently investigated. I think it will be found that the root of independent British enterprise in Bengal is to be found in the civil service.

929. Are you speaking of a time antecedent to 1837?—Yes, long antecedent to 1837.

930. But they could always hold leases?—Europeans could not hold leases.

931. Could not they hold leases before 1837?—They could only go into the country by licence, and I am not aware that they could hold leases.

932. Then the Act for holding land applied to lessees as well as to the proprietors of the land?—Yes; the Act goes on to say, they may hold land for a term of years, or in perpetuity, to hold it in every variety of way.

933. You have spoken of the bad state of the local administrations as operating to the discouragement of European settlers; what do you mean by the local administrations?—I refer to the police, to the magistracy, both covenanted and uncovenanted, and to the administration of justice generally in courts of all descriptions.

934. Will you begin with the first point to which you desire to call our attention?—The police is entirely a native police, under the superintendence of only one principal European officer, who is a magistrate. I would refer, to save the necessity of detailed description, to a minute of Mr. Halliday, the Lieutenant-Governor of Bengal; Mr. Halliday's minute was brought very fully before the notice of the House of Commons last Session, by an Honourable Member whom I see here. Mr. Halliday, I believe, only repeated the official opinions which had been given 20 years before respecting the police, that they are either the perpetrators of crime, or are connected with the criminal population of the country; that is the state of the police confessed by Mr. Halliday, and that representation by Mr. Halliday came out only two years ago; but we have made representations to the same effect, both in our petitions to Parliament and to the local government, with a view of obtaining the necessary reform. If the Committee will allow me, I will quote what we have said about the police; here is our petition to Parliament in which we describe the police, the magistracy, and the courts: "Police, magistracy, and courts, are the means established and on which all regular communities rely for the preservation of the peace, the enforcement of civil and criminal responsibility, the defence of the rightful possession of property, and expulsion or dispossession of those who have no title to it. The connexion between these means and order and security is that of cause and effect in all civilised communities. In Bengal the means are established; there is a police force, a magistracy, and courts, criminal and civil, but it cannot be affirmed that there is anywhere order and security; the means, therefore, which succeed elsewhere, fail in Bengal; obviously, on this state of the case, a very grave suspicion (of incompetency) rests on the police magistracy and law courts of Bengal. As to the police, there is but one opinion of it throughout the mofussil (country). In its chief duty of affording protection to persons and property, it is nearly useless; as a sword, as a shield, for defence, for attack, it cannot be trusted; at the same time it is universally reproached with many corrupt habits and practices, among them extortion on all sorts of occasions and pretences, and great venality, and to these your now petitioners add the practice of torture. Such being the state of the police, the laws for the preservation of peace are not enforced; the authority of the police is much abused, the inhabitants have to rely on their own resources for the most common protection of themselves and their possessions, and are left free in their quarrels. The poor protect themselves as best they can by combinations and otherwise, and the propertied classes and persons engaged in traffic by the employment of large and costly establishments. In the opinion of this committee" (that is the gentlemen with whom this petition originated, and the representation to the local Government originated) "the state of the police is in a considerable degree a cause of affrays, and of all sorts of agrarian disputes and disorders." And Mr. Halliday, in his minute, quotes, I think, from a member of the council, who had said that the police were all thieves and robbers, or in league with thieves and robbers, and that probably the most effectual means of improving the state of the country would be to put them all in prison, or words to that effect.

effect. We have represented that to the local Government, we have represented it to Parliament, we have represented it to the authorities here, the Court of Directors and the Board of Control; and it is, I believe, as bad now as ever. In 1836 it was in the same state; in 1836 the Court of Directors seem to have been perfectly aware of that state of things, for, by a despatch in January 1836, they directed that no financial considerations should stand in the way of a reform so urgently required; so that the Court of Directors have shown their knowledge of the state of the police at that time, which was what it is now, and at the time Mr. Halliday wrote nothing was done, and nothing has been done to the present day. That is what I mean when I say that the police, as a part of the local administration, is in a state that makes life uncomfortable to us.

935. Does not the mischief, in the case of the police, as in many other cases of the administration, lie in the inferior moral character of the natives as administrators of the police?—Undoubtedly, in their extreme want of moral principle, and humane principle of every kind.

936. The material with which you work is bad?—They are the worst materials to be found in the country. They are said to be the sweepings of the gaols.*

937. Is it not desirable, therefore, that European agency should extend further downwards, among the natives, so as gradually to infuse and communicate a better moral character to the natives?—That is the one reform essential, and which has never been suggested in any despatches of the Court of Directors; that is the one reform, without which the police cannot be improved.

938. Would not such an infusion of European character among the natives be of great advantage to the natives themselves, as well as favourable to the employment of Europeans?—I think there cannot be a doubt of it. It is the opinion of all Europeans, and it would scarcely diminish the amount of native employment; there is a jealousy of the increased employment of Europeans, on the supposition that it involves a diminished employment of the natives. I do not consider that that ought to be conclusive upon the question of the right or expediency of adopting it, but I do not think that would be the effect of it. Just as the introduction of our arts improves the native arts, so the introduction of Europeans into the native police force would improve the natives; but whether it would improve them or not, our eye and our principles would be a protection to the population. At present the police are held in abhorrence and horror by the population, there is no doubt; and it is a curse upon the country which is discreditable to English humanity and statemanship and government.

939. An increased use of Europeans in such cases would be a point of amalgamation, at which the European and native character would meet and fuse themselves together?—Yes, no doubt; and the native would learn our better morality, and unlearn his own habits to a certain extent.

940. Can you judge whether such a policy would be popular among the better class of natives themselves; would they apprciate such a policy?—Everything which acted beneficially upon them, upon the whole, as soon as they found it out, would be acceptable to them, there is not the smallest doubt.

941. But if they did not appreciate such a policy as the infusion of Europeans at first, their own interest would gradually induce them to do so?—No doubt. I dare say it might be at first unwelcome, and especially to the zemindars.

942. You have complained of the magistracy; will you state the reasons for which you complain of them?—The magistracy is of two classes; one is the covenanted, composed of Europeans, what I should rather call the ruling class of magistracy, and the subordinate class of magistracy, which is chiefly composed of natives. Of course, my answer to that question is invidious towards a class of gentlemen for whom we must entertain a great deal of respect in many points of view; but it is a public question, and there are such evils connected with the defects, as we say, of that branch of the magistracy, that I hope the Committee will not impute to me any feeling towards the class if I state what is our view respecting the covenanted magistracy. But I might save that trouble by simply again referring to Mr. Halliday's minute. Mr. Halliday treats the magistracy, of course, not as having vices, but as utterly inefficient, and he ascribes that utter inefficiency to two causes (I should add some other causes), from their youth and want of experience; and, moreover, he says that no reform in the police would be possible without having a more efficient magistracy, by which he means the ruling branch of the magistracy; and Mr. Halliday shows how the deterioration has been going on for

* *See* this answer corrected in Question 1214.

W. Theobald, Esq.

22 April 1858.

the last 10 years, I think. Mr. Halliday says that formerly the magistrates were men of 10 years' standing; he then gives the progressive diminution of the average of their age, till at last he states that the average now is only about six years. The magistrate is the most important officer in the country; he is more important than the commissioner, or the judge, or the collector; he has a great province under him; he represents the Government in all those offices which in England are distributed among all sorts of different administrations; he is a judicial officer with very important judicial functions; he is the head of the native police of his district; this one magistrate, in a population of 1,000,000, with this debased police, is the superintendent of that police. Therefore the youth and inexperience of the magistracy is a very great evil; and I was going to remark that it is an evil, as Mr. Halliday predicts in his minute, which unfortunately must go on increasing for some time to come; and the prediction has come to pass. In this way I think the Committee will see at what rate it is increasing: viz., that in 1855 the number of students in Bengal, was 11; in 1856 the number was 25; in 1857 the number was 58. The Committee see that the increase of young men in the country has been going on, and consequently the average age of the magistracy, as Mr. Halliday says, must diminish, and diminish to a most alarming extent. There is now, I think, in one of the most important districts of Bengal a magistrate who has been less than two years in the country.

943. Mr. *Villiers.*] How does the increase of students diminish the efficiency of the magistrates?—The average number of young gentlemen who have gone out from Haileybury to Bengal was 25, and that produced in the college in 1855, I think, 11 students; in 1856, 25; and in 1857–58, in consequence of Haileybury being broken up, all the young men seem to have been at once transferred to India.

944. How is it that the increased number of these young men coming out tends necessarily to weaken the qualification for the magistracy?—To state it generally, I should state it thus, that the proportion of students or of writers to the whole service in Bengal was in the beginning of 1857 much greater than it ever had been in any former period. Suppose the proportion of young men introduced has been 25 to 100, if you raise the 25 to 50, and make the proportion in any one year 50 to 100, evidently you lower the average; your 100 men have been in the country six years, and you introduce 50 new men, who have no experience at all.

945. Do you mean that more magistrates are appointed in consequence?—No; but there is a greater proportion of very young men. Mr. Halliday states that the evil of youth and inexperience in the magistracy must go on increasing; that is, the average standing in the service of the men will be lower, and it must fall still lower. It has fallen from ten to six years, and it has fallen from six to five, and Mr. Halliday has said that the average age is still diminishing. Mr. Halliday has made this assertion, that the evil must go on increasing for a certain time, and on what does that depend? My object was to explain how Mr. Halliday's anticipation has been verified. I am sorry to state this, because it involves a certain amount of criticism, which I would have avoided; but when the Court of Directors had notice that its lease of patronage was to expire, it took advantage of the occasion, very naturally, to fill Haileybury, and having filled Haileybury, when Haileybury was broken up, it had to put those young men into India, and therefore had to send a much larger proportion of young men than it ever did before.

946. *Chairman.*] What you complain of is, the increased number of youthful and inexperienced men?—Yes, that is the point.

947. Are not Europeans exempt from the local criminal jurisdiction of the magistrates, and, therefore, how can they be affected by them?—Europeans are exempt to a certain extent from the local magistracy; they are exempt from certain punishments, that is, from the punishment of imprisonment. The magistracy consists of two branches, one branch of which I have already mentioned, without giving instances of the way in which we suffer; but there is another very important branch, the uncovenanted, the members of which are appointed by the local Government, and from, of course, the resources which the local Government has upon the spot; and that magistracy is composed of Hindoos and Mahomedans, and East Indians and Europeans, but a very small proportion indeed of Europeans.

Europeans. I believe the intention was that that branch of the service should be filled up in equal proportions by the three classes, but the inducements were not sufficient to lead Europeans to take the service, or if they did take the service, their number has declined, because it was disagreeable to them, consequently that branch is filled with Mahometans and Hindoos, and a few East Indians. We have a large experience of those men; they are very inefficient; they are magistrates in subdivisions, subordinate to the upper magistrates. They have only a divisional authority, in divisions often of very great importance, and with a great population. They are very inefficient, and often worse than inefficient. We suffer in all sorts of ways from their prejudices; their unfitness in point of fact, for the exercise of criminal jurisdiction. The Hindoos have their prejudices of caste, and we are of no caste, and they look upon us with an aversion which appears inherent in the race, and with a contempt and dislike which is inspired by the prejudices of caste; and the Mahomedan is worse than the Hindoo. I speak now of the existing class of deputy magistrates, who are very ignorant and prejudiced, and ought not to be employed by the British Government at this time of day in a magisterial capacity. Then as superintendents of the police, they are terribly inefficient, from apathy, inactivity, indifference to duty, and other personal qualities very common among nations, and important districts fall into the greatest disorder very often through their inefficiency as local superintendents of the police; I could give instances of that.

948. If I understand you rightly with regard to European magistrates, you have raised two objections, their small numbers in proportion to the population, and their inexperience, particularly in the languages of the country?—Certainly.

949. Does that inexperience in the language of the country make them dependent upon the native officials?—I think you will hear that stated by any number of gentlemen who may be examined before this Committee, who may come from the Mofussil, and who are in constant communication with them. They are to a very great extent in the hands of their Omlahs; but necessarily they must be guided by persons who are utterly untrustworthy as to what takes place at a distance; they do not understand the languages.

950. Are the Omlah very much objected to?—It is so stated. I can read extracts from correspondence, in which the Omlah are described as the most corrupt, and for their purposes, nevertheless, able and skilful men.

951. With regard to the uncovenanted service, I understand that the same reasons for which you would recommend an infusion of Europeans among the police would induce you also to recommend an increase of Englishmen among the uncovenanted service?—Yes, most certainly, and the employment, where natives are employed, of men of altogether a different class of character and qualifications. The Government has not done justice to the country in its selection of native servants.

952. This would be another point of contact at which you would bring the European and native service together, extending and combining them in the uncovenanted service?—Yes, undoubtedly.

953. Except that you would command the other to a certain extent?—Undoubtedly.

954. In that point, in regard to the infusion of Europeans in greater number into the uncovenanted service, do you agree with General Tremenheere, who was examined the first day?—Yes, I agree entirely with his proposition, that the first consideration is the good of the country; and if the best service can be obtained from Europeans, the natives have no claims; but I still think that Government has not done justice in its selection of native employés.

955. You think that there might be more care displayed in the selection of native employés also?—Yes; certainly the class who are employed are very improper; I could mention cases of grievous incapacity, and grounds which ought to have disqualified.

956. Are there not complaints of the want of proper laws, especially of a *lex loci*, and of proper courts for Europeans and East Indians; will you explain your virws on these points?—As respects the *lex loci*, there has been a report by the Indian Law Commissioners, which has established the great want in the country of a *lex loci*; and it arises in this way: Hindoo law is the law of the Hindoos, Mahomedan law is the law of the Mahomedans, and they are personal laws; they are also deficient for the purposes even of native laws. Then there are the East Indians, and others, to whom those laws are not properly applicable.

W. Theobald, Esq.

22 April 1858.

We, the Europeans, also want a *lex loci*. The courts of the East India Company having no authoritative body of law in the character of a *lex loci*, have to make the law *pro re nata*, and that they do with more or less success, according to their power of reasoning and their general information; and they are now, to the best of their ability, supplying that law which is wanted by constant reference to English law; it is the only general law to which the courts can have resort, but we want it to be established authoritatively. Our opinion of the want is not ours alone, but it has been declared authoritatively by the Indian Law Commissioners, and the Indian Law Commissioners are supported by two of the members of the English Law Commission in their view of what ought to be the *lex loci*. I think the Right Honourable Member for Kidderminster was one of the members who supported the view of the Indian Law Commissioners, and the other was Sir John Jervis, with modifications to be given by the courts. Then we want proper courts. We say we ought not to be tried to the extent to which we are now triable in the native courts; the fact is, the natives have courts which are suited to them, but those native courts are not suited to us, and therefore we do want better courts; but that raises a question of reform.

957. You wish the law to be raised superior to persons, and to be made a local law applicable to all persons equally?—No; we do not wish to interfere with the Hindoo and Mahomedan law, but there is no source from which the defects of those laws, which are ancient and religious laws, can be supplied, and for the purpose of supplementing those laws where they are defective there is a *lex loci* wanted; and for the purpose of creating a law for us in the courts of the East India Company and for East Indians, and other classes not Hindoos and Mahomedans, we want a body of law which the Commissioners have characterised as a *lex loci*. Put the two sets of Commissioners together, the Indian Law Commissioners and the Law Commissioners in England, the opinion of the majority of those gentlemen, all of great eminence, is in favour of the establishment of English law as a *lex loci*, and I do not know what objection there is to it.

958. It would be a general law for Europeans, and a supplemental law for Mahomedans and Hindoos?—Yes, in substance that would be it, and we want other proper laws; that is a very debateable question. We have transactions with the natives, and we think that there are laws which are desirable to regulate our transactions with natives, such as in the case of indigo contracts and advances. There was a law for instance relating to indigo contracts; it was repealed when the Indian Law Commissioners went out; it was established by Lord William Bentinck. The population is so depraved, and the lower classes are so deficient in good faith, corruption seems to be so much increasing under the influence I believe of our institutions, that we want something like a strong pressure of law and police upon them for the protection of our interests and capital. That is a question with which this Committee probably could hardly deal in detail, but that is our view; the laws are very defective.

959. Did the law exist in the time of Lord William Bentinck between the proprietor and the tenant?—The law I referred to was passed by Lord William Bentinck. Its importance arises in this way; almost the whole industry and cultivation of the country is carried on under a system of what is called advances. If you want anything to be done by a native, you must give him an advace, whether he is an artisan or a cultivator; that is the habit and custom of the country. We have large capitals advanced to the population, and Lord William Bentinck thought, having reference to the peculiar character of the native population, that we ought to have an effective law, such as exists, in point of fact, in many branches of industry and trade in this country,—a penal law for the enforcement of contracts, where the breach in point of fact involves fraud, as it very often does in the case of broken Indigo contracts; and Lord William Bentinck gave the planters a law that was effective, not by reason of being enforced, but by reason of being the law; it was a power over a very debased population; which had the effect of producing the consequences which were contemplated when Lord William Bentinck gave us that law; it was repealed, I think, in 1836, not upon any examination which could have influenced the opinion of the Council, but upon the general view in England, that a breach of contract was a mere question of damages, and not a question for enforcement by penal law. I merely advert to that as one of the proper laws which we want, but there are many others. We want an improvement of the revenue laws, and many others.

960. By

960. By what name is that law of Lord William Bentinck's known?—I think it was for the enforcement of indigo contracts. It was like a law which existed for the enforcement of contracts with respect to cattle and carriage, and for certain services, and for the growth of opium under advances. It was analogous to that class of laws; and in an Act passed only last year, in which the opium laws are consolidated, the Government has, for its own protection and security, passed a penal law to operate upon those who have taken advances for opium cultivation. We have nothing of the sort; we are merely left to sue in the civil courts; and we say that, having reference to the state of morality, we ought to have a different law. I merely mention that as one of the defects.

961. Have you gone on during this want of a proper law for contracts since the year 1837?—No law of contracts has been passed since the year 1836. It was repealed then, and we were sent to the civil courts. Now the justification of the old law, I apprehend was, that a breach of the contracts referred to was a case of fraud; and wherever that is the case, I cannot see the objection to making it the subject of a penal law. Lord William Bentinck's view evidently was, that those contracts were broken by fraud.

962. A contract is not necessarily broken by fraud; it must depend on the case?—No; but when a man engages to do a certain act, and breaks his engagement, with the full means of performing the act, with his eyes open, and does something by which he gets the same money a second time from another person which he got from us, that is a case of fraud. I am only suggesting the ground upon which Lord William Bentinck gave us this law.

963. The Government, then, is protected by a penal Act, and the planter is not protected?—The Government is protected by a penal Act as respects opium cultivation, and is not sent to the civil courts for a remedy, but the remedy is enforced by its opium agents.

964. That is the only case almost in which the Government can come into contact with individuals as a matter of commerce?—Yes.

965. You stated that Europeans had been kept for the last 20 years in a state of constant apprehension of their condition being made worse by the proposed legislation, and you mentioned the Affray Bill, the Black Acts, and parts of the Penal Code; will you shortly explain those?—The Affray Bill was proposed about four years ago, for the purpose, as the name of the Bill denotes, of putting down affrays which were very prevalent in Bengal; but the means by which the Government proposed to do that, we say, would have rendered it impossible for us to remain in the country. I have not a copy of that law, but it produced very great alarm, and, if the Committee will allow me, I will read a very short passage from the representation which was made respecting that proposed law. The Bill proceeded on the supposition that those affrays were the result of organised and deliberate violence; a habit of violence on the part of all classes within the operation of the law, and that servants were deliberately entertained for the purpose, in point of fact, of carrying out by violence the views of zemindars and planters in their quarrels; and the principle of this new Affray Bill was to prevent that, simply by depriving us of all the means of committing violence; and amongst other things, the law provided that a magistrate, without giving any reason, upon an apprehension of his own, the ground of which he need not declare, that there was to be any affray whatever, might order a proprietor or a master to dismiss any one or more of his servants. That was a part of the proposed Affray Bill. But our opposition was effectual, and I conceive that the opinion of the Government eventually arrived at, after a great deal of discussion and remonstrance, was, that it was a bad law: and that is what I wish to represent, that we were justified by the result in our remonstrances; we should have been placed by that law in the very greatest danger both from the zemindars and the police in the country, where our position is now one of great danger both from the police and zemindars. The law was abandoned. And in that case, as in the case of the improvement of the Revenue Sale Law, we suggested improvements of the law, and when the original Bill, in consequence of our opposition, was withdrawn, amended and better laws were proposed, and we petitioned that they might be passed, but they have been dropped just like the amended Sale Law. That is one of the things to which I refer when I say we are kept in a constant state of apprehension of being put into a worse condition by proposed laws. I may state now another of the laws to which we object. There is a law for taking recognizances to keep the peace; that law applies to natives and Europeans indiscriminately. Now that law may be put in force at the mere

W. Theobald, Esq.

22 April 1858.

arbitrary will and discretion of a magistrate, without his giving any explanation whatever of the grounds of his applying that law to any individual whatever; and he does put it in force by putting people under recognizances for very large and often oppressive amounts. When we made that a subject of representation, it was admitted that it was a bad law for the natives and for us, and it has been so far admitted that it was so, that an amended law, which would meet the requirements of justice, and of a proper administration, was actually brought into the Council. We petitioned for that law to be passed; it made the enforcement of securities to keep the peace a judicial proceeding, instead of an arbitrary proceeding; that is, a proceeding upon which the magistrate has recorded grounds for his proceeding, and carries out his proceeding upon evidence, and after hearing defence. No one could object to that law; but we have not got the law.

966. Mr. *Willoughby.*] Who brought in the amended Bill?—I think Mr. Peacock.

967. In what year?—It was about the year 1855. Those are not captious or factious objections, I apprehend, to the existing laws, and our opposition, I apprehend, to all those things was just and reasonable; they now can take those recognizances of us, and of natives too, without giving any reason whatever, and the consequence is, that a policeman, one of that corrupt body, goes to a magistrate and states his own personal apprehension, and, according to the confidence which the magistrate may repose in that man, he demands a recognizance or not. The man reports of a native; this recognizance is obtained from the native, or if it is not obtained, it is probably because the officer has received a bribe.

968. *Chairman.*] You referred to the Black Acts; have you anything to state to the Committee upon that subject?—Yes; it is a name which does not originate with me; I used the name as bringing to the recollection of the Committee what the Black Acts are. Those are the Acts by which it is proposed to bring us, indiscriminately with the natives of the country, under the local tribunals in all those serious cases in which at present we are under a court of English law; and I think the way in which we put our objection to that, as far as I have found in this country, since I have been here in making my representations against it, is thought to have been fair and reasonable. We base our objections to the courts on the character of the courts; on the unfitness of natives to try Europeans, especially those who are capitalists; and we are quite willing, if proper courts are established, to be brought under the local tribunals.

969. You mentioned the penal code?—Yes; we find that there must be a code, and, consequently, our objections are only to particular parts of the code, in which the code deviates most widely from what I should think are sound principles of jurisprudence, and would place us, and I think the natives also (but we are of course contending for our own case), in circumstances of great danger and difficulty; I have the penal code here, and I may read from it as to responsibility for wrong. The principle of English law is, that every person who exercises a power or an authority given by law, must exercise that power or authority according to law, and that is a universal principle; and then whether a breach of the law is to involve penalties or simply damages depends, I apprehend, by the principles of English law, merely on the character of the injury. If it is a general injury, or public injury, or injury of a serious character, then a breach of the law comes under our penal law; if it is a mere private matter which admits of compensation by damages, then it belongs to the civil law. Now here are the two first provisions of Mr. Macaulay's code—"Nothing is an offence which is done by a person who is or in good faith believes himself to be commanded by law to do it." Now that establishes an irresponsibility for what is done contrary to law; on what ground? Simply that the person who violates the law, in good faith believes he is acting according to law. It is monstrous; I think it does not require any comment. I only quote this as an example.

970. Have you any other objections to the proposed penal code?—The code has been brought into Council, and has been read, I believe, a second time, but it has undergone some alterations by Mr. Peacock. The popularity of this code in England rests, I believe, mainly on the authority and high name of Mr. Macaulay; but a code deviating from English law, and merely on the authority of a member of the Indian Council, would have no authority in this country, I apprehend. The second proposition in Mr. Macaulay's code is, "Nothing is an offence which is done by a person in the exercise, to the best of his judgment exerted in good faith, of any power given to him by law." I confess I do not

quite

quite see what is the operation of that distinct from the former exception, but it is a principle unknown to and utterly at variance with English law; it establishes an irresponsibility upon the part of all persons having powers of any kind given by law, and places them in a state of irresponsibility, notwithstanding a breach of the law; and that merely on the ground of supposing that they were doing right, and that there was no malice towards the persons whom they have injured. That is a monstrous principle; we who know the English law, and know how much of the security we enjoy in this country rests upon principles of an altogether different character, of course cannot believe that principles of that kind can bear anything but the worst fruits to us in India. I confess I went to India a very advanced law reformer, and was very much in favour of the penal code. But when I examined it, and, as an English lawyer, compared it with English law, I found these objections. I do not object to it in a scientific point of view as a form of law, but I object to those parts which widely deviate from English law. There is, for instance, the right of private defence. I apprehend the law of England on the right of private defence is a most satisfactory law; it certainly adequately secures the public against the violence of private individuals, and, on the other hand, secures individuals satisfactorily against wrong improperly attempted against them. The right of private defence is well defined by English law. The penal code is very different.

971. Mr. *Villiers.*] What do you mean by the right of private defence?—A man defending his person and his property by the inherent strength which every man possesses; I am using the term of the code. The right of private defence is literally taken away by the provisions of this code, and the only case in which the right of private defence is reserved is where a person defending himself or his property has reason to think there is danger to his life.

972. *Chairman.*] You mean that you wish the principles of English law to prevail as applicable to British subjects?—Yes, we say they ought. This code is to be a penal law for all India, and for all classes in India. Now we object to certain provisions of the code as great deviations from the principles of English law. We admit that a code is necessary. We no longer object to the form of a code; we no longer insist, as formerly we did, upon having the English criminal law as it exists at present; but we do object to those parts of the code which are so widely different from English law as the parts I am now adverting to. They are objections of detail; but we do also say, as I have submitted in a printed paper, that the code is of much too high, refined, intellectual and scientific a character for the existing judicial authorities in the country, and especially for the native magistracy and native judicial officers. We say that it is quite beyond their comprehension; put, for instance, that exception to responsibility into the hands of a native officer, and he would do just as he likes with us, and set up the plea that he was justified, because he really believed he was authorised. If you are to have Mahomedan and Hindoo magistrates, you must give them the advantage of the plea of acting in good faith, and you must make allowance for the ignorances and prejudices and peculiarities of those men. With respect to the penal code, what would be its very merits in the estimation of persons who wished to see a scientific expression of the law, would be very great faults in relation to the condition of a great many persons who would have to administer the law; but this code has been so long persisted in, that we no longer offer the opposition which we did in the first instance, but we say, only make it more conformable with English law.

973. You do not object to a code?—No; probably I am influenced by my own personal feelings in favour of a code, but my constituents have ceased to object to a code. I ought to state, that Mr. Macaulay's code has undergone very great alterations by Mr. Peacock. Those two sections which I have read are altered, but there is still a wide deviation from the English law, and I apprehend that the authority of that code in England rests upon the authority of Mr. Macaulay.

974. You want an approximation to English laws?—Yes.

975. That being done, you do not object to a code?—No.

976. You spoke of the conduct of the ruling powers to Europeans?—Yes. It is a constant matter of complaint that we seem to be the objects of prejudice on the part of the civil service; a prejudice which exhibits itself in all sorts of ways in administration, both of administrative and judicial functions. And I think it can

W. Theobald, Esq.

22 April 1858.

be very well understood how that happens, when you recollect the great youth and great inexperience of the magistrates; a young man who has only been two years in the country is earwigged by worthless natives, who may have a dislike or spite against an European, which cannot be traced to any rational or good origin, and that young man yields under that influence. The persuasive and argumentative powers of the native to insinuate his own views in the mind of a person who does not understand the native thoroughly, are very great; and I cannot conceive that Englishmen, except under influence of that sort, would feel prejudiced against their own countrymen, because I can say the planters are a very hearty, genial set of men, and generally educated in such a way as that they might be considered gentlemen.

977. You do not mean that there is any prejudice against them on the part of the Government?—On the part of the Government also the treatment is very cold; it is, in effect, repulsive. As respects the Government, that is, the authorities at the seat of Government, it depends very much on the Governor-General; and fortunately with most of our Governors-General, they have shown much consideration for the British inhabitants. The Governors-General have received our representations most readily, and paid what I may be permitted to call a polite attention to them generally; but our opinion and experience is, that so far as the influence of the upper part of the covenanted civil service is concerned, we are not treated handsomely. And I may say now, because I do not in the least impute it to Lord Canning, who came out without any knowledge of the country, and of the Europeans in it, that it appears to me that under influence which must have been from the Secretaries, the Government has abridged our right of representation, which is a very important thing, the right of representation, of the want of better protection, and better courts, and particular evils as they arise, of an important character.

978. You mean the right of remonstrance?—Yes; a right which ought rather to have been enlarged when the press was gagged, because, of course, now we cannot proclaim our complaints as we did formerly.

979. How has Lord Canning abridged the right of representation?—I do not say it is Lord Canning; I will give an instance: after the Santhal rebellion the Legislative Council passed an Act to constitute non-regulation districts, or to constitute, under a particular administration, the districts containing the Santhals; that was an Act establishing an exceptional administration in the districts where the Santhals were settled—a very right and proper measure of course. The Act, by a mere blunder, I apprehend, or by mere mistake, included certain parts of the country in which there were no Santhals at all, but in which there were European settlers; and when the Act was brought into force the administration of the law was taken out of the hands of the magistracy, and out of the range of the proper law of the country, and I think the magistrate who was appointed had been a railway surveyor; he was a man of great activity; just the person perhaps to administer a province which this barbarous tribe merely was inhabiting; but, by a mistake of course, we were very much injured, and the indigo planter's society made a representation to that effect, pointing out the mistake, and we considered it quite a public matter. My impression is, that under any former Governor-General that representation would have been received as a perfectly justifiable one on the part of all the Europeans connected with the Mofussil; but it happened, that through the change which was made, a particular planter had a grievance; and so, no doubt, that which you may call a private case, became complicated with the objection to the law; and this society, composed of the most respectable merchants and a great many planters, made a representation to that effect. Lord Canning treated it as the case of the particular planter, who complained of what had happened, and denied the right of the society to make that representation to him. I do not know whether that satisfies the Committee, but that is about what I mean. From the time of the establishment of the society up to the time Lord Canning came out, nothing of the sort ever happened. Lord Dalhousie complimented the society on its fairness, courtesy, and moderation, and admitted also that we were very persevering. Those were the terms on which Lord Dalhousie parted with the Europeans and with that association. Another case was that of a very great outrage perpetrated by the retainers and servants of a native rajah, which was nearly fatal to a European. The local authorities, in the opinion of the parties interested, were very deficient, and did not do their duty, and the society took it up as a matter of great importance to the Europeans

in

W. Theobald, Esq.
22 April 1858.

in the interior, and thought that such an outrage, committed by a man in such a position, was not merely an injury to the individual, but was dangerous to us in the country. We represented this to Lord Canning. I think our prayer was (this is since I have been away), that a special inquiry should be instituted into the circumstances of the case, and looking at the position of this great rajah, and looking at our dangerous position if things of that sort were not repressed, that was a reasonable application. Lord Canning's Government chose to regard that as a mere private matter, and reproved us for having addressed the Government. Another case happened of which I am not master of the details, but still it illustrates the principle; and it is not from one case, but from this succession of cases that I deduce this opinion. That case was between a Moonsiff and a European of the name of Warner. I cannot state the details, but the result was the same, a reproof on the part of the Government for this society. And there is another thing which happened to myself, that seems to me to illustrate the ill-will, certainly not of Lord Canning, but I say of the service which is permanently located in the country. I happened in a speech to speak of the "Friend of India" as the Government organ; it was the common mode of speaking of the "Friend of India;" there was nothing certainly disrespectful in it. My speech was reported, and it appeared in the course of the proceedings of this association. In order to secure the accuracy of the reports of our meetings I usually reported them myself, and signed my own name to them, but still it was a mere report of a meeting of a society, and signed with my name, in which I had spoken of the "Friend of India" as the Government organ, and for that the Governor-General of India in Council administered a most severe rebuke to me for having called the "Friend of India" the Government organ. Of course I accepted the rebuke, and made a most humble apology, and everybody, of course, was pleased with my having done that; I had made the *amende honorable*, but everybody thought that the Governor-General in Council had demeaned himself very much in taking notice of a thing which, after all, the public said, was true nevertheless. Then I say that since Lord Canning has been in India there appears to have been (I ascribe it entirely to the influence of the service over his Lordship) a disposition to limit the right of representation, and I refer that to the more general view that there is a disposition not to treat us handsomely. If you go to the interior the illustrations can be given without number.

980. Do you believe that is the general feeling of the planters whom you represent, that they think they are slighted by the Government?—Yes; that they are slighted very much by the authorities.

Martis, 27° *die Aprilis*, 1858.

MEMBERS PRESENT:

Mr. Campbell.	Mr. Mangles.
Mr. De Vere.	Mr. Danby Seymour.
Mr. William Ewart.	Mr. John Benjamin Smith.
Mr. Gregson.	Mr. William Vansittart.
Mr. Kinnaird.	Mr. Villiers.
Mr. Lowe.	Mr. Willoughby.

WILLIAM EWART, Esq., IN THE CHAIR.

William Theobald, Esq., called in; and further Examined.

W. Theobald, Esq.
27 April 1858.

981. *Chairman.*] YOU have complained of the difficulties arising from the want of roads, and means of travel and transport; will you explain the difficulties that exist with regard to roads?—I beg to observe that it is a mistake to suppose that roads are not as useful and necessary in India, as in all other countries. I heard the opinion given by General Tremenheere about the Upper Provinces, and I have heard the same from gentlemen who are members of the Court of Directors. But I know a young merchant who went to settle in Central India South of Jubbulpore,

W. Theobald, Esq.

27 April 1858.

Jubbulpore, and his investment in the first year I believe turned out a dead loss from the iujury which it received in transit to Mirzapore, and that was entirely owing to the want of roads and bridges; the fact is that the country, though a a plain, as General Tremenheere stated, and level enough for Sepoys to march over, is full of hollows and seams and dry channels in the hot season, and of torrents and gullies in the rainy weather, and requires roads and bridges at all times. It is the same in the Lower Provinces. I circulated questions about roads among the planters, and found that roads were just as useful there as anywhere; and I have marked passages in the answers sent to me from the planters, which I will take the liberty of handing in for the Appendix. There are no roads to connect even Calcutta with any of the great cities of the interior. No road to Moorshedabad; no road to Dacca; none to Patna; no such roads as parish roads in England to connect villages and market towns in the interior; consequently, in the rainy season, every town is isolated from its neighbours, and from all the rest of the country. Besides roads, bridges are wanted; there are hardly any bridges in the country; their place is partially supplied by ferries. The grand trunk road within the Lower Provinces is only partially bridged, and half the bridges I believe have been washed away from defects of construction.

982. Are tolls taken on any of the roads in India?—Yes. Act 8 of 1851 was passed to enable the local governments to levy tolls on public roads and bridges. I know one toll-bar placed on the grand trunk road, about 35 miles from Calcutta; and I see by the newspapers that others have been established on the grand trunk road, which used to be free.

983. Under what management are the roads?—The grand trunk road is under the management of engineer officers, who are military engineers, each having charge of a portion of the road two or three hundred miles. The district roads, such as they are, are under the magistrate, who until last year was assisted by a committee, called the Ferry Fund Committee, composed of planters and Europeans living in the district; but the Lieutenant-governor, Mr. Halliday, has dispensed with that committee, and given the magistrate, I am told, a surveyor instead. This is a change, in my opinion, for the worse. I think that a better plan would have been to have dispensed with the magistrate, increased the powers of the committee, and given the committee a surveyor. I know that the planters take great interest in the roads; it is of great importance to them, and they would be found very useful in promoting the establishment of roads in the interior.

984. You would make it more a matter of local management?—Yes, of unofficial management.

985. Would you have a committee of landholders?—Yes, of European landholders everywhere; and probably the respectable natives would unite with the Europeans, and even contribute largely in the way of donations, just as the Europeans have done.

986. What funds are there at the disposal of the magistrates for roads?—The profits of the public ferries, which are now paid in to one fund, and distributed annually by the Lieutenant-governor; and besides the profits of the ferries, which I believe were formerly the only funds applicable to those district roads, Lord Dalhousie gave the Lieutenant-governor of Bengal the surplus tolls of certain rivers, called the Nuddea Rivers, which surplus formerly went to the general revenue.

987. Do the landholders contribute a per-centage on their revenue assessment?—Not in the Lower Provinces; but I think they ought, or at least that the wealth and labour of the country ought to be put under contribution to make roads; and I think that both a per-centage and a requsition of labour should be resorted to, and that no tolls should be collected.

988. Can you state anything as to the transit by the rivers?—Yes. I can speak of the Ganges and the Nuddea Rivers; but respecting the Ganges, I would only say generally that it requires a better police and some engineering appliances to deepen its channel in many parts in the dry weather. In consequence of the want of police, there are very great losses of property, and a very great difficulty in the transit by river arises from the state of the channels in places.

989. You referred to the Nuddea Rivers; explain what you mean by the Nuddea Rivers?—At 120 or 130 miles from Calcutta, the Ganges, after coming a course of several hundred miles, turns off to the east and empties itself into the Bay of Bengal, 100 miles below Calcutta; but from the point where the Ganges turns off there is a network of rivers called the Nuddea Rivers, which comes down direct

into

into the Calcutta River, called the Hooghly; those rivers save a circuit of about 500 miles, which is equal to several days downwards, and of course upwards very much longer. The Nuddea Rivers are supplied partly from the Ganges and partly from the drainage of the country. But as the Ganges falls, of course these rivers fall, and are all but dry. But the opinion on the spot of everybody acquainted with those rivers is, that one might be kept open for the country boats and for steamers all the year round, if proper engineering skill and mechanical arts were applied. The Indigo Planters' Association and the merchants have been pressing the Government for the application of proper appliances to keep one of the rivers open, but we can get nothing done; the Government refers to its engineer officer, and the last engineer officer reported, I believe, unfavourably; but whatever merits he might have in his department of the engineering service, I think he would hardly be an authority on the question of keeping these rivers open. He was a military engineer, and his skill was in architecture, and, of course, eminent in his branch; but the local superintendent of these rivers, who has been for years past an infantry officer, has recommended that he should be supplied with steam power for the purpose of keeping one of the rivers in a better state, and making the communication by the river better; but still he is not supplied even with the power he wishes, and it is a matter of contest between the mercantile and the planting classes and the Government whether one of the rivers could be kept open. In consequence of this state of the rivers, large boats and steamers are obliged to go round by the Ganges, when the river is low, and for smaller boats going by these rivers in the dry season there is immense obstruction and destruction of cargoes, all of which I could show by papers containing correspondence between myself, as secretary of the society, and the Government, which, with the permission of the Chairman, I will hand over.

989.* Are there any canals in the Lower Provinces of Bengal?—I know of only what are called the Calcutta canals, so called, because they enter the river Hooghly at Calcutta, and they are of the greatest importance to the trade and traffic from the eastern side of Bengal, as well as from the Upper Provinces. Like the Nuddea Rivers, they save a very long and even at certain times of the year a very dangerous circuit. The canals were made 30 or 40 years ago, and there have been no improvements so as to make them adequate to the vastly increased commerce. The consequence is, that although there is a tidal stream at each end, and they are only two or two-and-a-half miles long, it has taken, up to a very recent period, 9, 10, 11, 12, and 13 days to get through; and the boats, which it has been impossible to get through, have been subject to heavy demurrage tolls. The Bengal Chamber of Commerce, the Indigo Planters' Association, and the merchants generally, have complained of that, and the press has complained loudly and angrily ever since I have been in India; and at last the gentlemen who had charge of those canals told an indigo planter, whose boat had been kept 13 days in the canal, and who had applied for relief from the demurrage toll, that if he did not like the canal, he could take the circuitous route. That brought the matter to a crisis; the affair was taken up in good earnest by the Indigo Planters' Association, and some little change was made which has produced an improvement; and so sensible is the Government of the want of a larger canal, that it was determined to make a new cut, which probably would have made the canals adequate to the increasing commerce; it was begun; but since I have left India, I understand Lord Canning has stopped the progress of that canal, so that, with the exception that there is a little better management, and the boats are got through rather faster, those canals are in a state quite inadequate to the traffic, and perfectly disgraceful to the Government.

990. Do they go through the Upper Sunderbunds?—They join on another canal which goes through part of the Sunderbunds.

991. Have lands been conceded to European settlers in that part of the country?—Yes; there are many European grantees of lands in the Sunderbunds, and it is in direct communication with the Eastern part of Bengal, where European settlers are very numerous. A planter's boat, his servants, and I believe himself, had come up to this canal. At the head of the canal, only two miles from Calcutta, he got out, and came on to Calcutta, leaving his servants to get through the canal with the boat, and they were 13 days in getting through, and he went down every day to see that it was not the fault of his servants, and the boat was damaged. At that time, two or three years ago, there were very great extortions by the native police, and I understand that the only improvement that has been

W. Theobald, Esq.

27 April 1858.

made (the new canal having been abandoned), is, that the native establishment is superintended by an European, and he takes care that the illegal exactions of the natives have ceased.

992. Under what management are the canals?—They were formerly under an engineer officer who had an office in Calcutta; but that office was abolished, and then the superintendent was the collector of Calcutta, who took no care about the canal, but only about the collection of the tolls.

993. You have stated that your object in coming to England was to promote certain reforms; what are the reforms that you would suggest; first you mentioned the police?—Of course, I hope I have satisfied the Committee by referring to Mr. Halliday's minute, that the police is in a very bad state, and requires reform; and we regard one thing as essential; and I mention that because I believe it does not enter into any plan of the Government; it is the introduction of European superintendence, to a sufficient extent to curb the vices of the native police; and for this purpose I would suggest that there should be at least one European serjeant to every three or four darogahs, and one European superintendent to every three or four serjeants, and an European at the head of the whole, quite distinct from the magistrate. Now, in Upper India, there is a land frontier, on which a police is established for the purpose of preventing smuggling, and securing the revenue; and, according to the information which I have, the European element has been introduced into that police to a sufficient extent, for the purpose which I have indicated, that is, of curbing the vices of the native police. The Government has not trusted, where its revenue has been concerned, to a native police, and it ought not to trust to a native police without adequate European superintendence, where the object is the prevention and detection of crime, and the general protection of the population.

994. In this, and many other cases, the single remedy is the infusion into an Indian system of a greater amount of European character?—No doubt.

995. With regard to the reforms in the magistracy, which those whom you represent deem important, what are they?—Resting on Mr. Halliday's evidence, as to the youth and inexperience of the magistrates, we think that an immediate stop should be put to the employment of young and inexperienced men as magistrates, and that native deputy magistrates, from the experience which we have of them, should have only judicial duties, if duties at all of that character, and not at all the superintendence of the police; and then we think that magistrates and judicial officers of all classes should be put under a direct legal responsibility to the public for misfeasance and malfeasance, as they were up to 1850, when legal responsibility was in effect abolished by Act 18 of the Local Legislature, entitled, "An Act for the Protection of Judicial Officers." We also say that the Government ought to enforce responsibility to itself in the interest of the public in cases of magisterial misconduct, which it rarely does. I may mention the origin of the Act of 1850. Up to that time, the law of responsibility was the English law. An Armenian gentleman brought an action against a gentleman of the covenanted service for some extraordinary excess of jurisdiction, and recovered damages in the Supreme Court. The case was appealed to the Judical Committee of the Privy Council, and the Judicial Committee of the Privy Council affirmed the decision of the Court below; they held that the law of responsibility was substantially the same as in England. From that time the Government and the influential class of civilians were determined to get the law altered, and they did so by this Act 18 of 1850, by which they have, in effect, abolished all responsibility to the public. It would be a great benefit to place them under proper legal responsibility.

996. To what authority would you make them responsible?—The official classes are liable to be sued only in the Supreme Court. I am not quite sure that they might not also be sued in the Company's courts, but no one would sue a Company's civilian in a Company's court.

997. You would make them responsible to the Supreme Court?—Yes; as the law was from 1773 till 1850; the Supreme Court was, in point of fact, established to protect the natives from the services, the view at that time being that the natives were very much oppressed by the Government. Government has turned round, and says the oppression is by us.

998. Do you suggest any qualifications for admission to the judicial office?—Yes; we have asked that no one should be made a judge, or admitted into judicial employment, without having professional qualifications derived from practice as a barrister,

barrister, pleader, or attorney, or, as I should also add, a special legal education for judicial office. To carry out this principle, it would be necessary to make a separate branch for the judicial service, and in some way to open the so-called "civil service." Now a gentleman enters the service in one branch, and goes to another, and at last goes into, perhaps, the judicial service; and there are instances, I believe, of gentlemen being put into very high judicial office the first time, without having had any previous judicial practice; and into that service (that is, the judicial service, of which I would make a separate branch) barristers and pleaders in the Indian courts should be admissible, and then such only of the covenanted class should be admitted as had special educational qualifications. If Lord Macaulay's plan for a double examination had been carried out, I presume many young men would have paid attention to the legal part of education in preference, and we should have had gentlemen go out with a basis on which proper qualifications for judicial office, through a supplemental education, could have been engrafted.

999. Would not an Act of Parliament be requisite to carry those recommendations into effect?—I think not, because, by the 40th section of the Act of 1853, there is a power given to the Board of Control which would be sufficient. I think that section invests the Board of Control with power to open or modify the civil service by resolutions to be laid on the table of the Houses of Parliament.

1000. On what principle are the different kinds of judicial offices now distributed between the covenanted and the uncovenanted services?—I cannot discover any principle or rule in it; but the fact is, the highly paid offices are given to the covenanted, and generally those which are given to the uncovenanted are under paid. It amounts to a privilege of the covenanted of holding certain offices which may be best explained by an example which I will offer—the Lieutenant-governor, Mr. Halliday, lately appointed a principal sudder ameen (who is a judge of unlimited jurisdiction in civil matters) to act as a civil and sessions judge.

1001. Was he an European?—No, an East Indian. There being a vacancy in the office of civil and sessions judge, this principal sudder ameen who was uncovenanted, was appointed to act during the temporary absence of the judge of the district, that being an office which had been hitherto only held by the covenanted service. The Governor-general in Council refused to confirm the appointment, on the ground that the office of civil and sessions judge belonged to the covenanted service, and the principal sudder ameen, who had been selected by the local government, was removed. I call that the exclusion of a whole class exemplified in the case of an individual. And more recently the judges of the Sudder Dewanny Adawlut, which is the chief court of the Company in Bengal, were consulted by the Lieutenant-governor, and gave it as their opinion that the members of the covenanted service alone could be appointed to the offices now held by them. I do not know what the offices were, but they were certainly the offices of judge of the Sudder Dewanny Adawlut, of civil and sessions judge, and of magistrate. I beg to observe that the judicial offices held by the uncovenanted are to the public of quite as great importance as those held by the other branch of the service; therefore it is an arbitrary distribution of offices.

1002. Could that privilege be abolished by a resolution under the section which you refer to without an Act of Parliament?—I think it could be done by a resolution, and it ought to be done certainly.

1003. Had you in view any courts differing from those now existing, when you spoke of the want of proper courts?—Apart from a general reform of the judicial body, which we have suggested, and the general reform of the courts, I certainly think that there ought to be in all the great cities, like Moorshedabad, Patna, Dacca, Mirzapore, Cawnpore, Agra, Lahore, and commercial places of certain promise, like Rangoon, a court whose language should be English for all causes of a certain value, and with both civil and criminal jurisdiction; and in such places the English criminal law should be the law for natives as well as Europeans, as it is in Calcutta, and the judge should be a barrister. That is the principle; I have not developed it. And wherever there is a court of that kind, the only other court might be a small-cause court, such as we have in Calcutta, and a magistrate or magistrates like those in Calcutta; and those courts might have jurisdiction over Europeans; an English court, in fact.

1004. Would you adopt anything like the English county court?—The small-cause court much resembles an English county court; but I suggest also another

W. Theobald, Esq.

27 April 1858.

court, which should be thoroughly English in spirit, and in form as far as it was convenient.

1005. Do you mean that the small-cause courts which you suggest should have justice administered in them by English or native judges?—It would be essential, in small-cause courts, that there should be native judges; we have three judges in the small-cause court in Calcutta, the chief judge, who is a barrister of the Calcutta bar; and there are two gentlemen, one a native, and another a European, who is a perfect master of the native language. The native causes are insignificant to a great degree. And then there should be a court of greater legal and intellectual competency for important cases in those large towns.

1006. With regard to the *lex loci*, can you give the Committee some further information upon that subject?—The East Indians have asked for it, and they are much interested in it, as a large and respectable body of Christians; they have asked that the *lex loci* prepared by the Indian Law Commission, printed and read in Council, should be made the law. The only part of it which has been passed is the law of inheritance and toleration. Here is the draft Act which was read in Council, and sent home. The following clause embraces what we particularly wish for: "It is hereby enacted, that from and after," such a date, "the substantive law of the place in the territories subject to the government of the East India Company, without the local jurisdiction of Her Majesty's supreme courts aforesaid, shall be so much of the substantive law of England as is applicable to the situation of the people of the said territories, and as is not inconsistent with any regulation of the codes of Bengal, or Madras or Bombay, or with any Act passed by the Council of India, or with this Act; provided, and it is hereby enacted, that nothing in this Act contained shall apply, so far as regards marriage, divorce, or adoption, to any person professing in good faith any religion other than the Christian religion." That is what the East Indians want; and that is what the Europeans want in the courts of the East India Company, because it would be the authoritative establishment of English law. I believe the courts of the East India Company, where we are concerned, do, as well as they can, apply the English law to our cases; but I am not aware that that is authoritative upon them; but this would make it authoritative, and the English law would be the rule of their decisions. Twenty years ago the East Indians sent a representative to England, and one of the complaints was that no law was applicable to them, and their case was taken up by the Indian Law Commission, and this law was made mainly with regard to them, and here it is standing over still. They petitioned in 1853, and now, through me, petition again. They are a Christian body, and yet have not the advantages of Christians, but are mixed up with Hindoos and Mahomedans, and are altogether in a most unjust position.

1007. Is that the last edition of the *lex loci*?—This is the only edition of the Act which has appeared. There is a great weight of authority in support of it; putting the two sets of Commissioners together, that is, the Indian Law Commission and the late English Indian Law Commission; there is a majority of those gentlemen in favour of this Act; Mr. Cameron, I may say (I think I have his authority for saying it), wished that there should be a code prepared; but Mr. Cameron, seeing that even the penal code has not been passed, and that there is no constituted body qualified to prepare a civil code, is now in favour of passing this law as it is here, making English law the *lex loci*.

1008. The law would apply to all English, and to Mahomedans and Hindoos where the Mahomedan and the Hindoo law was silent?—Certainly, it would have that further advantage.

1009. And to Indo-Britons as well?—Yes.

1010. At present the Mahomedan and Hindoo law is (as it were) carried about with them by the natives personally?—Yes.

1011. That is the distinction which you draw between a local law and a personal law?—Yes; the Commissioners say that Hindoo law is the law of the Hindoos, and Mahomedan law is the law of the Mahomedans; those are not laws adapted for other classes than Hindoos and Mahomedans, and there is no other law; that was their opinion.

1012. Have those whom you represent made any demand for the reform of the Sudder Court?—Yes, they have; and the reform of the sudder formed part of the plan of the English Law Commissioners, but that plan has broken down not so much from our opposition as from the Council and the authorities on the other side having found that it was an impracticable plan; and that plan being abandoned, we still

still wish for the reform of the sudder; and our suggestion is, that, as it is admitted that what is wanted is the introduction of professional lawyers into the Sudder Court, you can best have that by increasing the number of Supreme Court judges. We say increase the number of the Supreme Court judges, and establish a rota amongst those judges to go and sit in the Sudder Court, whenever business is being transacted; and in the present state of the Sudder Court it would require three new judges, because, although there ought to be only about four sudder judges, there are now actually nine; so that the Sudder Court is sitting in divisions of three courts, and if you have the professional element in each court, you must have three English judges; and as the Supreme Court judges are overworked at present, double the number would be required. Instead, then, of having nine Company's judges, and not a professional lawyer among them, you would have six of one and three of the other class. If the number of Sudder Courts were diminished, the number of Supreme Court judges might be diminished.

1013. Have or not those whom you represent asked for any reform in the Legislative Council?—Yes, we have petitioned, and think it a matter of great importance, especially after the experience we have had of its working under its present constitution. It has the whole field of legislation before it, and it does not deal merely with questions of the constitution of the courts, and the constitution of the authorities, but it deals with questions affecting the mercantile interests and the social interests of the community, and we say that the council wants to be strengthened from without, and that the official element is not qualified to the full extent of its functions. And we can point out instances, we think, of failure from the want of that knowledge which could be supplied.

1014. Have you, or not, made any representations with regard to the recent Act for the restriction of the press?—Yes; we say it is essential to the safety and comfort of Europeans in India that those restrictions should be removed. We shall have no hope of any improvement till that is done. Our security depends upon the right of free discussion, and of representation to the Government of mal-administration of all kinds, and we can hope for no reform if the press is under the existing restrictions. The press law has been passed since I left.

1015. Do you think there should, or not, be an infusion of British commercial knowledge into the Legislative Council?—That is one of the things we desire.

1016. You think that indispensable?—Yes.

1017. Do you think that there should be an infusion into the Legislative Council of native knowledge?—We said in the petition that it should be left to the discretion of the Crown; that the Crown should have an unlimited discretion to appoint natives or Europeans; and we do not wish to hold natives disqualified.

1018. You think that the further introduction of the English language into India, by all proper means, is very desirable?—Certainly; its introduction into the courts is in every way desirable.

1019. Have you ever considered whether it might be desirable gradually to introduce, principally through European agency in the first instance, the system of free municipal government into India?—Yes, certainly, in the Presidency towns; and I think the municipal element has been employed with success in the Mofussil, in the Ferry Fund Committee; and after the great inundation, in 1855, it was determined to grant a large fund for the relief of the population, and that was employed in making roads for certain districts; it was placed, I believe, chiefly under the management of the Europeans of the district. I have asked many people in the country whether they could not relieve the magistrates of local duties in the nature of conservancy and duties of that kind which must be done; and they have always answered affirmatively that the element of self-government exists to a considerable extent, but it would require to be called out.

1020. Are there any vestiges of old municipal government traceable in the country in India?—Not in Lower Bengal so much as in the upper parts of India; the village communities are entirely, I fancy, broken up; I am not quite sure whether the rights of the villages and of zemindars to appoint chowkeedars is not a remnant of the old system of self-government.

1021. I think I gather from your evidence that we require in India an infusion of more locally distributed influence and power, and not centralization, to the extent to which it has hitherto existed?—I certainly think that a great deal of administration might be entrusted on the spot to unofficial persons, and without a constant reference to the supervising authority now given to the Government; the

W. Theobald, Esq.

27 April 1858.

Lieutenant-governor is employed about trumpery matters now, which, whether rightly managed or not, ought to be concluded on the spot.

1022. Have you ever considered the policy of the redeeming the land tax?—I would rather retain the land tax. I should be afraid that if the land tax was redeemed, the Government would spend the principal, and then want a substitute for the tax. The land tax saves us from a host of small taxes.

1023. That was recommended in a report by Mr. Thomas, an officer of the civil service, given in the Appendix to the Indian Cotton Committee Report?—I think it very unwise. The missionaries suggested it, and Mr. J. T. M'Kenzie has suggested it.

1024. You represent the planters here; do the planters pay attention to the education of the people about them; have they established any schools?—I do not know; I think they have in Kishnagur, but I am not quite sure. I know many of the planters are highly religious, and take a great interest in the welfare of the population.

1025. Do you think that probably they will hereafter pay attention to the establishment of schools and other means of enlightening the people?—Yes, I know there are amongst them patrons of everything of that kind.

1026. Mr. *Mangles.*] You say you think the climate of Bengal a good climate, and that if greater facilities existed of intercourse with England, people would have their children out earlier; have you any knowledge of cases in which children have been brought out earlier?—I certainly think it a very fair climate. I was not aware that I made the proposition of having the children out earlier; but I think that if the voyage was shorter, even that would happen. We send our children home much because the hill stations are not accessible, and because they get a better education; but the East Indians keep their children in the country, and give them a very good education; and if we were more numerous, probably we should find the means of keeping our children at the risk, perhaps, of impaired strength; but that risk is run by Europeans in all parts of the world.

1027. Did you ever know a European child trained up to maturity in Bengal?—I have seen several young persons who, I believe, were brought up in Upper India, the children of European parents; but I have seen none in Lower Bengal; and the only difference perceptible in them was, I think, the pure result of an inferior education. I could perceive no difference in strength and vigour. I apprehend we send our children home for the sake of a better education.

1028 Are you aware that it is said to be impossible to raise a second generation of Europeans in India?—Yes, I have heard that; but I am not at all aware on what evidence it rests. I suspect it is a mere matter of opinion, or founded upon the observation merely of official families; and I do not know that their position is the most favourable for health. I should doubt very much whether planters, and people who are living very active and have out-of-doors pursuits, would deteriorate and suffer the deterioration which is supposed.

1029. Do you think the climate of Bengal is favourable to out-of-door pursuits?—I know planters whose pursuits are entirely out of doors, are a healthy, hearty people. I know that it is desirable to avoid the sun; but I find that those people who are much out, and apparently run what would be thought very great risks, still go through them. And look at what the army has gone through now in this last rebellion. I have friends who have been greatly exposed to heat which would have been supposed to be fatal to Europeans; I have two brothers who have been out during the whole of the contest, and they have not suffered in health.

1030. Are you not aware that there has been a great mortality in the army owing to the weather?—I am not aware.

1031. Has there not always been on such occasions?—It may be so.

1032. Has not it always been found, that though the excitement may keep up a European during the campaign, there is a dreadful loss of life afterwards?—It depends upon the constitution; some people are very excitable, and some not, and some people can go through a great deal of exertion without much suffering. But the circumstances of the army in the field in India are exceptional. There can be no doubt that the climate is in a certain way unfavourable; but in a public point of view I regard it as of no importance at all on the question of colonization and settlement.

1033. Do you think what is called in common parlance colonization, as it exists in America and Australia, is practicable on the hills of India?—Certainly not; in

I do not think that has ever been affirmed by anybody, because there people go out in large masses, and speculate on finding a position; but in a thickly peopled country like India, that can never take place; but we could go in larger numbers, and with success, if we had proper local administrations. With respect to the hills, I cannot answer, without seeing some plan, whether it would be practicable.

1034. You stated that the settlement of Europeans must be advantageous to the natives, and at the same time you stated a strong opposition to what has been ordinarily called the Black Act; are you not aware that the Act of 1833 positively enjoins, that laws should be passed at the same time that it gives access to Europeans to India, that measures should be taken for the protection of the natives?—According to my recollection of that Act of 1833, it does not enjoin that the same law should be enacted for all classes, or that no discrimination should be made between different classes, because if that were the case, it would go to give Mahomedans and Hindoos and English the same law; but, according to my recollection of the Act of 1833, the Commissioners were to have instituted inquiries before they began to legislate, and they did not institute inquiries; for instance, into the character of the courts they did not inquire; if they had, I think they would have found that the objections which we take to the extension of the jurisdictions over us were justified in the character of those courts; but the Commissioners, especially Lord Macaulay (who was also Legislative Member), took it for granted that if we were put under the courts they would have been reformed, but we say reform your courts first; but Lord Macaulay chose to give the Government credit for making those alterations, which would have adapted the jurisdiction to us; and in answer to our objection, I think in a Minute of Council one reason alleged by Lord Macaulay for bringing us prematurely, as it were, under the local jurisdiction, was, that we were people who knew how to complain, and that our complaints would immediately lead to reforms that would adapt the courts to us. Now we have been complaining from that time to this, and the courts are not reformed, and still this measure of the Black Acts is threatened. I do not, however, apprehend that the proposition of those Acts is at all a proper consequence of the direction given in the Act of 1833.

1035. What, then, do you think was the meaning of the Legislature in 1833?—I cannot suppose the meaning to be, at least what has been proposed; without the Act of Parliament before me, I could not answer that question; but I have read it attentively, and I do not conceive that what has been proposed is a just performance of the intentions of that law; and I never understood that the Black Acts, as they were called, were pressed forward on that ground, because if the Act is imperative, why then *cadit quæstio*, and our attention would be directed to having the Act repealed or modified; but I apprehend that there was no such intention.

1036. What protection does the existing criminal law in India afford to a native who is maltreated, or wounded, or murdered by an Englishman at a distance from Calcutta?—All over Bengal there are magistrates who have the powers of justices of the peace, and those justices of the peace have an unlimited power of investigating as respects Europeans and all other classes; and where a case occurs which is beyond the jurisdiction of the local courts, that case can be tried by the Supreme Court in Calcutta.

1037. That is to say, that it is only in cases of a very aggravated character, in which the consequences are very important, such as involving transportation or imprisonment, that the jurisdiction of the Supreme Court is wanted, because the local tribunals have the power of fining heavily, and in anticipation or prevention of crime they have the power of putting persons under recognizances?—Yes.

1038. Do you think that is a sufficient protection to the native from the hazard of violence from an Englishman at a distance?—I think practically it is a protection, considering the small number of the class and their ordinary good habits; but I think a better protection is desirable by the institution of proper English courts, such as the East India Company has pertinaciously persisted in refusing.

1039. You are aware that the Supreme Government has to legislate, not only for Bengal, but for countries far more distant from the seat of government than any part of Bengal. Do you think it just that a native of Agra or Delhi, aggrieved criminally by an Englishman, should have no recourse but the Supreme Court?—I think it is not just, and we petitioned for better tribunals; the danger to the native ought not to exist, but then what is the remedy? not putting us

W. Theobald, Esq.

27 April 1858.

under corrupt native tribunals, but appointing proper courts. We say, Let us have rather the benefit of a court-martial, or try us by any means rather than by the native tribunals.

1040. Are the tribunals of the English judges, the covenanted servants in the country districts, corrupt?—They are not corrupt, but their omlahs are, and they have a corrupt population to deal with, and they are much open to influence, and we want protection, which those courts do not give us; certainly we do not impute corruption to the judges.

1041. Do you think if you had barristers located in the districts they would be free from corrupt native omlahs, if they be corrupt and a corrupt population around them, more than the covenanted officers are?—Yes, I think they would be, but I think the omlahs should be reformed as well as the judicial part of the court; it is one of the standing evils of the judicial system that the omlahs are thoroughly corrupt, and must be great impediments, under the best judges, to the administration of justice.

1042. Have the omlahs necessarily much to do, under a competent judge, in the administration of criminal justice?—Undoubtedly; in point of fact, they have much of everything to do; whether they ought to have so much to do is another question, and there are various grades of judges, not all equally open to influence. I fancy the sessions judge is a much older man, and is less open to influence, but he has less to do.

1043. Having less to do, he would be more at leisure to take up these things?—He applies his mind more effectually to the case; but if the question is, whether that would afford a satisfactory tribunal to us, I should say it would not be a satisfactory tribunal to us for many reasons, chiefly what may be termed the absence of all professional qualifications.

1044. Would a barrister coming out from England be competent to administer justice to the natives of India?—Not as he came raw from England, certainly. We have the advantage in the Supreme Court, of course, of having the proceedings taken down in English; and we should hope to preserve that privilege, if we were put under a reformed tribunal, in the Mofussil courts. I say we should expect the advantage of being tried by a jury in our own language, not under the sessions judge. You give the native that advantage, and why should we be deprived of it?

1045. Would that be practicable in every district?—Undoubtedly, because we are a small body of persons.

1046. Would it be possible without an enormous expense?—The expense ought to be no obstacle. I think there would be a considerable reduction of expense if the judicial offices of the highest kind were open to gentlemen not belonging to the covenanted service.

1047. Would a man knowing merely English law, and necessarily unacquainted at first with the language, and unacquainted for many years with the habits and manners of the people, be competent to administer justice merely from a knowledge of English law only?—I think in a month I would answer to get up the whole of the Regulations out of Mr. Marshman's Civil Guide.

1048. Do you think that a man is competent to administer justice in any country who has a knowledge only of the law, without a knowledge of the habits and manners and customs of the people, and of their modes of feeling and opinions?—Certainly I should think not; but I apprehend that that knowledge would be very easily obtained, supposing that he had a knowledge of the language, especially when he takes up an official duty with a conscientious wish to discharge it properly.

1049. You think the degree of knowledge of India attained by gentlemen of the civil service generally, after a service of from 10 to 15, 20, and 30 years, could be acquired sufficiently to enable a barrister from England to administer justice shortly after he arrived?—Yes; I apprehend that a barrister who had been 10 years in the country would have all the knowledge that a civilian has when he goes on the bench.

1050. Sir Thomas Munro held that no man was fit to be a judge in India who had not been a collector, because he would not be acquainted with the rural habits and agricultural pursuits, and the nature of the people. Would a man be qualified to be a judge in this country who did not know a field of wheat from a field of oats, or potatoes from beans?—I cannot accept Sir Thomas Munro as an authority, because I think that none of our public men ever made so many mistakes as

Sir

Sir Thomas Munro: apart from that, of course I think so. A minute knowledge of differences of crops is not necessary in a judge. We say that the advantages referred to in the question are possessed in a very inferior and inadequate degree by the class whom the question supposes to be highly qualified in those respects.

1051. Do you think that a man would be qualified to be a judge in this country who knew nothing but law, however deeply read in that, if not well acquainted with the habits, pursuits, callings, and trades of the country?—I should say no, as an abstract, general question; but if any practical inferences were intended to be drawn, I should require to qualify it.

1052. Is that to be acquired by any man going out late in life to India, and sitting at his desk?—No, certainly not. But barristers going out at 28, if office were open to them, and a proper salary attached, would soon acquire a sufficient knowledge of the people.

1053. You stated that very young men were appointed magistrates; are you aware that orders have gone out from the Court of Directors to place the magistracy in the hands of older men?—I did say that; but of course it is in the recollection of the Honourable Member that Mr. Halliday said it, and I rather brought forward his authority than my own. I am not aware that orders have gone out.

1054. Have not you seen the letter published and printed by order of the Court?—Not on that subject. I am aware that Mr. Halliday, taking a strong view of the inexpediency of employing young and inexperienced men, has recommended that the collectors should be made magistrates. The collectors are much older persons. I presume that is the only resource to which Mr. Halliday can go to obtain an older class of officers; but, without seeing the despatch and knowing what means the Honourable Court has suggested to carry out its own order, I should have no faith in that order; if it is merely in general terms, "Employ older men," it will not be carried out, I am quite sure.

1055. As this despatch has been laid before Parliament, and as you have taken up this subject so thoroughly, do not you think that it would have been wise as well as fair to have read a despatch published, which went to India, to reform the police and the magistracy?—I have endeavoured to make myself acquainted with every despatch at all relating to any of the objects of my mission; and I have seen most of the police despatches, but none of the character referred to in the question.

1056. You spoke of the magistrates being ignorant of the languages of the country; are you aware of the examinations to which all civil servants are now subjected in Bengal?—Yes, I am aware of the examinations to which civil servants are subjected, and I am aware that they are exceedingly ineffective; and that it is the general opinion, that they go into the performance of their duties with very inadequate knowledge of the language of the country. I think I can state in respect to two instances, two batches of young men; one certainly passed the examination by contrivance, by art, without the qualification which the examination was supposed to prove. That was reported to the local government, and by the local government it was reported to the Court of Directors, and the Court of Directors of course reprobated it as a most scandalous thing. I cannot quote the terms used by the Honourable Court, but they expressed just indignation at this batch of young civilians having passed by improper and disreputable means, and gave directions that if it happened again, the most serious consequences would be visited upon those young men. It did happen again, and the only consequence, I believe, was, not a reference again to the Court of Directors, but that those young men were sent into the country to be under senior members of the civil service, to learn the language.

1057. Was that an examination to pass out of the college in Calcutta?—Yes, both examinations; and there is a despatch of the Court of Directors relating to it.

1058. Are you aware what examinations a young civilian is subjected to now under the existing system?—I cannot describe them with proper precision and accuracy.

1059. Are there one, two, or three?—I do not know what they are now. I have no doubt they are framed so as to be complete, and if carried out properly, they would have the proper result of securing the best knowledge of the language obtainable.

W. Theobald, Esq.

27 April 1858.

1060. Are you aware that when a civilian gets out of college he is obliged to pass and show a certain knowledge of the native languages; that then, before he gets a single step in the service, he is obliged to pass a second examination, and before he takes a second step, a third?—I think it likely that there may be all those grades, but they fail to produce the results, as I hear from my friends in the Mofussil who come in contact with them, and see the effects.

1061. Are you aware that one of the tests applied in the second examination is to place in the hands of the young civilian a report written by a native officer of police or of revenue, which he has never seen before, and to require him to translate it then and there, without a dictionary or any book, and then and there sit down and write in the native language his own answer?—I have no doubt it may be the case.

1062. Could a man do that without a competent and sufficient knowledge of the native languages?—I should say, if it is *bonâ fide* carried through, it is a security for a proper knowledge of the language; but I have known young men distinguish themselves greatly upon an examination by cramming, who have really had very little practical command of the vernacular.

1063. Can a man be crammed to read a letter put into his hands in a foreign language for the first time?—I should say, certainly not. I understand the question is, whether he is entitled to promotion; he has necessarily acquired a certain knowledge of the language at that time, and I can conceive many young men fail in that test, and many young men succeed.

1064. Yet you said that the covenanted magistrates were ignorant of the native languages?—The magistrates, according to Mr. Halliday, are very young men, and I state upon the information which I have from persons in all parts of the Mofussil, that they do not know the languages.

1065. Do not those examinations take place considerably before they become magistrates?—A young man, now a magistrate in some district, has been in India under two years.

1066. Can a young man be a magistrate, under the rules of the service, till he has passed the three examinations?—By the rules of the service a young man ought not to be a magistrate till he has been 10 years in the service.

1067. You say that the uncovenanted magistrates, the Mahomedans and Hindoos, are bad men?—That is not the expression I used; it comes to that certainly, as respects fitness for office.

1068. The uncovenanted magistrates, Mahomedans and Hindoos, though bad men, are not chosen by Government?—The general opinion is that a very bad selection has been made for the very important office of deputy magistrates.

1069. Has not the Government a strong interest, as well as a duty, in the good administration of justice through the country?—No doubt it has an interest and a duty.

1070. Why should you suppose that intelligent rulers, like Mr. Halliday, for example, should voluntarily choose inefficient instruments of Government?—Because he is the creature of circumstances; he has only young men at his disposal.

1071. I am speaking of the natives?—The question, I understood, had reference to the selection of persons.

1072. The selection of natives?—The same observation applies. Mr. Halliday is the creature of circumstances; if he can only appoint a man at a very insufficient salary, he is obliged to take an inferior man; or if, for any reason whatever, he systematically abstains from employing natives educated in our colleges, he is necessarily driven by that circumstance to Hindoos and Mussulmans of inferior position; and consequently he and his predecessors have filled, undoubtedly, that important service of deputy magistracy with persons who are very improper to be in the deputy magistracy; there is no doubt about the fact.

1073. You said that there is danger to capital from the revenue system in Bengal; what is the danger?—In stating that proposition I referred, as a proof of it, to Mr. Grant's view on that question, and who, in consequence of the view which the Government has taken, brought in a Bill for the purpose of so amending the revenue system as to give proper security to capital.

1074. Do not Englishmen hold land now in Bengal as zemindars, or as under-tenants, with perfect practical security?—Yes, they hold every kind of interest in land; they have both zemindaries and putnees, and izara. Every sort of interest they have, and they owe the safety of their position to being men of capital and property; but nevertheless their property is not in a state of proper security.

1075. Do not the indigo planters of Nuddea and Jessore and other districts practically carry on their operations in perfect security?—I think, when they appear before the Committee, they will probably say there is a great deal of insecurity and danger from the absence of law and justice.

1076. You said that at Madras, in consequence of the ryotwary system, capitalists cannot get a footing?—Yes, that was the expression I used.

1077. A capitalist can buy land of the ryot at Madras, cannot he?—Yes, from a ryot, no doubt he can. I believe, now, the ryot has a saleable interest; but I should think it is a perfect impracticability for a capitalist to buy up a whole population, because it would come to that, and what is to become of the population when it is bought up. The question supposes a thing to be practicable, which is only theoretically possible.

1078. Are you not aware that many of the ryots of Madras have large holdings?—Yes, I think it is very likely. I am not aware whether they are numerous. I understood that the mass of the ryot population had very small holdings, and were in a very pauperised condition, something like the Irish peasantry until the exodus which followed the famine.

1079. Are you not aware that there are large holdings in Madras?—I am not acquainted with the details of the holdings, but I should think the large holdings are very few.

1080. You said that the people were emigrating to Tenasserim, and the Straits settlement, in consequence of the revenue system of Madras?—I stated, certainly, that there was an annual emigration, I understood, from the Coromandel coast, and by conjecture I imputed it to the impossibility of living on the spot. The native of India does not emigrate very willingly; but there is at present emigration going on, and I have heard it ascribed to the condition of the permanently settled population.

1081. Are you not aware that the wages of labour upon that coast are extremely high?—No, I have no information on that subject.

1082. Therefore having no information, you thought it best to ascribe it to the undue amount of the Government assessment?—My information led me to draw the conclusion that it was owing to the revenue system, and not merely to the amount of the assessment.

1083. You said that Lord Cornwallis was unjustly charged with having made the permanent settlement precipitately; are you aware that Sir John Shore, then the senior member of council, afterwards Lord Teignmouth, earnestly pressed upon Lord Cornwallis not to make the permanent settlement without more careful inquiry?—There was some difference of opinion in council I believe about it, but Lord Cornwallis was supported by all the most eminent men of the East India Company's service, by the court of directors, and I presume also by the Parliamentary statesmen, and that that was the case I think is also corroborated by this circumstance, that the next settlement was in the northern Circars; and although that was only a settlement for a term of years, it was made professedly with the object, and under a sort of promise to the parties concerned in that settlement, that it should be a permanent settlement; but it was a mere question of time as between Lord Cornwallis and any of the council when it should be made permanent, and I have no doubt Lord Cornwallis took a wise resolution, and that the settlement was a wise one the result has shown.

1084. Do not you think it was precipitately made?—Approving of the measure, I think it was not precipitate.

1085. Do not you think that there was a great sacrifice of all subordinate rights to the zemindar?—No, I think it was the salvation of the country, for if the permanent settlement had not been established, we should have been under the influence of those opinions which led to the Ryotwary settlement, and then Bengal would have been under the Ryotwary settlement.

1086. Did not the 30 years' settlement in the North Western Provinces result in very beneficial effects?—Not such beneficial effects as the permanent settlement; and I rather think that the civil rebellion which has supervened upon the military rebellion is very much to be ascribed to the effects of that revenue settlement. The old talookdars were displaced by that settlement; they were the persons analogous to the zemindars in Lower Bengal; and they are now returning to their lands, having the affections and respect of the people, and are resuming the place which they had before we took possession of those provinces.

1087. You stated that before 1837, that is, before Europeans and Englishmen were

W. Theobald, Esq.

27 April 1858.

were allowed free tenure of land in India, the indigo planters formed an alliance with the Government officers, who found capital, and so managed that they should get the kind of land they wanted?—That is rather a matter of reproach, and justly so, which I do not wish to dwell upon, because it conveys a reflection upon gentlemen of former days; but I state that from the information which I have received.

1088. You do not intend to justify that statement?—I do not withdraw it, because I believe it to be true; but I cannot justify it by a knowledge of the facts.

1089. Then your general opinion of the state of the police and of the magistracy is founded on Mr. Halliday's minute?—No, it is not; it is founded on my knowledge of and communications with the whole of the planting community of Lower Bengal; but I put Mr. Halliday's minute forth as a basis of opinion which the Committee is likely to accept at once.

1090. Have you or have you not read the letter which has been laid before Parliament containing the orders which the Court of Directors sent to India, with regard to the reform of the police and the magistracy of Bengal?—I have read that despatch.

1091. Are you not aware that part of the orders there given related to the separation of the magistrate from the superintendence of the police?—I do not think that has been carried out; the magistrate has the superintendence of police still, according to the information which I have.

1092. Were those the orders?—Those may have been the orders; I think they were; but I think also they have been the subject of discussion, and that the Council are not agreed with the Court of Directors upon the subject of that despatch. They were not peremptory orders.

1093. Has there been time, in the state of India since that event, to carry those orders into execution?—Yes, I think there has been; but I do not think any orders will be carried out without a special agency, if they are to go to the extent of a thorough reform, such as is needed. And moreover I may refer to the memorandum of the East India Company in defence of its administration: there is a short paragraph about the police, from which it appears that that despatch is not to be carried out. The memorandum is headed, "East India (Improvement in Administration)," and this passage is as follows:—"This plan has undergone careful deliberations from the Government of India. The various members of that Government and the Lieutenant-governor of Bengal have individually recorded their sentiments in minutes characterised by a frank recognition of existing defects, an earnest desire of improvement, a remarkable amount of knowledge and understanding of the subject, and a great ability in the statement and discussions of the merits and defects of the various plans advocated. For the present, so far as regards the Bengal Presidency (including the North-western Provinces), the recommendations of the Government of India are limited to a better choice and ampler remuneration of the native police, and to the aiding and strengthening them in certain localities by police corps of a semi-military character. These measures have been sanctioned, and until their effect has been tried, the Court of Directors have consented to put in abeyance the more fundamental changes which they had recommended." I say that puts an end to the despatch.

1094. Mr. *Gregson.*] In answer to question 857, you state that Europeans in the interior, connected with agriculture, have not increased, but are vastly declining in numbers; can you briefly account for this, while during late years the productions and the exports to Europe have considerably increased?—The operations of the Europeans are to a much larger extent; they would have a larger business each if their numbers are not increased.

1095. You further state that the proprietors of large concerns in the interior experience increasing difficulty in obtaining European assistance; to what cause do you attribute that difficulty?—To the state of the local administrations and to the several causes which I have enumerated in answer to a question that was put to me; I include in the local administrations the state of the police and the magistracy.

1096. *Chairman.*] Do you mean that those causes deter Europeans from going there?—Yes.

1097. Mr. *W. Vansittart.*] Are you of opinion that the abolition of the Supreme Court of Calcutta would be prejudicial to the interests of the Europeans generally?—Certainly; they sent me here to oppose that as ruinous to them.

1098. Would

1098. Would not the amalgamation of the Supreme Court of Calcutta with the Sudder Deewanny and Nizamut Adawlut answer every purpose?—No, certainly not, on the plan proposed, because that involves the abolition of the Supreme Court. The Commissioners themselves say that it does. We wish to preserve the Supreme Court distinctively as a court of English law.

1099. In point of fact you would keep the Supreme Court, and the Sudder Deewanny and Nizamut Adawlut entirely separate, as they are at present?—No, not exactly; for we have a plan for reforming the Sudder Court, which would bring the two courts very much together. We would establish a rota of Supreme Court Judges to sit constantly in the sudder, but the courts would be no doubt separate still.

1100. The indigo planters have been accused of keeping a body of lateeals or bludgeon-men, to protect them and coerce the zemindars; is that the case?—No doubt there is an absence of protection, which obliges the planters to employ their establishments in protecting themselves. An indigo concern spreads over a great extent of country. Their capital is out in small and large advances to a very large number of persons, and in a great variety of places, and they have to employ large establishments to look after their agricultural interests, their indigo and other interests in the various stages of growth. Those are what are called the latteeals, and no doubt they are capable of being combined for the purpose of forming a large body of men, but they are a large body of men distributed over the country, and they are not kept in the sense in which the question was put, as a body of men for the purpose of violence.

1101. Do you think that the indigo planters generally are prepared to give their local knowledge, and assist the local magistrates, in the apprehension of offenders?—I am quite sure of it. The Lieutenant-governor has lately appointed a considerable number of indigo planters as honorary assistant magistrates, and I believe it answers exceedingly well. I only wish that that system of employing Europeans and natives too, may be extended.

1102. You do not think that the zemindars and ryots view with any jealousy the appointment of indigo planters as deputy magistrates?—As honorary magistrates. I am not aware; certainly not the ryots. The indigo planters are largely employed now in judicial functions; their jurisdiction, of course, is a voluntary one entirely.

1103. Do you think that it is desirable to appoint indigo planters as deputy magistrates in the locale where their factories are?—The locale of their factories may be very extensive, and I think there is no objection to it, if they are prohibited from acting as magistrates in cases in which they are at all interested, directly or indirectly; but I cannot say to what extent their jurisdiction goes; whether it is merely inquisitorial, and with a power of police, or also judicial; no doubt limits should be put upon a jurisdiction of that kind.

1104. You do not think that their mercantile pursuits are incompatible with their duties as magistrates?—Certainly not, any more than the appointment of tradesmen and merchants as magistrates in England is incompatible with their interests. Their interests are to keep the country in order, and their power to do so is very much greater than that of the official classes.

1105. You speak of the bad administration of justice in our courts; do you allude to courts presided over by members of the civil service or to the courts of the Sudder Ameen and the moonsiffs?—To all the courts; not merely on account of the European judge, but on account of the atmosphere in which he acts.

1106. You do not allow that every civil servant is under the influence of his omlah, do you?—I have already stated that the civil and sessions judge is less under the influence of his omlah than the magistrate; but the magistrate is under influence in proportion to his experience, and knowledge, and ability: there are good magistrates and there are bad.

1107. Mr. *De Vere.*] You have recommended requisitions for labour in maintaining the roads; will you explain a little more clearly what you mean by that?—I have no detailed operation in view, but to put forward this proposition, that roads are so beneficial to the country, that the resources of the country should be applied to making them; and one resource of course is the supply of money from the wealthy classes and supply of labour from the agricultural classes. Having regard to the constitution of villages and of a native society, I rather think that they would supply labour: I put that as a general principle.

1108. You propose that it should be a compulsory requisition for labour?—If necessary;

W. Theobald, Esq.

27 April 1858.

necessary; but I think that the population would soon understand the benefit to be derived, and that no compulsion would be necessary.

1109. Do you propose that the labour should be paid for?—That goes not quite to the point. If a district chooses to employ its population in performing labour, that would be a performance of the obligation; if it chose to make a money payment, that would be equally a performance of the obligation.

1110. Mr. *Danby Seymour.*] Forced labour has been given up generally through India now, has not it?—Yes it has.

1111. And there has never been a dearth of free labour since that has been done, I believe?—No; what I contemplate would resemble statute labour in this country.

1112. Do you wish permanently to see one law for the natives and another law for the Europeans?—Yes, I do wish permanently to see one law for the natives and another law for the Europeans. The natives have always had one law, and we cannot have their law. There is the Hindoo law for the Hindoos, and the Mahomedan law for the Mahomedans; I do not see why we should not have the Christian law for the Christians.

1113. The natives in the other Presidency towns are quite content with the Supreme Court, are they not?—Yes, certainly, so far as I know.

1114. Then it is on principle that you object to the propositions of the Indian Law Commissioners?—The question is so very comprehensive that I cannot answer it.

1115. As a general principle, you would not wish to see any one law for the whole of India?—No; I conceive that there cannot be one law for the whole of India. India is a world in miniature, and one law for all India is like one law for all the world; so the proposition occurs to my mind.

1116. In the interior there are great defects, are there not, in the administration of justice?—Certainly.

1117. How do you propose to remedy those defects?—I have not gone into a detailed examination or statement of any plan.

1118. You would not attempt to form a law for the whole country?—I think it is a mistake to legislate for all India at once.

1119. Or even for one Presidency?—I think that one criminal law would do for pretty nearly all Bengal, and I should prefer the English law, and we do object to the Penal Code, chiefly as it deviates from the English law, and substitutes some law not so good as English law.

1120. Do you think that, as long as you have the great diversity of law which exists at present, you can improve the administration of justice?—Yes, most certainly.

1121. In what way would you do that?—By putting more qualified men into judicial office.

1122. How would you get better qualified men?—I think that the civil service should be opened for judicial office to persons professionally qualified.

1123. What do you mean by professionally qualified?—The practice of the law is one qualification, and, by the scientific study of the law, I conceive that there may be a legal education which qualifies for even judicial office; but you cannot give a young man the qualification by any education.

1124. Supposing you had to draw out a practical scheme for the improvement of those who had to administer justice in the Company's Courts, would you take English lawyers, or whom?—I would take English lawyers; and I would take from the civilians every person available. I mentioned the forming a judicial service.

1125. Would not that be separate from the civil service?—Yes; it would be a separte branch, variously composed.

1126. Would you appoint any one acquainted with law, or would you oblige anybody placed in the position of judge to have practised in court?—You send out a body of young men, who immediately after they have acquired a sufficient knowledge of the language, go into all the offices in the various departments of the government, and in their turn they become judicial officers; and being judicial officers, then they go into the revenue. I would change that in this way: after a young man had attained those qualifications which fit him for office, consisting of a knowledge of the people and of the languages, I would give him an opportunity, if the civil service is to be maintained as a separate body, of having separate qualifications for the judicial office, by studies which might be carried on either in India or at home, but he should have an opportunity of choosing the

judicial

judicial office, and of superadding to his qualifications the legal education which I think desirable.

1127. Would you make him choose the judicial line as soon as he went out to India?—No; I think that the whole civil service is on an erroneous constitution, but I take it as I find it. My proposal being to have a judicial service, here being the raw material of the civil service to form a portion of the judicial service, I would give these young men who have a taste for the judicial service an opportunity of acquiring special qualifications.

1128. How would you fill their places up; would you keep the judicial service entirely separate?—Certainly.

1129. How would you draft them into the judicial service?—After a young man has been three or four years in any service he should be drafted in.

1130. Still he should be a civilian?—Yes.

1131. Do not you think that some practice in courts of justice is necessary to make a good judge?—Certainly, and I accept the civilian class merely as one that is existing, and of which you must avail yourself, because, with all the resources to which you could revert, you would still find a difficulty in getting the proper number of judges, magistrates, and judicial officers specially qualified.

1132. If you chose barristers who had been in practice in Calcutta to fill the judicial situations, do you think that that would answer?—Most certainly it would.

1133. The character of the bar would probably improve?—Yes, it might be so; I do not quite understand the question.

1134. Civilians are obliged to pass in two languages now, in nine months, are they not?—I was not aware that it was in so short a time; it is made stricter than it used to be.

1135. And within three years are they not placed in magisterial positions very often?—Yes, in less than three years, unfortunately.

1136. If a barrister of three or four years' standing went out to India, and passed in the native languages in the same time as the civilians, he would be fitter for magisterial duties than a young civilian who had no judicial training?—Yes, inasmuch as he would have seen the administration of justice, and know something about it practically.

1137. With regard to the Black Act, are you aware that there was lately a murder committed by a railway engineer in the Presidency of Madras, in the interior of the country?—I will assume the fact.

1138. To try that man, you would be obliged to bring both him and all the witnesses in the case to Madras, would you not?—Yes, under the present system.

1139. If such a case took place on the railway which is now making in the Punjaub, you would have to bring all the persons down to Calcutta?—Yes.

1140. That is a very great inconvenience and expense, is it not?—Yes; but if we were liable to be tried by the local tribunals, there is not a European in the country that would not be charged with murder.

1141. But still the present system gives impunity to Europeans, does not it?—No; if it does, it is a very great reproach to the Government; I do not believe that it does at all. But that can be ascertained by a return of the number of persons who have been brought before the magistrates for inquiry, for there is nothing to prevent the magistrates recording a charge.

1142. With regard to young magistrates, is it not useless to send out an order about taking older men, when there are no older men to be had?—Supposing that to be the case it would be useless.

1143. Are you aware that the Lieutenant-governor has represented that there is a great dearth of servants, and that he wished to remedy the youth of the magistrates in another manner, by taking uncovenanted persons better suited to the post?—Yes.

1144. Are you aware that in that way he appointed Mr. Reilly?—Yes, to the office of civil and sessions judge.

1145. That was a still further step?—Yes.

1146. That received the sanction of Lord Dalhousie, did not it?—No; I think it was disallowed by the Governor-general in Council. Mr. Reilly was removed from the appointment, and another put in.

1147. But it was disallowed also by the Court of Directors, was not it?—That I am not aware of. It may have been that the disallowance was by the Court, and not by Lord Dalhousie in the first instance.

W. Theobald, Esq.

27 April 1858.

1148. Did Lord Dalhousie, generally, when there was a dearth of civil servants, wish to appoint uncovenanted servants?—I am not aware of that.

1149. Are you aware of the case of a postmaster in Bombay whom he put into office, and whom he was obliged to change, by order of the Court of Directors?—No; I know that four were appointed, and two were of the uncovenanted service, the one in Bengal and the other in Bombay, and why either of the uncovenanted ones should have been removed I do not know, but the fact may be so.

1150. You are not aware that it was because all those posts were considered to belong to the covenanted service?—No; and I should not have supposed that, because the postmaster of Bengal is uncovenanted to the present day.

1151. You are not aware that Lord Dalhousie proposed to repeal that clause, which was supposed to reserve all the great offices to the civil service?—No; I was not aware that it rested on an Act of Parliament; and I do not think that it does; it rests on custom.

1152. You are not aware that the Court of Directors consider that there is a clause in the Act of the old charter of George the Third, which reserves posts to the civil service, and that it is contrary to law to place uncovenanted servants in those posts?—I was not aware that that opinion was entertained.

1153. With a great extension of territory must you not either increase your civil service considerably, or place the uncovenanted servants in many posts to which they are not admitted at present?—Undoubtedly.

1154. The great expense of the civil service prevents its increase, does it not, looking at the finances of India?—Yes.

1155. The uncovenanted servants cost about from one-half to two-thirds of what the others cost, do not they?—Yes, less than half; many of their officers are much underpaid, and the others overpaid.

1156. You would be in favour of a greater extension of the uncovenanted service?—Yes; but I think it is an odious distinction in the judicial service that should not exist, and that is the only service that I have thought much about. I would not take a judicial office to be snubbed as uncovenanted, and no man with the high qualities of head and heart, which a judge ought to have, should do so. I have known uncovenanted officers of very great merit leave the service because that distinction exists, and I believe it is much owing to that that the uncovenanted service is of the lower stamp, which it is; they are not only underpaid, but there is a social degradation attaching to them.

1157. If the civil service were abolished, do you think that the whole tone of the service would be improved?—I will not say that, because that assumes that the civil service should be abolished, and I rather think that the civil service should not be abolished, but it should be recast, and the scope of its duties reduced.

1158. With regard to the police; you are aware of that despatch sent out by the Court of Directors for the reform of the police?—Yes.

1159. Is not the general fault that you have to find that the intentions are very good, but that there is a delay in carrying them out?—Yes; but there is a radical deficiency in that despatch. The defect of that despatch is, that it does not at all provide for the increase of European superintendence.

1160. Are you aware that that despatch provides for an European head in every district in the Presidency, and that that is not the case now?—Yes; it makes a European head—one head—I observed that there was that superintendence.

1161. In each district?—Yes; but what is a district—it is a zillah containing, perhaps, 9,000 square miles. It does provide for that superintendence which does not now exist.

1162. Does not that despatch provide that there should be an officer over each district, whose sole duty it should be to pursue thieves and have the superintendence of the police?—I think it does; it amounts to nothing.

1163. Are you aware that that system has been tried in Bombay and has been found to answer?—I have heard that the police has been much improved there.

1164. And that that is the system which has been adopted in Bombay?—I think it very probable.

1165. With regard to the increase of European superintendence, are you aware that some years ago the heads of the police in Calcutta were English serjeants?—Yes, and they are now. I recollect that reform being made, and a very beneficial one it was.

1166. Do you not remember that on one occasion they were all found to be as corrupt as the natives?—No, I do not believe that that has been discovered, and I should like to know the evidence of it. There was some such case before the Calcutta police was put on its present footing.

1167. Are you aware that in Bombay, some years ago, the European superintendents were tried with a bribe, and as far as it went they took it and were dismissed?—I am not aware of that.

1168. Are you aware that the police of Bombay were found to be radically bad, although there was a large European superintendence?—No; I am not aware of that.

1169. Mr. *Villiers*.] We understand that these grievances which you bring before the Committee apply strictly to Europeans, and have no reference to natives?—I have applied them to Europeans, but I apprehend that they equally affect the natives. The native population is very much and grievously oppressed by all the things from which we suffer.

1170. In all the particular instances which you have enumerated, you consider that the natives are as much aggrieved as the European settlers?—Yes, certainly, by the police and the courts. I refer to the whole of the honest part of the population.

1171. You seem to refer to several matters which require reform, and of which you say people have to complain; amongst those are the land revenue system, the state of the communications, and the administration of public justice regarded judicially, and also in its execution, and in the constitution of the Legislative Council?—Yes, I complain of all those matters.

1172. You adhere to your position that they have not been remedied?—Yes, I do.

1173. You have been asked about despatches which have lately been sent having reference to those evils, but you contend that they are still unreformed?—Certainly.

1174. Can you inform the Committee whether there has been any sanction given to, or an admission made of the evils of which you complain by persons in authority?—I refer to Mr. Halliday's minute as a complete sanction to a very great extent as regards the police and the covenanted branch of the magistracy, but not as regards the uncovenanted branch of the magistracy, because he is silent as to that.

1175. Looking at Mr. Halliday's minute or report, and at the despatches that have been sent out or prepared, do you consider that they do in the main recognise the existence of the evils in question?—Yes, I should say they do, as respects the police, the magistracy, and the land tenures. It is rare that you can quote an official admission of the state of things that I have described; but I have an official admission of Mr. Halliday as to the police and covenanted magistracy, and of Mr. John Peter Grant, as to the insecurity of the land tenures.

1176. And you mention all those evils as really, in your opinion, from your experience, operating seriously in deterring Europeans from taking capital there and from settling?—Yes, decidedly.

1177. Do you apply that also to the influence upon the Asiatics in deterring them, as far as they are so disposed to develop the resources of the country?—It has that effect, no doubt; but the native does not improve, he wants an example.

1178. Are you prepared to say that, looking at the character of the police and the inefficiency of the magistrate, there is insecurity to person and property in consequence?—To a great and grievous extent. It is distressing to every one who cares about the welfare of the country.

1179. Do you say that Europeans have no certainty of justice, and do they complain that they do not get justice in consequence of the inefficiency of the magistrates?—They complain greatly of those things as far as the jurisdiction extends over them.

1180. When you recommend a reform of the Legislative Council, has that reference to the complaint that remonstrances are not attended to, and that the interests of the Europeans are not sufficiently understood in the Legislative Council?—Partly on that ground, but not merely on that ground. Even matters with which they do deal fairly, according to the best of their judgment, they still deal with in an unsatisfactory manner.

1181. You speak of the want of communications in the country, and of the great neglect in keeping the rivers clear, and the want of other great public improvements;

W. Theobald, Esq.

27 April 1858.

improvements; do I understand that remonstrances have been made on this account to the Legislative Council, and that they have been disregarded?—No; those things which I have particularly mentioned belong to the Executive Government.

1182. Do you mean that decision upon effecting a great public work belongs to the Executive Government?—Yes, entirely; the Legislative Council has nothing whatever to do with that.

1183. Do not you require Acts of Council or Legislative Acts for that purpose?—That was the case in one instance, and I think the Legislative Council made default in its duty. We said that those demurrage tolls assessed on boats for delay, which they could not help, and which in point of fact was a grievance to them, were taken under an Act which had been unfairly construed to have that bearing, and we petitioned the Legislative Council to have that Act amended. Mr. Peacock either brought in a Bill, or asked for leave to bring in a Bill for the purpose, and some member of the Council I think objected to it merely on this ground, that it was a reproach to the Executive Government to suppose that after this abuse had been pointed out it would be allowed to continue, and it was assumed that it would be remedied, and, therefore, a law was unnecessary.

1184. I presume that you have some wider grounds to go on than those you mention when you reflect upon the constitution of the Council?—I spoke of the Council as deficient of knowledge and information. I do not put it reproachfully upon the Council, as far as their information and judgment go.

1185. Do you object to the constitution of the Council?—Yes, it is composed only of official persons; and we have prayed for the appointment to this Council, by Her Majesty or otherwise, of persons selected from the Indian communities without distinction of race or creed, but having an acquaintance with the country, and being connected with its business, commerce, professions, and agriculture.

1186. *Chairman.*] I understand your complaint to be the inadequacy of the representation in the Council of interests which ought to be represented?—Yes, no doubt.

1187. Mr. *Villiers.*] Do you believe that it would be at all prejudicial to the natives if Europeans were to settle more freely, and the distinction between covenanted and uncovenanted servants was removed?—It would be highly beneficial to the natives, and to all classes; and if you go into the indigo districts, where the planters are numerous, you will find the district a garden compared to those parts of the country where there are no planters. Where there are no Europeans there are no improvements. The zemindars are of the same character in every respect that they were a century ago.

1188. You have not a doubt that it would be to the advantage of the natives if Europeans were to settle there?—Greatly to their advantage.

1189. Mr. *Willoughby.*] I understand you to state that you have resided principally at Calcutta; with what other parts of India are you acquainted?—I am only acquainted with Lower Bengal.

1190. Where have you resided?—I have resided merely in Calcutta.

1191. Then all your information is derived from others?—Yes; as the secretary of a great society.

1192. With regard to the question of holding land, has not an Act been passed by the Government of India, namely, Act 4 of 1857, removing all restrictions?—I am not aware of the Act of 1857. The Act I am acquainted with is of 1837.

1193. Have not the Supreme Court at Calcutta recently decided that sections 81 and 82 of the Indian Act of 1833, which prohibited the settlement of Europeans in the provinces acquired during the present century, except by licence, were repealed by the subsequent Act of 1853?—The case of Ouseley *v.* Plowden has been decided since I left India, but I think that that must be the effect of that decision.

1194. Are you aware, when the licence system existed, of any licence being refused improperly and capriciously by the Court of Directors?—That is anterior to my information.

1195. You stated that officers in the civil employment are prohibited from holding lands in the district in which they exercise authority, and from holding farms and other obligations; do you object to that?—I think it is a question of policy which deserves to be reconsidered.

1196. Is not the object of the rule to prevent abuse, and to prevent the attention

of

of those officers being directed from their public duties?—No doubt that is the object of it.

1197. You have alluded in strong terms of objection to the Riotwarry system as prevailing in Madras, and also, but more partially, in Bombay; are you prepared to suggest any remedy for that system?—I am afraid it is irremediable; the country is covered with a pauper population, and I do not see how it is to be remedied.

1198. You have stated also, upon the authority of Mr. Kaye, that the Government considered that an increase of cultivation was impossible under that system; are you aware that a new system of survey and assessment has been in operation for many years, and that wherever it has been completed it has been followed by a very rapid increase of cultivation?—I am not aware of that.

1199. Do not the evils resulting from the Ryotwarry system result as much from the Hindoo law of inheritance or from the system itself?—No; I should say certainly not.

1200. I refer particularly to the matter of equal partition?—No; I think it results from annual settlements, coupled with the necessity of employing a very large native agency which could not possibly be controlled. The native agency uncontrolled is the bane of the population.

1201. The number of holdings has increased by the Hindoo law of inheritance?—It may have led to a great subdivision, but if people in other respects are in prosperous circumstances, as in France, I apprehend there are social checks upon the increase of subdivisions to an inconveniently minute degree for the interests of each family, especially where, as in India, there is plenty of unoccupied land to be had.

1202. You referred to the great number of agencies required to collect the Government revenue under the ryotwarry system; how do the great zemindars of Lower Bengal collect their revenue?—They must have large native establishments, but they have not the same authority by law, and they are responsible to the law, whereas the native police are invested with the law and are beyond control.

1203. Do you think that the ryot fares better at the hands of the agents of the zemindar than at the hands of the agents of the Government?—Yes; and I have no doubt that the population of Bengal is in a much better state than the population of Madras.

1204. *Chairman.*] Is it in a good state?—It varies in different parts of the country; the difference is patent even to travellers in the country.

1205. Mr. *Willoughby.*] With regard to the law of sales, you stated that an amended law to remedy a great evil, that is, the cancelling of all sub-tenures, was proposed by Mr. Grant, and objected to by the Indigo Planters' Association; what was the ground of their objection?—I think I rather overstated their objection in my former evidence; I have since referred to the petition which they sent in, and I find that it was only a strong suggestion of the practical defects of the law; it did not amount to an opposition.

1206. The law itself was a good law, was it not?—Yes; it was an admirable principle.

1207. Did not the proposed law provide that the lessee, on satisfying the collector that a fair amount of revenue sufficient to satisfy the demands of the Government was reserved, might have his lease registered, in which case the effect of a sale for arrears would be, not to cancel the lease, but to transfer the obligations of payment to the Government, instead of to the zemindar?—Yes; that question of the sufficiency of the rent reserved on the under tenures.

1208. And yet the Indigo Planters Association were not willing to accept that as the law?—The objections were of various kinds; the chief was, that the benefit of the Act could not be obtained without inquiries which opened the door to disputes and litigation. Notices had to be given by parties claiming the benefit of the Act; and on those notices parties might come in to dispute titles and question boundaries; and the Association thought that the principle of the law might have been very beneficially carried out without that practical objection. There was a difference of opinion among the planters; some wished that the law should be passed.

1209. Do you think that a law of that kind could be carried on without some precautions of the nature to which you refer?—According to the plan which we proposed, the law might have been passed without danger to the revenue.

W. Theobald, Esq.

27 April 1858.

1210. Can you state the extent of the European population in Lower Bengal?—I do not think there are any authentic returns upon that subject; I have heard it variously computed.

1211. Can you account for the increasing difficulty, as stated by you in answer to Question 857, of getting first-class Europeans for employment in the country; and how do you reconcile that decrease with the increase referred to in the first part of your answer?—Public opinion, and private opinion, and the apprehension of circumstances in which individuals may be placed, influence emigration and travel, and everything. The country is in bad repute, and our discontent affects settlement.

1212. In one instance you referred to an increase, and yet there is an increasing difficulty in obtaining European superintendence?—I said that they had increased because enterprises, such as the employment of steam, which require European management; and railroads have increased, but the class who are settled on the soil, the planters, and persons engaged in local business, have not increased.

1213. Will you state more particularly what you mean by the want of a *lex loci* for Europeans; are they not, throughout India, subject to English law?—They have English law; I would put it on the authority of the Indian Law Commissioners, that a *lex loci* is wanted. There is the investigation of the Indian Law Commissioners, and the report establishing that.

1214. With reference to your answer to Question No. 936, do you mean seriously to say that the police paid by the Government are the sweepings of the gaols?—That is the prevailing opinion of them; that is what Mr. Halliday has said in effect; I might better say sweepings of the population.

1215. You have recommended that serjeants from the army should be employed in police duties; that is, one serjeant to several darogahs?—Yes; I take that name rather as a name than as meaning that they should be military men; I think you would get East Indians and persons who have never been in the army, but the army would supply a certain proportion.

1216. What salary would you recommend?—I am not a judge of that.

1217. The salary must be high, in order to secure the services of such persons?—The same salary that secures their services on the land frontier would, I presume, secure their services in the police.

1218. Are you aware that the experiment was tried in Bombay, and that the whole number of serjeants who were employed were detected in bribery and corruption, and were summarily dismissed?—I am not aware of that; if it be so, it would not be conclusive in my mind against trying the experiment.

1219. Are you aware that the employment of planters and other European residents has recently been proposed to the association of landowners in Calcutta?—Yes, I can conceive that that may be so.

1220. That shows the desire on the part of the Government to make use of that respectable class of Europeans?—Yes, and very wisely.

1221. To what period did you refer when you stated that the Court of Directors had notice that its lease was to expire, and it took advantage, very naturally, to fill Haileybury with writers?—About 1853, when it was known that Haileybury was going to be abolished, an inordinate number of young men, as I understand, were put into Haileybury; at all events an unusual number came out of Haileybury, and went to India when Haileybury was closed.

1222. Haileybury was not abolished till very lately?—There were 58 students in one year in Bengal, which I fancy must have been more than double the proper number; but I ascribe it to Haileybury having been emptied.

1223. Does not the number of young men whom the Court of Directors can annually appoint to the civil service in India, depend entirely upon the annual requisitions of the local Government?—I am not aware that it does; I am told that the expense of the service is a limit upon the number.

1224. The Court of Directors have no power, nor is it their custom, summarily to increase the number of writers sent out to India?—They certainly were increased at that time.

1225. There was an Act in 1834–5 permitting, as an exception to the rule, writers to be sent out to India without passing through Haileybury, do you refer to that?—I am aware of that, and I am aware that some of the most eminent men of the service went out under that privilege.

1226. You do not refer to that when you say that the Court of Directors, seeing their

their lease was up, sent out a number of men?—No; I failed to explain satisfactorily how the increased number of young students lowered the average of age, and I added what Mr. Halliday had stated, that the evil would go on increasing for the next two or three years; and I said that this appeared to have been verified, for I found so and so; that last year 58 young men were students; then I said it must have happened in this way.

1227. Then it was a conjecture of your's?—Yes, but I believe it be perfectly true.

1228. To what extent are Europeans amenable to the jurisdiction of the local magistracy?—That is a very comprehensive question; I cannot answer it in a few words. They are subject, for the purpose of inquiry into their conduct, to the general jurisdiction of all magistrates who are justices of the peace, and only those who are justices of the peace; and the Government constitutes for that purpose whatever number it chooses as justices of the peace; but they are liable to be punished for "petty trespasses," which is a very elastic term. Then they are liable to be put under very heavy recognizances, without judicial investigation, as a precaution against wrong.

1229. In the complaints they have to make against others, should they not always apply themselves to the magistrates of this district?—Yes, no doubt.

1230. What effect would the introduction of the English law, as a *lex loci*, in India have upon the natives as to their employment in the judicial branch of the service?—I think that the native is very apt at learning anything; and I dare say that the native, if he knew the English language, would learn as quickly as the civilian.

1231. You think that it would have no injurious effect upon their prospects?—No, none. I think that the Government ought to use some subsidiary means for diffusing an acquaintance with the law.

1232. Are not the affrays in Lower Bengal very often the result of organised and deliberate violence?—I do not know as to that; they are very common, and very serious in number.

1233. What were the particular objections of the planters to a Bill, the object of which was to repress such affrays?—The extraordinary character of the Bill. The Act consisted of 16 clauses, each of which had a different operation. I mention one as characteristic of the Bill empowering the magistrate of the district to dismiss the servants of a planter. If a man was obnoxious, the magistrate could order him to be dismissed; and that was a power which was intolerable. Then it placed us entirely under the power of the local police, as we said, for all the purposes of mischief and wickedness which that police could possibly devise.

1234. What has been the effect of a law which authorises the magistrates to take recognizances to keep the peace; have the Europeans suffered under it?—Yes, they have.

1235. The effect has not been favourable to the peace of the country?—I would not say it has not been favourable to the peace of the country, but it has been accomplished at a monstrous injustice.

1236. How do you think the natives would view an approximation to the English criminal law?—We know the opinion of the natives of Calcutta as to that, and it is entirely favourable; they do not wish any new law.

1237. You have advocated the introduction of barristers and pleaders into high judicial office throughout India; what qualification would you exact from them?—A knowledge of the languages; and if they practised in the country they would have a knowledge of the people, and of the institutions and customs of the people.

1238. Do you think that barristers and pleaders who have never been out of the presidency towns would be able to acquire that knowledge of the manner and customs of the people in the interior?—Yes, I think they would very soon, after being there a short time.

1239. That presupposes that they are to be appointed, and then acquire the knowledge?—My answer presupposes that; I have not proposed any plan; I do not admit that they are without the qualifications; it would be desirable that they should have those qualifications to a greater degree.

1240. I think you stated that you had objections to the plan of redeeming the land tax in India?—Yes, upon grounds of political economy and finance I would retain the land tax, and pay off the debt in some other manner.

W. Theobald, Esq.

27 April 1858.

1241. You were regarding the interests of the Government?—Yes, it was regarding the interests of the State.

1242. Mr. *Lowe.*] What are those grounds of political economy?—First of all, if the land tax were redeemed, the Government would be in the position of having a large amount at command which it would probably expend, and it would then have to meet its annual expenditure, and would have to resort to modes of taxation exceedingly objectionable.

1243. If the Government were to sell land yielding 100 rupees a year, and were to extinguish by that means 100 rupees of debt, would the Government be a loser or a gainer by the transaction?—It might be a question which. Inasmuch as the annual revenue is a permanent source of income, I think it should be preserved in the shape of revenue, and the debt be paid off in some other manner.

1244. Is not the cutting off a permanent source of expenditure just as advantageous as the retaining a permanent source of revenue to the same amount?—It would seem in that general form of question that it might be, but I think that there are other resources for paying off the debt of India.

1245. Would not the Government be a gainer in the first instance, by saving the expense of collecting the revenue?—That must be very small under the permanent settlement.

1246. Would not the Government be the gainer in the second instance by the greater inducement that persons would have to invest capital in land?—The Government would not be directly a gainer in that. No doubt it is a favourite scheme with many capitalists; on the other hand, many capitalists, who look not merely at the interests of capital, but at the long interests of the State, are much of my opinion.

1247. Is not the Government a gainer by anything which enables people to put capital in a fixed state, instead of carrying it about their persons in a tangible shape?—Yes.

1248. Do you claim that Europeans should be tried by a different set of courts from the natives?—It is not my claim; it has been made for the last 20 years.

1249. That is the claim?—Yes, that is the claim put forth.

1250. As a permanency, or only depending upon the present state of the courts?—Depending upon the present state of the courts.

1251. Under what condition should that claim cease?—When courts qualified in every way as the Supreme Court is, to do justice to them, are established.

1252. The claim comes to this, that the Europeans are to enjoy immunity from all jurisdiction, except the jurisdiction of the Supreme Court, till the Europeans themselves are satisfied with the jurisdiction substituted for it?—It does not strike me that that is an absurdity at all. The alternative is, that they will leave the country.

1253. What I ask is, whether that is the claim?—If I put the claim in my own words, I should not put it in that way, and I submit that I should not be compelled to make an admission.

1254. Do you claim that the Europeans resident in the Mofussil should continue to be subject to the jurisdiction of the Supreme Court alone, until a system of courts can be devised in the Mofussil with which those Europeans are satisfied?—I would modify the latter part of the question, with which "those Europeans are satisfied," to "with which Europeans may reasonably be satisfied."

1255. Who is to be the judge of the reason?—The Supreme Government; I mean Parliament. We hope that we have sufficiently succeeded in giving good reasons to depend upon Parliament as our protection.

1256. If the Supreme Government be of opinion that the present judicial system, however defective, is such as that the Europeans, who go into the Mofussil, ought to be satisfied with it, they are content?—By the Supreme Government, I mean the Parliament of England, not the local government, for since the recent outbreak, Lord Canning is reputed to be still in favour of putting us under the county courts.

1257. You do not think that the Europeans should themselves be the judges?—We should be very content; but of course it is a question of imperial policy, on which we must submit to the wisdom of Parliament; but we hope that nothing less than a decision of Parliament will deprive us of the privileges that we possess.

1258. What position do you contemplate for the Europeans resident in India; is it that of equality, or that of a dominant class?—Not that of a dominant class, certainly;

certainly; we are not a dominant class; we are exempted from what has prostrated the whole of the native population, and we are anxious to preserve our privilege as necessary for our own preservation.

1259. Do you think that the offences which natives may commit upon Europeans ought to be tried by tribunals which should not be able to try the offences which Europeans may commit upon natives?—No, I think they ought not; I think that the tribunals ought to be reformed for the sake of the natives; and if reformed to the standard at which I would place them, I should not object to be tried by them.

1260. But in the meanwhile you do think that which I have stated?—I think that they are a sort of pestilence till they are reformed.

1261. Until they are reformed you think that the Europeans should have the power of invoking their agency against the native, but that the native should not have the power of invoking their agency against the European; is that your opinion?—Undoubtedly, under the circumstances, and for the reasons I have stated.

1262. That the courts should only act against the natives, and not against the Europeans?—Yes, as I stated before.

1263. What is your opinion as to the position of the European in India; is he to regard himself as a person of a dominant caste, or as equal before the law with the native?—We do not put our claim to exemption on the ground of the dominance of the race; one man is as good as another in the sight of God, and ought to be so in the sight of the law; but here is a state of things which operates cruelly upon the whole native population, which by circumstances we are exempt from, and we wish to retain our exemption. It is an anomaly, I admit. We do not defend it as an institution.

1264. Have Europeans difficulty in obtaining land in the Mofussil?—There are no legal difficulties in the way. They are purchasers in the market, and of course it depends on the quantity of land in the market. They purchase in all sorts of ways.

1265. Can a zemindary be sold without the consent of the Government?—Yes.

1266. Can you buy part of a zemindary?—Yes.

1267. What is the tenure, then?—It still remains under the settlement of the whole zemindary.

1268. Do you become, or the person who purchases part, responsible to the Government, or are you a feudatory of the zemindary?—It requires a little definition. The interest purchased might be what would be called here a joint tenancy, or a tenancy in common; it might be part geographically distinct from the rest, but still as respects the liability to revenue, there would be no alteration.

1269. There is no apportionment of a zemindary?—No, except by a regular partition suit; that was one of the objects of Mr. Grant's Bill, to divide zemindaries, and apportion the revenue among the different co-sharers. The case of under-leases was distinct.

1270. Is not that a difficulty in the way of obtaining land, that your land is liable for a larger portion of the revenue than its fair share?—No doubt.

1271. Can you suggest any remedy for that?—I think Mr. John Peter Grant's Bill offered a perfect remedy. It was only the adjuncts to the principle of his Bill that made it unacceptable. It involved a survey and an ascertainment of the boundaries, and opened questions of title, and we thought that that was quite unnecessary.

1272. Have you known an individual case of a European being deterred from settling in the mofussil by the land regulation, or the police, or the judicial system, or by the union of them altogether?—I have heard people say, "I will not go into that vile mofussil, where there are such and such difficulties," but only in that way; but undoubtedly it is the case that no one will leave Calcutta to settle in the mofussil who can possibly keep there, and the native landholders settle in Calcutta for the personal security they enjoy there.

1273. Mr. *Campbell.*] You are of opinion that colonization, or English settlement in India, has been impeded by the laws existing; that the mode in which those laws have been administered is inefficient; that there is a venal police, and that there are difficulties of communication and transit?—Undoubtedly.

1274. As regards the first of those impediments, the administration of the laws, revenue and judicial, might not a remedy exist in a more practical training

W. Theobald, Esq.

27 April 1858.

and selection of the revenue or judicial service of the State confining, after such selection, the law officers to their department and the revenue officers to theirs, and at the same time utilising the local knowledge which they may acquire in the district they are first appointed to, by confining their advancement in employment as much as possible to those districts?—Undoubtedly.

1275. Is not local knowledge in a country where false evidence is so general, as necessary as a knowledge of the revenue or judicial laws; and will not the possession of it by a magistrate, judge, or collector materially reduce crime, false suits, and false evidence, by curtailing the power of the corrupt native officials, and the general tendency to litigation in the people?—Certainly, I think so.

1276. Is it not the fact that the security to life and property, in any district, is measured to a great extent by the efficiency or otherwise of the judge, magistrate, or collector?—Certainly; the difference between a good magistrate, and a bad one, makes all the difference between order and the greatest anarchy.

1277. Would you advise throwing the service open, and having deputy collectors, deputy magistrates, and sudder ameens, taken from competent Englishmen in India, and as an incentive to increased efficiency and exertion, owing to such higher grades in the existing civil service?—I would open the service, certainly; and I affirm the rest of the question.

1278. Do not you think the facilities that have hitherto existed, of overland communication, for civil officers visiting their native country, has diminished that necessary class of civil servants that, previously to the introduction of the overland route, existed; that is to say, the overland facilities reduce the available number of officers for the duties of the State?—Very much so, no doubt.

1279. At present there is generally a greater number absent than before the introduction of steam?—Yes, I think so.

1280. And that would naturally call for an increase of that service?—Yes.

1281. Is not the number that can be absent on furlough at any given time in one Presidency limited by regulation?—I suppose it is so.

1282. Admitting that it is limited, does not the facility of coming home encourage a greater number to come home than did come home round the Cape, having a six months' voyage staring them in the face?—Yes, no doubt.

1283. So that, practically, the regulation alluded to has not that bearing that it might otherwise have?—I think that the new regulation of the Government, permitting furlough at the end of seven years, has operated very mischievously in a public point of view; a young man no sooner gets located than he comes home; and there is less feeling of settlement in the country than under the old system, when they had to stay 10 years.

1284. How are the native officials generally regarded by their countrymen, either in the administration of the laws or the discharge of other duties, with comparative distrust?—Of course it is a matter of opinion; I think there is an amount of distrust; but I think that is a point upon which I would rather not pledge myself as to the opinions of the natives of their own countrymen.

1285. Until the moral code of the Mussulman and the Hindoo is higher, are you of opinion that in the interests of India and its people they should not, unless in exceptional cases, be employed in responsible positions?—Certainly, I think the creed of caste and the creed of the Mussulman is a bad creed for persons entrusted with the administration of justice; a man who looks upon another man as not of the same human kind as himself is not fit to administer justice to that man.

1286. As regards the police, do not you think that distinct and responsible officers should be accountable for the efficiency of that department; that it should, to some extent, have a military organization, as in the Punjaub; that respectable Europeans should fill the place of darogah, and that even in subordinate positions to those the steady intelligent European would fill the places well?—Yes, I think that is much like the opinion I have already expressed.

1287. With such a police, life and property would be more secure and litigation materially abridged?—Yes.

1288. As regards the facilities of communication and transit, they have hitherto been prohibitory, almost; you are aware that the roads of the Ganges and the Jumna to Upper India are most tedious, hazardous, and costly, and that the time occupied from Calcutta to Meerut, on the Ganges, and Delhi, on the Jumna, is usually six months for a distance of only 1,000 to 1,100 miles, and at a cost of four times that by railway?—Yes.

1289. You are of opinion that the extension of roads and railways will remedy those

those difficulties, and make general settlement profitable and possible?—Certainly.

1290. I suppose you are aware of the general respect and estimation that Sir Charles, afterwards Lord Metcalfe, enjoyed in India?—Yes.

1291. Are you aware of the opinions which he expressed upon the subject of colonization as early as in 1814, and the confirmation those opinions had at his hands when Lord Metcalfe, in 1836?—Yes; I will read what he says. On the question of colonization, Lord Metcalfe writes thus: "It is impracticable, perhaps, to suggest a remedy for the general disaffection of our Indian subjects. Colonization seems to be the only system which could give us a chance of having any part of the population attached to our Government from a sense of common interests. Colonization may have its attendant evils; but with reference to the consideration above stated, it would promise to give us a hold in the country which we do not at present possess. We might now be swept away in a single whirlwind. We are without root. The best affected natives would think of a change of government with indifference, and in the North Western Provinces there is hardly a man who would not hope for benefit from a change. This disaffection, however, will most probably not break out as long as we possess a predominant power; and it has only been alluded to as one source of weakness, and a necessary object of attention in the consideration of our situation." Then, again, he says, "The Europeans settled in India, and not in the Company's service, and to these might be added generally the East Indians of mixed breed, wil, never be satisfied with the Company's government; well or ill-founded, they will always attach to it the notion of monopoly and exclusion; they will consider themselves comparatively discountenanced and unfavoured, and will always look with desire to the substitution of Crown government; for the contentment of this class, which for the benefit of India and the security of our Indian empire ought greatly to increase in numbers and importance, the introduction of Crown government is undoubtedly desirable."

1292. Is the commercial or agricultural interest in India at all represented in the Legislative Council by members of those bodies?—No, they are all official persons in the Legislative Council.

1293. Are the agricultural interests themselves represented?—No, they are not represented.

1294. You observed that the planters generally were a very healthy class?—Certainly.

1295. Are they a more healthy class than the general body of Europeans not engaged in open air planting avocations?—Yes, I think they are.

1296. Is it not a common remark, on their annual visit to Calcutta with indigo, that they are pictures of health compared with the residents of Calcutta, whose avocations are sedentary and in-doors?—Yes; but I do not think we are a very ill-looking set of people, nor objects of compassion.

1297. In reference to a question put to you by Mr. Willoughby, as to the objections by the planters to the boundary surveys, had those objections reference to the exactions and impositions which native officials generally enforce against the planters and others, in discharge of any such delegated duty?—With reference to Mr. Grant's Bill, the objection was, that it was impracticable; that the territorial inquiries and divisions necessary in every case would indefinitely postpone the operation of the Act, because there would be thousands of estates to be divided, and all sorts of objections made.

1298. You stated in your evidence that it was the survey that rendered it impossible?—Yes; surveys and measurements, and valuations and questions of title, which would open the door to endless dispute.

1299. Mr. *Willoughby.*] In answer to a question by the Honourable Member, Mr. Campbell, you stated that the transit from Calcutta to Delhi was four to six months; have not steam navigation companies been formed for the River Ganges?—Yes, there are steam boats; the observation does not apply to those.

1300. There is a speedier transit than prevailed in former years?—Yes.

1301. Mr. *Campbell.*] My question had reference to the general staple commodities of the country. A steamer is a mere conveyance for light and valuable commodities and passengers, but I referred to grain and everything that the country is dependent upon?—Yes.

1302. Do not the steamers only go as far as Allahabad, which is only half the distance?—Yes.

W. Theobald, Esq.

27 April 1858.

1303. Mr. *Lowe.*] Is it easy to form joint-stock companies in India on account of the law?—Yes.

1304. How do you form joint-stock companies in India?—Under an Act of the local Legislature.

1305. Is that attended with expense?—No; and since that Act, an Act for limited liability has been passed, I think.

1306. Do you know whether it has been used?—I am not quite sure whether the Act for limited liability has; it has been passed since I left. There are plans for the formation of limited liability companies.

1307. Mr. *Villiers.*] Is there anything now to distinguish the dependencies of India from any other dependencies of the Crown in the facilities offered to any Englishman in settling and domiciling himself there?—No, I am not aware that there are any distinctions; there are no legal obstacles.

1308. Mr. *Danby Seymour.*] In some parts Europeans are not allowed to settle without a licence?—I apprehend that has been repealed by Act 4 of 1837. (*The Witness delivered in the following Papers.*)

Vide Appendix.

Jovis, 29° die Aprilis, 1858.

MEMBERS PRESENT.

Mr. Baillie.	Mr. Lygon.
Mr. Campbell.	Mr. Mangles.
Mr. William Ewart.	Mr. Danby Seymour.
Mr. Gregson.	Mr. J. B. Smith.
Mr. Kinnaird.	Mr. William Vansittart.
Mr. Knight.	Mr. Villiers.
Mr. Lowe.	Mr. Willoughby.

WILLIAM EWART, Esq., IN THE CHAIR.

Mr. *Stewart Jolly Auld*, was called in; and Examined.

Mr. *S. J. Auld.*

29 April 1858.

1309. *Committee.*] BE so good as state what is your business?—I am an Indigo Planter, and a manager of an estate.

1310. Have you recently returned from Lower Bengal?—I have been only two months in England.

1311. How long have you been manager of an estate in India?—Sixteen years.

1312. In what part of India?—I was 11 years in Midnapore, and the rest of the time in Rajshaie.

1313–14. They are both in Lower Bengal?—Yes.

1315. The Committee have been informed that the Lieutenant-governor recently appointed several honorary magistrates, of which you were one?—Yes, I was, for a short time.

1316. Had you given your opinion previously to the Lieutenant-governor as to the expediency of those appointments?—Yes, I had.

1317. What are the duties of an honorary magistrate?—He has principally to assist the magistrate; he is an assistant magistrate without being a covenanted one; he is an uncovenanted assistant magistrate.

1318. And unpaid?—Yes, and unpaid. In fact, he is a justice of the peace, neither more nor less. With the permission of the Committee, I will read a letter which I wrote to Mr. Jackson, the officiating sessions judge at Rajshaie, in answer to a letter which I had from him, requesting my opinion upon the scheme under the consideration of the Lieutenant-governor: "Sir, I have the honour to acknowledge the receipt of your letter of the 29th ult., calling upon me for my opinion as to the scheme under the consideration of his Honour the Lieutenant-governor for investing some of the Europeans in the Mofussil with certain magisterial powers, and particularly directing my attention to the following points; viz., the probable effects of such a measure, the willingness of planters to accept such functions, &c.

My

My opinion is, that it would be beneficial to all parties: to the Government, to the ryots, and to the planter; and, in stating my reasons, I need hardly revert to the oft-told tale of the inefficiency of the Mofussil police; it is well known, and cannot be disguised, that, much as Government has done and is doing for the better regulation of that branch of the service, they are corrupt, and often in the case of a robbery the natives would rather put up with the first loss than call in the aid of the police; for, in many instances, they have to pay in fees to the inferior officers as much, and sometimes more, than the value of the property stolen. Now, the immediate tenants of a European landlord or agent do naturally come to the sahib for redress in all their grievances; but in the case of robbery, &c., he has at present no power to award the punishment that such acts deserve, and can only tell the sufferers to go to the police. Taking this view of the case, and I think a just one, I say that not only would the effects of such a measure as is now proposed be beneficial to the natives in general, but that there are few planters who would not only conscientiously accept of the functions, but discharge them, for the benefit of the natives, and for the suppression of crime. I have," &c.

1319. Was your opinion also taken by the Lieutenant-governor as to the powers with which European magistrates should be invested?—Yes; the powers were not defined when I left India; with the permission of the Committee, I will read what I said: "We have voluntarily taken the office of assistant magistrates for the purpose of assisting Government, and that can only be done by assisting the magistrate in whose elakah we exercise our powers, and I consider that it should be left in a great measure to our own discretion, as to what cases we take up" (I meant judicially). "Entire supervision of the proceedings of the police is indispensable. Darogahs should send all original reports to the magistrate, and the schedule of them to the honorary assistant magistrate; I say this, because the magistrate or covenanted assistant magistrate, in whose elakah we exercise our powers, is a paid Government servant, and, as such, responsible for all that happens within his jurisdiction; we are not. As I said before, we assist the magistrate to the best of our abilities, without interfering too much with our own immediate avocations. On receiving the daily reports from the darogah, if it should appear that any case mentioned therein could be better decided by the honorary assistant magistrate on the spot, the same ought to be intimated to the darogah; of course in all heavy cases, such as murder, dacoitee, &c., the honorary assistant magistrate would consider it his duty to go at once to the spot, and report, &c. As to the judicial department, that should be left much to his own discretion; if he can assist the magistrate by taking up cases, he will do so."

1320. How long were you employed as assistant magistrate?—Only three months before leaving India.

1321. What assistance and service did you render?—We tried petty cases, and we were of some assistance to the magistrates in cases of dacoitee and murder; I have a letter from the magistrate thanking me for my assistance.

1322. Do you think such appointments of very great use in order to preserve the peace of the country?—I think so.

1323. On your return to India shall you be willing to accept the appointment again?—Quite.

1324. Your opinion is, that such appointments are of great use in preserving the order of the country?—I think so.

1325. Do the ryots acquiesce in the appointment of such honorary magistrates?—They do.

1326. Do they consider it a benefit or an evil?—I think that the ryots think it good, for this reason, that they have not, in most instances, to go so far for justice.

1327. Do they voluntarily refer their difficulties to the arbitration of a European settler?—Always.

1328. Then this is only giving effect in a more formal way to the proved necessities of the country?—Nothing more nor less.

1329. Mr. *Mangles.*] Do you believe that there is any hostility on the part of the Government to the settlement of Europeans in India?—I did not come prepared to answer those questions. I never personally found hostility; it would only be the state of the laws and the police that one could construe into hostility on the part of the Government.

1330. Do you think that the Government manifests by its acts any wish to injure or impede the action of Englishmen in carrying on industrial occupations

Mr. *S. J. Auld.*

29 April 1858.

in India?—I should say not. As I said before, the state of the laws and the state of the police would deter many Englishmen from settling; it is very easy to find fault, but very difficult to name a remedy.

1331. You think that there was no desire on the part of the Government to prevent settlement?—Decidedly not.

1332. Do you think, on the contrary, that there was a desire on the part of the Government to make the laws, and the administration of those laws, as good as the materials at their command enable them to do?—I think that we have had bad tools to work with; and what is to be done? the natives that we have to work with are the worst possible in the world.

1333. That is not the fault of the Government?—That is not the fault of the Government, certainly; you cannot change the nature of the people.

1334. It has been said by a very able man, writing upon Bengal, that the attempt to administer that country by means of native agency, is like carving upon rotten wood; do you think that that is correct?—I think that that is a true representation; the people are bad and corrupt.

1335. Do you think that the Government have made the best and the most honest use of the materials which they possess?—They have made an honest use of them, decidedly.

1336. It has been stated that bad men, in the sense of being bad instruments, have been appointed as deputy magistrates by the Government; do you believe that?—Yes, I have heard of instances of that.

1337. Do you not believe that the Government have appointed honestly and conscientiously the best men that they could find?—Yes, so far as they have been aware of it.

1338. Have you found any hostility in the districts where you have been settled on the part of the covenanted officers?—I have not personally, never.

1339. On the contrary, have you found cordial assistance?—Always.

1340. Have you, or have you not, found any overbearing conduct on the part of the functionaries?—Not personally.

1341. Have you known any instances in which good and peaceable British settlers, who conducted themselves honestly and fairly towards those around them, have been interfered with or wronged in any way by the local authorities?—I cannot at present call to mind any. As I said before I did not come prepared to answer such questions. It was only yesterday, in fact, that I got the summons from the Committee.

1342. You say that you were the manager of an estate?—Yes, belonging to Messrs. R. Watson & Co.

1343. Had you any impediments thrown in your way by the local authorities in the management of those estates?—No, excepting in a general way, with regard to the working of the police; that has always been an impediment.

1344. Perhaps you will describe to the Committee in what way the police are practically an impediment to the management of estates of Europeans?—Principally because they are so open to bribery.

1345. Are the omlah very corrupt?—They are.

1346. Do not you believe that, practically, a great many of the bribes which are believed by planters and other Englishmen to be given to the omlah, go no further, in fact, than the hands of their own mokhtars, or agents; do not you believe that it practically happens that an agent tells you he must bribe this or that officer, and he gets the money, and keeps it himself?—He takes a percentage, not the whole.

1347. Do not you think that very often he keeps it all?—He may.

1848. Is not that done?—I have no doubt that it is done in some instances.

1849. In spite of the impediments which you have mentioned, were the Messrs. Watson able to carry on business in a profitable manner under your management?—Yes.

1350. Do you believe that any other Englishman managing in the same way, and conducting his business with equal skill, could also have carried on a profitable business in any of the districts where you have been settled?—Yes; I was not in a disturbed district.

1351. Generally speaking, till this last mutiny broke out, were there any disturbed districts in Bengal?—No; perhaps I was wrong in making use of that expression.

1352. What

1352. What did you mean by the use of the term "disturbed"?—That where I have been we have always been quiet, and there has been very little litigation.

1353. Do you know of any instances where well-conducted British settlers, conforming to the laws, and behaving themselves justly and properly, have met with any impediments?—I cannot call to mind any instance now, not being prepared, as I said before.

1354. Mr. *Villiers.*] I understand that you are only speaking of a particular district; you have not moved about much?—I was 11 years in Midnapore, and five in Rajshaie; I can speak most of Midnapore.

1355. You acted as assistant magistrate only three months?—Yes; the appointments were only made three months before I left India. I left India in December.

1356. Had the appointments of those assistant magistrates reference to the inefficiency of the magistrate or to the amount of business?—To the amount of business.

1357. You do not speak as to the character for efficiency of the magistrates that are usually appointed?—No.

1358. If there were more highly qualified persons appointed as magistrates, they cannot dispense with the assistance that the honorary magistrates are to them?—No; they require more assistance.

1359. Is there anything like the omlah in our administration of justice; is he a sort of clerk to the magistrates?—Omlah means officers of the court.

1360. What are the duties of omlah?—They have various duties: one has to read the petition, another to write the evidence, another is in the collector's office, and there are various offices.

1361. I am talking of the judicial office; what are the duties of the omlah there?—There are three or four of them.

1362. Do any of them write the evidence?—Yes, they do.

1363. And it depends upon their accuracy what is received as evidence?—Yes.

1364. We have heard some reflections upon those officers; it is very important that they should be thoroughly honest?—Yes.

1365. What have you heard about the character of those persons generally?—I think that few of them are honest.

1366. How far is the judge dependent upon them; does he take down the evidence in the native language?—He makes memoranda in his own book as to the evidence, but the evidence of the witnesses is taken in the native language.

1367. Is the evidence taken *vivâ voce*, or upon deposition?—Upon deposition.

1368. And it is produced in court upon the trial?—Yes.

1369. Have you ever known an instance of omlah being suspected of taking bribes?—I have known them; I dare say that men have been discharged for that fault, but I cannot recal to mind any particular instances now.

1370. Is there any general distrust in consequence of the bad character of those officers of the courts themselves?—Yes, there is.

1371. Do you think that the distrust which there is of the judicial officers amounts to anything like a sense of insecurity among settlers or persons who have gone out?—It must be so in a certain measure.

1372. *Chairman.*] Therefore it is injurious to settlement?—Yes, it must be so.

1373. Mr. *Villiers.*] You have spoken very decidedly about the police; you think that they are generally recognised to be as you describe?—Yes; at the present time I think they are.

1374. Looking at the character of the police and the character of the officers of the court, and regarding their importance, you think they offer a fair ground of complaint on the part of settlers, and might operate to deter Europeans from settling and employing their capital in many of those districts?—I think it might.

1375. Those are your observations in a particularly quiet district?—Yes.

1376. I think you do not state any opinion with respect to other districts?—I do not. I have heard of them, but I do not like to state anything about them.

1377. You say that there is notoriety with respect to the character of the police and of the courts generally in the other districts?—Yes.

1378. Have you any commission to act as magistrate?—I hold my appointment from Government.

Mr. *S. J. Auld.*

29 April 1858.

1379. Is it from the idea that you could prevent any of the evils in question that you attach so much importance to the appointment of those assistant magistrates?—Yes; I think that for the repression of crime they are of great assistance, or will be eventually; the system has hardly worked long enough for me to form an opinion upon it.

1380. Are you better able to judge of the credit of witnesses from local acquaintance with a district?—Much so from being on the spot.

1381. Are people exposed there to having false charges made against them?—Yes.

1382. Is that used as a means of extortion?—That may be one cause, and pique and enmity another.

1383. Do you believe that the Government is perfectly well aware of the state of the courts and of the character of the police?—They must be aware of it now, as it has been brought to their notice so frequently.

1384. What is the expectation of settlers generally; is it that there are going to be great improvements in that respect?—Yes.

1385. But they have not begun yet?—No.

1386. Have no reforms in the police been carried out yet, so far as you are aware?—I do not know that you would call it a reform, but there has been a raising of the pay of the darogahs, and putting in better educated men.

1387. Do you consider that the police are underpaid?—Yes.

1388. I believe you are going to return to India?—Yes, at the end of this year.

1389. You have no objection to state so much as you know in consequence of that, have you?—No, not at all.

1390. Mr. *W. Vansittart.*] You say that in your opinion the greater part of the omlah are corrupt; what agency do you think could be substituted for them?—That is a very difficult question to answer.

1391. If Europeans were employed as magistrates, they would be obliged to have omlah?—They must do so.

1392. Would not they be of exactly of the same character and stamp as those who are now employed in our courts?—Yes, the tools must be the same.

1393. Do not you think that the Asiatic character, generally, is in such a degraded state that it is very difficult to get a better system than that which exists at present as regards native omlah?—As I said before, it is very difficult to find a remedy; the employment of more European superintendents would be one great remedy.

1394. Mr. *Gregson.*] At what distance from Calcutta did you reside?—One hundred and thirty miles.

1395. Mr. *Danby Seymour.*] Do not you think your evidence that the police of India are not worse than the police in European countries, contradicts Mr. Halliday's opinion about the police?—I merely said that the police were corrupt, but I have no doubt that you would find them corrupt in most other countries. I did not intend to say that the police in other countries were as corrupt as they.

1396. Can you tell the Committee the names of the various officers of the court who are directly under the magistrate?—The first is a sherishtedar.

1397. Do you know how much the sherishtedar is paid?—Fifty rupees a month, I think.

1398. Who is under the sherishtedar?—The peshkar.

1399. How much is the peshkar paid?—Thirty rupees a month.

1400. Is there any officer under him?—Yes, the nazir.

1401. What is his pay?—I think it is the same.

1402. Is it not notorious that all those officers live far above their salaries?—It is.

1403. Have you known planters regularly keep omlah in their pay?—I have not known any instance of that kind.

1404. We have read in evidence of planters having 200 or 300 decrees lying by which they have not been able to get executed; can you inform the Committee what those decrees are about?—That depends upon the nature of the decree: a decree may be for rent, or anything else.

1405. Is it the fact that planters sometimes have a great many decrees unexecuted?—Very often.

1406. Why are they not executed?—It is sometimes the fault of the omlah.

1407. What

1407. What is the object of getting those decrees if they are not executed?—I must know the nature of the decree before I can tell the object.

1408. What are those decrees obtained for generally; are they for debts?—You may have a decree for debt, or for rents, or for anything else.

1409. What use are those unexecuted decrees put to?—You may get a decree against a man, and hold it until you find an opportunity, or it is worth your while to execute it.

1410. Do you hold it as a screw upon him in future under a threat?—Unless you get a decree within a certain time it would be worthless.

1411. You mean unless the decree is executed within a certain time?—Unless it is executed within a certain time.

1412. Have you known instances of planters having 200 or 300 decrees unexecuted?—I have heard of such instances.

1413. Mr. *Baillie.*] You do not know it of your personal knowledge?—No.

1414. *Chairman.*] But do you believe it?—I believe that many decrees have been unexecuted.

1415. Mr. *Danby Seymour.*] If the omlah were paid better salaries, would you get more efficient and more honest men?—No.

1416. If you got a higher class of natives, would you get more honest men?—No, for I think you have got the highest class of natives that you can get.

1417. Do you agree with what was stated in the evidence in 1852, that there is a much greater amount of perjury in the provinces that have been longest settled, than in those which we have recently taken?—I am not prepared to answer that question.

1418. Mr. *Villiers.*] Can you devise any check to the dishonesty of the omlah?—Nothing, but European superintendence.

1419. Mr. *Willoughby.*] You stated that the evidence is taken by deposition; are not the witnesses also examined *vivâ voce*?—They are in some instances.

1420. What powers were vested in you as magistrate, with regard to your jurisdiction?—It was not settled when I left India, what should be the exact powers that we should hold; but we only had the powers of an assistant magistrate to take up petty cases of assault where no bones were broken, and cases of theft not exceeding in value 50 rupees. All the heavier cases were sent to the magistrate.

1421. What extent of punishment were you empowered to inflict?—Twenty-five rupees fine and a fortnight's imprisonment.

1422. What number of European settlers were there in Rajshaie?—Say 100.

1423. Were they employed in the same way as you were?—Yes, some of them, and some of them in silk factories.

1424. Was the measure of appointing gentlemen of your class honorary magistrates petitioned against by anybody?—No, I am not certain that it was.

1425. Was it petitioned against by the Indigo Planters' Association?—No, decidedly not.

1426. Did not the Government of Bengal appoint yourself and others as honorary magistrates in a cordial spirit, and with the intention of giving you every confidence and support?—Yes, I believe that was the case.

1427. According to your experience, were the covenanted officers with whom you were acquainted efficient or inefficient, hard-working and diligent or otherwise, and acquainted or unacquainted with the languages?—I have found some efficient and some inefficient, some acquainted with the languages and some of them ignorant of the languages.

1428. Could the Government get better native officers than they have at present?—I do not think they could.

1429. Mr. *Lowe.*] Have you ever known any gentleman prevented from settling in the Mofussil by the badness of the police, or from the effects of the courts, or from any cause connected with the Government of the country?—I cannot call to mind any particular instance.

1430. Have you ever known any one driven out of the Mofussil by those causes?—I cannot call to mind any particular instance.

1431. Does the tenure of the land in the part of the country with which you are acquainted present any difficulties to the settlement of Europeans?—No; in the part of the country where I have been, so far as my own knowledge goes.

1432. Are you an occupier of land?—No; I only manage for others.

Mr. *S. J. Auld.*

29 April 1858.

1433. What is the tenure of the land of those for whom you manage?—They are zemindars.

1434. Have they the whole property in the land, or is there any one under them?—In some instances they hold from the Government, and in some instances they hold under native zemindars.

1435. Do they hold part of the zemindary or the whole?—A part of the zemindary.

1436. Do they hold that for a term of years, or in perpetuity?—For a term of years.

1437. In the case of a person holding from the Government, is there any other person under him with a title not derived from him?—He must have his title derived from the zemindar.

1438. Could the zemindar sell the land absolutely, so as to give a complete title, subject to the payment of a rent to the Government, or is there any other native underneath who would have a claim?—I do not quite understand the questions.

1439. Mr. *Baillie.*] Is there any practical difficulty in the way of an Englishman acquiring land, either as a landholder or as a tenant?—No, I know of none.

1440. Mr. *Campbell.*] You are and have been in the management of the Messrs. Watson's concerns in India?—Yes.

1441. They are very large planters and zemindars?—Yes.

1442-8. And very powerful men?—They are.

1449. Was not your appointment as deputy magistrate more connected with the late mutiny than from a desire to improve the law before the mutiny began; were you appointed before or since the mutiny?—Since.

1450. Did you see any attempt made, on the part of Government, to create honorary magistrates before the mutiny?—I think not.

1451-4. Do you think it was a necessary step in the state of feeling in the country at the time?—Yes.

1455. *Chairman.*] You have said that the natives are almost universally corrupt; is that corruptness of the natives a reason why you think the superintendence of Europeans more necessary?—It is.

Mr. *John Freeman*, called in; and Examined.

Mr. *J. Freeman.*

1456. *Chairman.*] YOU are a proprietor in various parts of Bengal, are you not?—I am.

1457. In fact you are an English zemindar?—I am, and have been for a great many years.

1458. How many years have you resided in Bengal?—Deducting the time that I have been in Europe, I should say 25 or 26 years.

1459. You have, I believe, resided in various districts in Bengal?—I have, in most of them.

1460. You are not only a landowner and zemindar, but also an indigo planter?—I am, and always have been.

1461. In what districts of Bengal have you been?—I was first in Radshaie and Pubna; I was afterwards in Jessore and Furriedpore. I was not proprietor in either of those districts at the commencement of my business, but I have been a resident proprietor, both as zemindar and planter, in Nuddea or Kishnagur, and Burdwan and Bhaugulpore, Purnea and Monghyr; and of late years in Benares, Juanpore, Azimghur, on the frontiers of Oude; and I also lately invested a large sum of money in land in the district of Hooghly, close to Calcutta.

1462. Do you consider that the land tenures in general are secure in those parts of India?—No.

1463. Will you state the reason why?—From reasons which have been already stated by witnesses who have preceded me: the unsatisfactory state of the administration of justice, the state of the police, and in some parts on account of the great Sale Law, which affects all the permanently settled districts of Lower Bengal, and also, of course, to the inefficient state of the administration of justice, which applies to the incapacity of the civil service in general. Perhaps I may say one word in explanation of the evidence which I am about to give, so that it may not be misunderstood. I would wish to observe, that, with my long experience in India, I have no personal complaint to make against any

of

Mr. *J. Freeman.*

29 April 1858.

of the civil service as gentlemen, excepting in one instance, which was a matter of exception; and therefore I have no kind of ill-will nor animosity, nor any passion against any of them. What I blame, and have always found fault with, is the system that prevails, and not so much the individuals who administer the system.

1464. What is the state of the police in the parts of India with which you have been acquainted?—I may state a case in illustration, which occurred when I was in Radshaie, in the early part of my career in 1826; that was a case of a false accusation of murder against a gentleman who was an assistant in another gentleman's factory, owing to which he had to undergo the greatest indignity and suffering, and it was clearly proved to be a false accusation altogether. It was more particularly owing to the darogah's performance and those employed under him, and also to a state of animosity and a proneness to revenge on the part of a native zemindar, to gratify a feeling of enmity or dissatisfaction.

1465. Was it a European against whom the charge of murder was brought?—Yes; he was an Englishman It involved great suffering on his part, and very considerable loss to the proprietor of that extensive concern; for it took place during the manufacturing season, when the rivers were rising, and several of the factories being stopped, the crops went under water, and what did not go under water was plundered; immense boats loaded with it were taken up the stream to the opponents' factory.

1466. By whom was the charge brought?—By a native zemindar, in consequence of the refusal of the proprietor to make him a loan of 10,000 rupees.

1467. Was the man who made the charge prosecuted for perjury?—No, he was not.

1468. Before what authority was the charge made, tried, and disposed of?—It was at first made before the darogah; this was at a distance of 40 to 45 miles from the civil station. There had been a regular conspiracy got up beforehand, and I afterwards became aware what the darogah had received. Two days afterwards I saw this gentleman in a hut in the bazaar; I took food to him. The darogah was bribed to a very considerable extent, and this conspiracy was got up. This gentleman had commenced manufacturing owing, to the rise of the river, somewhere about 10 days before. A dead body was being taken to the Ganges, either to be burnt or thrown into the water, and this body was stopped by the zemindar's people, and they took it into a field of indigo, I should say about 300 yards from this gentleman's factory; they had a kid, and they cut its throat. They then inflicted *post mortem* wounds on the body, and poured the blood over the body; they then marched away with the corpse to the tannah, which is about a mile and a quarter distant. They there presented a petition against this gentleman, and all the servants in his factory, from the highest to the lowest, stating that this gentleman created this affray in the indigo field, and that the dead body was the consequence of the affray; thereupon the darogah, it being a thing that he had agreed to do, forcibly entered the factory of Mr. B., of which he had charge. The daroga entered the premises, and seized the gentleman in his bungalow, and subjected him to great abuse and ill-treatment, as he himself told me afterwards. He was then marched away to a tannah, in a small bazaar: in all those small bazaars there are prostitutes, and here happened to be two prostitutes living in the same hut; they were turned out, and this gentleman put into the hut, where I saw him. Not satisfied with that, to show the animosity which the natives have when they do get Europeans into their power, I may mention that they actually made those women do over him what I will refrain from mentioning, and there he lay between four or five days. I went nearly every day to see him. I was residing with Mr. C., whose head factory was managed by Mr. B., near the Ganges, and about 12 miles from ———. There was another factory between those, superintended by a country-born gentleman. Mr. C. got intelligence of this affair, and he went immediately to that other person's factory, but he had run away, from fear of being treated in the same way. Mr. C. arrived there, and did not find him; he had gone down to Calcutta. Then he wrote to me, begging me to come and give him what assistance I could; when I saw him, he asked me if I would venture down to B.'s factory, for B. had been seized by the police. I volunteered my services, and went there; I went into the bungalow, but not a servant was present. There was the indigo, some of it fermented, and some in the boiler, and indigo plant spoilt and strewed about. I saw boats passing by, going up to the native factory with Mr. C.'s plant. Of course Mr. C. was very much excited; the two factories were completely

Mr. *J. Freeman.*

29 April 1858.

stopped, because it is an invariable custom, when these false complaints are made, to include all the servants and men in the service of the planter, either as a zemindar or an indigo planter. I went down there. Mr. C. then started for the sudder station, where the authorities reside, about 45 miles off; he was in a dreadful state; he brought his case before the magistrate. He was sending me frequent messengers on horseback to let me know what was doing, and also messengers went from me to let him know what was going on. I wrote to tell him that it was the intention of the darogah to make Mr. B. walk up to the station in irons; this was in the month of July. Upon that intelligence reaching him, the magistrate interfered, and sent a special order to the darogah, that Mr. B. should be accompanied up to the station, but should have the use of a palanquin; he went in that way; part of his little finger was cut off during the first ill-treatment he was subjected to on his arrest; and finally it was proved to be a complete case of invention and forgery.

1469. How was part of his finger cut off?—In pulling him about, and striking and beating him, which invariably happen when the natives get a European into their power. Even in Calcutta you may see the police, when they get a European into their power, poke their sticks in his ribs, and treat him in a cruel way.

1470. Was the charge proved to be an unjust charge?—Completely so; it was a perfect invention.

1471. How was that proved?—By the inquiries of the magistrates, and the darogah was dismissed the service. Inquiry was made, and this case was proved to be completely unfounded. Mr. B., of course, was released. In the meantime, while these proceedings were going on, in the course of about a week I began to get the servants and the people together, and managed to get plant cut and to save what we could. From investigation, the case was proved to be unfounded. Mr. B. did not return to the factories. Mr. C.'s factory got to work; the darogah was dismissed the service: I believe there was some fine also in the matter.

1472. Mr. *Baillie.*] Did Mr. B. ever apply to have justice done against his accusers?—Not that I am aware of. I left that part of the country shortly afterwards.

1473. *Chairman.*] You give this only as an instance of what occurs?—Of what occurred at that time; but since then, of very late years, I have had, in consequence of my purchasing an extensive estate close to Calcutta, false charges made against me, and to such an extent that I left the place, and put in a manager at 500 rupees a month. I would not subject myself to having false charges brought against me, arising from the fact of my purchasing this zemindary, for which I paid down 20,000 *l.* cash.

1474. Where is that estate situated?—In the Hooghly district. I purchased it in 1849–50.

1475. What were the reasons for which you gave up the management of that property?—I purchased the estate, and a few days afterwards entered into possession, when a dispute took place in consequence of some of the under-tenants claiming to hold certain villages which they said they held under a lease; that was a Mussulman family. Then another family, a Hindoo family, claimed to hold a great extent of land rent-free; of which lands they had from time to time dispossessed the poorer ryots, and seeing me come there, they were apprehensive that inquiries would be made into these things, and of course it was with a jealous eye that they saw me come; there had been no resident proprietor, native or otherwise, upon that estate for upwards of 40 years, and in consequence, great abuses had crept into the estate. A few days afterwards they got up a case, falsely accusing me of going out with 150 or 200 armed people; every servant, from the highest to the lowest, in my employ, was put down in the petition. They stated that I had gone out, and seized their nets, beaten and thrashed them, and prevented their fishing in a large fishpond which formed part of the estate; and got a number of false witnesses against me. I was hauled up by the magistrate to appear and answer these complaints within three days. I was going to make complaints against them, but I was met with the statement that they had an hour before filed false charges against me in the court. This case was supported, on the one hand, by the ignorance of the magistrate who presided in the court, and, on the other hand, by the bribery of the police and of the native omlah. The orders which the magistrate passed were such, that I was actually dispossessed, while I had to pay to Government about 400 *l.* per month for revenue of several villages, besides the expense of the administration of the estate; and I could not

get

get in a penny of my rents from the people, who had been incited by these men to withhold their rents. I went down and applied to a high authority in Calcutta, and brought the case before him, and said, "This is what is going on; I am being ruined, not only in money, but in my own person." And my wife and family being in Calcutta, I was apprehensive of danger; at last, I quitted the estate, and put a gentleman in charge, who received 500 rupees a month as salary.

1476. You complain generally of the want of security in your property?—Yes.

1477. To what cause do you attribute the want of security?—In the first instance to the bad interpretation of the laws, and the incapacity in many instances of the civil servants in the Mofussil courts to interpret the laws, such as they exist; and in the next place to the corrupt state of the omlah, and also of the police; the prevalence of false charges and false witnesses. They are the grand causes of insecurity; for in no country can property be secure where such a system and practices exist as those I have described.

1478. What became of those charges?—Fortunately the gentleman to whom I applied had been a very experienced revenue officer, and was then superintendent of the police in Bengal; he told me, "If you will put the case in the shape of a petition before me, with a copy of the orders of the magistrate as passed, though I cannot interfere in a direct way, still, as all magistrates are under my power, I will write the magistrate in correspondence with me, and tell him how wrong he is acting, and that he will get himself into a scrape." He added, "You had better go back, and I have no doubt but that the gentleman will pay some attention to my remonstrances." I did go back, and had to appear as a defendant. I was the plaintiff on the one hand, and the defendant on the other. I put this very clause of the Sale Act, clause 26, Act I, of 1845, before him; it is impossible to see anything more positive and clear, that an estate being sold for arrears of revenue, the purchaser gets the estate free from all incumbrance since the decennial settlement, with five single exceptions. I said, "I only purchased this estate the other day; here is my certificate, and how can you listen to these people saying that this man is entitled to hold these two villages; this man is entitled to hold this land free from rent, and the other to go and cast nets into the fishery? You can refer it only to the civil court. I, as purchaser, have come and paid up the arrears of Government revenue, but you place me in a false position. That is dead against the Government regulations." The consequence was, that, owing to his ignorance on the one hand, and the bribery of the omlah on the other, instead of being a guide to him, the omlah led him quite astray.

1479. As a resident and landowner there, you complain of the corruptness of the natives, and of the incompetency of the magistrates?—I do complain, generally speaking, of the incompetency, which I apply more to a want of knowlege of the language of the country, and to ignorance of the regulations, and of bad application of them.

1480. What had the magistrate to say?—When the witnesses were called, some of them brought in forged leases, others brought in other leases, cancelled *de facto* by the act of sale, and of course the magistrate referred the parties to the civil court, which it would have been his duty to do in the first instance; they were so referred, and then I went back, and got my rents.

1481. That case was decided in your favour?—Yes; after a great deal of unnecessary expense, and very great anxiety and inconvenience to me, besides the fear of getting myself into a scrape; I was afraid to put my foot out of the house.

1482. Is there any case in which you consider wrong to have been done to you which was not decided in your favour?—Ultimately I have generally managed to get redress, either by a memorial to the Governor-general in Council, or through the superior authorities in Calcutta, but after a vast deal of trouble and expense, and a great deal of demoralization; that was the case at Bhaugulpore; I had to memorialise the Governor-general in Council against the decisions of all the civil servants of that station, and after great suffering and loss, I got redress, minus heavy expenses.

1483. You have heard the Sale Law complained of by a former witness; have you in your experience as a landowner felt the mischief of it?—Yes, certainly; nobody can be interested in land in Bengal in any way but what he will feel dissatisfied with the state of that law; it affects everybody, whether European or a native landholder.

1484. What is the point in the sale law of which you specifically complain, or

Mr. *J. Freeman.*

29 April 1858.

rather the law attempted to be amended by Mr. Grant's Sale Law?—The principal item is that *bonâ fide* leases, such as putnees, izarahs, or farms, from three to nine years, all acquired at considerable expense, are cancelled by the Act of Sale, as well as leases for extensive plantations of date trees for sugar, &c. &c.; they are the greatest grievances; that a man may purchase a putnee, we will say, consisting of seven or eight villages, in an estate composed of 20 villages. The zemindar gives him a perpetual lease, and the man who takes the putnee pays him a certain sum in cash, and agrees to a certain annual rental in perpetuity. Then if the zemindar of the estate, of which this forms a portion only, thinks proper to keep back wilfully, or otherwise, a trifle of the Government revenue of the whole estate, the consequence is that the estate is sold, and that gentleman's money, whether it was 20,000 rupees or 50,000 rupees, which he has paid down in the first instance for a lease of that property, is lost *in toto*.

1485. You confirm the statement made by Mr. Theobald on that subject?—Of course I do. I have given putnee leases myself. I have an estate paying me 1,000 *l.* a year in perpetuity upon a putnee lease. I prefer giving a putnee lease, and would prefer taking a putnee lease to taking a farm for a limited period, for a variety of reasons.

1486. What is a putnee lease?—A perpetual lease, under certain conditions. These were introduced about 1812. I do not see any regulations in reference to that tenure before that period. The whole estate of the Rajah of Burdwan is divided into putnee leases; they are perpetual leases. So long as the putneedar continues to pay his rent at stated times, the zemindar cannot increase it, or interfere in any way with that portion of the estate. On the putneedar making default to pay the rent regularly, then these regulations enable the zemindar to apply by petition to the collector, praying that the right and title of the party to that portion of the estate should be sold by public auction; and then it is optional with the original holder of the estate to bid for that right and title which he sold for the sum of money which he received in the first instance.

1487. Mr. *Villiers.*] Does he take all the interest which the former leaseholder had?—The purchaser takes all the interest and all the rights which the putneedar had.

1488. Does the purchaser take all the right which the original leaseholder had?—Yes, he enters into his shoes.

1489. Then it is not a forfeiture of the lease?—Yes; the leaseholder forfeits his money and tenure in consequence of default of the zemindar in the one case, and also by his own act of default to the zemindar in the other. The putneedar pays down a certain amount in the first instance, and an annual rent for ever subsequently.

1490. Mr. *Campbell.*] You mention that in reference to the remedy of the zemindar against the putneedar?—Yes.

1491. But the putneedar has no remedy against the zemindar for default; but his putnee may be forfeited unless he pays the rent?—Yes; the regulation reserves to any under-tenant a power of going and paying up the Government revenue, provided he has knowledge that default is contemplated by the zemindar.

1492. *Chairman.*] The zemindar being in arrear, the putneedar's tenure is sold?—In the case of a zemindar making default, the whole estate, including putnees and other farms, &c. is put up for sale by the Government. There is one way of preventing that from being done; that is to say, the different owners of under-tenures and others, or the part owners of the estate, have power by law to pay up that Government revenue, if it is done before sunset on the particular day. But I have known instances where it has been contrived that they should not get any intelligence that the zemindar was going to make default, and when sunset came there were parties who would have paid the revenue had they suspected the fraud; but it was a stratagem used to oust them out of their property.

1493. Whose fault is that?—It is owing to the immorality and dishonesty of the native character, and the inefficiency of the present law to prevent such evils, which persons of practical knowledge could easily provide against.

1494. You do not complain of the judicial system upon that ground?—No; this is a matter of revenue law; but the law requires great modifications to make it safe for under-tenures. Take the case of a man holding for 10 years; his lease is done away with by the fact of the sale of the zemindary by the Government; any interest that he has is sacrificed and gone. Then he comes, despoiled of his lease,

lease, to the new proprietor, and gets into the same position that he was in before, if he can, after agreeing to pay a second time.

1495. Mr. *Villiers.*] Do you consider that what you have just now stated follows from the state of the law?—Of course it does, and from nothing else; but there are many other very great defects in this Sale Law.

1496. Mr. *Campbell.*] Take the case of a zemindary at an annual rental of 100,000 rupees. You may hold a putnee for which you have given 30,000 or 40,000 rupees, and the zemindary is put up for arrears of Government revenue; your putnee is forfeited when the zemindary is sold?—Yes.

1497. All that you gave for it is gone?—Yes; that is one of the great hardships.

1498. *Chairman.*] Has any amendment of the law been proposed to meet this point?—From having had a very great deal of experience in this matter, and hearing great complaints in Calcutta against the Sale Law during a moment of sickness, I devoted my time to making suggestions and draughting modifications of this law; and owing to my leaving India just at that time, I handed them over to Mr. Grant, member of Council, and told him that I had not time to bring the matter forward before the Government myself, but that I would venture to put it into his hands.

1499. What did Mr. Grant say?—He said that he would see to it, and about eight or ten months after I left I heard that a new law had been introduced into the Legislative Council, and a discussion took place upon it, providing for a reform of the Sale Law.

1500. Has such law been carried into effect?—I am not aware that it has.

1501. Is such law under the consideration of the Legislative Council?—I believe there is.

1502. Mr. *Willoughby.*] Was not it in consequence of the objections made to the amended draught by the Indigo Planters' Association that that law has not been passed?—I am not aware. I cannot speak to that. I left India in 1855.

1503. Mr. *Danby Seymour.*] What was the general principle of the draft sale law?—I can only judge by the public papers, in which I have seen long discussions, and from those discussions I am justified in believing that Mr. Grant has adopted many of the suggestions which I took the liberty of recommending; but many sad consequences also to the purchasers of estates, under present circumstances, at a Government sale are owing to the preliminary steps to be taken by the authorities being improperly carried out: in fact, you may say in general that where a sale, after having taken place, is disallowed by the Government authorities (I should say in nine cases out of 10), it is owing to the formalities not having been carried out by the revenue authorities; the collector principally, free from all blame on part of purchasers. That has been the case with me. I have purchased several estates, and wherever the purchase has been disallowed, it has been owing to ignorance or neglect of his duties on the part of the collector. I suggested that the preliminary inquiries should take place before the property was put up for sale, to obviate the ruin which is sometimes inflicted upon a purchaser coming forward to pay the Government revenue. He is brought into the net, and after having become the purchaser of the estate, and having had possession of it for two or three years, his possession and purchase may be upset; the alleged proprietors or late defaulters get up a case called a wassilut; they draw up an account of the gross collections of the estate, and instead of being satisfied with filing their claim for a fair amount, or something below, it almost always turns out that their claim amounts to more than double or treble what it was possible for the estate ever to collect. The consequence is, that by a civil suit the possession of the estate may be disallowed after two or three years, and your money is returned to you with interest at the rate of 5 per cent., or whatever the Government securities may be worth at the time; and that money cost me, perhaps, 18 or 20 per cent. in the first instance; and I may be made to pay large sums for rents falsely alleged to have been collected.

1504. *Chairman.*] What is your specific complaint, in the case which you have been describing?—I complain of the inefficiency and defects of the Sale Law in not calling upon the defaulter to state all his reasons why his estate should not be sold before the sale takes place; in fact, the principle admitted in publishing the banns of intended marriages.

1505. I understand you to have complained, in the course of your evidence,

Mr. *J. Freeman.*

29 April 1858.

of the corruptness of the police, of the incompetency of the administrators of justice; also of the laws themselves, and of the incompetency of the European civil officers?—Yes, with respect to the tenure of lands more particularly.

1506. Mr. *Danby Seymour.*] I understood you to say that your objection was, that the tenure was incomplete when you bought at a Government sale?—No; on the contrary, you get then the best title that you can have.

1507. You complain that when you have simply bought at an auction, then your tenure is not completed?—You may not know of what you will get then.

1508. When the collector has ratified your sale, then it is complete?—No, it has to be confirmed by the Commissioner of Revenue, and in some cases it may be upset by the Board of Revenue.

1509. *Chairman.*] Are you of opinion that the adoption of the English language in the courts of law, which has been advocated by some witnesses, would be a benefit both to the European and ultimately to the Indian population?—I do not think that it would be of greater benefit to the Europeans than to the natives, but I think that it would be the greatest beneficial reform that could be introduced into India.

1510. Do you confirm the opinion of those who have stated that the want of good roads, of water-carriage, and of general means of communication, has been of great detriment to English settlers in India?—I think that it has operated very much against settlers, but not more so than against the welfare of the country in general, natives as well as Europeans.

1511. Do you think that it has been detrimental to the settlement of Europeans?—Decidedly.

1512. From your experience, can you speak of the influence which has been produced by the settlement of the British in the large towns and in those parts of India where they are more numerous, and where their capital is applied?—Yes; I may first of all take Calcutta, where the European residents within my recollection have more than doubled; whereas in the Mofussil I do not believe that there are 30 Europeans more, if there are so many more, than there were 35 years ago.

1513. To what do you attribute that?—I attribute that to the want of security in the Mofussil.

1514. Do you attribute it to the mischiefs which you have already laid before the Committee, namely, the bad administration of justice, the inefficiency of the police, and to the other cases which you have mentioned?—Yes, principally.

1515. To what other cause do you attribute it?—The capitalist in Calcutta feels so insecure, that although he is ready to advance money to you upon mortgage, upon securities within the Queen's jurisdiction, to any extent, at 5 and 6 per cent., yet whenever money is required for an indigo planter, or silk grower, or to develop the resources of the interior of the country, you cannot get it at less than 15 per cent., and very often more than that; that is a clear proof of the distinction which exists between the Queen's jurisdiction and the Company's jurisdiction.

1516. Do you attribute that to the different administration of the law in the Queen's courts and the Mofussil courts?—Yes, I attribute it to that and to the insecurity of the land. Then as to the influence of the great number of Europeans, I must beg to refer to the advancement of education and intelligence, to the improvement in the habits, and the intercourse and influence in a commercial point of view existing in Calcutta, and the extent of the use of the English language. The Government and merchants' offices are filled with natives, writing and reading for the purposes of the English, just the same as English clerks are employed in England; all these combined have great influences upon the state of the people there. I see natives there reading English books, whereas in the Mofussil I never saw a native read any book at all; but in Calcutta young men study English, and take to reading English books in their leisure hours, and acquire information. I never saw anything of that kind during my whole residence in India in the Mofussil. That has been done by the greater intercourse and friction between the European and native communities and facilities afforded to acquire the English language. A native merchant in Calcutta comes to me, and talks and writes English better than I do myself; but you never see anything of that kind in the Mofussil. If a native goes to pay his respects to a civil servant in the Mofussil, he asks how he does, and after the few set phrases of civilities, &c., have passed, there the matter ends.

1517. That

Mr. *J. Freeman.*

29 April 1858.

1517. That greater intercourse proceeds from the greater number of Europeans in Calcutta, and that greater number of Europeans proceeds from the administration of English law and the security of property?—Yes; from the fact of their being a European community, there is a greater protection; every man feels secure; he has the benefit of English law administered by trained and professional officers, and of many of the institutions which exist in England.

1518. Do you contemplate, from your past and present experience, in the event of a considerable increase of the English there, and the employment of English capital, that a very much greater degree of prosperity will take place?—Undoubtedly; it is that which is wanted so much for India.

1519. You have had great experience of the capabilities of India, in the production of various agricultural articles, have you not?—Yes, I have.

1520. Do you attribute the limited extension of the production of those articles to the absence of the means of transit down to the seaports from the interior?—Certainly I do, both as regards the produce of the country, and more particularly the produce of Europe, English manufactures and such like.

1521. Has your attention been called to the evil of the great difference in the price of salt in the different provinces of India?—That is one of the greatest hardships in Bengal; it is one of the greatest and most oppresive taxes that bears upon the poor; I refer more particularly to the distant parts of Bengal; I know that the salt used to cost them, up in the northern part of Bhaugulpore district, 10 rupees a maund. In Calcutta it used to be sold by the Company by auction, and bring four rupees a maund, sold in large quantities. That, of course, is a very exorbitant price in the first instance, but, owing to the system of the natives of putting in 50 per cent. adulteration, in three or four instances, before it reaches a distant part, there is a great enhancement of the price added to the expense of the conveyance; but that is a trifle compared with the adulteration, and I do not think that the Government have taken the proper course to remedy those evils.

1522. What has been, within the places where you have been, your experience of the introduction of many European articles of cultivation?—I do not know of the introduction of any European articles of cultivation, except more particularly European vegetables; that has been wonderful. When I arrived in India, you could not get a carrot bigger than your little finger, or a lettuce fit to be put upon your table; and I appeal to any gentleman acquainted with India now, whether the exhibition of vegetables in Calcutta is not equal to any exhibition in Covent Garden, also the successful introduction of some European fruits, apples, grapes, strawberries, and others.

1523. To what do you attribute that superior cultivation?—To the introduction of good seed, and changing it every year, and improved method of cultivation.

1524. To what do you attribute that?—To the introduction of Europeans; those things never would have been in existence without them.

1525. Have you ever been in Ceylon?—I have been there five or six times, but not as a resident.

1526. What has been the effect of the introduction of Europeans and European capital in Ceylon?—The introduction of European capital has had the same effect wherever it has extended. Coffee was introduced there by Europeans. I know many gentlemen in Calcutta who went down to Ceylon, and had large estates there; in fact, I was on the point of investing a large sum of money in an estate there myself. The cultivation of coffee has succeeded to a wonderful extent.

1527. What has been the reason of the difference between European capitalists going to Ceylon and European capitalists going to India?—They go to Ceylon with a perfect security, owing to the administration of the country; while in the other case they are deterred from a great number of causes.

1528. Have you turned your attention to the probability of any advantages resulting from small colonies of Europeans being established in the hilly parts of India?—As far as the influence of climate goes, I do not see why people of small means, soldiers and other persons, should not be induced to follow something like the system pursued by the French in Algeria, to colonise on or to settle the hills.

1529. Do you know anything of the colonization of the French in Algeria?—I do; I have a connexion of mine who is managing superintendent of the Setiff Company's grant in Algeria.

1530. Do you think that a great improvement in the habits, morality, and comforts of the European community will be produced in India by the much greater

Mr. *J. Freeman.*

29 April 1858.

approximation to the mother country; by the facilities afforded by steam and the employment of British capital?—The bringing India near to the mother country has created a complete revolution in India within the period of the last 18 or 20 years, compared with what the state of things was when I first went out to India, whether you take the habits or morality of the Christians, or the progress of the natives who have been within its influences.

1531. Have the native merchants of late years been engaged in shipping products of various kinds to England?—Yes; some to a considerable extent. I know many natives in Calcutta who are large shippers of country produce to England, and who send out orders direct to England; nothing of that sort existed 20 years ago.

1532. You think that this great advantage of the extended commerce of the natives may be traced to the employment of British capital?—It gave the example, but the natives employ their own capital.

1533. But for the English, they never would have employed capital to the same extent?—Certainly not; they follow our lead; they do not take the initiative in anything in the shape of improving what already exists, or in introducing anything new.

1534. You want European superintendence to direct the labours of the people of India?—Yes; the same as a schoolmaster is necessary to teach young children.

1535. Have you ever been in any other parts of India besides Bengal?—Yes; I travelled from Bombay to Calcutta by dawk some years ago; I was 22 days and nights on the road; and being given to make observations, I made certain observations during that journey.

1536. Mr. *Campbell.*] What is the distance from Bombay to Calcutta?—About 1,000 miles, and may be more, on account of the great semicircle one is compelled to make.

1537. At what rate per hour did you travel?—It depended upon the roads; where there were good roads, we went about four miles an hour.

1538. *Chairman.*] The railway in that direction will make a complete revolution in the travelling system in India?—Yes, as between Bombay and Calcutta.

1539. What will be the cost of going across India by railway as compared with going across by dawk?—The dawk would be more expensive; it comes to eight annas a mile, and in Hyderabad it is a rupee a mile; you are carried on men's shoulders and upon men's heads when there is no road, and you have to be carried over the water; I had to be carried on men's heads in my palankeen, and they let me down frequently.

1540. Mr. *Willoughby.*] How did you go to Poonah?—By dawk. That was in 1841 or 1842; it is only lately that Europeans have established carriage by horses.

1541. *Chairman.*] Are there any articles of great consequence to the natives of India which have been principally discovered, worked or introduced by Europeans?—Yes; the British settlers were the first to establish direct steam communication between Calcatta and Suez, and I had the gratification of being one of the passengers that proceeded by the first experimental steamer which crowned their efforts, the first pioneering enterprise before the existence of the Peninsular and Oriental Company's steamers appeared to the east of the Cape of Good Hope. It was through the untiring exertions of the British settler, that, after years of research, coal-beds were discovered and extensively worked, and have for results the present prosperous and useful Bengal Coal Company, paying about 2,000*l.* per month to the railway, for the transit of their coal from Raneegunge to Calcutta. There are other companies of minor importance, and individuals, including natives, also engaged in working coal-mines. What would the Indian Government have done during the late rebellion without these coals, and without the fleets of inland steamers belonging to the Indian General Steam Navigation Company and to the Ganges Company, that were of such vital service in conveying the British troops, the Naval Brigade, and the ammunition and stores for the army? Yet, how much greater services might they have rendered had there been a canal to Rajmehal, or had one of the Nuddea rivers been kept open from Nuddea to the Ganges. The British settlers first introduced, and have steadily persevered in increasing the number of sea-going tugs, for facilitating the intricate and dangerous navigation between the pilot station at sea up to Calcutta, and thence back. This was considered so important a guarantee against accidents, that for many years the insurance offices spontaneously paid the hire of the steam tugs up and down. The wet docks and shipbuilding yards were all erected by the settlers;

settlers; the Government established none, but were happy some years ago to purchase that vast establishment of Mr. Kidd. A great source of benefit has been conferred upon England, as well as upon India, by the perseverance of the settlers in overcoming many obstacles, after repeated failures. They succeeded in the cultivation of good tea, even before it was discovered to be indigenous in so many places in the hills. I see, by a report, that the imports into England in 1856 amounted to 700,000 lbs.; and should the flames of rebellion have spared that part of Assam, I have no doubt but that the imports of 1857 will have far exceeded that quantity. It is but through the initiative and exertion of the Europeans that the valuable iron and copper ores lately discovered will ever be brought into the market. The British settlers established the inland transit, by means of small carriages drawn by horses; by means of which, Sir Colin Campbell and some hundreds of officers and soldiers were conveyed from Calcutta to the seat of war. Through the instrumentality of the British settlers it was that the transit through Egypt was finally brought into existence, and that the first steamer was placed on the Nile. That is as to resources and matters in which the Europeans have taken the initiative, and have prospered to a very extraordinary extent. I am interested in many of those undertakings, both in the coal-mines and in the tugs, and we receive very large dividends.

1542. Do you think that there is likely to be great improvement in the production of wool in India?—I see nothing adverse to it.

1543. Has the production of it increased much of late years?—No; there is no wool in India, properly speaking; it is a kind of hair; it may be turned into very good wool, by crossing with English or merinos sheep.

1544. What sort of hair is it?—It is a coarse wool; the people call it wool.

1545. It is imported as wool, is not it?—The term is used. The wool is used for manufacturing coarse blankets, and all those sorts of things; but improvement in cattle is a very desirable object, and easy to effect.

1546. Does the indigo which is made by the natives sell at a lower price than that which is produced by Europeans?—Of course it does.

1547. To what reason do you ascribe that?—First of all, wilful fraud is extensively practised by the former; no gentleman will go and purchase native indigo with that implicit faith that he will purchase of Europeans.

1548. Is that attributable to the superior skill and to the capital of the Europeans?—To skill, care, attention, and honesty.

1549. Is the native indigo mixed?—Yes; the inferior quality is mixed up with the good quality; the chest is packed with good cakes and colour, down the sides and on the tops and bottoms, but the middle is bad, sometimes far from being dry, &c.; there are, of course, exceptions.

1550. You think that the higher price is a proof of the superiority of English capital and skill?—Yes.

1551. It also proves the inferior character of the natives, both as manufacturers and also as respects their want of honesty as dealers?—There is that *nonchalance* and indifferent kind of feeling, that they do not take so much interest, zeal and good faith in the matter.

1552. Do you find that your health has suffered very much during your residence in India?—I never took a dose of medicine for 16 years on one stay, and never knew what a doctor was; I think it a most healthy country, so far as my knowledge goes.

1553. From your acquaintance with the other planters in your part of India, can you state that they are healthy men?—Yes.

1554. Do not you think that the stories which we have heard of the unhealthiness of the country are somewhat exaggerated?—Very greatly. People who live in an artificial state must expect it, but the people in the Mofussil are destined by nature to lead a life more natural, or more harmonising with the requirements of a healthy state. Their employments are out of doors, and they are exposed to the air and other elements, and to other beneficial influences, and to these I attribute their better health.

1555. To what do you attribute the want of health amongst the soldiers in India?—To a great extent to the laxity of discipline. And to illustrate that, I may mention, that Fort William, in Calcutta, where the European soldiers are garrisoned, is about three-fourths of a mile from the Government House, and there is a beautiful plain between the two; to go to the town, the soldiers pass it; and I have seen there three or four British soldiers at a time sprawling on their

Mr. *J. Freeman.*

29 April 1858.

backs, filled with liquor, fermenting in the sun, and foaming at the mouth; they are taken into the Fort; they fall sick, and many die; and that is attributed to the climate. If in a warm climate such things as these are tolerated by those who ought to keep men in order, what body can resist? I say none. The same applies to sailors, as well as to soldiers.

1556. Has the attention of the gentlemen who, like yourself, reside in the Mofussil, been called, as that of an English gentleman would be, to the amelioration of the people, by the foundation of schools, and other means of instructing them?—Not that I am aware of; no more tha that in every village there is a native school.

1557. The Europeans do not seem hitherto to have devoted much attention to that subject?—The occupations of the British settlers are so constant that they have not done it. In some of the civil stations I have heard discussions on the subject, and many planters have co-operated with persons more particularly engaged therein, and many others have subscribed liberally for building churches in the stations.

1558. Is there not a school at Jessore?—I believe there is; I do not speak positively.

1559. Have you any observations to make upon a subject that has formed a portion of the evidence given to the Committee with regard to the Black Act?—Yes. I have here Sir Arthur Buller's speech in a discussion in the Legislative Council in February 1857. Sir Arthur Buller has been one of the Queen's judges for 14 years. He says, "Then who are they who thus come forward with this language of remonstrance?" (This refers to the British settlers.) "Are they some ignorant or insignificant or worthless section of our community? Far from it; they represent the life, the vigour, the best hopes of our Indian possessions. To the industry, the skill, the indomitable energy of the British speculator in the Mofussil it is no little that we already owe; and it will be the height of impolicy as well as of ingratitude heedlessly to discourage so valuable a subject in the onward course of improvement, along which it is his mission to lead the destinies of his country." I will only read one other passage. "But, sir, while I instance without any horror these deviations from the principle of equality in the scheme of the Commissioners" (that is, the Law Commissioners), "there is one other such deviation to which I cannot help drawing your attention, and on which I confess I look with very different feelings; I refer to that most extraordinary provision by which an exclusive right to be tried before the sessions court is reserved to certain four classes of public servants; namely, to judges of every description, to all members of the covenanted civil service, to all officers of the Queen's and Company's army, and to all officers of the Company's navy. Sir, I could hardly believe my eyes when I first saw this provision in the Blue Book. I could hardly believe that, at the very time its authors were professing to abolish on principle all distinctions between natives and Europeans (distinctions which, merely as distinctions, the natives cared very little about), they should have gone out of their way to invent this new distinction between different classes of British subjects; and that they should have selected, as the objects of exclusion, precisely those who have always been most clamorous for the maintenance of their ancient privilege, and who would be so sure, not only to resist such an attempt on principle, but to resent, with all the bitterness of insulted pride, an act of favouritism so offensive, so uncalled for, and so palpably unjust"

1560. Mr. *Campbell.*] Have you watched the increase of the exports of commerce from Calcutta since the period that Europeans were allowed to hold land in their own names, and compared the period between 1832 and 1838, and the period between 1851 and 1856?—Yes.

1561. By a tabular statement which I hold in my hand, I find that in the first period 52 crores represented the exports when Europeans were not allowed to hold lands in their own names, and in the latter period they have increased to 124 crores; in other words, they have increased to 237 per cent., after Europeans were allowed to hold land in their own names; are you aware of that?—I am aware of that, in consequence of this: Mr. G. Brown, who is the managing partner of one, if not of the most considerable commercial firms in Calcutta, Jardine, Skinner & Co.'s firm, went very deeply into these things; and I have here his address upon these matters; and he being a commercial man, I consider his observations are of some value. He states that in examining the commercial returns he has gone back as far as 1824–25; from that year to the year 1831–32, a period of eight years, the exports and imports of this country amounted to

59 crores

59 crores and 85 lakhs. From the year 1832–33 to 1837–38, the exports and imports amounted to 52 crores and 36 lakhs, which period of six years thus shows an increase of upwards of 11 per cent., as compared with the former period of eight years. That was a small increase, but it was an increase effected at a time when the country was just being freed from the monopoly which the East India Company previously enjoyed. "Observe," he says, "the increase of trade during the year following 1837–38; and, from that, judge what a serious thing it would be to interfere with the judicial administration of this country in the manner that is proposed." I have divided the space of time intervening between 1838–39 and 1855–56 into three periods. From 1838–39 to 1843–44, the total amount of the trade of this country, in exports and imports, was 80 crores and 74 lakhs; from 1844–45 to 1849–50, it was 98 crores and 537 lakhs; and from 1850–51 to 1855–56, it was 124 crores and eight lakhs, being an increase upon the years 1832–33 to 1855–56 of upwards of 237 per cent.

1562. Do you attribute that to the fact of Europeans being allowed to hold land in their own name, or to the course of trade?—No; it is certainly not my opinion that it all arises from the facilities of Europeans being allowed to hold lands in the Mofussil, but it is owing to the increased introduction of British capital, and the great increase of Europeans in Calcutta, who have agents in the interior of the country for purchasing produce, and giving facilities for capital at such places as Cawnpore, Mirzapore, Patna, Benares, Dacca, Sherajgunge, Commerceilly, Moorshedabad, and the like. This caused the produce to be more known and exported. I may mention linseed; I was the first man who sent linseed down to Calcutta; I recollect the first invoice to England; and it has risen now to that extent that in 1856 Bengal exported upwards of 60,000 tons of it; and the same may be said of all other seeds, and of hemp and jupe, for example. I may mention that India supplied, including tallow, and vast quantities of hides of all kinds, during the Crimean war, what Russia was unable to supply, owing to the blockade.

1563. You alluded to the inefficiency of the present examinations and acquirements of the magisterial officers; can you suggest any remedy for that?—Of course if a man is intended to preside on a bench of justice, whether as a magistrate or as a civil judge, we think that he requires a certain apprenticeship and a certain training; a special education, for a certain period. These would cause a great improvement; but what I consider would lead to greater improvement is through the means of the English language being introduced into the courts of justice throughout the country, the same as in Calcutta. In that case, though the magistrate might not be more efficient in professional knowledge, we should have the advantage of his common sense, which he cannot exercise at present. He does not understand at present the witness, and he cannot make himself understood; this applies also to the written petitions or plaints, as well as to written answers and written depositions; therefore, he is in a kind of shivering, anxious, and hesitating state; whereas if he had the privilege of speaking his own language, and having an interpreter, instead of the omlah, he would understand and make himself understood, and would feel a much greater satisfaction in his own conscience as to his responsibility, and in his deciding according to the merits of the case, which he would thoroughly understand; and that would be a greater means of improving the administration of justice in every sense.

1564. What remedy do you suggest for the defects of the police?—It has been my impression for many years that the only means of effecting an improvement in that direction is by the further introduction of the European element into every district.

1565. You alluded to the hardships that the indigo planters underwent when false charges were brought against them, more especially during the period of the manufacture; perhaps from your own practical experience you can state what those losses are, if a planter, at the commencement of his indigo operations, is simply incarcerated, in the case of a property yielding 1,000 maunds of indigo per annum; if the managing planter were removed from the active scene of operations during the two months that he might be manufacturing, what would be the effect upon the property of such removal and degradation to him?—Very extensive indeed. It might involve a loss to the extent of one-half to two-thirds of his whole outlay for a year, and have for effect very considerably to depreciate the value of his factories.

1566. And the outlay for a year of a planter realising 1,000 maunds of indigo might

Mr. *J. Freeman.*

29 April 1858.

might be how much?—My concern averages from 1,000 to 1,400 maunds, and my outlay is, in cash, about a lac and 15,000 rupees, 12,000*l.* actual cash outlay, independent of block, interest, and charges. Down in Jessore and Kishnagur, where the planter is on the ryotwarry system, in such a case as you mention, the losses would be very considerable.

1567. What effect do you think the transfer of the Government from the Company to the Crown will have on colonization or British settlement?—Colonization as applied to India in the present circumstances would have a very great effect I have no doubt; because the change in the form of Government from the company to the Queen leads one to expect ulterior reforms more closely connected with India itself; and therefore as there is such a vast call for reforming in every branch of the service in India, we naturally suppose that a great portion of those reforms will result in consequence of this change in the system of the Government in England, where independent men having a knowledge of India will be allowed to take a part in any Council or Indian Board formed there. But the great demand of the community, both native and European in India, is the opening of the Legislative Council in Calcutta; and we look upon that as much more important than the change of Government here. The Legislative Council do not possess the necessary knowledge of the practical working of the laws they enact; and so long as light and practical knowledge are kept out of the Council, its members must continue to grope in the dark, or abstain altogether from proposing acts so urgently called for by the extension of commerce, &c.; if you will not open the window to let in light, they legislate in darkness.

1568. Are the agricultural interests of India at present represented in the Council?—Not at all.

1569. There is no member of the agricultural interests in India in the Council to represent those interests in any way?—None whatever.

1570. Are the commercial interests represented?—No.

1571. Would you recommend their representation in India?—Certainly.

1572. Have the members of the existing Council in India competent knowledge of agriculture and its interests, and of commerce and its interests?—They have none whatever, to the best of my belief; how can they have?

1573. Then you think that agriculture and commerce in India at present suffer from not being represented in those councils?—They most urgently require to be represented; they suffer very much from not being represented; we feel the want of it ourselves, having our capital invested in the Mofussil.

1574. Mr. *J. B. Smith.*] You stated that you went from Calcutta to Bombay by dawk, and that it took you 22 days and nights to be carried on men's shoulders a distance of about 1,000 miles?—Yes.

1575. Are you aware that in the United States of America you can travel that distance in two or three days?—Yes, I believe so.

1576. In the course of that long journey did you travel through any of the native states?—Yes; you have to go down from Bombay to Hyderabad, and then up again; and you go through the whole Hyderabad territory.

1577. What was the state of the roads in the native states; were they as good as those in the English territory, or better?—The only good road is from Bombay to Poonah, and a short way thence on to Shulapore; there was a track, rather than a road, for some short distance; but beyond Shulapore we could scarcely see any road at all.

1578. Did you find the roads in the native states better or worse than those in the English territory?—I had greater facility in going through the Hyderabad territory than through the other parts.

1579. That is a native state?—Yes. The roads there were better than certain parts of the roads in the Company's territory?—Yes.

1580. In the course of your journey through the English territories did you see the remains of ancient roads?—Yes, in some parts to the eastward.

1581. Had those roads formerly been good roads?—I presume they had; they were fine broad roads, planted with trees; but they were no longer in the state of roads when I passed them.

1582. They had been so much neglected that they were almost impassable?—I could not pass them.

1583. Mr. Mackie, the commissioner sent by the Manchester Chamber of Commerce to report upon Western India, states of that part of the country that it is a misnomer to say that there are roads in Guzzerat; for roads, in the civilised

and

and ordinary sense of the term, there are none in the province, it being utterly impossible to convey to anyone who has never seen them any correct idea of what are called roads in Western India; he furnished also a variety of diagrams. Will you look at those diagrams, and inform the Committee whether they be anything like a correct representation of what are called roads in Bengal?—With respect to Bhaugulpore district, where I was resident for eight years, and in parts of Kishnagur, where I was also resident, and in parts of Burdwan, I say that that is a fair representation of the roads there, of those not called metalled roads, such as the great trunk road. Then there are other roads, which by the regulations the zemindars are supposed to repair; that is a very good likeness of those roads. Then come the roads round about the civil stations of India, in and immediately around which there are beautiful roads, but they are pleasure roads, chiefly drives for the civilians and their ladies; as commercial roads, I know of no others but those I have mentioned.

1584. I have shown you a diagram of a single road; I will now show you a section of a parallel road; will you look at that?—I cannot say that I have seen the ruts so deep as this; but there is another one, with the ruts two and a half feet deep. On such a road we cannot carry on a cart more than seven or eight maunds; whereas on a good road a cart and two bullocks carry from 25 to 30 maunds.

1585. Are not the parallel roads mere ditches?—Those I have seen are such; the pleasure roads and the great trunk road being excepted.

1586. Mr. Mackie also stated that, in the district of country which he visited, comprising an area larger than that of England, those main roads are barely passable during eight months, and utterly impassable during the four remaining months, except to pedestrians; is that true of Bengal?—Where the periodical rains prevail, that is so; the inundations also help; they use boats then.

1587. I think you stated that you had an estate somewhere in the neighbourhood of Calcutta?—About 40 miles off Calcutta.

1588. Do you grow sugar upon that estate?—Sugar, tobacco, and vegetables for the Calcutta market, and rice to a great extent.

1589. Does a bad state of roads exist there?—So much that the men who come to take the sugar away are obliged to use bullocks, and they put leather bags upon the bullocks' backs, each bag containing a little less than a maund; and the only roads they have there are the lines separting one rice field from another, which are generally about a foot in breadth, somewhat elevated above the field, acting also as ledges to keep the water in the fields; and the bullocks tread along those little passages; but some distance from there, where there is a little bit of road, they will take 20 and 25 maunds of produce with a cart and a couple of bullocks.

1590. I understand you to say that that road is impassable for carts?—There were no roads practicable for carts.

1591. They are obliged therefore to send the sugar two maunds at a time on the bullocks' backs, because there is no road fit for a carriage?—Yes, exactly.

1592. But if there were a road fit for a carriage, as I understand you, a cart would take 25 maunds?—Certainly.

1593. How many bullocks would be required for a cart of that kind?—Two.

1594. It requires, then, 12 bullocks to do the work of two?—Yes, it does.

1595. Does not that very much enhance the price of the sugar?—It enhances it on the one hand, and causes a loss to the producer on the other.

1596. That is to say, if the producer of the sugar could carry 25 maunds with two bullocks, instead of carrying 25 maunds with 12 bullocks, he would have so much greater profit?—Of course, the grower would get a greater value for his produce. This applies as well to rice and wheat. In Bhaugulpore there is a great wheat cultivation, both white and red; Indian corn is one of its great productions. It has been imported into England.

1597. There are some good roads in the neighbourhood of Calcutta; is there not one to the Governor-general's house?—Yes, 18 miles long.

1598. Is that the only good road out of Calcutta?—There is one to Dum Dum, which is the artillery station, close by; and there is a bit of a branch road that leads out in the Baraset direction.

1599. I understand you to say that the Government monopoly of salt was felt to be a great grievance in India. Is not that grievance increased by the enormous expense of the carriage of salt into the country?—That is a component part of the

Mr. *J. Freeman.*

29 April 1858.

the enhanced value of it by the time it gets a certain distance. But there is another cause, which is the quantity of adulteration which the salt has undergone, which might be prevented by the Government having depôts at various stations, &c., on the French system. There is no doubt that if there were facilities by roads, the price of transit would be very considerably reduced.

1600. That adds very much to the price of salt to the consumer, does not it?—It does, when it gets to a certain part of the country.

1601. Therefore, that increases the grievance which you complain of in the price of salt?—It does; for where water communication stops, a great expense is incurred to get the salt.

1602. You stated that since the Russian war there had been a great increase in the exports from India?—Yes.

1603. Has not that increase of exports been occasioned by the great advance in the price of different kinds of produce which were formerly supplied by Russia?—I was in Calcutta during part of the time, and my observation was this, that as to hemp and jupe, oil seeds, tallow, and hides when the blockade took place, they no longer found the issue from Russia to the same extent as before the war; and then Calcutta was applied to to see how far it could supply the deficiency; and India distinguished herself in that capacity, in supplying, to a very great extent, the calls made upon her resources.

1604. Has not that increase in exports been occasioned by the great advance in the price of the different articles which were formerly supplied by Russia?—I cannot answer the question put in that way. The enhanced price, no doubt, contributed in enabling India to pay greatly enhanced prices for freight, from 7 *l.* 8 *s.* to 10 *l.* per ton, instead of 3 *l.* and 5 *l.*, ruling freights.

1605. Are you aware that the price of those articles has doubled?—Many of them did much more than double in India; jute, for instance.

1606. And did not that rise in price enable merchants to bring that kind of produce from a greater distance than it had been brought before?—It brought down a much greater quantity.

1607. Why cannot they at all times bring this produce down to market?—Owing to the want of facilities of communication.

1608. Supposing the price of those commodities were to decline to what it was before the Russian war, do you think that there would be the same quantity of produce brought to the ports that there was during the war?—To a considerable extent, I should say, there would; because when once an article has been made known in the market, and a demand for it in Europe, it is produced in greater quantity, and is made an article of export, which, in the first instance, it was not; and without the effect of the Russian war intervening, you would not have had a knowledge of the capabilities of the country in respect of those particular items, or of India's capabilities to produce such large quantities. And I am satisfied now, that though prices have not remained quite so high as during the Russian war, still those articles have been exported with a very fair and tempting profit in general, and I think that will continue to be so, freights having come down to the standard that prevailed before the war.

1609. Do not you think that the great cost of bringing, over the bad roads of which you speak, the produce which has been substituted for the produce which was formerly received from Russia, will add so seriously to the price of the articles as to disable India from competing with Russia when prices fall to what they were before the war?—That would be a great ingredient in the difference, no doubt.

1610. And you would not, therefore, be surprised if, now that the Russian ports are open, there should be a great falling off in the exports from India?—I should not be surprised at some considerable falling off, though not *in toto.*

1611. Supposing that India had the facilities of good roads and cheap conveyances, is there anything, in your opinion, to prevent India from supplying our markets at all times, at as cheap a rate as Russia?—That alone would not be sufficient, but coupled with a better administration of justice and a better police, and experienced men competent to make commercial laws, &c., it would I am convinced.

1612. Mr. *Campbell.*] The natural capabilities of India would do it, with the facilities of roads?—The natural capabilities of India are amply sufficient.

1613. Mr. *J. B. Smith.*] You are an indigo planter; do you grow your indigo by

by means of irrigation?—No, we do not; it would be too expensive, unless irrigation was made available.

1614. It would be too expensive to dig wells, but would it not be practicable to bring canals and irrigation into your neighbourhood?—I dare say it would be; the Ganges has such an immense length, and there are other rivers down to the Ganges; there is a great slope, and you might dam the water up, as the barrage on the Nile, or otherwise, as done in other countries.

1615. Would that not be a great advantage?—Yes, of course, a very great advantage, and most desirable; we might then have grass lands, so much needed.

1616. Does indigo yield a larger crop by means of irrigation than without it?—Much larger, and more certain. With one-half the quantity of land, and one half the expense, we would produce an equal quantity. With irrigation you have a full field, whereas without irrigation you have half the field fail, except in Tirhoot, where the moisture is kept in the soil by superior cultivation of the soil. Down in Lower Bengal, all Behar, Benares, Juanpore, irrigation would be of great benefit where the land will not retain moisture.

1617. In your opinion, is the navigation of the Ganges capable of great improvement?—It is of less consequence, because you can manage to use it as it is.

1618. The Nuddea rivers are capable of great improvement?—Yes, one of them we have for many years urged the Government to keep open, or to construct a canal.

1619. Is the Nuddea, in the dry season, navigable?—No, the Nuddea rivers are not navigable.

1620. Is not the Nuddea capable of being made so?—Part of it is navigable all the year round, but not from the Ganges; it is only a small part inland.

1621. All the traffic coming by the Ganges during the dry months is shut out?—Yes; it has to go round 200 or 300 miles, through a very intricate and dangerous navigable part of the country.

1622. Is it not proposed to make it navigable for the whole year?—I do not see why it should not be done.

1623. And would not that be a great advantage to the traffic?—Immense. Now that the railways are coming, it is of less consequence, except for bulky articles, and of low value.

1624. Mr. *Lowe.*] You suggested as an improvement in the judicial system that the proceedings should be in English?—Yes.

1625. Then you would want interpreters?—Yes, exactly as in Calcutta.

1626. How would you get them in the Mofussil?—The country-born Christians are an excellent class; they are employed in the Supreme Court in Calcutta, and elsewhere in such capacities.

1627. And you think that they could be trusted to interpret truly?—Decidedly. The advocates on either side would be there, and if any mistake took place they could correct it. The system has prevailed for 80 years in Calcutta.

1628. It might prevail in Calcutta, and yet might not succeed so well in the Mofussil?—I will not say quite so well; that would depend upon proper control and discipline in the courts.

1629. You have given a great many reasons why things go easier in Calcutta than in the Mofussil?—Yes.

1630. Have you any other suggestion to make with respect to the judicial system?—Yes.

1631. What remedy have you to suggest?—A greater standard of qualification on the part of the gentlemen presiding on the bench, independent of the change of the language. I would have men trained to be judges, such as those gentlemen are who are sent out from England to preside in the Supreme Court, who have practised in England at the bar, and having undergone a sort of apprenticeship, which has taken a certain number of years, they are able to assume their duties at once with satisfaction to all parties.

1632. You would recommend a higher standard of legal qualification?—Certainly.

1633. In what way would you distribute those judges; would you make them occupy the same districts as now?—Yes, they should preside in the same courts as the judges at present existing, but I think that an extension of judicial and magisterial offices would be required. Take Tirhoot, there are a million of inhabitants there, and only one magistrate and one judge to do the business.

Mr. J. Freeman.

29 Apri 1858.

1634. Is there any other suggestion which you can make?—The reform notion is this, that the introduction of the English language would cut at the root of all this heap of corruption, and do away with the native omlah.

1635. You suggest the introduction of the English language, and a more highly qualified judge?—Yes.

1636. Nothing else occurs to you at this moment?—No, so far as the courts go.

1637. Then with regard to police, what are your suggestions?—To have an extension of European agency, the same as has been adopted in Calcutta for some years past, from which we see that amazing benefit has arisen.

1638. Do you wish that the common policemen should be Europeans, or only the superintendents?—I would wish that in every district, according to its extent and population, the superior grade of policemen should have the superintendence of three or four tannahs, which would employ three or four darogahs, because there is a darogah in every tannah; and they should keep a surveillance over them and have reports; and when any serious case takes place, such as burglary, affray, or murder, they should go and investigate the case upon the spot, or watch over the proceedings of the darogah with scrutiny; and from that control the magistrate would get a better insight into the truth of the case; the European would have to depose to the truth of his inquiries, all of which is unattainable under the present system.

1639. What class of European would you recommend?—The class of men who are employed in England. In France it is the same; many soldiers are employed there; and in India, where material life is so very cheap, it might easily be done. Our assistant indigo planters receive a salary varying from 200 to 500 rupees a month, and under such circumstances, and even with less, the officers might live very comfortably; and one or two grades might be made. For Europeans I would have two different grades at least.

1640. With salaries varying from 200 to 500 rupees a month?—Yes, according to their rank and to the trust reposed in them; say from 150, the lowest; and 300, the highest grade.

1641. Do you propose that the body of the police should continue to be natives?—Yes.

1642. What class of natives?—Much the same, with this distinction; I must say that, within my own knowledge, the selection for the police might be better made. I know instances of gentlemen who have made darogahs of their own private servants when they have shifted to another station, and that I think improper.

1643. Who should select them?—Ten or fifteen years hence I would not select any darogah unless he could pass an examination in the English language; that would be a means of divesting him of his system of corruption; they should be appointed by the magistrates, subject to confirmation.

1644. Could you get darogahs who could speak English at present?—Not immediately; but if a proclamation was issued to say that it was necessary for the future that they should be able to speak English, I dare say, before 12 years hence, you would have your courts filled with persons able to carry on the police or the administration of the country, such as pleaders, moocktears, and others.

1645. What class of people are they who furnish the police; are they Bengalese?—Generally speaking, they are Bengalese; but they are sometimes upcountrymen, who are more moral, of a better standard, more trustworthy, and more brave: the natives of Bengal of that class are a bad set.

1646. They are bad material?—They are very bad material.

1647. Is it not objectionable to employ them as police?—Not if they are properly looked after.

1648. Are they not notoriously wanting in physical courage?—They are, to the extreme.

1649. You do not see how you could get over employing them?—No; you want the closest European superintendence and surveillance.

1650. Mr. *Lowe.*] Would not there be some advantage in bringing police from a distance, from the fact that they would be free from local influence?—Decidedly; no doubt.

1651. Is it a good system that the darogah should be allowed to examine prisoners himself?—Certainly not; it ought to be put a stop to, though I would allow this power to a certain extent to the European police, to save an innocent man from being sent a distance of 50 miles to the station.

1652. Is

1652. Is there anything else that you could suggest with regard to the police?—I think that darogahships, after a certain number of years, should not be given without an examination in English; I maintain that the natives of Bengal are corrupt as far as they are in a needy position, and if you go to a higher class of people, you meet with a higher degree of morality.

1653. What is the pay of a darogah?—In the part of India that I know, it was from 20 to 25 rupees a month; peons 4 rupees, and jammadars 8 rupees.

1654. With regard to the land, can you make any suggestion which would improve the tenure of land, and facilitate the possession of it by Europeans?—Certainly; in the country, where most of the land is occupied in one way or another, except in the sunderbunds, there is a difficulty to surmount. Those gentlemen who have invested their capital in indigo and so forth, have managed it in this way: for the sake of peace and quietness they have come in as purchasers of leases for 8, 9, and 10 years; they have purchased putnee talooks or perpetual leases. Therefore when this unfortunate sale law comes into effect upon an entire zemindary these are all swept away.

1655. You wish some measure like Mr. Grant's sale law, which should give the lessee a security that his large tenures, unprotected by the sale law tenure, should not be destroyed by the sale of the zemindary?—That is one thing; our other method is to rent the land from the small tenant; I am obliged to pay six rupees a bigah for rent.

1656. How much is a bigah?—Thirty thousand superficial feet, where I am; but the bigah varies.

1657. From whom do you take it?—From the ryot.

1658. Who is himself the tenant of the zemindar?—He generally is, or the tenant of Government. In Bengal, where land is so much cheaper and better, there is the ryotwar system of indigo cultivation, and there they have to make contracts; some planters make 10,000 contracts with 10,000 different cultivators; one makes a contract to cultivate indigo for one acre, another for half a one, and another for ten; and it is from the natural disposition of those people to break the contracts that those innumerable suits arise; and out of those suits, by the time you get a decree, very often the man is left with nothing.

1659. What other remedy would you suggest with regard to titles for land?—In my knowledge of India, where the village system prevails, and the country has been surveyed by the Government, and the limits fixed, instead of adhering to that system, I would create estates containing 8, 10, 20 villages together, of from 4,000 to 10,000 acres, and I would sell those estates, and that would create a proprietary class, which is so desirable.

1660. You would sell them out and out?—Yes; and of course realise an enormous sum of money, or I would bring them under the perpetual system.

1661. Those would be zemindaries?—Yes; they are not at present.

1662. Is there not some native right to extinguish?—No, none where the village system has been introduced.

1663. Take Bengal, for instance?—That does not apply; in Bengal these rights are defined, and more or less protected.

1664. Do you see any objection to allowing the zemindar to redeem at so many years' purchase the tax assessed upon him by the permanent settlement?—I do not see any.

1665. Why not?—Because, in the permanent, settled districts of Bengal, the tax on the land was reckoned at one-half the produce of the soil at the time of perpetual settlement; and if a man has purchased an estate, paying for it 20,000 rupees annually to the Government, he is supposed to collect at least 50,000 rupees from that estate. The land-tax is so great that it would depend upon the number of years' purchase at which the estate should be redeemed; but to redeem the land-tax in India, it would take a large capital to redeem a property where the value established had been based upon one-half the produce of the soil. Lord Cornwallis's settlement was made upon that principle.

1666. If an equitable agreement could be come to between the Government and the zemindar, do you think that such an operation would be beneficial to the country?—I think that it would; but I doubt whether the natives would have sufficient confidence in the present Government to do so.

1667. Would the Europeans do it?—They would be more likely.

1668. Would not you, as a European, estimate very highly the advantage of being free from Government interference?—Yes, and so would every one.

Mr. *J. Freeman.*

29 April 1858.

1669. And of being in the position of holding a fee-simple in England?—Yes, if the Government would only limit my estate, or send out a person at my expense to mark the boundaries of it.

1670. Would not such a plan tend very much towards the encouragement of the investment of capital in India?—No doubt very greatly.

1671. Are there not rights besides the rights of the zemindar that would require to be extinguished?—None such that I consider necessary for agricultural purposes.

1672. Still the people would be glad to get rid of the land-tax, even maintaining those rights?— No doubt they would; that is, those who are more enlightened.

1673. You have mentioned a case where a man makes a lease to another, and then the Collector may sell that property, if he is in arrear?—Yes, at the request of the owner of the property. This applies exclusively to putnee leases.

1674. Would it not be more convenient for all parties if, when there was a lessee of the land, that person should become the Government tenant, and you should have nothing more to do with the rent payable to the Government for that portion of the land?—Yes.

1675. But without redeeming it, the tenant has two payments to make?—Yes, he may, in certain cases.

1676. Would it not be a great convenience to you that he should pay directly to the Government, and that you should have nothing to do with the payment?—No, I do not see any advantage in that, any more than it might prevent the fraud of the zemindar.

1677. Mr. *J. B. Smith.*] Suppose the case of a zemindar paying 10,000 rupees a year to the Government, do you think, if he had the power of redeeming that payment by the purchase of so much Government stock as would yield that amount, he would be glad to do so?—Certainly, if he could, and if he had sufficient confidence in the Government.

1678. *Chairman.*] But you think that in many cases the sum required for redemption would deter persons from redeeming?—That would be one of the difficulties to be overcome.

Martis, 4° die Maii, 1858.

MEMBERS PRESENT.

Mr. Campbell.	Mr. Mangles.

Mr. William Ewart.	Mr. William Vansittart.
Mr. Kinnaird.	Mr. Villiers.
Mr. Lowe.	Mr. Willoughby.

WILLIAM EWART, Esq., IN THE CHAIR.

Mr. *John Freeman,* called in; and further Examined.

Mr. *J. Freeman.*

4 May 1858.

1679. Mr. *Willoughby.*] IN what year did you go out to India?—In 1825.

1680. Did you go out in any particular capacity, or as a settler?—In 1825 I went out as a settler.

1681. And you commenced by purchasing land?—By going to an indigo factory, where I remained.

1682. As a principal or as an agent?—As a man of business; an assistant, properly speaking.

1683. You stated that you considered the land tenures in Bengal to be generally insecure; that when you buy at an auction sale you know nothing of what you will get; that in purchasing an estate you are brought into all kinds of difficulties; but notwithstanding all this, you have purchased several estates, and have lately invested a large sum of money, 20,000 *l.*, in land in the district of the Hoogly, which, it appears from your answer to Question 1478, you purchased at an

Mr. *J. Freeman.*

4 May 1858.

an auction sale for arrears of revenue. With all this insecurity, all these difficulties, and all this experience, do you not think you might have found some better investment for your money?—My answer to that is, that I had money at that time, and have still a very considerable amount, invested in a variety of ways in India: in indigo factories, in zemindaries, coal mines, and steam tugs; on mortgage of land in the Mofussil, and in a variety of ways; and as I had been for 30 years at that time, and more, a zemindar, from the time I first purchased an estate at a public sale in 1835, I was conversant with that kind of business; but I could never anticipate that I should meet with the difficulties which I have related connected with that purchase.

1684. On the whole, you have found those investments which you have made in land in India profitable to yourself?—I can say so; in most instances they have turned out well, in some they have turned out a failure.

1685. You have stated, in answer to Question 1492, when speaking of sales for arrears of revenue, that you have known instances where it has been contrived that the owners of under-tenures and others should not get any intelligence that the man was going to make default; will you explain more clearly how the intelligence was withheld from them?—In this way: the law provides for cases where the more wealthy zemindar of an undivided estate may be disposed to oust the smaller proprietor, by withholding any portion of his share of the revenue, thereby causing the estate to be sold, which he will cause to be bought in the name of some relative. Then, as to under tenures held from the zemindar, they are often forfeited by fraudulent detention of the Government revenue, in the following manner, and by other means; for instance, suppose I am a large landowner, paying 5,000*l.* or 6,000*l.* Government revenue, and I have leased out to a party say 5,000 or 6,000 acres, or 10,000 acres, under a lease called a putnee. The putneedar has spent large sums of money for the purchase of those putnees or farms, and I may wish to get rid also of the parties who have a proprietary interest in my zemindary, in an undivided estate, the only way I can do that effectually is to withhold at the last moment my portion, or any portion of the Government revenue; if it was known some time previous to the last day of payment that I was going to do so, the other parties might concert amongst themselves, pay up the whole balance, and save the estate. But my object is to oust them, and therefore I keep quiet till the last moment before sunset; and when that comes, I abstain from paying the money in, and the estate is sequestered from that moment; then, to carry out my purpose, I, in the name of another party or relation, or somebody I can confide in, when the sale day comes, bid for the whole estate; thus I am perfectly possessed of the entire estate. The only thing is to provide sufficient capital. I require to be prepared to pay down the full amount of purchase-money before I can receive from the collector the proceeds of the sale of my estate; in fact, I am the seller on the one hand, and buyer on the other, but acting a fraudulent and illegal part; for, were it known I was the purchaser under such circumstances, I should be punished, and the sale cancelled or otherwise. Consequently, if the estate is worth 30,000*l.*, you must be possessed of 60,000*l.*, because you cannot touch the 30,000*l.* paid to the collector, and yet you must pay down 30,000*l.* purchase. To provide against such practices, clauses were enacted in the sale law, called the Benamee clauses, to protect the weaker against the stronger.

1686. Mr. *J. B. Smith.*] Suppose an estate worth 20,000*l.*, and the Government dues only worth 1,000*l.*, if the Government sell the estate, what do they do with the balance?—They pay over the surplus to the proprietor.

1687. Mr. *Willoughby.*] The zemindars go through a fictitious default in order to get a title to the estate; was not that the reason of the law which swept away all under-tenures, because it was found, not that a very respectable gentleman like yourself, but that zemindars under those fictitious sales got rid of a portion of the estate, and the liability upon it, so that when the estate was sold it could not pay the revenue, and was not the object of Mr. John Peter Grant's law, that provided the putneedar could show that that lease embraced a fair proportion of the whole revenue of the zemindary, it should not be interfered with?—At all events, since 1845, by the sale law it is provided that the Commissioner of Revenue, or the collector, has the option to sell an estate with those leases binding upon the new purchaser, but I have never known it acted upon (Act I. of 1845, clause 28); it has always remained a dead letter, the collectors apparently dreading the responsibility involved in after part of that clause. I have bought a great many

Mr. *J. Freeman.*

4 May 1858.

properties, large and small, at public sales, and sold them again a short time after, but I never knew that clause acted on while they had the facility of doing so.

1688. But you would admit that the object of that which certainly appears a very extraordinary law, that all under-contracts shall be null and void by a sale, was to prevent the fraudulent appropriation of the public revenue?—Yes; from this very reason, that in the case of an estate which had been sold several times since the deceninal settlement up to the present time, it might arise that the estate would not realise the amount due by the fraudulent under-tenures granted by dishonest proprietors who had been in possession of the property.

1689. Is not public notice given of any intended sale?—Yes, in the Government Gazette; but, once in the Gazette, it is too late to tender arrears of revenue.

1690. Is not the day of sale always fixed and specified in such notice?—It is.

1691. Is not the omission to make such specification in the notice of sale *ipso facto* sufficient to vitiate any sale that may follow on such imperfect notice?—Yes; but I may state a case of some importance. Unfortunately, the officials break through the regulations, and do not carry them out. There was a case in 1850, where a very fine estate in Monghyr was advertised in the Government Gazette. I and another gentleman made up our minds to purchase it. I started with 10,000*l.* about my person, for you have to pay 25 per cent. down on the day of sale. It took me three days and nights to get up there in a palanquin, at considerable expense, and just as I passed through Bhaugulpore, about 25 miles nearer to Calcutta than Monghyr, I met a gentleman who had been employed by me before, and he told me that the collector had received the revenue of this estate. I went to the Commissioner of Revenue at Bhaugulpore, and I said, "Here is my position; this estate has been advertised for a fortnight regularly in the Gazette, and in consequence of that I and a friend have made up our minds to raise the capital to buy the estate for 40,000*l.*, if it should not run higher; and I have heard that so and so is the case." His reply was, "Mr. Freeman, I am very sorry that it is true, but it is a mistake of the collector, from a misunderstanding of the orders which I sent to him." He regretted very much himself that the collector should have misconstrued his orders. But that over, I went into the collector's court at Bhaugulpore, where it was also sale-day for arrears, and bought a small estate for 1,000*l.*, and I had every reason to believe that the collector had issued the proper notices and gone through the formalities. I purchased the estate and went down to visit it, and was very well satisfied with my bargain; but when I returned a fortnight afterwards, the sale was cancelled by the Commissioner of Revenue for want of the proper formalities having been gone through by the collector. That is an inconvenience that happens constantly, but it is better that it should happen in that stage than a year or two afterwards, because, when a sale is disallowed after you have been in possession for a year or two, it may involve you in absolute ruin.

1692. Do you know what constitutes sufficient notice of sale?—They are prescribed in the regulations. A proclamation is issued on the estate by the collector, warning the under-tenants from paying the revenue to the late proprietor, who is a defaulter, that if they do pay to him, they will not get credit in the account hereafter, on the part of the new purchaser. Independent of that, a notice to the same effect is to be stuck up in the collector's office, in the magistrate's cutcherry, and other places, and in the village, and in some of the tannahs about the estate; but there are many instances in which defaulters have some good reasons to bring forward why the estate should not be sold, but unfortunately those inquiries have been allowed to take place after the sale has taken effect, and that is why, in the draft of the law which I submitted to Mr. Grant for altering the present law, I obviated that, by causing all those objections to be made prior to the day of sale, which can be easily accomplished; and then the sale is made, and you know that the property you have purchased is yours, and you are not subject, six months or two years afterwards, to be called upon to refund an amount of rent such as you never collected from it during the time it was in your possession. And that is one of the great hardships of the sale law, keeping away intending purchasers on the one hand, while you inflict entire ruin on the other. The first estate for which I bid, so soon as the law allowed Englishmen to purchase lands, was knocked down to me for 8,200*l.* That sale was disallowed; six months afterwards the estate was put up for sale, and I bought it for 3,400*l.* only, and

that

that sale was confirmed; that estate I kept for upwards of 20 years, and sold it last year. That shows you that both to the defaulter and the seller the state of the law is very often a ruinous thing, and if a man has been in possession of his estate for two years, and the sale is disallowed, the defaulter turns round upon him, and out of a spirit of revenge he will file a case of wassilut; that is to say, to recover collections during your possession, which claims are so exaggerated as to be made to amount to three or four times beyond what you could possibly have ever collected from that estate.

1693. *Chairman.*] You would have all those obstacles cleared away before the sale?—Yes.

1694. Mr. *Willoughby.*] Are you aware that the notice is always such that with the most common diligence no party interested in an estate need fail to obtain timely intelligence of an intended sale?—No doubt, though not of an intended default.

1695. If it afterwards happens that the collector, or revenue commissioner, receives a complaint that the formalities prescribed by law have not been attended to, what other option have the authorities but to act according to law?—It is partly owing to their negligence in going through the proper formalities, and partly from not calling upon the defaulter to state any and every reason he has why his estate should not be sold prior to the day of sale, that such matters are laid hold of by the defaulter after the sale has taken place, and are brought before the Commissioner in the first instance, when he frequently sees reasons for cancelling sales; while in some instances, if he should confirm the sale, they will frequently resort to the civil court.

1696. Can you prevent persons who consider themselves aggrieved filing a case in the civil court; that cannot be the fault of the administration?—The system and acts and deeds of their inefficient servants are the cause of all this; their acts of omission or commission are the cause. I have a case now of 20 years' standing arising from a collector's ignorance of his elementary duties, aided, I have no doubt, by the misdirection of his native omlah, who had been bribed; it arose in 1838.

1697. You have spoken, in answer to Question 1503, of the great hardships resulting from the upsetting of auction sales, after two or three years' possession on the part of the purchaser, in consequence of the preliminaries of sales not having been properly observed by the collector; are you aware that any objection, on such grounds, must be preferred to the collector within one month from the date of sale?—I am.

1698. How does that tally with the complaint that it is made two or three years afterwards?—The defaulter whose estate is about being sold will rake up reasons to try and show why his estate should not be sold, but he does not always bring them all forward, and the fact is, when an estate has been sold the Commissioners of Revenue find grounds, from the proceedings of the collector, to annul the sale.

1699. Still the law is that he must prefer his complaint within one month?—The law is that, but I am telling you what the practice is, and what the state of things is; and I maintain and can cite many instances in which purchasers at Government sales have had their purchases cancelled by decrees of civil courts, several years after possession.

1700. *Chairman.*] Do you complain of the law, or of the administration of the law?—I complain of the law on the one hand; the theory of the law may be good in many instances; but those who make the laws are unacquainted with the practical working of them; while they are badly construed, and too frequently misapplied, by the Mofussil authorities.

1701. Mr. *Willoughby.*] Does not an appeal lie from the collector's order to the Commissioner of Revenue, and again from the order of the Commissioner to the Sudder Board of Revenue?—Yes, to the Board of Revenue is the exception.

1702. That shows a desire upon the part of the Government to secure the people?—Yes; but it is from want of practical knowledge, particularly in details, that the Government are not able to adopt such measures as are required, and they receive little or no assistance from their officers.

1703. Is it also the case, that the civil court is precluded from hearing and trying any objection to the regularity of the sale which has not been preferred to the revenue authorities?—That is also the law, but the practice very often varies from it; my case was a six years' lawsuit upon that estate, which I purchased

Mr. *J. Freeman.*

4 May 1858.

chased in the first instance for 3,400*l.*, before I was left in quiet possession of the property.

1704. You are in favour of a law for the protection of under-tenures; is there not some difficulty in affording such protection in such a way as to afford protection at the same time to the Government revenue?—No, none whatever. I made that very clear in my draft where a *bonâ fide* tenure has been granted by any proprietor of an estate, which, whether putnee or farm, shall be duly registered at the time of its being made, that the collector can inquire to see that it is a fair transaction at the time; and there is nothing to prevent that affecting the Government or Government revenue in any way whatever, because that estate can be sold with that incumbrance or under-tenure upon it, which is the case with the law at present; but it is never done, as under clause 28, already referred to.

1705. Take the case, for instance, of an estate which pays 20,000 rupees a year to the Government. The proprietor lets it in putnee to himself in the names of creatures of his own in three separate lots at 5,000 rupees a year each; he then falls into arrear to the Government, the estate is put up for sale, and for want of a purchaser falls into the hands of the Government at a nominal price. Such fraud would be prevented, if, when those putnees were taken to the collector for registration, he were called upon to inquire as to their fairness, equitable terms, and good faith, as already suggested in my draft. The Government then would get 15,000 a year from putneedars instead of 20,000 a year from the proprietor; are you aware that such things are attempted even under the existing law?—I really am not; a case of that kind has never come under my observation; really I do not think it is done, or would be practised to anything like that extent (such a transaction would become too notorious), from my long knowledge and experience in such matters. It is so easy to provide against an act of that kind, by causing inquiry at the time as to the fairness and validity, and *bonâ fide* nature of the transaction, and have it registered the same as mortgages at present; where a man does take a putnee, he has it registered for his own security.

1706. *Chairman.*] Is registration compulsory?—It is not compulsory; but any deed registered takes precedence over a deed unregistered.

1707. Mr. *Willoughby.*] You speak at Question 1671 of extinguishing the rights of the tenants, by which I presume you mean the rights of the cultivators of the soil; are you aware that the protection of the rights of tenants forms as much a part of Lord Cornwallis's system as the protection of the rights of proprietors?—Yes, in theory; and if those protective regulations were properly applied by the authorities, they would do good.

1708. How do you propose to extinguish the rights of tenants?—There are two classes of tenants whose rights are respected: the kood-caste ryot, whose predecessors have been on the estate for generations, who appear to have acquired a certain right to hold land in that particular village. His rights are respected; but still they are qualified in this way, that the new purchaser is entitled to revise and re-measure the estate purchased, and to revise the holding of those very people. Independently of the kood-caste ryots, there are four other exceptions respected by the sale law, such as buildings for certain purposes, tanks, wells, and gardens, for a period of about 20 years; but there is a very singular thing with respect to the plantation of date-trees for sugar, which are not excepted. I know two gentlemen, one of whom has planted many hundred thousands of trees, and it was a source of great torment to him in Calcutta, in consequence of this kind of planting not being respected; and when his trees begin to yield a few years afterwards, he may be called upon for any conditions and enhancement of rent that the proprietor may think fit to ask for, in case of sale of estate for arrears of revenue.

1709. How do you propose to extinguish the rights of the cultivators of the soil?—The intention of the regulations of 1793 and subsequent regulations has been to define and protect their rights; but, unfortunately, they are not sufficiently defined on the one hand, and on the other hand the native zemindar is so prone to exercise an undue influence which is illegal, that the ryot seldom has recourse to a court of justice, that is to say, either to the collector or the magistrate, to see his claims enforced such as they are recognised by law; and there is again the bad administration of justice, and the bad state of the police; so that those people are principally deterred from coming forward; and on the other hand the apprehension of their landowners, who can persecute them and ill-treat them if they venture to make a complaint against them; I do not wish to see the kood-

caste

caste ryots rights extinguished, nor is it necessary for any agricultural pursuits by Europeans that they should be, since those ryots would only be expected to cultivate a portion of their tenures in cotton, hemp, silk, indigo, or opium, &c., and the object the Europeans have in taking putnees, or in purchasing estates, is to obtain this end and no more.

1710. Then it appears that the zemindars already extinguish the rights of the cultivators of the soil; how do you propose to extinguish the rights of the cultivators, when we know perfectly well that the cultivators all over India have the right of occupancy?—Yes, with us in the permanently settled country, the cultivator has only the right of occupancy on the lands belonging to his own village, and he is distinguished by the name of kood-caste from the pie-caste ryot; who belongs to one village, and comes to cultivate the land of another village.

1711. Then you have no remedy to propose for this evil which you state to exist?—No, unless it is more adequacy in the collector's office and the magistrate's to meet the requirements of public justice, that those people can bring forward their complaints, and have them remedied.

1712. In the answer I allude to you talk of extinguishing their rights?—No; I do not wish to extinguish the rights of the kood-caste ryots protected by the laws.

1713. In answer to Question 1668, "Would not you, as a European, estimate "very highly the advantage of being free from Government interference?" you say, "Yes." 1669. "And of being in the position of holding a fee-simple in "England? Yes, if the Government would only limit my estate, or send out a "person at my expense to mark the boundaries of it. 1670. Would not such a "plan tend very much towards the encouragement of the investment of capital in "India? No doubt very greatly. 1671. Are there not rights besides the rights "of the zemindar that would require to be extinguished? Yes, the rights of the "tenants, if we would maintain them as they are at present." The question was, in order to give a fee simple certain to a limited extent, "Are there not rights "besides the rights of the zemindar that would require to be extinguished"?—To make you perfect master of the land, with power to turn out whom you please, and put in possession whom you please, no doubt the ryot's rights must be done away with, and the landowner would then be empowered to make the best arrangements he thought proper with tenants and others.

1714. You allude to being obliged to raise money in the Mofussil at 15 or 18 per cent.; can you not get money in Calcutta, for a Mofussil purpose, at the same rate of interest that you can for a Calcutta purpose, provided you give the same securities?—No, positively not; I do not know one single case where that has been effected, I state this in all cases where real property existing in the Mofussil is tendered as the security for the capital to be borrowed.

1715. Supposing you went to a bankers, and gave a promissory note on the Company's loan, for a Calcutta purpose or a Mofussil purpose, would that make any difference?—A transaction with a banker is a mater of note of hand, with one or two or three signatures to it, or a deposit of Company's paper; but if you want to raise money, the practical way of doing it is upon mortgage of your property, and indigo factories, and crops, and so forth, which are all situated in the Mofussil, whereas in Calcutta, I mortgage a house to a man, and get the money at six per cent.; if I mortgaged an indigo factory or a house in the Mofussil, I cannot get it under 12 per cent. bare interest, and other charges which bring it up to 17 or 18 per cent. at the minimum, but it goes very often far beyond that. Planters do not hold Company's paper, they prefer employing their capital or credit in working out the resources of the country.

1716. But is not the difference between the 5 and the 15 per cent. interest, owing to the mortgage and other securities in the one case, and to no security in the other, beyond the result of the speculation, the success of which is dependent upon the season, the rise and fall of rivers, and other causes over which no systems of administration can exercise any control?—No; for a man possessed of money whose outlay may be 20,000 *l.*, and who has property nearly clear, and 5,000 *l.* or 6,000 *l.* in the bank, he requires a difference of 15,000 *l.* for that year, and how can he raise that? He must apply to an agent in Calcutta or a private individual, and say, "Here, I offer you a mortgage on my property in the Mofussil, which you can see, by my conveyance and other information, is worth more than double the loan asked for, besides which I offer to mortgage all my crop which of itself will realise in Calcutta double your loan; will you advance me the money which I require to go on with?" and I maintain that with all that

Mr. *J. Freeman.*

4 May 1858.

security he cannot get it under 12 per cent. interest, and those commissions which I have named, and I have known hundreds of cases where the best men, with first rate securities, have had to pay directly or indirectly much more.

1717. Do you recollect the case of the great failure of eight of the principal mercantile firms of Calcutta?—Yes.

1718. Did not that chiefly originate in the Calcutta merchants making advances upon indigo manufactories?—No, it was more owing to the great advances to the civil service and to the army, whose aggregate debts were to a greater amount than those of the planters.

1719. I quote that merely to show the difference between the security of an indigo factory and other descriptions of security?—A man if he falls in difficulties gets his money back more easily in Calcutta; he can have the property seized and sold by the supreme court with little delay; but to recover in the Mofussil it is very difficult, owing to the institutions which exist there.

1720. Are not the civil servants of Bengal, to whom you have alluded, obliged to pass through several examinations in the native languages, and in the regulations, and in their knowledge of the manners and customs of the natives, in their advancement to the different grades of service?—That was not the practice at the time I was in India; they passed an examination in two languages of course; I never heard of examinations as to manners, customs, &c.

1721. And subsequently other tests have been prescribed?—I have no knowledge of that.

1722. Can you speak from your own personal knowledge of the general attainments of the civil service in the native languages?—Yes, I have had a great deal to do in a great number of courts in the Mofussil, and I have seen the civil servants in ordinary life besides; and it is from that that I am able to speak. I left India in the month of February 1855, and I can state that up to that time, in spite of the examinations which the young men of the civil service were made to undergo, I do not believe there are five out of 100 who, the day after they have undergone their examinations and have passed, would be able in a court of justice to read a petition or to dictate one, or who could thoroughly understand one when read to him.

1723. Is not reading a petition off-hand one of the tests of the examination which they undergo?—I am not aware whether such was the practice at that time.

1724. You are of opinion that while there is a good deal of English education and knowledge among the natives at the Presidency, there is little or none in the interior of the country?—Certainly.

1725. Have the European settlers done anything to remedy this state of things?—I cannot say that they have taken the initiative; but where proceedings have been taken, such as at Bhaugulpore, there we chimed in with other parties, the authorities and the Government, in promoting schools and building churches. I subscribed myself a very considerable sum, both to establish an English Protestant church and a Catholic chapel.

1726. Notwithstanding this general ignorance of English in the country, you would introduce the English language into the courts of justice?—Certainly. I consider that one of the greatest improvements in every respect, and applies more forcibly to the benefits the natives would derive, they being so numerous.

1727. And with English judges, English barristers, and English law and English police?—I would introduce English agency into the police in the Mofussil; but to say exclusively English, no. I would merely do what has been done in Calcutta, for there you see the beneficial result that has taken place owing to the introduction of English police, combined with the native agency; and I have here the opinion of the Governor of Bengal, upon a case of abominable torture and falsely assumed case of murder, and I do not hesitate in saying, that if there had been a mixture of European agency there, this horrid case of torture would never have taken place.

1728. Do you answer my question in the affirmative?—Most positively as far as the police goes, and also as to professional judges and magistrates, and of trained pleaders, these last whether educated natives or Europeans in civil courts, but in cases involving imprisonment and higher penalties to Englishmen, it would be most repugnant and unjust to him to be deprived of an English advocate.

1729. And then for English judges you would have English barristers and English law?—I do not care about their being barristers provided they are trained men.

1730. Would you have English law?—I see no objection to English law, from the fact that English law is administered to 600,000 people without distinction of creed, caste or colour in Calcutta, and has been administered for 80 years, and afforded satisfaction to all.

1731. From a return presented to Parliament in 1853, it appears that there were in Bengal 6,749 British born subjects in India, chiefly residing in Calcutta, and only 276 residing in the interior engaged in agriculture and manufactures; admitting that there may have been some increase in the meantime, nevertheless you would advocate judicial proceedings being conducted for their benefit in the English language, to the exclusion of the vernacular language?—Not at all; far from it. I do not put it for the benefit of the 300 or 400 Europeans, but for the benefit of all the natives, whether Christians, Hindoos, Mahomedans, and others.

1732. How are they to be benefited by the introduction of a language which they do not understand?—The language of the court which has been in existence up to the last few years is quite as foreign to the masses, being the Persian language.

1733. Are you not aware that that was abolished in Lord William Bentinck's time?—Only partially; up to 1855 it was in practice in a good many courts, though you had the facility of being allowed to present a petition in Bengalee or English or Hindostanee. In mentioning the use of the English language and of professional men, I declare that it is more for the benefit of the natives; it is only by such means that you will get the advantage of the common sense of the presiding authority, which we do not get the benefit of at present, because he does not understand the case before him, nor can he make himself understood by the witness, and that gives an unsatsifactory feeling to the judge who is obliged to grope his way, and he himself is seldom satisfied with the decision that he may have given. Whereas, in the other case, the advocates of either party would understand the English language, and the sworn interpreter would be the medium of conveying the questions and answers to the witnesses. Then we should have the benefit of the use of his common sense and fair judgment, which we cannot get at the present time. I would mention to my certain knowledge that in all the colonies to the east of the Cape of Good Hope, whether Dutch or Portuguese or Spanish or French, they speak their own languages; even the Dutch at Chinsurah in Batavia, and all their valuable colonies, and the Danes at Serampore and the French at Chandernagore, close to Calcutta; and at Pondicherry, down the coast, the French are governed by the Code Napoléon. No other language is used by the authorities but the French language. It is the same in the Dutch colonies, nothing but Dutch is used. When I first visited Serampore, everything was carried on in the language of the mother country.

1734. Does not that more apply to places situated like the presidency towns of our own empire?—Yes, at Chandernagor or Chinsura; but take a greater case in Algeria, which will soon reach very nearly the extent of our possessions in India, everything is done by the Code Napoléon, as in the extensive Dutch and Spanish colonies having millions of natives, the judicials are all Europeans who administer the laws of their respective countries, in some cases modified to meet exigencies of the colonies.

1735. Do you think that such a system would be satisfactory to the natives?—Undoubtedly.

1736. You have said that, after a certain number of years, you would not appoint a police darogah unless he knew English; will you state the advantage of a knowledge of English to a man who, in a service of a quarter of a century, might never meet with a man capable of understanding English?—Except the reports he has to make to the magistrate, his constant intercourse with him, and that which he would have with the European police, his superiors, and so forth; and it would also be the means of spreading the use of the English language in the country, which is so much desired; for it is only through the English language that you can make any progress in India in any way.

1737. You would also introduce the system of interpreters, as in Calcutta, and you think that the advocates on either side could correct mistakes?—I should think so; they have the option and the power to do it, provided they are treated in a proper way. That is another great drawback on the administration of justice in the Mofussil: an advocate in the Mofussil is not free to make his speech and plead his cause in a proper way in practice.

1738. But what if they were English advocates, and knew only English, or

Mr. *J. Freeman.*

4 May 1858.

native advocates, and understood only the native language; how could they act as a check upon the interpreter?—I must qualify my answer in this way; that we do not want to have all English barristers, or professional men, but we would have eminent native barristers, as in the sudder, one the senior standing council of the Government, the other the junior, and there is a third one independent. And in the Mofussil, if the English language is to be used, the native advocates will be masters of the English language, and so will the attorneys or moocktiars, which I make compulsory, and to pass an examination in English, the same as they are at the present time of the Persian language, which is foreign to them; and understanding the English language well, they will be perfectly free and able to support the rights of either litigant, and to object to any question improperly put by the interpreter.

1739. In Calcutta and the Presidency towns of India do not many Europeans attend the courts who understand the native language, and many natives who understand English?—Yes, in fact all the English attornies' offices are filled with native clerks, and the English barristers employ natives to the extent of their requirements; all these read and write English, and many of them are versed in English law, and all the details of practice, &c., even hundreds of natives are employed in the supreme court in writing, drafting, copying, &c., all in English.

1740. That is a check on the administration of justice at the Presidency towns?—As far as understanding the language goes, many people may understand a little of it, but cannot express themselves in a proper way, but I do not attribute the guarantee or the safety of justice to rest with the audience understanding the languages.

1741. It is a check upon the inaccuracies of the interpreter?—The interpreter is in a responsible situation, but he would be checked by the court or by parties to whom the case is confided.

1742. Are there not also natives upon juries in Calcutta, who understand English?—Yes.

1743. Does not the presence in court of numbers of Europeans and natives, who understand both languages, act as a check upon the interpreter?—It is a difficult thing to give a positive answer to a question of that description, but I should say not.

1744. Take the case of a Mofussil court: the judge understands only one language (as the English barrister judge must for some time do); the advocates understood only one language, the people understand only one language, the interpreter is the only man in court who understands both; do you really believe that such a system would have any other effect than that of rendering the administration of justice uncertain in the eyes of the people?—If the advocates understood the English language, and the interpreter understood the English language, and the judge understood the English language, I can see no objection to a due administration of justice under those circumstances, but I must again repeat that the native barristers, or pleaders, and the native attorneys or moocktears naturally understanding the language of the country, would have to pass an examination of English, after a fixed time, to qualify for their diplomas and licence to practice.

1745. Are you aware that the proportion of decisions confirmed and reversed by the Judicial Committee of the Privy Council is greatly in favour of the Mofussil judge as compared with those of Her Majesty's courts?—I am not aware of that, such a fact would reflect in a most injurious way upon the judges of the Sudder Deewanny, who are supposed to be chosen from the most efficient among the Company's judges.

1746. Are any doubts entertained of the integrity of English judges of the Company's court?—No; if you mean honesty, freedom from bribery, and so forth, we do not accuse them of any thing of the kind.

1747. Is it not the fact that not more than six or seven per cent of the cases are decided by European judges; and taking the original suits, not more than one per cent., all original jurisdiction being vested in the natives?—It is so, and you see the effects of it by the accumulation of appeals in the Sudder Deewanny in Calcutta.

1748. An appeal is open from all the decisions of the native judges, and also of the magistrates, is it not?—Yes.

1749. And it is admitted that the per-centage of appeals is very small?—I say very great. The cases of appeal from the principal sudder ameen to the sudder where

where the cases are admissible, I say, are very numerous, for the greater number are appealed.

1750. Do you think colonization can be effected in any part of India in the same manner, and to the same extent, as Algeria has been colonised?—I think that colonization can be extended in India, but there are two kinds of colonists for India, whereas, in Algeria, there is only one kind of colonist that is absolutely necessary; one to work the land. But in India there is room for two colonists, one with capital and directing capabilities, enterprise, and perseverance, using the natives for carrying out his purposes, and one a colonist to work the land himself under particular conditions and circumstances; if you encourage and render your institutions rationally fit for the higher grade of these, you will confer the greatest benefit to the country, but the latter must be always more or less limited, but they would be of great use to the country, for other reasons.

1751. You instanced the colonization in Algeria as a proof that it may be extended in India; therefore I asked, "Do you think that it can be carried on to the same extent in India as in Algeria?"—In every part I should say not, but in many parts I should say it might. In Algeria a large grant was made to a company on condition that, within a certain number of years, they should establish so many villages, and should have so much land in cultivation; and people were induced to resort there, and they have succeeded, and they have introduced large permanent pasture lands by irrigation and so forth, and the cultivation of wheat and tobacco, &c. to a very great extent; and this is partly by European labour and partly by the labour of natives of the country; and that climate, it strikes me, is quite as warm as the climate in many parts of India; the heat is just as great, and there are the same difficulties as to the oppressiveness of the heat to be overcome there as by the Europeans in India. Then, if you come to the northern parts of India and to the hilly ranges, there, I think, the climate and soil are quite fit for purposes of that kind; and if settlements were established there, to induce people to settle, it would be an advantage in having a European force at hand as in the military colonies in Algeria.

1752. Is there any quantity of land that could be appropriated in the hill ranges?—That I cannot answer from personal knowledge, though I have heard there is abundance.

1753. Mr. *Villiers.*] Did you hear the evidence which Mr. Theobald gave to this Committee?—Yes, I did.

1754. Are the Committee to understand that you coincide very generally in the opinions which he has conveyed to the Committee?—Mr. Theobald spoke on some principal heads, and on most of those heads I confirm him. On some other heads I have not the same special knowledge that he has, and therefore I do not speak so positively with reference to them.

1755. I understand you to agree in the first place with Mr. Theobald with respect to the principal heads of complaint that European settlers make of the present system of Government, and that you represent the feelings and opinions of that class of persons who, like yourself, have gone out to India with capital in order to employ it, and to settle there?—Yes, I do.

1756. You returned to this country so late as the year 1855?—Yes.

1757. And up to that time you considered that all those grounds of complaint were in force?—Yes, certainly in practice. But there is one point to which I should wish to refer, and that is the change of the police in the Mofussil; that change consists of having created three classes of darogahs, whereas before there was only one class; and the only improvement that I have heard of since then, has been to divide them into three classes, and give them three grades of salaries; so much more to No. 2, so much more to No. 1. I do not conceive that to be a greater protection to the people, or that it has improved the state of the police.

1758. Was that change made with the view of making the darogah more honest?—I fancy that the desire was such; but if anything, it has been detrimental to the people.

1759. As far as you know, the same maladministration of justice continues, as regards both the administration of the law in the courts, and in the execution of the law by the police; and I think also you state that there has been no reform in the law with respect to the sale of land; you consider that the state of things remains as it was when you were there?—As far as relates to the state of the police at present, I would urgently beg to be allowed to refer to a case that occurred about 20 months ago, which is mentioned by Mr. Kenny, a large land-

Mr. *J. Freeman.*

4 May 1858.

holder and silkgrower. That case was brought to the notice of Mr. Halliday, and I have here his opinion upon it. This was a most gross case of torture applied to parties, to make them confess that they saw a man murder a boy, who was found hanging upon a tree, the boy having committed suicide.

1760. Where is the statement made?—The statement is made by Mr. Kenny, who is the proprietor of the village in which the dead body was found.

1761. You say that the correctness of it is recognised by the Governor of Bengal?—Yes; here is his comment upon it: "The officiating judge of Dacca has submitted an explanation of the alleged case of torture, said to have happened when he was joint magistrate of Pubna. The Lieutenant-governor observes thereon, that the charge of assuming, on insufficient grounds, that a murder had been committed, is borne out by the facts on record; that he cannot entirely acquit him of the second charge, of having coerced the darogah to adopt improper means to find evidence in support of the charge, though his Honour is willing to believe that he could not have been influenced by the intention imputed to him; and that the third charge, of having only visited the darogah with a slight reprimand, although the atrocious means used to substantiate the accusation of murder were recorded, is not established, since the alleged acts of torture were wholly discredited by him in his judicial capacity; but if the charge is held to include, as it really does, the blame of being imperfectly inquired into, the Lieutenant-governor cannot entirely acquit him of it." This is the 15th of March, present year.

1762. Who is it that the Governor-general refers to?—To the magistrate who issued the order to the darogah upon his report that a boy was found hung in the village. He issued the report in these words, "Send the murderer in within seven days, or you shall be dismissed." This is Mr. Kenny's statement at a public meeting at Calcutta last year: "A short time ago the body of a boy was found hanging on a tree in my village. The circumstance was reported to the darogah, and the darogah reported it to the magistrate. The magistrate jumped to the conclusion that the boy had been murdered, and sent the darogah an order—to do what do you suppose? Either to find out the murderer in seven days, or to come to his (the magistrate's) court with the seal of his office in his hand. The darogah looked around him to see what he was to do. He knew that the boy had committed suicide; but, under the magistrate's order, he must treat the case as one of murder, and must put forward some one as the murderer. After some reflection his choice fell upon the master of the boy. The master thereupon was accused of the murder, and was taken by burkundauzas (they are the messengers of the darogah) to the darogah. The darogah required him to confess that he had hanged the boy; he would not confess, and the darogah tortured him to make him confess, but he would not; he had not hanged the boy; why should he 'confess'? The darogah then looked about him once more, and pounced upon a poor widow woman living in the neighbourhood of the place in which the body of the boy was found hanging to give evidence that she had seen the master hang the boy. The woman knew nothing about the matter, and said so. As she persisted in her statement she was tied down, her hair was pulled out by the roots, the fume of burnt chillies was put up her nostrils, and, horror to say, pounded chillies were introduced into her person. Under all this atrocious treatment the poor woman at length said, that she had seen the master hang the boy. That statement was taken down, and the master and the 'witness' were forwarded in custody to the magistrate. Before the magistrate the woman denied that she had seen the master hang the boy, and said that the written statement which the darogah had sent up as her evidence had been extracted from her under torture. The magistrate released the accused and the witness; and what do you think was the punishment that was awarded to the darogah for his atrocity? A slight reprimand, and a recommendation to be more careful in future." This case, I believe, was brought to the knowledge of Mr. Halliday in his capacity as Governor, which I fancy has led to the inquiry. Mr. Halliday does not deny it; he admits it; but he excuses the magistrate, because he did not believe that torture had been resorted to. Then there is one other matter about the administration of justice in a civil case. I may mention the case of a moonsiff, where three Europeans were interested. In that case, in consequence of the conduct of the moonsiff in his court, Mr. Kenny presented a petition to Mr. Halliday, who was on a tour of inspection in Jessore at the time.

1763. What was done by Mr. Halliday?—The following is an extract from

Mr.

Mr. J. Freeman.

4 May 1858.

Mr. Kenny's speech, delivered in the town-hall of Calcutta in February last, at a meeting against the proposed subjection of British subjects to the criminal jurisdiction of the East India Company's courts. He says: "I shall now give you a specimen of the mode in which moonsiffs conduct their duties, with no more powers than they at present possess. I myself had a case in the moonsiff's court in my district. Mr. Fraser was to superintend the case, and Mr. David Gilmore and Mr. Roberts were witnesses in it. Mr. Fraser was unable to attend from illness, and sent in a medical certificate. Mr. Gilmore and Mr. Roberts did attend; and how do you think they were received by this moonsiff in his court? The 'huzoor' (that means to say, the honourable official) lifted up his legs upon his table in their faces, and broke forth into an obscene Hindostanee song. The song sung, he applied himself abstractedly to a hookah, and Mr. Gilmore and Mr. Roberts remained cooling their heels until it should be his highness's pleasure to turn to business and hear what they had to say. Wearied out at length, they desired the mooktear in the case to inform the moonsiff that they were waiting. 'Oh,' said the dispenser of justice, 'are they? Well, let them come on and give their evidence.' Messrs. Gilmore and Roberts then successively deposed to the facts in their knowledge, and were about to retire, when the moonsiff asked them, 'I suppose you breakfasted at Mr. Fraser's this morning?' They replied they had. The moonsiff said, 'Of course it was a good breakfast?' 'Oh yes,' said the gentlemen, 'it was a very good breakfast.' 'And I suppose you will dine with him this evening?' 'We have been asked.' 'And it will be a good dinner?' 'We shall live in that hope.' 'Very good; you may go away. I do not believe the evidence you have given; every word of it is a lie.' And the case was decided against me. It was an unimportant case in itself; but I did not think it right to submit to such a mode of administering the law; and Mr. Halliday, who was on his tour, happening to be in the district at the time, I sent up a petition to him upon the subject. He directed the Judge of Jessore to inquire into the case; and the result was, that the delinquency of the moonsiff was made clear. What do you think was the punishment with which he was visited? Suspension from office for three months, and removal to another sphere of action."

1764. What is the date of that last case?—I fancy it must have been about 18 months, or it may have been two years ago.

1765. You cite those things in order to show that the maladministration of justice, which occurred when you first went to India, continues still?—Yes, I see very little change.

1766. Whereabouts was this?—This occurred in Jessore and Pubna, close to Calcutta, where the Europeans are more numerous than in other parts of India.

1767. I take for granted that it is a matter of notoriety that these things occur?—Yes, ever since I first went to India, 33 years ago.

1768. Would the natives prefer an English court; would they go to Calcutta to secure justice in the courts there, in consequence of what they know to occur at these places?—I can only state from inferences that the wealthy people, the land-owners, and others in Calcutta, in all suits of a complicated nature, inheritances, and so forth, are quite satisfied, and are anxious that their cases should be tried in the Supreme Court, and there has never been the slightest complaint against it.

1769. You do not know how many cases have been tried in the English courts at Calcutta, taken there by natives?—It is the right of every native domiciled in Calcutta to take his cause into the English court; and every one having an office or domicile in Calcutta is, *de facto*, amenable to those courts.

1770. Do you know how many cases have been taken there by natives?—No; I cannot state that.

1771. You consider that this faulty administration of justice does operate upon European or English settlers?—Yes; and all other Christian settlers, as also upon many natives of capital.

1772. It actually caused you to abandon a property which you had taken, not liking to be exposed to the sort of iniquities that might be practised against you by means of false evidence, owing to the defective administration of the law?—I abandoned residing upon the property myself, on account of the iniquities that had been practised against me, and which might further be resorted to.

1773. I presume that those cases which you mentioned in which you were involved yourself are notoriously of that character that you have stated here?—Yes, it is the permanent state of things.

Mr. *J. Freeman.*

4 May 1858.

1774. Is there any record either of the punishment of the persons who were implicated in that matter, or is there any public document that would prove that you were aggrieved?—There are the records in the courts as to those matters that happened to me in respect to this estate. All the records are in the courts at Hoogly; in other cases, in the courts at Bhaugulpore, Radshai, &c.

1775. Did I rightly understand you that the officers of the Company, who are appointed to judicial situations, are not familiar with the languages in which the evidence is given?—They are not; they are far from it.

1776. That you state from practical observation?—Yes, I have had practice in about 10 different zillahs, where I have possessed property at different times; and that has been so, with two or three very honourable exceptions of men who were perfectly competent in the language, and I always found them very able men as judges. I saw them take their business to heart, *con amore*, and they took a delight in it; and with such men as those, we should be very happy to be submitted to their jurisdiction, freed, of course, from the trammels of native omlahs; though with such men their iniquities are less resorted to, because such judges inspire respect and deference from all, and the majesty of justice is repected in their persons.

1777. Do you think that that circumstance itself can generate anything like a sense of insecurity in the jurisdiction that the judge is not competent to understand the language in which the evidence before him is given?—Decidedly.

1778. I presume there are Englishmen who could acquire such a knowledge of the language as to make them efficient?—Yes, but I believe with great difficulty. A native has ten times more facility for acquiring the languages than an Englishman.

1779. You spoke of some persons who had such a knowledge of the language that they could discourse familiarly with the natives?—Yes, I know of some.

1780. Therefore it is quite possible that persons might be found for judges?—It is.

1781. Is the native language the same in all the courts, or are there any varieties of languages?—Up to Rajmahal, the Bengalee character and the Bengalee language are used; beyond Rajmahal the Nagree character is used, and the Hindostanee language.

1782. Persons appearing before a judge may speak in a variety of languages?—Yes; but in a civil court he must plead through a vakeel who only knows Persian and either Bengalee or else Hindostanee.

1783. What is the language in which justice is administered?—The civil service, in their official capacity, are more prone to make use of the Hindostanee language; they seldom express themselves in the Bengalee language, because it is a different idiom; but you make more way in India with a knowledge of the Hindostanee language than with a knowledge of the Bengalee. In Bengal, among the ryots, in the villages, you will not find people who understand Hindostanee, or above Rajmahal do they understand Bengalee; the official language of justice is Persian, so is the Persian character.

1784. From your knowledge of the natives and of their disposition towards us, do you think that they would be more satisfied if persons of English origin were more appointed to the courts?—Undoubtedly they would have much greater faith in them than they have in the honesty of their own people; and if the English were masters of the language, and better trained, they would be satisfied.

1785. Have you ever thought of any mode by which this defect in our civil servants could be remedied, such as examining them after two or three years residence, to see what their efficiency was with respect to languages?—No doubt it would be a great thing to examine a young civilian. He should be made to undergo an examination before he gets to a higher grade or salary; it would have a very good effect no doubt.

1786. You are not aware that that plan has been adopted since you left India?—I am not aware of that; but why should not a young gentleman be made to practice in the courts for a period of 12 months or some other time, the same as in other countries; then they would acquire an intimate knowledge of the character and the weaknesses and prejudices of the natives, because they would see behind the screen; for at present there is a wide screen before the eyes of the civil servants with respects to the habits of the people; and further, he would make himself a perfect master of the language, of the laws, and of their defects in practice; and in his subsequent exalted position he would signalise such to those that could amend the laws.

1787. Your

1787. Your general complaint is, that the civil servants are not competent as they are appointed at present?—Certainly not.

1788. Do you tell the Committee that there is such an uncertainty about the tenure of land, that no settler can feel his property safe after he has purchased?—That is the fact to a very great extent. That it utterly precludes Europeans from doing so is not the fact, or where should I be. But it is not every man that has sufficient energy and moral courage to contend against such obstacles. Some overcome them, and many fail, but the greater number dare not trust their persons and capital in the Mofussil.

1789. As the law stands now, you say that if there is any default in the revenue, and the estate is sold, the sub-tenants are intended to be protected in their rights. Do you complain of the law itself, or of its being actually disregarded?—It is optional in the Sale Law for the collector to sell the estate, with the putnees and other long leases existing on the estate; but such is not the practice, and those under tenures are not protected.

1790. That is to say, the rights of sub-tenants are respected?—Yes, he may respect those kinds of tenures, and sell the estate under those engagements; in that case the purchaser would pay something less for the estate; at least I apprehend so.

1791. That is the law?—The regulation is such, but I have never seen it put in practice.

1792. Supposing any person were to buy an estate, or an estate was to be sold, with a disregard for these rights, and the purchaser pays the full value as if there were no sub-tenant, would not the sub-tenant, looking at the state of the law, have his remedy, if he was ejected?—He can prosecute the defaulters where he feels aggrieved and damaged; and if he can prove that it was done maliciously, he can get a verdict, but he cannot save his tenure.

1793. A man pays a large price for a lease?—Yes, particularly for putnees, but izarahs are mostly obtained by making heavy loans.

1794. There is a default by the zemindar, and the estate is put up for sale; and we have been informed that it is sold without any regard to the sub-tenant?—Yes, that is the practice, except with the Kood-caste ryut.

1795. Then what is the remedy of such a man who has paid a high price for his lease?—He is only left to the civil court, where he may enter a civil suit. He has no remedy before the revenue authorities; and if the revenue authorities confirm the sale, the judicial authorities may find out a flaw, or some point that may call for its interference, and ultimately upset the sale, in which case the putnidar resumes his lease after having been forcibly dispossessed for many years, as the civil suit may last.

1796. To whom is it that the Government or the Commissioners of Revenue pay over the excess of the sale over the default?—It has to be paid without demur to the ex-proprietor or defaulter.

1797. Is there no remedy against the ex-proprietor by the sub-lessee?—No; the Revenue Commissioners have no power in that matter; his only chance is a civil suit.

1798. Then if a lessee, practically speaking, has his property sold from him, he has no remedy?—No remedy but the chances of a civil suit.

1799. But you admit that the regulation is to the contrary; that it provides him with a remedy, or at least admits his right?—The collector has a power to sell the zemindary, respecting that engagement existing upon it. Why the regulation is never acted upon I cannot say, but I have never known a case in which it has been acted upon. I again refer you to Act I. of 1845, clause 28.

1800. You state also that when a man purchases an estate he hardly knows what he has purchased, as he does not know what incumbrances there are upon it?—No, there are to be no incumbrances; that is about all he does positively know.

1801. I understood you to say that a man is hardly safe when he has purchased a property, and you even referred to your own case in support of that view?—He does not know anything as to the boundary, whether it stops here or there, nor can he be certain of being in quiet possession of his purchase, as was the case with me in every instance, whether in Bhaugulpore or in Hoogly; in the former case I had to sustain a civil suit for six years.

1802. Is not that owing to a want of vigilance on the part of the purchaser?—No, the purchaser cannot be blamed, he is innocent of such consequences to himself; the fault lies in the working of the sale law, in the Government not sending

Mr. *J. Freeman.*

4 May 1858.

out a party to show the man the extent of the land which has just been sold, and to show the boundaries of the estate, because there are no posts or marks limiting the state. That is what we complain of. We cannot get the estate limited and fixed for us, nor can we get prompt and efficient inquiries to prevent such recurrences.

1803. *Chairman.*] Is there any survey or registration?—Not that I am aware of in Bengal; in the North West Provinces there is.

1804. Mr. *Villiers.*] As far as I understand you, you say that a man's troubles begin when he buys an estate, because the man who buys the estate does not know what the incumbrances upon it are?—The defaulter is aware, of course, many false claims are urged only on an estate being sold or changing hands, whether by Government sale or by private sale, and more so still in sales by order of civil process.

1805. Can a man ascertain what are the liabilities of an estate which he purchases?—Yes; registration is open for mortgages, or for leases, or for anything of the kind; that is one of the reasons why I wanted to make it compulsory that a man in taking a lease should be compelled to register the deed, or if he did not do so, in case of a suit arising it should not be recognised; that would do away with those dishonest practices; but, I repeat, a purchaser cannot be called upon to respect any leases of the kind unless the estate is declared to be sold under such reserve, which is not done.

1806. Do you think that generally the law is in that state that people are prevented from purchasing land?—Certainly, to a very great extent.

1807. Nothwithstanding all those difficulties and obstacles to people settling, what has been really the result to indigo planters where they have settled; have not they made fortunes, and thriven generally in their business?—Many people have been wealthy indigo planters, and that wealth has all disappeared again in indigo planting. Others again have been very successful; and that applies not only to the planters, but to the whole native community around them. And look at the districts down in Lower Bengal, at the state of the population, and the state of the country as to cultivation, and the state of the Government revenue; you cannot get an estate to purchase even; and why? Because these Europeans are there with 3,000,000 *l.* sterling annually employed in the cultivation of indigo, and the ryots come into our offices with the collectors of the native zemindars and bring their accounts, and the money merely passes from our hands into the hands of the zemindar's collectors, and the next day it is taken and paid as Government revenue, and those are the influences that are exercised by the settlement of Europeans, but still I maintain that people are afraid to invest capital in the Mofussil for the adverse reasons I have assigned.

1808. I think you said that the number of Europeans has increased considerably within the last 25 years?—Very considerably; they are more than double what they were in Calcutta under the Queen's jurisdiction; but in the Mofussil, to my knowledge there has not been an increase of 25 or 30 Europeans within the last 25 or 30 years.

1809. Do you ascribe that to the difficulties to which you have been referring?—To all those difficulties combined.

1810. And you believe that if those difficulties were removed, the number of Europeans would increase?—No doubt they would; people of capital would go there, and employ their knowledge in a variety of ways in buying up the produce of the country, and remitting it down to Calcutta, and bring to light many hitherto unknown resources, such as they have already done.

1811. I think you say that the export of the products of India has greatly increased?—Yes; according to the authority of Mr. George Brown, for the last three years ending with 1856, the imports and exports amounted to 124,000,000 *l.* per annum, as compared with 58,000,000 *l.* in 1832.

1812. I believe you have no doubt of the capacity of India to extend its products?—No, and that to an unlimited extent in many valuable articles.

1813. And you attach great importance to the want of communication?—Yes.

1814. Is not the difficulty of conveying many of the products of the country that which enhances the cost of production so much, that they cannot enter into competition profitably in foreign markets?—That is my opinion, but price of freight may also influence.

1815. Those communications are improving now, are they not?—I only know the fact of the railroad being an improvement; no attempt at other roads, or canals, or improving the Nuddea rivers, is being yet made in Bengal.

1816. Supposing

1816. Supposing we had quitted the country 10 or 12 years ago, what should we have left behind to show in the way of public works beneficial to the country?—In Lower Bengal nothing whatever, unless it is so much of the trunk road as runs through Bengal. Fort William, some fine barracks at Chinsura, government house, and some other buildings in Calcutta, and a fine college at Benares, and 122 miles of railroad made with speculators' capital.

1817. Do you ascribe the improved state of the country to the greater communication between the mother country and India, and to the force of public opinion as to the mode in which the country has been governed?—Since facilities have been afforded for more frequent and regular communications with the mother country by steam, that has effected quite a revolution in the habits of the people, more particularly among all classes of Europeans, and in the business of the country.

1818. You think that the force of public opinion in this country, and the more constant intercourse between settlers and others with the mother country, have really brought about the improvements which have recently been effected?—Undoubtedly; no improvement arises from the initiative of the native, because the native has no initiative mind, nor does the Government of India appear to progress, unless forced on by Parliament.

1819. Do you believe that if the communication was improved, and the settlers were to increase, the natives would improve by their example, and assist in developing the resources of the country?—Undoubtedly, because such has been the effect where the Europeans are in the greatest numbers, and natives are happy to follow the European in successful innovation.

1820. Is there any difficulty in obtaining capital if it could be profitably employed in Calcutta?—At certain moments there is a difficulty in case of a crisis; but you always have to pay very heavily for capital for Mofussil purposes.

1821. You did not mean to say, in a former answer, that money is not lent with reference to the nature of the security offered; the man who lends the money looks to the security for its repayment, does not he?—Yes.

1822. Whether the money is employed in Calcutta or the Mofussil, the security being the same, there would not be a difference in the rate of interest of 6 per cent. and 15 per cent.?—Suppose I possess houses or property in Calcutta, and supposing I want a loan of 5,000 *l.* or 10,000 *l.*, I apply to a person to advance the money upon a mortgage upon that property within the Queen's jurisdiction. I will be able to procure it at five, six, or seven per cent. On the other hand, I am possessed of houses, indigo, factories, buildings, and plantations within the Company's jurisdiction in the Mofussil; and supposing I want 10,000 *l.* on a mortgage of that property, which is worth 40,000 *l.*, I cannot raise it under 12 per cent. net interest, besides heavy commission and charges, which bring it up to 17 per cent., and generally more, because there is no security afforded by the institutions in the Mofussil to the capitalist in Calcutta, where, at all events, he has any confidence.

1823. If you chose to mortgage your houses in Calcutta for the sake of employing your money in the Mofussil, you could get it at the same rate?—Yes, no doubt. That is a barometer marking the degree of security and of confidence in the state of the Company's institutions, as compared with those of the Queen's.

1824. Did you state whether the Government sales of land for the default of revenue were very frequent?—In some parts they are very frequent. In Jessore and Kishnagur they are not frequent. In Bhaugulpore and Purnea, and Monghyr and others, they are more frequent.

1825. Are those defaults *boná fide*, or are they for the fraudulent purpose of acquiring the estate?—I think some of them are *boná fide*; but others take their rise from fraud, no doubt, such as I have stated.

1826. You quoted at some length, on the last day of your examination, a speech of Sir Arthur Buller's; will you state the circumstances under which that speech was made?—It was made on the second reading of the Bill in the Legislative Council of Calcutta last year with respect to the passing of the Act making Englishmen in the Mofussil amenable to the Company's courts, both those presided over by natives and Europeans, in criminal matters; and then, as that law excepts four classes of Englishmen (that is to say, the military and marine services of the East India Company, and the military and marine services of the Queen) from that jurisdiction, of course it showed that the Government were satisfied that their courts were not in a fit state to try their own servants or the servants of the Queen; and yet, with regard to us, who have taken root in the country, and who have all our fortunes and all we possess in the country under those institutions, those

Mr. *J. Freeman.*

4 May 1858.

courts are good enough for us. I may mention that Sir Arthur Buller says: "It is against these tribunals that British subjects protest; against all as incompetent, and against some as open to the evil influences of personal prejudice and antagonism of race. They refer you to the penal code, which, in its anxiety to provide for every possible offence, draws within its wide definitions acts which men are sure to be frequently committing without imagining that they are crimes; and they show you that under its provisions a person can hardly open his mouth or move his hand, or even move the air, without committing an offence punishable with imprisonment. They ask you to picture to yourselves the sort of places which in small localities are available for imprisonment, and to consider well what sort of punishment imprisonment is to a European, even in the best regulated gaols. They refer you to the calendar of the Supreme Court, and they show you that two years is the maximum of imprisonment which that court thinks is safe to award to such persons in this climate; and they implore you not to trust a power so susceptible of abuse to unfriendly or inexperienced hands. They ask you to consider their position in the Mofussil, how perpetually they are brought into conflict with influential natives, not over-scrupulous as to making false charges, or supporting those charges with false evidence. They show you how all persons in the locality become mixed up in these disputes; how it has come to pass that the subordinate magistracy look upon them, and that they look upon the subordinate magistracy as natural enemies: and they declare they have no hope of obtaining impartial justice in your inferior courts. They point out to you the defects of your judicial machinery, whereby the administration of criminal justice must for the most part be entrusted to mere boys, or, at the best, to inexperienced young men, who are shifted one day from the cutcherry or the salt field, to be removed the next to another cutcherry or another salt field, again, in some future day, to turn up upon the bench; and they ask you why, in this learned profession, professional learning is the only thing not required. Then as regards moonsiffs, the still unforgotten animosities of race introduce a new element of distrust. Nor would this seem to be wholly without foundation. I find the following statement in the 'Friend of India,' which should be a good authority on the subject, in an article by no means favourable to the larger pretensions of British subjects: 'There are many, particularly Mahomedans of the old school, whose hostility to Europeans, as such, is of the most envenomed character. The magistrate lately removed from Serajgunge would probably have put every European in the station in prison, could he have only obtained the chance. The antagonism between the races is becoming every day more marked.'" This was about two months before the outbreak took place.

1827. Was this in the Legislative Council?—Yes.

1828. Are the discussions there public, and are they reported?—They are; lately they have been made public.

1829. In what position was Sir Arthur Buller?—According to the new charter of 1853, the reform in the Legislative Council consisted in admitting two judges of the Supreme Court of Calcutta and two members of Civil Service, one from Madras and one from Bombay, and Sir Arthur Buller's seat derives its existence from that fact. He is still a member of the council at the present day. Then, again, he says: "And I must say, sir, that if there is any country in the world in which such an institution is required, it is eminently so in one like this, where the tendency to bring false charges so universally prevails; and more than ever will it be desirable, when the criminal code comes into force, with its tempting variety of opportunities for the maliciously disposed. To session courts so constituted and so assisted, I have no hesitation in confiding the protection of every British subject. At all events, this is the best solution which, after much consideration, I am able to give this most difficult question."

1830. Mr. *W. Vansittart.*] You say that, owing to the incapacity of the civil servants, the corrupt state of the omlah and the police, and the defects of the sale law, the settlement of Europeans is very difficult, do not you?—Yes, and not only for Europeans but natives; and everybody else find great difficulties in their way.

1831. Do you not think that indigo planters generally know how to take care of themselves, in spite of the civil servants?—Of course they have to exert themselves and protect their persons and property to the best of their means, using those means which are available to them.

1832. Is it not very easy for an indigo planter to summon a magistrate before the Supreme Court at Calcutta on a charge of false imprisonment or some other irregularity

larity of proceeding?—No, it cannot be done. The law is, that the servants of the Company, for their official proceedings, are irresponsible to us; formerly we could do it.

1833. When was that power taken away?—Of late years.

1834. Have you no legal redress now against civilians?—No; my own case arose from an illegal order of the collector making me pay an enhanced rent for my estate of 850 rupees a year, before his own decision had been confirmed by the Commissioner of Revenue, as required by law, and, through negligence, the commissioner was 10 years before he revised the order of the collector; but on his doing so, he reversed the collector's arbitrary and illegal order; yet for all that time I had been compelled to pay the enhanced annual rent, and had no remedy whatever against the collector; but obtained a decree, amounting now to 2,000*l.*, in the civil court, which they appealed against. The consequence of that is, that now I have a suit of 2,000*l.* in appeal before the Sudder Deewanny court in Calcutta, and I have no redress in that case. If the law had permitted me, I should have called the collector to account in the Supreme Court.

1835. Is it true that indigo planters are in the habit of keeping in their pay large bodies of latteeals, or bludgeon-men, to overawe and coerce the zemindars and ryots?—No, not to my knowledge.

1836. You have resided in some dozen different districts I think, namely, in all the principal districts of Bengal, and in the principal districts of Behar and the North West?—Yes; up as far as Benares and Juanpore.

1837. Why is it that indigo planters in Bengal, for instance in Hoogly, Jessore, Radshaie, and others, give the magistrates so much more trouble than those in the upper provinces?—The indigo planters have a great number of contracts with different cultivators. There is one in the room at present who has contracts with 20,000 cultivators, and therefore he having the adverse disposition of many of the zemindars to contend with, it brings him in contact with those people; and of course the more extended a man's relations are with other men, the greater chance there is of objections and difficulties, and breaches of contracts arising. And that explains a question which was asked a gentleman the other day, why it is that the indigo planters have so many cases in court, and so many decrees which they cannot enforce. It arises out of the natural consequences of their position. I have to deal with thousands of cultivators from whom, in our part, we have to rent the land, under contract to cultivate, to sow and reap it, while others furnish boats, others furnish carts, and others manufacture the indigo itself; and therefore our relations are so numerous and extended, that when you say that an indigo planter has always 50 or 60 suits in court, there is nothing extraordinary in that.

1838. Do you not think that there are a finer body of indigo planters in the Tirhoot district than in Bengal?—I do not know how such a notion can have ever been entertained; there is no truth in it, and I never heard of it.

1839. Do not you think that that is the case on account of the healthiness of the climate?—No, I do not think so, for the case or fact does not exist.

1840. Are not the manufactories at Bengal much more under the Company's supervision than the manufactories in Behar and the Upper Provinces?—Certainly not; there is no distinction whatever.

1841. You acknowledge that you can ultimately always get redress?—Yes, after a great deal of suffering and losses; I have generally managed to get redress by going to high authorities, but not under the local authorities in the provinces; I have got it from the superior authorities in Calcutta.

1842. With regard to the sale law, do not you think that the collectors, generally, are in the habit of giving as much grace and indulgence to the defaulting zemindar, as they consistently can with reference to the regulations and laws?—Yes, not only as much, but a great deal more in many instances than they ought to do, according to the regulations, such as receiving arrears from a man when he has forfeited his estate, not having paid at the proper time; hence the inconvenience to the purchaser, and the great detriment to the defaulter in many cases; owing to the great uncertainties purchasers will not bid up to the full value.

1843. You say that you never knew an instance of a civil servant in the Mofussil being able to keep up a conversation with a native for five minutes together; am I to understand that the civilians of the present day are not so intelligent as they were 10 or 15 years ago?—My opinion is this, that I have never

Mr. *J. Freeman.*

4 May 1858.

never known a civilian, excepting in three instances, that could keep up a conversation for five or ten minutes with a respectable native, such a conversation as an English gentleman conversant with the French, or the German, or the Italian language, would expect to keep up with a Frenchman, or a German, or an Italian.

1844. I say 10 or 15 years ago, because I have reason to believe that the civilians, generally, then could converse as freely in the vernacular as in their own language?—That is certainly not the case at present, nor did I ever know of such, save the exceptions.

1845. Surely you must allow that if a civilian, before he leaves this country, and again before he quits Calcutta for the interior, has to undergo two severe examinations in the vernacular languages, and then he is in the habit of spending weeks, months, and years in his court, and on coming home has only a large suite of native servants to converse with, he must naturally have great facilities for becoming a perfect master of the native language?—No, unless he chooses to learn it, and study it. By the facilities afforded, even in Calcutta, you make yourself understood by broken words, and so forth, but that is not what I call speaking the language. The intercourse is very restricted with the natives. As a civil servant he does not mix with the natives, although surrounded by them.

1846. He must give them orders, surely?—Yes, but you understand the difference between speaking a language to keep up a conversation and making yourself understood by broken words and sentences, quite unconnected the one with the other, which is not conversation upon general topics.

1847. Are you aware that a young civilian, for instance, an assistant to the collector, is frequently sent into the interior of his district to make a revenue settlement, and does not see a white face or hear his own language for months together?—That I am not aware of; I never saw an instance of that kind. Young men are sent to make settlements at times.

1848. Who makes the revenue settlements?—In Bengal there are, properly, no revenue settlements unless they are reserved lands, or lands that have been resumed, or others that have been forfeited; then the uncovenanted collector would be the person to make or report upon them to the collector; formerly covenanted assistant collectors or deputies made these also.

1849. If an estate is sold and does not reach the arrears of revenue, the collector buys it up on the part of the Government, and it becomes a khasmahal, and then the collector deputes his assistant to make a revenue settlement of it?—Yes, but those cases seldom occurred to my knowledge. I was for a long time resident in Bengal, and I have lands in the Monghyr district, and I know that such has been done, but it never came under my knowledge that covenanted deputies had been out for three months at a time without intercourse with any European.

1850. You say that you know instances of gentlemen who have made darogahs of their own private servants; are you aware that magistrates send in monthly statements to the superintendent of police, and to the civil and sessions judge, stating what appointments are vacant, and the qualifications of the men appointed to them?—I am not aware of those statements being sent in, but I am aware of a great many persons being appointed in the way that I have mentioned, both to darogahships and also as burkundauzes, and many as jemadars of police.

1851. You say that the mookteears, or native pleaders, have not fair play in pleading their cases before the authorities; to what do you attribute that?—I attribute it to this, that in the civil courts the vakeel is very often told to hold his tongue, or he will be fined or suspended from practice; and in the magistrate's court, where the mookteears appear, the same practice prevails. I could mention instances where extreme practices have been had resort to. In the Mofussil courts they are not free and independent as they are in the Sudder Court of Calcutta. At Calcutta you are inspired with some degree of respect and awe in seeing the discipline of the court, and the order of the place, and the facilities which are afforded to the vakeels and mookteears, enabling them to sit down and have their papers and notes, and tables and seats provided. But in the Mofussil courts there is no order and no discipline; you hardly know where you are, and certainly they tend to inspire you with every degree of disrespect, and even contempt, and I may add disgust.

1852. With regard to the case which was brought to your notice by Mr. Kenny, in which you say the magistrate ordered the darogah to find out the murderer in seven days, or come in himself, surely that order does not prove that the magistrate countenanced

countenanced anything like torture being used?—I do not say that he countenanced torture; certainly not; I absolve all gentlemen in the civil service from wishing to encourage torture. The only thing is, that from their want of knowledge, they are not aware of it, and when proved, as in the case you refer to, they will not believe it, or if they do, they will not punish in such an examplary way as to deter repetition, otherwise how would such practices still exist to such an extent.

1853. You will excuse this question; but do not you think that you and Mr. Theobald are rather unfairly prejudiced against the civil servants?—Certainly I am not; I feel strongly and deeply with respect to the system, but against the gentlemen of the civil service I never had any ill feeling. I admire them in their social capacity; I think that they are as gentlemanly and as agreeable a body of men as are to be found any where. If they were only properly trained in their profession, good masters of the languages, had more intercourse with and much more real knowledge of the character and ways of dealing of the natives, I would not wish to see better men in India.

1854. Mr. *Mangles.*] You have been in some of the districts in Behar?—Yes.

1855. You said that revenue settlements were very rare except in cases of resumption after the lands have been declared liable to assessment; are not you aware that in the province of Behar there were many hundreds, if not thousands, of such cases?—Yes, that is an exception, applying to towfeer and resumed lands, and mahul khansa cases.

1856. Is not that a very considerable exception?—Yes, but still very limited compared to extent of country.

1857. Were not many of those estates settled by young civil officers?—They had the authority to do so, subject to collector's revision and commissioner's final approbation; and, of course, they were in a manner the responsible parties. They had a kind of supervision, but it was really done by the native omlah who accompanied them; the omlahs were the actors in the scene, and the young inexperienced boy civilian was supposed to represent the authority of the Government.

1858. Do not you believe that those young men who went out, the covenanted servants, the deputy collectors and assistants to the Commissioner and Collector, made those settlements virtually themselves?—That is like comparing the Commander-in-Chief to an army; he gives his orders, and execution is done by the officers and soldiers; they are the people who carry out the work; in the present cases the omlahs were the officers and soldiers, and the young civilian the commander-in-chief nearest the field of battle.

1859. Did you ever see a settlement report written by an English officer?—Yes, decidedly, but I never saw one written in the native language—used in the courts—by a covenanted assistant collector.

1860. Do not they go into every question of tenure, and of rights, and of revenue?—Yes; as far as the rights go, there are the conflicting claims. But if you want to get at the real question, the native omlahs are the investigating people, and they get all those particulars for the European gentlemen that you mention in those cases, and advise as to what is to be done, according as they may be bribed.

1861. Is not an officer who makes those settlements competent to understand, and does not he understand, the native language of the returns which he sends in?—Not in the way that I mention, to hold a regular conversation with a gentleman, but he may understand in such a way as to enable him to arrive at the drift, and partially and unsatisfactorily, at the merits of the case.

1862. And you really mean to tell me, who have been many years in the country myself, and conducted revenue settlements myself, and who have been engaged in conversation with thousands of natives, that the young civil servants are incompetent to carry on conversations in the native languages?—I do say that my experience fully justifies me in maintaining what I have just said. I do not mean to say that there are not exceptions; I have made exceptions, and I am sure the honourable and distinguished gentleman was a worthy exception, but, taking the mass of civil servants, I say that they are not conversant with the native languages, so as to enable them to do their duties in a proper way.

1863. Are you not aware that at the Sudder station of a district, hundreds of native officials come in to pay their respects to the authorities, and pay them visits, and sit with them for half an hour, conversing with them upon every sort of subject?—Yes, I am perfectly well aware of that; and if a short-hand writer

Mr. *J. Freeman.*

4 May 1858.

were there to take down the questions and answers of the European gentlemen, you would see what sort of a language it was. As to the civilities existing between the civil service and respectable natives on occasions like those, the conversation is soon put a stop to, in consequence of their inability to speak the language fluently, and in such a manner as I have before stated. It is one of the great obstacles of intercourse in the proper way between the Europeans and the natives. I know gentlemen very conversant with the languages, who are great oriental scholars; but they are quite an exception, 2 in 100.

1864. Is it necessary for a man to be a great oriental scholar to have a perfect colloquial acquaintance with the language?—If a man sits upon the bench to administer justice to the people, where the proceedings are carried on in the native language, I do not see how he can get on in a proper way without speaking the language freely; and when the native witness comes in, if he could speak the language freely he would still have some difficulty with the witness, owing to the state of his mind and his hesitation in appearing before an officer of the court. But the want of a knowledge of the native language is the greatest drawback, in my estimation, to the administration of justice, because that entails so many other evils.

1865. Are you not aware that of late years, besides the examination which all civilians have to pass before they get out of college and enter upon a public career at all, they have to go through two examinations before they are allowed to take the first two steps in the service?—I was not aware of that, I speak to the real state of things.

1866. If I were to tell you that one of the tests which young civilians have to pass in that respect is this, that a report of a native darogah or a native tehsildar, either a revenue or criminal report, or a report from an ameen sent out upon a civil investigation, is put into his hand in the native language, which he has never seen before, and that he is required by the examining committee to read that paper, and sit down then and there and write his answer and orders to that officer upon that paper, should you not suppose that the capability of doing that argued a sufficient acquaintance with the native language?—I should think it a great point to arrive there, but I should not consider it, under those circumstances, quite sufficient. I would rather put the candidate offering for examination in a court upon the bench, and have a case gone through, such as a complaint or a petition of any kind, either a matter of revenue, or an assault, or a theft. I would put him into the court, and make him go through the proceedings. There would be the presentation of the petition, there would be the presentation of the answer of the man, and the examination of the witnesses, and if he could go through that, and make a fair comment on, or abstract of the merits of the case, and the reasons for his award all that fairly delivered by speech or written in the native language and character, I should say that would be a most sufficient and satisfactory test. I maintain this to be sufficient.

1867. Could you read a native paper written in either Hindostanee or Bangalee yourself?—Very imperfectly.

1868. You know how very rapidly they write; how they leave out all the dots and marks; and how difficult it is to read?—I do not think that the Persian character is quite so difficult to read as the Nagree character or Bengalee, in the way you state.

1869. They are both very difficult?—Yes, they are.

1870. Could officers go through the test that I have spoken of without a very great knowledge of the native languages?—No. I should say that if a report came in and the officer read it and made his answer to it, it would imply an acquaintance with the native language, at all events sufficient for the man to enter upon his duties; but I should prefer his going into a court, as I have stated; if he could get through that with satisfaction I should have confidence in him; because when a man does get an acquaintance with a language, he takes a liking to the language, and is induced to study it out of his hours of occupation, for he then feels emulation urge him on.

1871. You said that the majority of civil officers with whom you have been acquainted could not read a native petition; could that be the case when they had gone through such an examination as that to which I have referred?—In most cases that is so; I have only stated the truth. How they get through their examinations and so forth has been a wonder at all times to us. We have been surprised how certain young men sitting on the bench have managed to get through

those

those examinations; but the ordeal I propose would put an end to all cramming, and any other inadequate means, for getting over the first examinations.

1872. I thought you said that you knew nothing of those two subsequent examinations?—Those I understand have been only passed lately, but during the time that I was a permanent resident in the Mofussil, I say that it was a source of astonishment to us how it was that they were so unfit in practice to read and speak, and so forth, after passing their examinations.

1873. You spoke of the administration of the Sale Laws; are you not aware that about 20 or 25 years ago there was a great alteration made in the mode of administering those laws?—I recollect the Sale Law of 1819, such as it existed at the time when I purchased an estate at the Government sale in 1835, and such as it existed up till 1841 when it was modified, and thence till 1845, the law which is still in force; therefore, the great change which has taken place since 1819, was more to assist the Commissioner and the Collector in carrying out the sales. When I went into the court to purchase the estate, I saw people coming into the court with bags of money, actually keeping the money in their hands till the Collector had commenced the sale, and the hammer up for the third time, when they put the revenue on the table; that, of course, could not be put up with. It was a perfect lottery. You might sell an estate three or four times over, and the sale would not be confirmed. And therefore it was for the benefit of the defaulter as well as the purchaser that the law underwent an alteration in that respect, and was also modified in respect to consequences of Benamee purchase.

1874. Long before the date of 1845 or 1841, was not it felt by the authorities that the indulgent system was really a hardship to the defaulter, by preventing him from getting the real fair price of his estate very often, owing to the uncertainty to the purchaser, and, therefore, were not rules laid down by which balances were obliged to be paid by sunset before the sale, and were not very strict rules made rendering it very difficult to get a sale reversed, and have not the reversals of sales since that time been very much less frequent than they were before?—I think that they may be less frequent; but on the last occasion which I mentioned, which was in 1850, where I went into the court at Bhaugulpore and purchased a small estate, the sale was reversed, and the reason given for the reversal was some want of the necessary formalities on the part of the Collector. But in the reform of the present law as compared to that of 1819, unfortunately the Government have not taken into consideration the question of the large under-tenures, which are of great importance, which are purchased by ready money, such as the putnee. They have not made it positive that they should be saved by the sale, and I have never known an instance where they have. And the other thing they have omitted is the not going into the preliminaries prior to the day of sale, but the holding back from doing so till the sale has been effected, and many other important points.

1875. It has struck me, with regard to your evidence on the under-tenures, that if the hardship were so frequent as you say it is, when, in case of sale, these putnee tenures are voided, and the putneedars lose their property, it is exceedingly strange that parties should be found willing to pay a fine for putnee tenures, instead of taking them upon an adequate rent, in which case they would merely lose whatever the tenure was worth to farm, and not the purchase-money?—Speaking of the European settlers, the same gentlemen in India who are given to take putnees are given to taking izarahs; but the putnees are a definite thing, for ever, perpetual; while the izaree is only for five, seven, or nine years. No zemindar will grant a putnee without you pay down a considerable sum as purchase; besides which, you have to pay the full rent, and often more, annually and for ever. In Tirhoot, they are all izarees; there are no putnees; but the opposition on the part of the zemindars and ryots, from a variety of causes, was found to be so great, that for the last 20 years the planters and others have come into the habit of taking putnees whenever they can get them for the sake of peace and quietness with the zemindars, who otherwise make every exertion with their ryots to oppose your pursuits, and to bring all manner of false charges against you and your servants in the Mofussil courts. Izaras are taken at enhanced rents for the same reason. Down in the Lower Provinces, estates are seldom put up for sale for arrears of Government revenue; the revenue is paid with great facility, and therefore they cannot come in; and the zemindar, again, gives a putnee. I got 2,000 *l.* down upon the nail as the purchase of a putnee I sold, besides 1,000 *l.* a year in perpetuity.

Mr. *J. Freeman.*

4 May 1858.

1876. If the cases are so frequent that men lose the money which they have paid in the shape of a fine, why is it that they do not cease to pay a fine, and insist upon taking the land as a farm, and not as a putnee?—My answer is this, that in those provinces where the system of putnee exists, it is seldom or ever that an estate is put up for sale, and therefore there is no forfeit, and as for insisting upon the zemindar to give you any izara or putnee, you cannot do anything of the kind.

1877. Then there cannot be the hardship of which you complain; you stated that there were great hardships upon men who had paid fines losing what they had paid in consequence of the sale of the estate which voided their tenures; I asked whether that did not right itself by men ceasing to pay the fines; you say No, for the estates are very seldom sold; therefore there cannot be a grievance? —No; for the simple reason that if you pay no fine for a putnee or no loan for an izarah, you cannot get such leases, so that in case of a Government sale you have neither lease or money to lose; but there are other parts where the tenures exist; such as in Bhaugulpore; and though the estates are less seldom put up for sale in the districts of Kishnagur and other districts, yet they are sometimes sold; and therefore after a man has paid 1,000 *l.*, or 2,000 *l.* or 3,000 *l.* for a lease of that kind, he is subject to lose it.

1878. Then why in those districts where sales are frequent do men persist in risking their money by paying a fine?—Because it is a necessity of their position, and owing to the bad state of the institutions, as so often stated, and that they prefer to risk a sacrifice in money, to risking the consequences of all manner of false accusations in the courts. I was the first person to introduce the system of putnees in Bhaugulpore, and since then two or three natives have done the same; but there izarees exist to a greater extent. For the sake of peace and quietness we lend money to the zemindar upon his bond, payable in a certain number of years, and he assigns over to us the rents of those villages to liquidate the loan which we make to him; and that is the same in the Lower Provinces, lower down, where also putnee tenures are more numerous; but I cannot say that they have become so common higher up.

1879. Mr. *Campbell.*] I think a stronger reason than any that you have adduced exists for the purchase of putnees, namely, that necessity and not choice is often the motive in influencing the person in taking the putnee to secure his lands, as without the putnee his lands are quite unsafe?—Yes.

1880. And he is obliged to run the risk of taking a putnee rather than lose his lands?—Yes.

1881. Is not that one of the chief reasons for it?—Yes.

1882. Mr. *Mangles.*] Therefore it is worth while to run the risk for the sake of the advantage?—If a man has purchased 20,000 *l.* or 30,000 *l.* worth of indigo factories and has got them in possession, he must take the best means to keep them working, and that has been found to be the best mode. You take a putnee for 2,000 *l.* a year that you know you cannot get 1,500 *l.* for; I call that a purchase for peace and quietness. That is the reason why Europeans resort to taking putnees on the one hand and izarees on the other, and for no other purpose.

1883. You state that in certain districts, which you have mentioned, in consequence of the number of European settlers there, and the large amount of capital which they have invested, you cannot purchase estates?—The number that can be purchased is small compared with other districts, because the capital of the European planters annually spent in working his factories enable the ryots to pay their rents to the zemindars, who benefit in a similar way, for their discharge of the Government revenue.

1884. As to the othes districts, there can be no hardships, in consequence of there being no sales?—There are hardships from the general uncertainty of the tenure; men may fall into arrears even *bonâ fide* and honestly. Ramrutten Roy's estates in Jessore were very nearly for sale some years ago during the crisis in 1849, he could not get the money to pay up; and in that case how many Europeans would have lost their money. So that it is constantly hanging over persons, and they are nowhere, and never free from great anxieties on that score, they are so dependent. Hence the obstacles to so many others.

1885. You bought an estate in the Hooghly district, in which you found great difficulties from your under-tenants?—Those difficulties which I met with there were from the indefinite nature of the sale law. If the Collector had marked the boundaries to the property, I should have known, and the magistrate would have known,

known, that those were the boundaries, and that therefore the people were claiming within the boundaries; therefore my hardships arose from the dishonesty of those people who got up those complaints. But the principal thing was the corruption of the native omlah, who ill-advised the magistrate; and from the magistrate's own inexperience and ignorance of his duty and of the Regulations, combined with the disgraceful and ineffectual way the Government pretend to put you in possession of what they sell you; in fact, you are left to get possession how you can in too many cases.

1886. You speak of the difficulties arising from the want of defined boundaries; has not a scientific survey of the whole of the Bengal and Behar districts been going on for several years?—I have heard that a survey has been going on for some years; but whether it has been effected, and come into practical use in the courts of the Collectors, I am not aware.

1887. Are you not aware that all the boundaries of the estates in many districts have been defined by a scientific survey?—I believe so.

1888. Following the plan of the survey of the North West Provinces?—That I cannot speak to.

1889. In those districts, at any rate, the evils of a want of knowledge of the boundaries of the estates have been obviated?—Unless it is where large rivers pass, because there the boundary of a man's estate changes every year.

1890. It cannot be the fault of the Government that the Ganges runs away with the land?—No. I believe that surveys have been made for the purpose of endeavouring to arrive at a definition of the boundaries of the estates; but whether it has been done to a useful purpose I cannot say. Why did not the magistrate at Hooghly refer to the survey in my case.

1891. You stated that in the case of the estate which you purchased in the Hooghly district, your tenants troubled you by claiming rights which were really abrogated by the sale laws under that sale?—Yes, most positively.

1892. Have you found great difficulty from that circumstance?—Yes.

1893. How do you reconcile that with the earnestness which you have expressed, that a law like Mr. Grant's should be passed for the protection of under tenants?—In my case the claims of the two parties I alluded to were most unfounded, and in direct violation of the existing law. The law should be within a reasonable limit, as has been contemplated by the Government and by the Regulations which are in force, if the present principle is to remain for the future. If the law says we recognise in these people certain rights from the time of the decennial settlement until the law reverses those rights, I think they are bound to meet with protection in them, and therefore, I say that the sale of an estate for arrears of revenue causes a perfect revolution in all the villages and in every tenure. A new purchaser comes in, and the first thing that he does is to call for an increase of rent upon every ryot, which is considered a hardship by all the tenants.

1894. Those men made the very same claim against you in the case to which you have referred, and you thought that it was very unjust, and that those claims should not be listened to?—When I purchased that estate, the Government said, "You purchase that estate quite clear from every incumbrance;" and when I took possession of it one man claims to hold three or four villages here, and another 400 or 500 acres there, upon nominal rents, and some under old and forged documents. That, I say, is not in conformity to the law. My object was, to be perfect master of the estate according to the Regulations, and I could not put up with that; and so far the magistrate and Collector were bound to afford me support, and you have heard how far I met with such.

1895. Mr. *Villiers.*] It was a fraud upon you?—Yes.

1896. Mr. *Mangles.*] Had not the tenant in that case a right to go and appeal to the law?—Yes, he could go and file a petition in the Civil Court, and show what tenure he had, and all the particulars. And then in the Civil Court each man brings forward his claim and produces the documents, and so forth, and the evidence as to his right in keeping possession. And if he has a fair claim he gets it awarded to him, but the revenue authorities have no remedy. They are not competent to take cognizance of a thing of that sort.

1897. I understood you that those men appealed to the magistrates; I presume they charged you with violence?—Of course they did. They got up two false cases, one preceding the other about a week, stating that I had gone with 150 or 200 armed men, with all my servants, to collect the revenue in those two villages; that I plundered the villages and beat the people. That was false; I

Mr. *J. Freeman.*

4 May 1858.

never moved out of my cutchery on either of the days stated, and I had not an armed man on the estate. But the Foujdarry Court is a sink of iniquity, and if a man finds that in the Foujdarry Court he can get something like a prize, that will prompt him to go to a superior court, and if he does not find it there, he will give it up; and that is the reason why Mr. Theobald said that really the jurisdiction of the magistrate was beyond all belief.

1898. How did you manage the estate after you left it yourself?—I put in a European to manage it; subsequently he got an appointment in Silhet, and I put in another gentleman.

1899. He managed it pretty well, did he?—Yes, under difficult circumstances, which he managed to contend against.

1900. You made a very good thing of that estate?—I do not know about that; it realised three lacs and 3,000 rupees at the exchange at Calcutta, when the estate was sold. The estate had been purchased for two lacs at the Collector's sale.

1901. You bought it?—Yes.

1902. And it was sold for 3 lacs and 3,000 rupees?—Yes.

1903. You yourself have managed, in spite of all the difficulties of the laws and the administration generally, to be very successful?—People tell me so, This outbreak has walked away with a good deal of my property.

1904. Then you must believe that any person equally able and energetic with yourself, in spite of all the difficulties in the law, might be a very successful settler in Bengal?—Taking 100 men, there are not a very great per-centage who have met with great success. Every man has not the same energy, and the same character and perseverance. We cannot help that; that is a matter of nature.

1905. Are there many who have done it, and are doing it every day?—Of course there are, out of the numbers; but there are nothing like the numbers that would do so under other circumstances and better institutions.

1906. Mr. *Villiers.*] You have no motive, from being disappointed, in making the statements which you have made to-day?—None.

1907. Mr. *Mangles.*] The laws and the administration are not so bad but that an able and energetic Englishman may make his fortune?—Some people have succeeded; but those that have not succeeded you do not see; they are not here to urge the reasons of their failure.

1908. You say that those who enact the laws are unacquainted with their practical working?—Exactly; that is one of our greatest grievances.

1909. Are you not aware that, according to the system in Bengal, if a revenue law is to be enacted, it is drafted for the Government by the Board of Revenue?—No doubt that may be the case.

1910. Are not the members of the Board of Revenue practically acquainted with the working of the system?—To judge by their acts, I should positively say they are not practically acquainted with the details and working of the revenue laws they enact.

1911. Are they not men who have gone through all the lower grades of the service; and are they not selected by the Governor-general, according to the best of his judgment, as being the ablest men in the department?—That may be; but the existence even of this sale law, in its details, clearly proves that they are unacquainted with the practical working of that law. It would have been reformed long ago if they had been acquainted with its working; and I apply that to the Foujdarry courts and to the other courts, and to the whole administration, beginning with the Legislative Council.

1912. Did you know Mr. Dampier?—Yes.

1913. He was a member of the Board of Revenue; was not he acquainted with the practical working of the revenue law?—More than others.

1914. Did you know Mr. Lewis, and was he acquainted with the practical working of the revenue law?—I cannot speak to him; but from what I saw of Mr. Dampier, I know that he enjoyed the reputation of being a very first-rate revenue officer.

1915. Did you know Mr. Pattle?—Yes, I knew him.

1916. Was he not acquainted with the practical working of the revenue laws?—If I come to speak of my knowledge individually, as applied to Mr. Pattle, I cannot say.

1917. Do not you believe that, generally, the members of the Sudder Board of Revenue in Calcutta are selected as the ablest revenue officers of the Company?—I think

—I think they have a knowledge, taking it generally; but as to what I call the details of the thing, which so much affect the lower orders, I think they are quite unacquainted with them.

1918. Have they not all been Collectors?—Yes, I fancy they have.

1919. And they are, probably, men of 25 years' standing in the service?—I should say somewhere thereabouts, 18 or 20 years.

1920. Then you stated that the ablest men in the revenue administration, who have been 25 years in the service, are not practically acquainted with the working of that system which they have been administering all their lives?—Certainly not, I should say, down to the details which I have mentioned; really I do not see how they can be, their position, so exceptional, precludes them from such knowledge.

1921. You said that the cultivation of tea had been introduced entirely by European settlers?—In an extensive way; I believe the Government encouraged it, and contributed in some way, in the first instance, to getting plants, and so forth; and that they went certain lengths in promoting it; but that was soon given up on their parts; and then it was taken up by a body of settlers, who carried it out to a much greater extent; but their first endeavours were far from being successful. Afterwards they were able to bring it to its present extension and prosperous state.

1922. Are you not aware that both in Assam and Kumaon the Government established tea plantations for the express purpose of trying experiments, for the sake of the settlers, and with the avowed object of handing over their plantations to the settlers, as soon as the experiment had been shown to be successful, and as soon as settlers could be found willing to take them?—That is what I refer to; that in the first mooting of the cultivation of tea the Government took the initiative and encouraged it, and went to some expense in taking the necessary steps towards it. Then some Europeans took it up on a larger scale, and that attempt was not successful; but somewhere about 14 years ago, in consequence of this new arrangement, where the Government gave them more favourable terms about the land that they were to concede to them, from that arose the present company, which has carried it out in a very extensive way, which without the English settlers and their capital I doubt would ever been effected.

1923. Did not the Government in fact bear the whole of the expense of the experiment, and hand over, both in Assam and Kumaon, their plantations to the settlers on very liberal terms?—That I am unacquainted with; I will not say that it was so, or that it was not so.

1924. Did not the Government send Mr. Fortune, and others before him into China to get seed, and to get tea-makers, Chinese, and otherwise, to inform themselves as to the Chinese system of culture, for the express purpose and the sole object of instructing the settlers in India?—I do not know for certain whether that experiment was made by the Government; I believe it was so; but I know that Chinamen were brought in the first instance. It was hoped, through them, that the natives in India would get an insight into the cultivation of tea, but it failed, so far.

1925. Have not you heard of Mr. Fortune's mission in China; that he went several times to China to get seed, and so on?—I do not know positively whether he was sent several times.

1926. Has not the same course been taken by Government with regard to working iron; have they not established experimental works for the purpose of testing the practicability of such works, and with the avowed and declared object, that as soon as ever any man would take the matter up, and take the works off their hands, they would make them over to him?—Upon that subject I can speak with a little more knowledge, for I happen to be a large shareholder in the Bengal Coal Company. Two years ago we applied to the Government to grant us the services of their overseer, who was specially out there to look after iron ore with a view of establishing blast furnaces, and we understood that the Government would grant his services; on that we sent to England, and got machinery out to the extent of 6,000 *l.*, and in the early part of last year, our secretary applied to the Government to know whether they were disposed to lend us the services of this scientific man, which is rather scarce to be had in India, and the reply was, that they were very sorry, but this gentleman's term was about being up with them, and he was about to return to England; and they advised the company to see what arrangements they could make with him. We

Mr. *J. Freeman.*

4 May 1858.

did not want the Government to pay one farthing, all we wanted was the superior knowledge of that person to superintend for several months the erection of our blast furnaces. The Government positively declined, and the consequence is that our machinery is lying there in Calcutta. The iron ore was submitted to Government; and it is positively a very precious and very good material for the purpose, it had been tried at the Mint and most favourably reported upon by the Government officials and overseers. But as far as the Government went we took it as very singular after giving us good reason to believe that we should have the loan of this gentleman's services, that after we had written and got the machinery out, the Government should refuse its assistance.

1927. Are you aware that the Government have recently sent out a gentleman conversant with the iron manufacture, and with him several assistants, to the province of Kumaon, to introduce the iron manufacture there?—I have read of it, but we offered to do everything at our own expense.

1928. And the Government have stated that, as soon as the experiment is shown to be successful, they are willing to hand over the works to any Englishman that will undertake them?—Yes, that may be, but this does not do away with the facts I have stated; I have the correspondence with me.

1929. You spoke of the superiority of the indigo made by Englishmen, and of the superiority of their system of manufacturing that production altogether, and of the successful results of it; and you stated that it was generally carried on by advances on the part of the planters to the natives, and that that system had been very successful?—Yes; every cultivation of the produce there, or even of artisans, is carried on upon the system of advances. You must advance to the extent of one-third or a half.

1930. Do not you think, judging from analogy, that if the same system was pursued with respect to cotton, any amount of cotton might be procured by the same process?—That is my belief. In those parts where cotton has been cultivated from time immemorial down to the present time I do not see why, with good seed, good cotton should not be produced.

1931. If those who are interested in the production of cotton in India were to act exactly in the same way as those who are interested in the production of indigo, do you believe that the same results would follow?—There is only this difference, that one is the establishment of a new branch of industry, and the other is an old one.

1932. Indigo was once a new branch?—Yes; I only make that distinction.

1933. If those gentlemen who are interested in the production of cotton were to take the same steps, and act with the same energy as the indigo planters of Bengal, could not they get as much cotton as they could possibly desire?—How far they would succeed is a matter to be ascertained. If no beginning is made, we cannot ascertain. I should say large capital for experiments would be required, to encourage which, on the part of new comers, you must radically reform your institutions; the first subscribers to railways were few, and why more particularly on the continent; but see the state of the shares of late years.

1934. Mr. *J. B. Smith.*] Is not there this difference between cotton and indigo, that cotton is an article which, at the place of growth, is worth about 1 ¼ *d.* a pound, and at the place of shipment 3 *d.*; and indigo is an article which, at the place of growth, is worth 2 *s.* to 4 *s.* a pound. Therefore, can cotton afford to pay the same rate of carriage that indigo can?—No, I should say not.

1935. Therefore, do you suppose that cotton could be cultivated with the same advantage as indigo, when you have to bring it a long distance to market?—No; the expense of carriage is an obstacle. But I would wish to make one remark, that the superiority of the European indigo arises from the better superintendence, greater honesty, but more particularly from the honesty of the packing, because that is a matter of great importance.

1936. Mr. *Mangles.*] That would hold good specially with regard to cotton, where the complaints are great as to dishonesty?—Yes, and silks too.

1937. You spoke about the roads, and you said that there were no good roads in Bengal; does not that arise partly from the fact that the traffic of Bengal, from the circumstances of the country, is carried on in a very great measure by water-carriage?—It is in the rainy season, when the rivers are up; but during the other seven months, the want of roads or water communication is a very great obstacle to the commerce of the country.

1938. Is not Bengal at all seasons of the year, even during the dry season, more than

than any other country in the world furnished by nature with water-carriage?—No, certainly not; but keeping open at the mouth one of the Nuddea rivers would effect wonders.

1939. I mean by the delta of the Ganges?—The Ganges is the great artery; it goes down round by the Sunderbunds all the year, but during seven months the mouth of the three Nuddea rivers remain closed, or, at all events, cannot admit boats, and are therefore impracticable from the Ganges to Calcutta direct; so boats must go a dangerous and circuitous route of several hundred miles by the Sunderbunds.

1940. Are there any stones in Bengal to make roads with?—Not till you get to Rajmahal.

1941. Is there a single stone in the country?—Excepting those used for the ballast of ships, which have been applied to make the roads and streets in Calcutta, there are none until you get to Rajmahal.

1942. Those are imported stones?—Yes; all the roads in India are made of brick or kanker lime, which is excellent for the purpose, and abundant.

1943. Is not it extremely expensive to make better roads from there being no natural metal?—No, because you can make bricks wherever you like; I used to pay 30 *l.* for 100,000 bricks by contract; that was the price, but in consequence of the railroads they may now be rather higher.

1944. Would not making roads at that price be extremely expensive?—I do not think so. I have not tried the experiment, but I can represent to myself a kiln of 100,000 bricks, and I see how many cubic feet of material there is in such a batta or kiln of bricks, and I fancy with that you would make a road about 3,000 cubic feet, certainly not so expensive as in England, hand labour is so cheap. Taking all things into consideration, I should say roads in Lower Bengal would not cost above one-fifth of what the metalled roads cost in England.

1945. Is not the Government now engaged in making railways, and in making roads as feeders to those railways?—As to feeders, I am not aware; but that they are making railroads I am aware; the railroads are private enterprises; the Government guarantee a small interest.

1946. Will not that conduce very much to the improvement of carriage through the country?—No doubt railroads will be a very great improvement; the only complaint is, that they are not getting ahead with them. I assisted at the official opening of the railway, 120 miles, from Calcutta to Raneegunge, in January 1855, and among the speeches made by the Government servants, we were promised that the road should soon reach Rajmahal; that was in January 1855, and at this time not one mile more has been opened.

1947. Are you not aware that that railroad was made in as short a time as the railroad from London to Birmingham?—I think it took about six years to open that portion of 122 miles; I do not know how long the London and Birmingham took.

1948. Are you aware that the one great difficulty which has prevented the railway being opened to Rajmahal was the difficulty of getting a sufficient supply of those bricks which you stated were to be made in any quantity at a cheap price?—Yes; but I think there was a cause for that, and that was, the bad looking after on the part of the Government. They had the supervision of the railroads; and I think, if the contractors had been more urged on and better looked after, and made to comply with their contract, that would not have taken place; to which must be added, the constant references on every detail that have to be made to the India House.

1949. You think that in that case, as in all others, the Government solely is in fault, and not the railway directors?—No; I say that the Government are very much to blame; but that is not the sole cause.

1950. You spoke of the Nuddea rivers, and you stated that they were not kept properly open; are you aware that for many years the Government has laid out very large sums of money annually to keep them open?—I am not aware that the Government has done that. I am aware that the ferry funds have been applied partly. The only proceedings that I have seen are applying mats and bamboos to the sides of the streams; that goes on to the end of October, I think, and all the rest of the year there is nothing done; but all that is of no permanent avail. What can be done with a few mats and bamboos.

1951. Do you remember the time when Mr. May was superintendent of the Nuddea rivers?—Yes.

Mr. *J. Freeman.*

4 May 1858.

1952. Did not the Government go to a considerable expense then in endeavouring to keep the rivers open?—No; as to anything in the shape of permanent brickwork, or any other, I never saw any, in spite of all the repeated calls of the public.

1953. Is it possible in those rivers, which you describe as shifting their course so greatly, to erect any permanent works which the rivers might not leave in a year, and go 10 miles off?—The damages done by those three rivers are nothing compared to those of the Ganges; they are on a very small scale. I refer you to the embankments at Berhampore, Calcutta, and elsewhere; see how effectual they are. I refer you to those along the Rhone for hundreds of miles, whose stream or current is more powerful than that of the Nuddea rivers. The Ganges will carry away a hundred times more in one year. But the call was for a canal from Rajmahal to Calcutta, and that would be easier, and less expense to effect than keeping one river open.

1954. Will not the railway from Rajmahal quite supersede the necessity of a canal?—In a great measure, but, as in England, many bulky articles would always prefer water-carriage.

1955. Are you aware that the shifting of those rivers is such that the battle-field of Plassey is now upon a different side of the river to what it was when the battle was fought?—The river would not have to shift above 500 feet to do that; and upon the Ganges I had a house that I built in 1836, perhaps a mile and a half from the river, and by 1840 that house, and an extensive village covering 200 acres, was carried away by the cuttings of the Ganges.

1956. Is it so easy a task as you seem to imply, to keep rivers open by permanent works, which shift their courses so extremely and suddenly as the great rivers of India do?—They are small rivers; I mean the Nuddea rivers.

1957. They are small rivers as compared with the great Ganges, but do you call those three Nuddea rivers small; how far are they across?—From main bank to main bank, I should not suppose more than 500 feet or thereabouts.

1958. From bank to bank are not the two larger ones more than about 500 feet?—I do not think I am very much out; they may be in some parts a little more.

1959. You stated that the Government had done nothing in the way of improving the police except increasing the salaries of the darogahs, and you said that the result had been rather detrimental than otherwise?—Yes, I did say so.

1960. Has not the smallness of the salaries been laid down as one of the principal causes of the badness of the police in Bengal?—That may have been attributed as one of the causes, but I do not think that was the real cause.

1961. Do not you think that increasing the salaries would be likely to improve them, and make them desirous of retaining their situations?—Yes, if you refer to such a step as rendering darogahships more covetted.

1962. You said that the change was positively mischievous?—In this sense; before this distinction was made, and this high pay was given, you might bribe a darogah for 20 rupees to get him to do a job; and at the present time a first class darogah would no longer be satisfied with that, and therefore the persons who resort to that system have to pay in proportion to his grade and increased salary; that is why I say, if anything, it has been a little more oppressive upon the people.

1963. Supposing your reason is conclusive, which I do not admit, how is it possible for the Government to improve such men?—Only by more close supervision, and by having Europeans to a certain extent supervising those people; nothing but a better superintendence can be of any use.

REPORT

FROM THE

SELECT COMMITTEE

ON

COLONIZATION AND SETTLEMENT (INDIA);

WITH THE

MINUTES OF EVIDENCE

TAKEN BEFORE THEM.

Ordered, by The House of Commons, *to be Printed,*
10 *June* 1858.

Martis, 16° *die Martii*, 1858.

Ordered, That a Select Committee be appointed to inquire into the Progress and Prospects, and the best Means to be adopted for the Promotion of European Colonization and Settlement in India, especially in the Hill Districts and Healthier Climates of that Country; as well as for the Extension of our Commerce with Central Asia.

Lunæ, 22° *die Martii*, 1858.

Committee nominated of—

Mr. William Ewart.
Mr. Baillie.
Mr. Campbell.
Mr. Gregson.
Mr. Kinnaird.
Mr. Knight.
Mr. Lowe.
Mr. Lygon.
Mr. Mangles.
Sir Erskine Perry.
Mr. Seymour.
Mr. John Benjamin Smith.
Mr. William Vansittart.
Mr. Villiers.
Mr. Willoughby.

Ordered, That the Committee have power to send for Persons, Papers, and Records.

Ordered, That Five be the Quorum of the Committee.

Jovis, 25° *die Martii*, 1858.

Ordered, That the Committee do consist of Sixteen Members.

Ordered, That Mr. De Vere be added to the Committee.

Jovis, 6° *die Maii*, 1858.

Ordered, That the following Petitions be referred to the Committee, viz.:—From Landed Proprietors, Indigo Planters, Merchants, and Traders in Calcutta and the Lower Provinces of Bengal;—and, Indigo Planters' Association in Bengal;—and, British Subjects resident in Calcutta and the Mofussil Districts of the Residency of Fort William, in Bengal.

Ordered, That the Committee have power to Report the Minutes of Evidence taken before them, from time to time, to The House.

Mr. William Vansittart.
Mr. Villiers.

WILLIAM EWART, Esq. IN THE CHAIR.

Mr. *George MacNair,* called in; and Examined.

Mr. *G. MacNair.*

6 May 1858.

1964. *Chairman.*] YOU are, I believe, an indigo planter in India?—Yes, I am.

1965. How long have you been in India?—I have been 20 years in India.

1966. Have you been constantly resident there during that time?—Yes; I was at home for about six months in 1854.

1967. In what districts have you resided?—In Lower Bengal, in the districts of Jessore, Kishnaghur, and Pubna.

1968. Have you heard the evidence given by Mr. Freeman?—Yes.

1969. Do you give your general concurrence to the tenor of that evidence?—I fully concur in all that Mr. Freeman said about the state of the law and police, and the general state of the country.

1970. Do you concur in what he said about the magistracy?—I do.

1971-2. And also about the distribution of justice?—I do.

1973. How long have you returned from India?—Last year I returned.

1974. Have you formed any general opinions about the settlement of Europeans, or, as it is sometimes called, colonization in India?—Yes; I think it would be very advantageous to encourage the colonization of India as much as possible; indeed the safety and stability of the country depends much upon more Europeans being settled there. It would also tend much to the improvement of the natives, and to the prosperity of the country.

1975. Do you think it would be an advantage not only to the Europeans themselves, but the natives also?—I think it would; many of the most able governors strongly recommended colonization. Lord William Bentinck first granted to Englishmen the privilege of holding lands in the interior of India, contrary to the instructions of the Court of Directors. Sir Charles Metcalfe said he was convinced our possession in India would always be very precarious, unless we had a considerable European population attached to our Government by common interests and sympathies. If these recommendations had been carried out, in all probability this dreadful mutiny would never have occurred.

1976. Was Lord William Bentinck thoroughly convinced of the good policy of the settlement of Europeans in India?—I think from his minute in the council at that time, in 1829 and 1830, you may assume that he was.

1977. Has he expressed himself so formally in words?—Yes.

1978. Does that appear on his minutes?—Yes, on the minutes of 1829 and

Mr. *G. MacNair.*

6 May 1858.

1830. I think the late system of the East India Company opposing the settlement of Europeans and conciliating the natives of India has not succeeded. If Government wish to retain that eastern empire, I think they must follow another system, and encourage the settlement of Europeans as much as possible. A considerable number might be employed in Government situations which are at present filled by natives in whom no dependence can be placed. Some thousands of European troops and their families might be settled in the hill districts, with grants of lands, and if roads and railways were carried through, these troops could be made available in any emergency; the very knowledge that such troops were within call would assist to keep the natives in subjection. India is no less favoured than England with respect to the possession of every description of minerals in the neighbourhood of Calcutta, in the districts of Burdwan, Bheerboom, and Rajmahal. We have abundance of coal nearly on the surface of the ground; also iron ore, lead, and limestone; we only want a protection for skill and capital to develop the resources of the country. There are at present a great many obstacles to the settlement of Englishmen; if those obstacles were removed, I have no doubt Englishmen would soon settle to a greater extent in India.

1979. Will you state what are the obstacles to the settlement of Englishmen in India?—The policy of the East India Company has always been opposed to the settlement of Englishmen in India; they commenced their government as a trading monopoly, and excluded Englishmen as far as possible. India has never been considered or administered as a British colony. It was only in 1833 that trading was partially opened, and not until 1837 could Englishmen purchase or hold land in their own names.

1980. That was under the Indian Act of 1837?—Yes.

1981. Using the power given them by the Legislative Act of 1833?—Yes, when the trading monopoly was partially done away with. At that time those most obnoxious Black Acts were introduced, which did more to prevent the settlement of Englishmen than any benefit to be expected from the opening of the trade. From agitation and opposition these Acts were delayed, but every few years they were brought forward again to harass and disturb the few English settlers in that country. At this present time there are fewer Englishmen settled in the interior of India than there were 20 years ago, English Government servants excepted. To induce Englishmen to settle in India, they require a reasonable protection of their personal rights and property, the same as Englishmen enjoy and are entitled to in any British colony. In India Englishmen have hitherto enjoyed the protection or privilege of being tried in all criminal cases before the Supreme Court by an English jury; but during the last 20 years, every few years some new Act has been brought forward to do away with that privilege, and to subject them to the jurisdiction of a native court, native judges, and a native jury, placing them upon the same level as the lowest natives of the country.

1982. Mr. *Willoughby.*] Are you alluding to laws actually passed, or to laws proposed?—I am alluding to the proposed Black Acts; a portion of the jury, by the proposed Black Acts, can be natives; by that Act a jury was not to exceed nine, nor to be less than three.

1983. *Chairman.*] Including natives?—Including natives. In that country, where the natives carry out their antagonistical feelings to the greatest extent, where corruption, bribery, and false evidence are the rule, how could a limited number of Europeans be expected to have any safety for their lives and property? You may as well propose to place the British inhabitants of Canada or Australia under the jurisdiction of the aborigines of those countries. The Hindoos and Mussulmans are such a litigious and vindictive race, that if Englishmen were subject to the native judges in criminal cases, those judges would use every means to degrade and dishonour them, and I think very few Englishmen would be found willing to risk their lives and property under such laws. I have heard many of them express that they would leave the country if these laws were passed. In the last Bill brought forward by the Legislative Council in Calcutta, it was proposed to exempt all government servants, even European soldiers and sailors, and people of the lowest situations, from the action and jurisdiction of the proposed native criminal courts and judges, which sufficiently shows their animus, partiality and opposition to English settlers.

1984. Do you refer to the allusion in Sir Arthur Buller's speech in the Legislative

lative Council?—He did not allude to that part of it, but he alluded to all the Government servants being exempted by these Black Acts.

1985. Sir *Erskine Perry.*] Are you sure that it is a fact that soldiers and sailors were to be exempted?—Soldiers and sailors are to be tried by court-martial.

1986. Mr. *Campbell.*] Practically that exempts them from the native tribunal?—Yes, they are to be tried by court-martial.

1987. Mr. *Willoughby.*] They are to be tried by military law?—Yes.

1988. *Chairman.*] They are not specially exempted by the Act to which you refer?—I think there is a clause to that effect.

1989. Will you go on with your statement?—The European community in India have also no mercantile or agricultural representation in the Legislative Council; at present the Legislative Council in Calcutta is entirely composed of Government servants; nearly every law brought forward by them is to strengthen the hands of Government, or to impose some new restriction upon the already over-restricted European settlers. I think it would be very advantageous if the Governor-general were instructed to select six non-official members from the mercantile and agricultural community. This plan is adopted in Ceylon and at Hong Kong, and I believe has worked well for the prosperity of those countries. I may mention that there are two judges of the Supreme Court who are members of the Council; but they are paid by the Government. I do not propose to interfere with the secret, financial or executive councils, but merely to have some non-official members in the Legislative Council.

1990. You mean you wish to secure the representation of the interests of the agricultural and commercial community?—Yes.

1991. Would you exclude natives of first-rate character and intelligence from some share in the Council?—No; if the Government thought proper, I do not think there would be any objection to have one or two natives of the upper classes.

1992. Will you proceed with your statement?—The inhabitants of India have no opportunity of giving their evidence before a Committee like this, where the wants and requirements of the country can be heard. They cannot give their evidence before the Legislative Council there. The sale laws and laws of land tenures are also very insufficient for the protection of property. As the natives are so dilatory and unwilling to pay what is due, it is quite proper to have very stringent regulations for the quarterly payment of Government rents. In Bengal, where the perpetual settlement is established, it is very beneficial to the land-owners for the improvement of their property. Many of the large estates are made over in putnees, or perpetual sub-tenures, for which an increased annual rent is paid; also a large sum as premium fee or purchase-money, which makes a very profitable settlement for the original holders; but some fraudulent proprietors, after they have received a large sum for those sub-tenures, allow their property to be sold for default of Government rents, and purchase it in the name of some of their relatives or friends. A Government sale for arrear of rents is considered to release the property of all the sub-tenures. As these sub-tenures are at an increased rent, and not injurious to the Government claim for rent, I think there should be a protection for them, and the property should be sold, subject to all *bonâ fide* sub-tenures and existing leases which were duly registered within a reasonable time of being granted. Great care and caution is also necessary to investigate fraudulent claims; when a property is sold, the relatives or dependents of former proprietors generally bring forward numerous false claims to former tenures, and spare no means to try to prove them, to the great injury of the new purchaser.

1993. You appear to me to consider that registration and preventive measures would be the best expedient for preventing those fraudulent acts on the part of the natives?—Yes.

1994. Measures preventive of fraud on the part of the law and the Government, rather than remedial?—It would prevent fraudulent acts to a very great extent; there is a registration at present, but it is not compulsory. A paper registered is of course considered more valid than one not registered.

1995. Would you make registration compulsory?—Yes, I would.

1996. Mr. *J. B. Smith.*] Supposing a putneedar took a perpetual lease of the land, and was not subject to be ejected in the way you state, do you suppose he would

Mr. *G. MacNair.*

6 May 1858.

would not be obliged to give a higher rent for his land?—He might; and it would be an inducement to do so, because there would be no chance of its being upset.

1997. Every putneedar that takes land of a zemindar is fully cognizant that he may be deprived of it in the manner you have just stated?—Yes, to a certain extent he is; and he takes it upon the good faith of its being a profitable zemindary, and that the zemindar will continue to pay the sudder rents.

1998. Therefore, does not he get it at a much lower rent than he otherwise would?—In Lower Bengal there is such a demand for these tenures, that you have to pay a higher rent.

1999. But does he get it at a lower rent or not?—No, not on that account.

2000. *Chairman.*] Will you proceed with your statement?—The exclusive system of the civil service is also very objectionable. Of late years so many of the more experienced and able gentlemen of that service have been taken away for new and advanced employment, and been absent from the country, that a great many mere youths, a few months from college, with little knowledge of the language, and with no experience or business habits, are placed in charge of large districts. It cannot be expected that they could have any control over their courts' servants or over the police, consequently the business is entirely in the hands of the native omlah, who soon know their power, and use it for their own advantage. I have known court omlahs, with the small salary of 10 to 12 rupees per month, accumulating large sums in a few years, and purchasing landed property and building pucca houses. There are no doubt many very able men in the service who take an interest in their work, and give general satisfaction; but those gentlemen get promotion, and are frequently removed from their districts just when they are getting acquainted with the people, and becoming useful magistrates. I think it would be preferable to give them advancement in these appointments, and retain them where their services would be most useful. The most able men are generally made collectors, as I suppose Government think it most important to collect the revenues. The inexperienced youths are made magistrates, and the higher judicial appointments are filled by people whose energies are expended, and who are anxious to take the earliest opportunity of retiring from the service, which they can do upon a handsome pension, after an actual service of 22 years. If these appointments were open to competition in India, many well-qualified people would be found able to fill them, and it would also be a great inducement for English settlers to qualify themselves for those appointments where they would get advancement from their own merits and exertions. At present the uncovenanted deputy magistrates and deputy collectors of experience and long standing get about the same allowance as the young civilians get when they receive their appointments. I think it would be very advantageous to put the covenanted and uncovenanted services upon the same footing as it is in this country, and open the civil service entirely. I think there is a great necessity of inquiring into the nature and number of public appointments in India, the salaries and emoluments attached to them, and the principles upon which the public service could be supplied from English settlers in India. In India the system of advance prevails to a great extent.

2001. Mr. *Willoughby.*] Do you mean the advance of funds?—Yes, to native cultivators. In India, where the system of advance prevails to such an extent, where the native cultivators are generally so poor, they cannot provide seed for their lands, or engage to deliver any produce, without previously obtaining a considerable advance, generally equal to the value of the produce, a good law of contract is much required for all classes, English and natives. Government found it necessary to have stringent laws of contract for their own opium advances; and if they would extend that law to all parties, Europeans and natives, it would save a great deal of litigation and cases of affrays. The present law of complaining before the civil courts is so expensive and tedious, it is in fact an encouragement to ill-disposed people to break their contracts; it is a very common thing for small natives who save or have a little money, to lend it or make advances to natives upon their crops; most of them are ruined from not being able to recover their advances, which is the sole cause why so very exorbitant rates are taken by native dealers. These high rates bear hard upon the poor cultivators, and is the principal cause of their poverty. It seems to be a popular proposition of Government to put all their subjects upon the same footing and under the same laws; but they claim to keep their own servants of every grade, from the highest to the lowest,

exempt

exempt from these laws, and also have different laws of contract for their own opium and salt advances.

2002. Sir *Erskine Perry.*] You do not disapprove of the general principle of having one system of laws for all the inhabitants of a country, do you?—I do not approve of putting us all under the Mussulman and Hindoo laws. The laws must be separate for the Hindoos and Mussulmans. I think Government have not at their disposal in India a sufficient amount of scientific and engineering skill for the proper prosecution of public works. Their officers are constantly called away to their military duties. I think some skilful English engineers, acquainted with the deepening of rivers and canals, and the making of roads and bridges, are much wanted. The police is also in a very neglected state; instead of being any protection for life or property, it is considered a curse to the population. Almost three-fourths of the crimes are suppressed, to prevent the oppression of a police investigation. Dacoitee is very bad, but the subsequent police inquiry is considered very much worse. The system of taking evidence is very corrupt. It is the general opinion of the native and European residents in the Mofussil that the administration of criminal justice is little better than a lottery; the best chances in which are with the criminal. This state of affairs has been admitted by all Indian ministrations for the last half century, but to this day nothing has been done to improve it.

2003. *Chairman.*] Do you consider that the evils you have just now stated act as impediments to European settlement in India?—Decidedly they do, I think.

2004. I gather from your evidence that you make two general statements; the one, that India has been too much governed by a species of hierarchy; and the other, that it ought to be governed more as an English colony?—I think so.

2005. What class of people do you consider the best suited to settle in India?—People of skill and capital who would assist to develop the resources of the country, also engineers and miners, and agriculturists as overseers.

2006. Skill itself is intellectual capital, is not it?—It is, but you require capital also.

2007. The skilful man and the capitalist might combine together?—Yes, the skilful man is capital, and he can generally get on in India by getting employment.

2008. Will you state what you know about the rivers, canals and roads in Lower Bengal?—I have paid some attention to the state of the rivers, and have passed frequently through them. The rivers Jellinghee and Mattahungah, that lead from the Ganges to Calcutta, are in a very neglected state; they are quite impassable for seven or eight months in the year for boats drawing from 12 to 15 inches of water.

2009. Are they the Nuddea rivers?—Yes; the other river, the Bugurruttie, is much more shut up. In going to Calcutta, in December, I have seen upwards of 1,000 boats stopped in one place, with immense up-country boats and rafts of timber quite blocked together, that could neither get up nor down. There is generally a police darogah, with some people from the superintendent of the rivers sent there, but their presence adds to the mischief; they extort and rob as much as possible; no boat can attempt to get through without paying these people; many of the boat people run away, and leave their boats, which get broken and robbed. I have frequently had my boat broken; large boats that cannot get through are left there for six months till the inundation rises. A considerable amount of tolls is collected from these rivers, and little or nothing is done to improve them. I think, if a skilful engineer was appointed, much might be done to straighten their courses and deepen them, which would be of immense advantage to the whole country, by allowing the produce of the Upper Provinces to proceed direct to Calcutta. From these rivers being shut up during the dry weather, all the valuable produce of the Upper Provinces, also the grain and firewood from the eastern districts, are obliged to go by the circuitous and dangerous route of the Sunderbunds, incurring a delay of 20 or 30 days, with great risk and expense of transport.

2010. What would be the time if a short line were made from Nuddea down the river?—It would be a saving of three or four weeks; if one of the rivers was kept open, it would be a great advantage. The approach to Calcutta, through the Sunderbunds, is through a narrow shallow channel, scarcely as broad as this room, and quite unfit to allow so many boats to pass through it. So much is the additional risk by this route, that it is nearly impossible to get boats insured;

Mr. *C. MacNair.*

6 May 1858.

eight per cent. is asked for insurance of hemp from Serajgunge to Calcutta, whereas the insurance from Calcutta to England is only two per cent. There is also a large amount of tolls collected from the canal, and I believe there is every facility to make a good canal there. With regard to the roads, I may state that, within the last two years, the Government granted some funds to make roads in some of the districts, and a little more attention has been paid to them, but the roads are principally made in the neighbourhood of the stations, or leading from one police station to another. From the materials of those roads they are generally quite impassable during the rainy season. There are no crossroads for the conveyance of produce, or for the benefit of the country generally. The transport of produce is so difficult and expensive, that much of the produce is stored in the interior for some months, till the inundation comes, when it is removed by boats. In June or July, when the inundation commences, you see thousands of boats collected at the different rivers, waiting to proceed through as soon as they are open. Indigo planters make roads to a very great extent; there is one large indigo concern in Jessore that has made 50 or 60 miles of roads within the last few years, with some little assistance from the ferry funds, but principally from voluntary contributions from ryots, and from private expense.

2011. Where settlers establish themselves, is there a tendency to improve the roads?—Very great. In our own concern we have made roads to a considerable extent.

2012. Mr. *J. B. Smith.*] Are those metal roads?—No; there is only one metal road, the great military road to Calcutta. In our own concern we have made about 20 miles of roads, entirely at private expense, with some assistance from the ryots; we wished to make other 10 miles of roads, to connect some leading roads to some large bazaars, but were prevented from doing so by the zemindar, who would not allow us to cut roads through his lands; sometimes the zemindars prevent our making roads.

2013. *Chairman.*] Ought not there to be some overruling authority on the part of the State, the same as in this country, with respect to railways?—There should be. I have known the magistrate come out and order it to be done. People perhaps object to having a tree cut down; but if you have a proper magistrate, he will order it to be done, if it is for the public advantage.

2014. Mr. *J. B. Smith.*] In such a case is the zemindar compensated for the land?—Not generally; generally they would not ask for compensation; it would benefit the property.

2015. *Chairman.*] Would not the Eastern Railway, projected from the Ganges to Calcutta, be advantageous for the carriage of produce?—I think it would be very advantageous, both for the carriage of the produce coming down the Ganges and for the produce coming from the eastern provinces of Mymunsing, Dacca, and Assam. That line has been surveyed two years ago, and has been sanctioned by Government, but not yet commenced. It would be very advantageous if it could be completed as early as possible. The distance is short, and there are no great engineering difficulties the length of the Ganges. If the Government would lay off the land, and allow the company to complete it, I believe it would be finished in two or three years. It is a short railway, about 120 or 130 miles long. It is called the Eastern Bengal Railway, which has been guaranteed by Government within the last six months.

2016. You have referred very much to the police; could you suggest any improvement in the state of the police at present?—As the magistrates are at present so distant from the police stations, they cannot exercise a proper control over them. I would recommend an extension of European superintendents, and the introduction of the English language.

2017. What are the principal products of Lower Bengal?—Indigo, sugar, silk, hemp, oil-seeds, some wheat, rice, and other small grain.

2018. Have those products been improved by European skill and superintendence?—Very much indeed; everything formerly produced by the natives was of a very poor quality, and inferior to that produced in other countries. Indigo, silk, sugar, and hemp have been brought to their present state of perfection by European settlers.

2019. Do natives sometimes employ Europeans to superintend their indigo factories and landed properties?—Nearly all natives who have extensive factories and landed properties, employ Europeans to superintend them; they find that their

their indigo produce is so much improved by European superintendence, that it fetches a much higher price and bears a better character. All natives know their own servants are dishonest, and cheat them to a great extent. I have heard an extensive zemindar, who had measured his property five times, say he never could depend upon a native measurement, and that unless he could hold one end of the measuring chain and his brother the other end, he never could depend upon its being correct. Natives in measuring lands have great opportunities of cheating; they themselves tell you they do not take employment for the small salaries they receive, but try to get as much as they can in other ways. I heard a police darogah say that he and all his native establishment were nearly in a state of starvation, because his district was so quiet and he could get nothing out of the people. All powerful natives generally oppress the poor and the weak, and encroach upon properties as much as possible.

2020. In your indigo concerns, do you generally purchase landed property?—We do; we generally purchase all the property that is available within the respective lines of our concerns.

2021. Why do you purchase the landed property?—To give us protection for our operations.

2022. You do not buy it for the value of the property, but for the protection it gives you?—Not for the value and the profit we make upon the property, but for the protection it gives us.

2023. You become a zemindar?—Yes, we do.

2024. And then you have greater protection in your property?—Yes; we can carry the work on without the ryots running away.

2025. You are on a level with the native zemindars?—We are.

2026. How does that give you protection?—The native zemindars oppress the people by collecting increased rents, or by perquisites for themselves; and the people run away and leave our work undone, and injure the work; but when we have the property in our own hands, we can prevent that oppression.

2027. In fact, you prefer being a landlord to being a lessee?—We do, because it is more settled.

2028. What description of land tenures do you hold?—We hold some estates or shares of estates under Government, paying the rent to the Collector, some putnees, or perpetual sub-tenures from zemindars, also izaras, or leases for stated periods. As zemindaries in Bengal are now so profitable, they are seldom sold. We are obliged to take putnees and izaras at a very enhanced rate, and give large sums as purchase-money, or in advance; and it is for these sub-tenures that we ask to be recognised and protected in a new sale law.

2029. Do proprietors of estates under the perpetual settlement collect much amount of rent in excess of the Government rent?—Some estates are very profitable, collecting 10 or 12 times the amount of Government rent; others less, collecting two or four times the amount of Government rent.

2030. Are estates frequently sold for arrears of Government rent?—Formerly they were more frequently sold; of late years they have increased in value, and are now seldom sold except when proprietors are involved in debt, and are unable to get assistance in time to pay the quarterly rents.

2031. When you take a putnee or perpetual lease from the zemindar, what amount is generally paid as premium fee or purchase-money?—We generally pay for a putnee three or four times the amount of the annual rents.

2032. In the event of an estate being sold by the Collector for arrears of Government rent, is this putnee or sub-tenure recognised by the present sale laws?—No, it is not recognised.

2033. You confirm the evidence of Mr. Freeman and Mr. Theobald on that point?—I do.

2034. Are the small tenants or ryots entitled to hold possession of their lands?—They are considered entitled to hold as long as they pay their rents.

2035. Is that observation generally true, or is it limited to particular tenants?—Upon new land it is not considered that they are entitled; but what you call a koot-cast ryot is entitled to have a sort of right to the land, but very few have any pottahs or leases.

2036. It is a customary right?—Yes; it should be a recognised right. Under Lord Cornwallis's settlement it was intended, I believe, that it should be a recognised right.

Mr. *G. MacNair.*

6 May 1858.

2037. Can the rents of those ryots be increased at the will of the proprietor?—The lands can be re-measured and assessed at the neerick of the pergunnah, that is, the rate of the pergunnah. They generally have lands in excess; if a man is charged for 20 begahs, he probably has 25.

2038. If the neerick makes the amount greater than before, of course the rent of the land is proportionately increased?—Yes.

2039. Do the zemindars of Bengal annually assess the different descriptions of crops?—Some of the smaller zemindars do so; but the more extensive zemindars generally fix the assessment according to the description of crops on the lands at the time of measurement.

2040. That is not an annual assessment?—Some of the very small ones do that occasionally, but generally it is not annual; it is generally fixed at the time of the measurement.

2041. At what rate do they assess the different descriptions of crops, when they do assess them?—From one rupee to one rupee eight annas per begah for grain crops; two rupees eight annas to three rupees for sugar-cane, mulberry, and tobacco; and two rupees eight annas to three rupees for tanks, gardens, and house steadings.

2042. What is the proportion of the Bengal begah to the acre?—About two-and-a-half begahs make an acre; it varies a little in the different pergunnahs.

2043. What do they charge for cotton?—About two rupees eight annas per begah.

2044. Does this system of assessing the rotation of crops by some zemindars, and charging higher rates for mulberry, sugar-cane, cotton, and tobacco, prevent the ryots from cultivating those crops?—It may sometimes, to a small extent; but if the crops are profitable, they will not be prevented.

2045. What is the extent of the indigo cultivated in Bengal, and what is the outlay?—About 4,000,000 of begahs are annually sown, and about 2,000,000 *l.* is the annual outlay; about 5,000,000 *l.* or 6,000,000 *l.* is the estimated value of the blocks of the indigo concerns, and about 2,000,000 *l.* are annually expended for outlay upon silk.

2046. Of course this great circulation of money created by the cultivation must assist in improving the condition of the ryots?—It does to a very great extent; it enables the ryots to pay their rent in coin, and not to be imposed upon by paying it in grain to any extent the zemindar may demand.

2047. Has the cultivation of the waste lands and the improvement in the condition of the natives in Bengal extended within your experience?—Very much indeed. Twenty years ago there was a very great portion of waste land in Jessore and Kishnagur, which abounded in wild buffaloes and hogs; those lands have all been gradually brought into cultivation, and at present there is scarcely any waste land in the districts. The condition and prosperity of the natives have been very much improved from the cultivation of more lands and the circulation of so much capital; they are better enabled to pay their rents, they have better houses and better cattle, and are better clothed than formerly.

2048. Is Jessore a district much peopled by European settlers?—It is, in the northern part especially; it is north-east of Calcutta.

2049. Of course the wages of the natives have increased in consequence?—They have.

2050. Do the native zemindars reside upon their properties, and do anything to improve their estates?—Very few of the large zemindars reside much of their time upon their estates; they reside principally in Calcutta, or the neighbourhood, to be free from the annoyance and extortion of the courts and police; the estates are consequently much left to the management of their servants, who extort as much as they can in rents and perquisites for themselves, and do little for the improvement of the property.

2051. Then the native zemindar class is an absentee class almost?—To a great extent; they have houses on their estates, and may come for a short time to them at different times, but they principally reside in the neighbourhood of Calcutta.

2052. What description of lands is mostly used for the cultivation of indigo?—New alluvial soils and churs formed on the banks of the large rivers, which are low, and the plant requires to be cut early before the inundation comes down; there is afterwards such a current of the water upon these lands, that they could not be used for rice, or any other crops.

2053. You have stated that the population of the English settlers in Bengal has not increased?—No it has not, during my experience.

2054. What is the reason that so few Englishmen have settled in those districts of late years?—I believe principally from the unsettled state of the laws, and the want of proper protection for life and property.

2055. Has the increase of English settlers, in the interior of Lower Bengal, been at all proportioned to the increase of English settlers in Calcutta?—No; there has been a great increase in Calcutta.

2056. Do you think that the introduction of the English language in the courts of justice would be a benefit to India?—I think it would be of the very greatest benefit; it would in a great measure put a stop to false evidence, bribery, and corruption; the natives learn the English language very quickly; if it was ordered to be introduced I think they would be qualified, in two or three years, to conduct the court business in the English language.

2057. Do you think it is better for the judge to use the English language through an interpreter, employing his own common sense, than indirectly and often erroneously, through the omlah, in a foreign dialect?—I think it is; if you had a good interpreter you would arrive more at the truth through that than doing it in the present way.

2058. It would bring the facts of the case more home to his mind in plain English, than having to go through a course of putting his ideas into a foreign and only imperfectly understood language?—It would.

2059. In what situations under Government do you think more Europeans could be employed than are employed now?—In all the public offices, such as the Treasury, the Home and Foreign Departments, the Military, Public Works, Salt and Opium, Stamp Office, Mint, Post Office, &c.; there is at present a very large establishment of native writers in these departments; some of them receiving from 100 *l.* to 300 *l.* per annum, and even more, who do very little work; they are nearly all mere machines, who copy well, but cannot draught or write a letter of any consequence; for the present pay of these native establishments I should say a much more efficient European establishment could be kept, which would be a good training school for higher appointments to get on from their own merits and exertions.

2060. Would the natives feel much objection to learning the English language?—No, they are very anxious to learn the English language, and they pick it up very much.

2061. How would it answer to commute the payment of the land revenue, and make a freehold sale of the land?—It might answer very well, and a large sum be raised if the natives could be induced to take it at a fair valuation, but they generally look upon these new schemes with great distrust. I do not think it would be taken up so soon after the mutiny. The natives lost much confidence in the Company's Government from the financial scheme of 1854, reducing the 5 per cent. loan to 4 per cent., and shortly after opening a new loan at 5 per cent., thereby reducing the value of every man's loan 20 per cent.; that measure created much distrust, which is still fresh in their memories; if the country were settled in the Queen's Government, probably they might take up their estates in freehold. The scheme for surveying the country has also created a considerable distrust; the natives were astonished that the Government would go to such an expense measuring and surveying the country; they thought they were going to do away with the perpetual settlement, and settle the land anew, they have so much distrust of new things.

2062. Was that a proof of their own ignorance?—No, they are not ignorant, it is distrust, and they distrust these new things; they cannot make out the object of what they are for at the present time. The Resumption Laws, too, gave them a great deal of distrust, some 20 years ago, when the La Khiraj lands were resumed. The Rajah of Burdwan appealed his resumption case to the Privy Council here, and his appeal was confirmed, and the resumption upset, and his lands were released; but all the rest of the poor natives who could not afford an appeal are still taxed for those lands. If they could join together, and appeal to this country, they would all be released.

2063. Do you refer to the lands which are free from Government rent?—Yes, the La Khiraj lands.

2064. You having been so long as 20 years resident in India, will you be good enough to state what sort of health you have enjoyed during that time?—Very good.

Mr. *G. MacNair.*

6 May 1858.

2065. What have you to say about the healthiness of Europeans in general?—If the European settlers are moderate, and take sufficient exercise, I think they enjoy very good health; everything depends upon that. The state of living is better understood than it was formerly.

2066. Have the English cultivators and proprietors taken any pains in the establishment of schools in that part of the country?—They have; I have known one or two have schools in their own villages. There are schools at Jessore and Pubna, and at different places, and the planters all subscribe to them. In one case I gave a Government school free rooms, and I subscribe to two or three schools.

2067. Do you think that if English settlement had its proper scope, there would be a greater tendency to improve the education of the natives on the part of the settlers?—There would.

2068. Do you think that that tendency is displaying itself already, and would in that case be more likely to be further extended?—Yes, a great deal more has been done for education in the last eight or ten years.

2069. Mr. *Mangles.*] Do you mean by the settlers?—Yes, and by the Government.

2070. Mr. *De Vere.*] You spoke of placing in the hands of Europeans many offices which are now held by natives; do the natives undergo a special education to fit them for those offices?—No, they do not; they undergo an examination, but they have no special education that I am aware of.

2071. Do not you think that depriving them of those offices would have a deteriorating effect upon their education generally, and that there would be less encouragement held out to them to educate themselves than now?—It might be so to a certain extent, but not very much.

2072. To whatever extent it would operate, it would tend to keep back the educational progress of the native population of the country?—No, I do not think it would.

2073. Mr. *Danby Seymour.*] Are you aware that the Government give those places now to those who have distinguished themselves in the schools?—Some appointments are given to them.

2074. Do not you think it is only fair, as far as you can, to employ the natives of the country in the government of their own country?—If you could employ them beneficially, and you could put dependence upon them, it would be so, but if you cannot get trustworthy people it is not even for the benefit of their own native class to employ them.

2075. Do not you think that the planters entertain a very extreme idea of the notion of dishonesty of the natives?—I think we have a just one; the native dishonesty is proverbial.

2076. Do not you think that the extreme corruption is a disputed point?—No, they admit it themselves; their whole idea is to cheat; they do not take an employment for the small salary they get; it is to cheat, and to get what they can.

2077. How do you account for it that when 95 per cent. of all cases are tried by native judges there are so few reversals of their verdicts by the zillah judges immediately above them?—That is in civil cases; there are a great many reversals.

2078. The number of reversals is well known, is it not?—It is reported every year.

2079. Are you aware that the high authorities in India are not of your opinion as to the dishonesty of the natives, and that there are reports in favour of the way in which the admission of them to the higher offices has worked?—I do not think gentlemen acquainted with them are in favour of them. I mean of the omlah class.

2080. Would you call the Governor of Bengal acquainted with them?—Yes; he has great experience about them, and he has stated his opinion of the police very fully, and very unfavourably of the natives.

2081. He has also stated his opinion, has not he, of the way in which their promotion to the judicial offices has worked?—Yes.

2082. A favourable opinion, I believe?—I am not aware.

2083. Are you aware that he wished to put a native into office as Sudder judge, two or three years ago?—Yes.

2084. Does not that show that he had a good opinion of the native judges?—In one or two cases they may be better.

2085. A man

2085. A man may be corrupt in civil cases as well as criminal, may not he?—He may.

2086. Are you aware that Sir George Clerk was strongly in favour of promoting natives even to collectorships?—No.

2087. And Mr. Mountstuart Elphinstone also, I believe?—That referred to the natives of Bombay; the natives there are different from the Bengalese; the Bengalese are the worst set in India.

2088. You say that there ought to be an inquiry into public employments in India; are you aware that an inquiry is going on by Mr. Ricketts at present?—I have seen some notice of it.

2089. Are you aware that he has made 49 reports already on the state of every public employment in India, and has visited every part of India for that purpose during the last two years?—I do not know how many reports he has made.

2090. Have you seen an account of it in the papers?—Yes; some part of it in the public papers I have seen.

2091. You have not seen an account of his inquiry?—Not a full report of it; but I have seen some notice of it.

2092. You said that you thought the servants of the Government should be found among the European settlers?—Yes, as much as possible. I think it would be a great inducement for Europeans to go to India to qualify themselves for those appointments.

2093. Do you remember why the covenanted service was established?—It was established at a very early time, I suppose, to send a better class of people to the country at that time.

2094. Was not it established because it was thought that the power was too great to be vested in the Governor-general to choose whomsoever he pleased in India to put into the offices?—I do not know.

2095. Do not you think that it would be putting a very great power into the hands of the Governor-general to allow him to choose at his own discretion from the people of the country?—No, so long as there is a free press to check those things.

2096. With regard to advances, almost all produce is made from advances, is not it?—It is to a great extent; you cannot get a carpenter or blacksmith to do anything in that country without advances.

2097. Are the accounts for those advances ever made up?—Yes, if the work is monthly; they are made up monthly, or as soon as possible.

2098. Is that the case with advances for indigo?—Yes.

2099. There is not a running account?—No.

2100. Is that the general practice?—It is the general practice among European planters; and if there is anything to receive, it is willingly paid before the Europeans, to prevent the natives cheating them.

2101. The cases in which you want a law of contracts are principally where you engage at a certain price with the ryot, and the ryot finds a better customer before the time for the delivery of the goods arrives, and sells to that other customer?—Yes; it shows their deception. If they can get a better price when the thing comes forward, they will dispose of it in that way, if they can: I have known many natives ruined in that way.

2102. Do you not expect a very high interest on the money you advance?—The natives take a very high rate.

2103. Do not the European planters take a very high rate?—No; there is no interest charged in indigo factory accounts.

2104. Out of the price of the goods the native ryot gets but a very small portion?—No; a fair price.

2105. What do you call a fair price?—As much as that article would be worth to himself, or as much as other people would give.

2106. If there was a law for advances as summary as the law of the Company with regard to opium, would not the ryots be placed very much in the hands of the planters?—No, I do not think they would; it would make them more correct if they knew that there was a strict law.

2107. Do you think that if they were here, and could give their own account, they would wish as summary a law to be general as is now the particular law with regard to opium?—No, they would not; nor would the opium people wish it either, if they could avoid it.

2108. You said that there were not engineers enough to do the civil engineering work

Mr. *G. MacNair.*

6 May 1858.

work in Bengal; do you think that it would be a good thing to have a corps of civil engineers employed by the Government?—I think it would.

2109. Are you aware that some have been sent out?—Yes, a Mr. Sims, and one or two others.

2110. That was for a railway, was not it?—Yes; and he surveyed some of the rivers also.

2111. Do not you think that it would be a good thing to have engineers whose sole attention should be directed to the rivers?—Yes, a very great advantage indeed, because those artillery and military officers in India are not acquainted with the best improvements in those things.

2112. Civil engineering is entirely a different branch from military engineering?—Yes.

2113. And you think the time has arrived when the two should be divided?—Yes.

2114. Would it not be cheaper for the Government to engage a civil engineer for five years, or some specified time, and then take somebody else if he did not turn out well?—No doubt; and they would get more work done.

2115. You say you think that the introduction of the English language would prevent corruption in the courts?—To a great extent it would.

2116. Do not you think some amendment is required in the law of procedure; that written evidence should be done away with?—Yes, it is too tedious; it should be more oral.

2117. Are you aware that the plan of taking oral evidence has been tried in some places, Chittagong particularly?—No.

2118. You are not aware that it has been found to answer there, and that the Governor of Bengal recommended it to be tried in other parts?—No.

2119. Do you think there could be any plan adopted for improving the roads of Bengal, in which the zemindars and planters, and the inhabitants and the villagers would subscribe, if the Government gave a certain sum?—A small assessment might be laid on in all the villages, or upon the zemindars.

2120. And they would be glad to pay it?—They would willingly do so for improved roads; it is done in some cases.

2121. Are you acquainted with a minute of Mr. Halliday's upon that subject, where he says that at once there should be 3,000 miles of road made in Bengal?—Yes.

2122. Do you think any plan of that sort could be generally laid down, and carried out in 10 year's time?—I think it could.

2123. Were not the zemindars bound to keep up banks and make roads, to a certain extent, at the time of the perpetual settlement?—Some embankments they are bound to keep up.

2124. You say that sometimes an active magistrate comes out and obliges a zemindar to allow the roads to be made?—He does; I have seen it done.

2125. If he had the power to make any zemindar make any road, such power would be liable to be misused and would result in oppression?—It might be left to arbitration, and settled amicably.

2126. You said that the darogah, in a case where there was little for the police to do, could not live on his pay; do not you think the pay generally is very low for that class of servants?—It has been increased for the last three or four years, but it makes no improvement; they are as bad as ever.

2127. Is the pay now sufficient?—For that class of people it is.

2128. Do you know whether the civil servants of the company were formerly underpaid?—I believe in the early part of the Company's lease they were underpaid, but they are not underpaid at present.

2129. Do not you think it would be fair to try what paying the natives fairly would do to render them more honest?—There is no objection to it; it is tried in the civil appointments to a certain extent.

2130. Are you aware whether the natives have been sufficiently tried?—The pay of sudder ameens and moonsiffs has been much increased.

2131. Do you think you could bring any sufficient case of corruption against a sudder ameen or a principal sudder smeen?—No. I have heard of a great many of them, if they are not corrupt themselves; they have always some cousin or brother ready to take to any amount.

2132. A great deal of that is owing to the mode of procedure, which encourages false swearing as much as possible?—There is a great facility for it.

2133. Owing to the great technicalities of the system in the Regulation Provinces, would you be in favour of having the Punjaub system introduced into Lower Bengal?—I think some part of that system would be advantageous.

2134. Would you like the summary system that at present prevails in the Punjaub; would it be suited to the lower provinces of Bengal?—I do not think it would answer so well in Lower Bengal.

2135. Would you be in favour of a division of districts and the accumulation of all powers in the same individual to make the magistrate collector and judge?—No, I would not.

2136. Do you think the magistrate and collector should be the same individual?—No; I should have the magistrate separate, and I would have an efficient officer for a magistrate. You might have younger assistants for collectors, but I would have an efficient man for a magistrate.

2137. And you would not have the two offices united in the same person?—No; I would have separate offices.

2138. And you would keep the present system in Bengal, and improve it rather than depart from it?—Yes.

2139. You are aware that the introduction of the old system of the union of magistrate and collector in the same person is much mooted now?—Yes.

2140. When did estates begin to increase in value in Bengal; is it within the last few years, or 10 or 15 years?—From the last 10 to 20 years.

2141. Do you think that of late they have gone on increasing up to the present time?—Yes, they are higher at present than they have been formerly.

2142. Has that increase been greater in the last four or five years than previously?—It has.

2143. And you do not think it has reached its climax yet?—Yes; I think it is very high at present.

2144. How many years' purchase is given for land?—It is taken in leases; it is not bought as freehold land.

2145. Every piece of land you buy must be calculated to yield a certain rent; if you took a lease for 30 years of an estate at Jessore at 100*l.* a year, what would you pay for it?—It would depend upon what you could collect from it.

2146. Bringing in an average calculated at 100*l.* a year?—We generally give the collectable rent in that respect.

2147. What is the rate of wages generally for a day-labourer?—A day-labourer receives from two rupees eight annas a month to from four to five rupees; it depends upon the description of labourer.

2148. An able-bodied labourer, for instance, on railway works?—Four, five, and six rupees a month, an able-bodied man.

2149. It is by the day?—No, not by the day, but by the month.

2150. Is the work performed by contract generally?—Yes; generally it is; people are paid for their labour by contract work.

2151. It is generally on the system of advances, and paying the work at certain rates?—Yes; you give them probably two rupees in advance; they come to you and work for a month, and at the end of that time the account is squared.

2152. Are the accounts for indigo large or small?—It depends upon how much they can take; they come in for their own contracts, and propose how much they can take.

2153. You say the subject of the survey was discussed when it was proposed?—Yes.

2154. Do not you think that a good survey of Bengal is a very necessary thing?—Yes, and a great advantage, if properly done.

2155. Will not it be an advantage to all parties?—Yes; it will put a stop to much litigation about the boundaries of property.

2156. Was not it well done?—There was a little too much power given to the natives to decide the boundaries at the time. You want European superintendence.

2157. Is not European superintendence enormously expensive?—It is a little so.

2158. Do you think that in all those great Government works you could employ nothing but Europeans?—No; you could have Europeans to superintend the natives to a greater extent, and have efficient people to see the work done;

Mr. *G. MacNair.*

6 May 1858.

a great many Europeans leave the natives to do the work, and do not look to the work at all.

2159. That has not been the case with the survey, has it?—Frequently.

2160. Are there not uncovenanted European servants at the head of each party?—Not at the head of all the parties; on some there are.

2161. Are you acquainted with what was done on the subject of resumptions?—Yes.

2162. What was your opinion about the conduct of the Government on the subject of resumptions?—It was considered very unjust.

2163. Why was it considered very unjust?—Because the lands had been granted in perpetuity before.

2164. Do you think a law of limitation would be useful; that where a man had had possession of property for a certain number of years, his title should be unquestioned?—It depends upon the arrangement which he makes for the property, if it is a fair right.

2165. I mean like the Statute of Limitations in this country; if a man has held property for 20 years in this country, and no man has questioned his right, the property is his, and no man can question it; do you think that would be a good thing in India?—Yes, it would induce the people to improve the property.

2166. Suppose the Government has left you in possession of your land for 30 years, without questioning your right to it; you think it an injustice for the Government to step in?—I do indeed.

2167. That is what I mean, that there should be a certain time, after which, supposing a party had rights, he should not be able to avail himself of them?—Yes.

2168. Mr. *Mangles.*] Was the question of the resumptions purely a matter of property; was not it also a question of taxation; was not it a question whether the holders of those lands should be exempted in perpetuity from bearing any share of the public burthens, and contributing to the public expenses?—I suppose Government did it with a view to increase the revenue.

2169. Do you think it equitable that in a country where, like India, almost the whole of the revenue is derived from the land, any class of persons should be exempt in perpetuity from bearing any portion of the public burthens?—I think it unjust that they should be exempt; except in cases where it was granted for particular purposes.

2170. Was not the claim of those men as against the Government, that the lands which they held should be continued exempt for ever from paying any revenue to the Government?—It was; but those lands were given by the native princes for sacred and religious purposes, and other particular purposes, and they had to perform some of those purposes, and if the lands were given in good faith by the former proprietors of the country, the gift should have been upheld.

2171. To any extent that they might exist?—If they could produce documents given in good faith.

2172. Are you aware that by the law if they were really given for religious purposes, they are still applied to those religious purposes, and cannot be resumed?—In some cases.

2173. Any religious endowments?—No; I have heard of a number that have been resumed.

2174. I mean where the revenues are *bonâ fide* applied for those purposes?—They are not often applied for those purposes.

2175. Do you think it reasonable then that any class of persons should be exempt for ever from bearing any part of the public burthens?—No, except in particular cases.

2176. You said those resumptions are very unjust, and now you admit the contrary?—No; they are unjust when given for specific purposes.

2177. Do not you think that if they were given for the maintenance of a temple or mosque, and the man took the money and applied it to private purposes, it would be unjust?—Yes; but if a man gets a piece of ground for those purposes you cannot say how much he uses for the particular purpose, and how much he appropriates to himself.

2178. Are you aware of the nature of the grant which the Rajah of Burdwan appealed home?—No.

2179. Are you aware that it was land to an enormous extent which had been granted by a former Rajah of Burdwan to his own son for the colourable purpose of

of sacred ceremonies?—I believe it had been granted for the purpose of sacred ceremonies.

2180. Do you believe that it was applied to those sacred ceremonies?—I am not aware how it was applied.

2181. Do you think it just that that burden should *pro tanto* be thrown upon the general community, and that the Rajah of Burdwan, who has an enormous income from other sources, should, besides that, enjoy this land under the pretext that it was granted to be applied to sacred ceremonies?—It was given for that purpose by the owners of the soil at the time; it was given by the rulers of the country at the time.

2182. No; it was given by the Rajah of Burdwan to his own son for that purpose?—He gave it as his own property.

2183. Was not his own property liable to the Government revenue?—His general property is liable to the Government revenue, but whether that portion is or not I cannot say.

2184. Is it not the general present law of India that the whole of the land, as a general rule, should bear the burden of the public expenses?—The land-tax supports the Government expenses; but there was always in India a portion of the land given rent-free to different people, to different supporters and retainers of native rajahs.

2185. Did not the man who succeeded the next rajah, as a matter of course, resume all those grants, and grant new ones to his own people?—No, they have not been resumed much by the rajahs; they may have been forcibly in some places, but they have not been generally resumed by natives.

2186. Were they ever granted for longer than the life of the ruler who made the grant?—The people say they were granted for perpetuity, and some people produce old writings upon copper and brass to that effect.

2187. Supposing in this country that the Duke of Northumberland or the Duke of Norfolk were to produce a grant from King Stephen that neither he nor any of his descendants should pay taxes, do you suppose that people would think that equitable?—Yes; it should have been inquired into at a former period.

2188. You think it is equitable?—Yes; if you were to disturb all former grants, no grants would be safe.

2189. In India the land has always been held liable to support the Government?—Yes; but in all countries there are some exceptions.

2190. And yet any breach of that grant which you speak of you think would be an injustice?—Yes, the people look upon it as unjust.

2191. Does anybody besides the holders?—Yes, it was the general voice of the country that it was unjust, because it was given to a great many poor Brahmins who had not been brought up to business, and had to support themselves upon it.

2192. Were those large estates given to poor Brahmins?—Principally, but some portions were given to Mussulmans also.

2193. Are you not aware that grants under 100 begahs were not subject to being inquired into?—I think it was 50 begahs.

2194. Are you aware that the Government could not meddle with grants under 100 begahs?—There were some small ones that were resumed earlier.

2195. Supposing all those rent-free grants had been left as they originally were, and supposing the case that the people of India became really their own rulers, and were intelligent rulers, do you suppose that the people of India themselves would acquiesce in a small part of their own body being exempt in perpetuity from taxation?—From what I have seen of the natives, they would recognise those rent-free lands to the Brahmins, because they thought it was a sort of religious purpose.

2196. What proportion of those grants are made to Brahmins for religious purposes; do not you know that there are large zemindaries to the extent of thousands of begahs that were held by men who did not pretend to be Brahmins or anything of the sort?—That was not so in our part of the country.

2197. Were not those small grants to Brahmins exempt by the law from being meddled with?—Yes; I believe under 50 begahs.

2198. Then where was the hardship?—They resumed all the larger grants.

2199. They could not be resumed under 100 begahs?—I think these were the instructions to the special Commissioners who were appointed to inquire into these grants.

2200. You say you heard the evidence of Mr. Freeman?—I did.

Mr. *G. MacNair.*

6 May 1858.

2201. You said that you generally agreed with him about the magistracy and the police, and the administration of justice?—Yes.

2202. Do you agree with him as to the ignorance of the covenanted servants of the native languages?—I do.

2203. Did you hear the question that I asked Mr. Freeman as to the examinations, to which they are now and have been subject for some years, namely, the two examinations that take place after they are out of College, before they can take any step?—I did.

2204. Are you aware of that examination?—I have heard of that examination.

2205. Do you know that it exists?—I believe it does.

2206. Are you not sure that it does?—I suppose so. I never was at an examination myself, but I have heard so.

2207. I asked Mr. Freeman this question, and I ask you the same. If you were told that one of the tests of knowledge of language is to show the examinee a report from a darogah, or native tehsildar, or native ameen, a report written in Bengalee if in Bengal, and Hindostanee if in Bahar, which he has never seen before, and he is required then and there, before the examiners, to read that report, and then and there to sit down and write with his own hand, in the native language, an answer to that report, should not you think the possession of that power argued a very great and sufficient knowledge of the native language?—It would if it could be properly done. I have seldom seen a magistrate that could do so; the system of writing the native languages is so very difficult for a magistrate to read, when he is not acquainted with the handwriting.

2208. Would it imply a sufficient knowledge of the languages that a man could read it, and was competent to write an answer in his own hand in the native language?—A man might read the printed language, but very few read the written language in the court.

2209. When he sees a report written by a darogah, and reads it, and writes his answer to it, does that imply a sufficient knowledge of the language?—If he is able to do it, it does; very few magistrates can do it.

2210. You say that the policy of the East India Company has always been opposed to the settlement of Europeans; do you mean since 1833?—I refer more to their early policy.

2211. Do not you think that if the early policy of the Government had not been opposed to the acquisition of lands by Europeans in the early period of our rule in India there would have been great danger that almost all the valuable estates would have passed into the hands of Englishmen?—I think it would have been an advantage to the country; it would have been in a greater state of civilisation. I do not think there would have been any danger from that.

2212. Do not you think that there would be great danger that all the estates would have passed into their hands?—I think that that would be an advantage both for Government and security of the country.

2213. Since that has happened, you say that Englishmen can hold lands in their own names?—Yes.

2214. And yet you say that fewer Englishmen are settled in India now than was the case 20 years ago?—There are, in our neighbourhood at least.

2215. How has it happened that the greater facilities and privileges which have been granted to Englishmen, have only resulted in there being fewer Englishmen to take advantage of them?—Those advantages have been much overruled by the proposed Black Acts. The people in Calcutta who are free from the laws of the interior, object to settling in the interior to be subject to those Black Acts.

2216. You say that those Black Acts interfere with the privileges of Englishmen, and place them on the same level with the lowest natives of the country?—If they were passed they would have that effect.

2217. Is not the great notion of the English law that all men are equal before the law?—If that is the object, the Government should give good laws, and efficient people to administer them.

2218. If there were efficient people to administer the laws, you would not think it derogatory to be placed on the same level with the lowest natives of the country?—I do not admit that, unless there were good English law, and trained lawyers.

2219. Is there no law in the world that is good but English law?—There may be.

2220. Are you not aware that there are great objections to the administration of the English law, not only in India, but in England, on account of its great expense?—I am not aware of that.

2221. Have you never heard of an objection against the Court of Chancery?—Yes, but I have never been in that court.

2222. Are the natives of India very well satisfied with the Supreme Court?—Yes, they have more confidence in the European courts; they think they get justice in them.

2223. Have you never heard that many very wealthy families in Calcutta have been reduced to poverty by the operation of the Supreme Court?—That is owing to the litigiousness of the different branches of the families quarrelling for a division of the property.

2224. Is not law a very expensive amusement in Calcutta?—It is.

2225. Do you know what a bobolea is?—No.

2226. Did you never hear of a bobolea?—No, I did not.

2227. Did you never hear that a bobolea is the name of the jackals which the attornies of Calcutta used to maintain to find suitors?—No, I have not heard that word used in my time.

2228. Have you never heard of the tricks that have been played to bring the natives into Calcutta, and render them amenable to the Supreme Court?—No.

2229. I mean by inducing them to sleep one night in Calcutta?—No, I have not heard much of those tricks; I have heard them mentioned in society, but I have not seen them practised.

2230. And when the poor man awoke in the morning he was informed that he had become amenable to the Supreme Court?—That shows the imperfection of the Mofussil courts, because they wanted to bring the man under the jurisdiction of the Supreme Court.

2231. The man himself not being willing?—He could get better justice from the Supreme Court, and I suppose that was the object of the claimant; if you get a decree in the Mofussil courts it is more trouble to you than if you were without it.

2232. Is there not the same difficulty in executing the decrees of the Supreme Court in the Mofussil, as there is when decrees are given by the country courts?—Sometimes, because the Mofussil magistrates have a great aversion to the orders of the Supreme Court, and they sometimes object to them, and will not fulfil them.

2233. Do not the same difficulties arise in the one case as in the other, owing to the tricks and chicanery of the natives themselves, whose property is at stake?—Not so much.

2234. Does a defendant like better to be ousted by the country court?—No, I suppose he is not partial to be ousted in any court.

2235. Do not they resort to resistance and intrigue?—Yes, they have a great deal of intrigue and resistance; as much as possible.

2236. Is it not as much with a decree of the Supreme Court, as with a decree of the zillah court?—It is not so troublesome.

2237. You say that it was proposed by the Criminal Black Act to exempt all the Company's officers from the jurisdiction of that law, and that Sir Arthur Buller strongly objected to it?—Yes, he thought that the Company's servants should be under the Black Acts as well as the English settlers.

2238. Are you aware who proposed that clause?—No, I never heard.

2239. You think that the object was to favour the servants of the Government?—I do; it was generally thought so.

2240. What should you say if you were informed that that particular clause had been proposed by Sir Lawrence Peel, who was a judge of the Supreme Court, and not a servant of the Government?—I should think that the clause was unjust.

2241. It could not have been introduced through favour?—I do not know who proposed it.

2242. You said that the Legislative Council was composed entirely of Government servants, and that even the judges of the Supreme Court are Government servants?—They are paid by the Government, and therefore I look upon them in that light.

2243. Are they appointed by the local Government or by the Government of the East India Company?—I suppose they are appointed by the Court of Directors.

Mr. G. MacNair.

6 May 1858.

2244. That is not the case. Are you aware that their payment is by Act of Parliament?—I believe it is; but still they are paid by Government.

2245. Can they be removed except upon *malfeasance*?—No.

2246. And their salaries are fixed by Act of Parliament?—They are.

2247. Then how are they at all dependent upon the Company's Government?—They get their pay from the Company's Government.

2248. Does that render a man dependent upon the Government?—I do not say that they are dependent; I look upon them as Government servants because they are paid by the Government.

2249. Your objection is, not that a man is called a Government servant, but because being a Government servant he is dependent upon that Government, and likely to take the part of that Government and to be partial; do you suppose that the judges of the Supreme Court are in that predicament?—No, they are less partial than the other members of the Council, and seem to act more independently.

2250. Are they partial?—No, they have shown less wish to be partial than the other members.

2251. Do you think that the other members of the council are partial?—They have shown a great partiality in wishing to pass these Acts, to exempt their own servants.

2252. You say that no evidence can be given before the Legislative Council; are they not open to any representation by petition or memorial, or otherwise?—Last year, the inhabitants of Calcutta petitioned to be heard before the Legislative Council, and they were refused.

2253. I asked you whether they could not make themselves heard by memorial or petition?—I believe they can do so by memorial or petition.

2254. Cannot they state in a memorial all that they can state *vivâ voce*?—I am not quite aware of the regulations.

2255. You spoke of them very confidently?—I said, that in that instance they had not an opportunity of giving their verbal evidence in the same way as I am giving evidence before this Committee.

2256. You think that the exclusive system of the civil service is very objectionable; do you not think that opening appointments to all classes would be liable to great abuses?—No, I think that it would be very advantageous.

2257. Do you think that it would not be liable to this abuse, that grown men would go out from England who were friends of the Governor-general, or the friends of his friends in England, or his political supporters, and would get those appointments in India?—No, I do not think that it would be liable to so much abuse in that way as it is at present.

2258. Is it liable to any abuse when men go out as boys, and make the service the business of their lives, being obliged to remain in India?—They go out with their appointment, and they know that they are provided for, and there is the want of a wish to get on by their own abilities. Some of them are unfit for their appointments; but they are appointed and they are never removed, and the appointments are not open to general competition. There are very many people in the uncovenanted civil service, who are fit for those appointments, and can get no advancement beyond their service.

2259. You think that absolute virtue would always be shown, and that no retainers of the Government in England would be sent out to India?—It might be the case.

2260. Are you at all aware what class of people the Government officers have been in our colonies, who are appointed under the system which you advocate?—I should say that formerly they might have been not so good, but latterly good officers have been appointed in the colonies.

2261. Are the colonial servants of the Government equal as a body to the Indian servants of the Government?—I should say that they are quite.

2262. You said that the Government had not sufficient engineers for scientific purposes in India?—I do not think that they have.

2263. And you said that one or two had been sent out lately?—Yes.

2264. Are you aware of the number that have been sent out?—No. I have only heard of one or two being employed in those particular branches.

2265. Might there have been 10, or 20, or 50?—I have not heard of so many.

2266. You said that the military engineers were not competent men?—No, they are

are not trained in that department; they are not competent for the deepening of rivers and looking after that department. They may be very able officers in their own way.

2267. Are you not aware that the employment of engineers in India in purely military works is very limited indeed?—No; a great many are taken for engineering works, for roads and embankments, and different things.

2268. You said that those military men should be confined to their own department, and that civil engineers should be employed in civil works?—Yes; I mean the general works of the country.

2269. Are not embankments and roads works of that description?—Yes, those are generally under military engineers at present.

2270. Are you aware that the really military works in India are very small indeed, and occupy a very small part of the attention of the engineering officers?—I am not aware of that.

2271. Are you aware that there are very few fortresses on the Bengal side?—There are not many,

2272. Are there any but Fort William?—No, not in Lower Bengal.

2273. What military employment is there for a military engineer?—To instruct his men in his own corps.

2274. There is no corps except the sappers and miners?—No.

2275. Is there military employment in Bengal for a military engineer?—I am not acquainted with that subject.

2276. Then why cannot the military engineers sufficiently attend to the civil engineering?—Because they have not been brought up to the civil engineering department, and they have not a knowledge of the newest improvements with respect to widening and deepening rivers, making bridges, &c.

2277. Have they not been instructed at Addiscombe and Chatham in all those matters?—To a certain extent, but not to the extent that a civil engineer would be capable of doing. I do not think that they get much instruction in civil engineering, and they have no opportunity of keeping up their information upon that particular branch of public works.

2278. You said that India ought to be governed as an English colony?—I think so.

2279. Do you think that that would be just towards the natives?—I think that it would be beneficial to the natives.

2280. Considering that the proportion of the Europeans to the natives is so small, do you think that it would be just to govern India upon the principles of the small minority, and not upon the rules and laws of the great majority?—It is better to improve the Government for them than to keep an inferior Government for the English settlers.

2281. Like which English colony do you think India ought to be governed?—Like Australia and Canada; I speak of the colonies generally.

2282. Are you not aware that those colonies which you have named govern themselves?—They have done so to a great extent latterly.

2283. Are the natives of India fit to govern themselves in that way?—They are not at present; but I think that it might be gradually done by Europeans.

2284. And you think that Europeans should have the making of the laws and the ruling of the country?—I think that they should.

2285. Do you not think that there would be some little danger that they would make the laws to suit their own interests, and not the interests of the natives?—No; I think they would make better laws than the laws which at present exist.

2286. Is it the experience of the world, where there has been a race of a different class and a different colour, that they have made a just and good Government?—When a civilized state governs an uncivilized one, I think you would have good laws, better than the Hindoo and Musselman laws.

2287. You said that a skilful man in India can generally get on; is that opinion compatible with your other opinions as to the badness of the laws and the administration, which prevent men from getting on?—A skilful man will find a market for his skill, and get on by his perseverance, although the laws are against his operations.

2288. Still he can get on?—Yes, he will generally get on in any place.

2289. You spoke about the Nuddea rivers; did you hear what Mr. Freeman stated about the size of those rivers?—I did.

Mr. *G. MacNair.*

6 May 1858.

2290. Do you concur with him?—I do.

2291. Do you think that they are not larger than what he stated?—I do not; they are medium rivers.

2292. To what river in this country should you compare them?—They are about a third or fourth part of the breadth of the Thames.

2293. How are they in the rainy season?—In the rainy season they may be extended in some places where the banks overflow.

2294. Do not they often change their course?—No, not the Nuddea rivers; the Ganges does.

2295. You think that it would be practicable to have permanent works upon the Nuddea rivers?—I think it would be practicable to improve them to a great extent.

2296. Are there not large churs in those rivers?—No; there are small formations, that could be carried away; and if the course of the river was straitened, the action of the water would prevent such formations.

2297. Did you ever see Mr. May in India?—Yes.

2298. Were not great exertions made by the Government, at the time Mr. May was there, to keep the rivers open?—Mr. May did a little, but the value of that little has been lost, because nothing has been done since.

2299. You have spoken of the advantage of a canal to Rajmahal?—Yes.

2300. Will not a railroad to Rajmahal be much better than the canal?—Yes, but water-carriage generally is considered cheaper for bulky articles than railway carriage.

2301. You stated that the roads in Bengal were quite impassable in the rainy season?—They are.

2302. Would it be practicable, at any expense that would pay, to make roads in Bengal that would be passable in the rainy season?—Yes, quite, for main roads.

2303. To any extent that would pay?—I apprehend that it could be done by some assessment upon the zemindars and ryots.

2304. Would that be consistent with the terms of the permanent settlement; is the Government at liberty to place an assessment upon the zemindars for roads and other objects?—I am not aware of any law to that effect; I think that the zemindars would do it voluntarily.

2305. There are no stones in Lower Bengal?—No.

2306. A road could only be made with bricks?—Yes.

2307. What would be the expense of making roads that would be passable?—I cannot say at present correctly.

2308. Would it not be something enormous?—I do not think it would be so very great; it would be much less in that country than in this, because you can make bricks in India at such a moderate rate, and labour is cheap.

2309. What is the cost of making bricks there?—We can make bricks at 5 *s.* to 6 *s.* a thousand, including burning and everything.

2310. You say that you desire the introduction of the English language into the courts of justice; do you think that would be just to the people?—I think it would.

2311. Although they do not speak the language?—I think that it would be a great benefit to the natives.

2312. Do you think that they would be able to understand the language of the court?—Very soon.

2313. How is it that our officers do not understand the native language?—Because they do not give the same attention to it, and do not commence to learn it so early.

2314. You thing that English gentlemen, whose duty it is to learn the native languages, do not give the same attention to the subject that the natives would do?—No; I believe the natives would soon acquire the English language; they are very quick in picking up languages.

2315. Do not you know that the English language is the most difficult in the world to learn?—Some people say so.

2316. You think that the natives would learn the English language quicker and better than the civil servants learn the native language?—I think they would.

2317. With regard to the police: you say that it is very bad?—Very bad indeed.

2318. You said that all powerful natives oppress the poor and the weak?—To a considerable extent they do.

2319. How is the Government to get better instruments of police?—By having more European superintendents.

2320. You think that would be just to the people of the country?—Yes, the people would like it themselves; it would prevent the oppression, in a great measure. The present oppression from the police is much complained of.

2321. You said that even in Calcutta, in the treasury and in the other offices in Calcutta, it would be desirable to employ English servants?—I think it would, to a considerable extent.

2322. Would it be just and fair towards the people of the country to take all the employment out of their hands, and give it to the English?—If you cannot find natives fit for those employments you must employ Europeans.

2323. How are the natives to be made fit without being employed?—You may make them fit for some of the appointments, but it is difficult to make them correct or honest without more European superintendence.

2324. Are they likely to be made correct or honest if they are not tried?—They do not seem to improve in that respect.

2325. Do you agree with Mr. Freeman that the darogahs have been worse since they have had better salaries?—They are as bad; they have not improved; they are as corrupt as they were, and they require larger bribes to do the same work that they did formerly; they say they are bigger men, and they require more.

2326. You think that it is possible to teach boys to swim without allowing them to go into the water?—No, I do not.

2327. *Chairman.*] Do not you think it would be an advantage for them to see a man swim who could swim better than themselves?—Yes, I think that they would get benefit from the example.

2328. Mr. *Mangles.*] You said that estates were now so valuable in Lower Bengal that they are seldom sold?—Yes.

2329. And you said also that there has been an enormous increase of cultivation; that the waste lands are much less extended; that the condition of the natives has much improved; that they are better clothed and live in better houses, and so on; will you state how that state of things, and also the greatly enhanced value of land, is compatible with the terrible misgovernment which you say prevails?—That state of things is owing to the influence of the Europeans, and to the money which they have spent in the country; it is not owing to the Government.

2330. You think that this great improvement has taken place in spite of the Government?—To a certain extent. If there had been good laws and better protection the country would have progressed to a greater extent. The country has improved to a very vast extent by the European settlers.

2331. Has it not improved in parts of the country where there are no European settlers?—Not nearly so much in the eastern parts and the Sunderbunds; you do not see the same improvement, though there is a great deal of cultivation in the Sunderbunds now.

2332. Still you could hardly compare the Sunderbunds with the fine beautiful districts of Kishnaghur and Jessore?—They produce beautiful crops of rice.

2333. Rice is the most inferior crop?—It is a low-priced crop.

2334. You say that there is great hazard to the possessors of putnees of losing their tenures by sales?—There is.

2335. Still you say that the sales are very few?—They may occur at any time; there is the fear of their taking place.

2336. Why do persons persist in giving a premium for putnees if they are so liable to lose them?—They cannot get them without.

2337. Does not the fact of their giving a premium show that the hazard cannot be very great?—There is still a dread of the hazard.

2338. Would persons give a considerable premium if they thought that the danger was great?—In the case of small proprietors, where there is more dread of it, they sometimes make an arrangement to pay the Government rents.

2339. Mr. *Campbell.*] Is not it absolutely necessary for the possessor of an indigo plantation, in self-protection, to take those putnees?—It is very necessary, and very important.

2340. It is a choice of evils, and the taking of the putnee is the lesser evil of the two?—It is. It is very important to have the putnees.

Mr. *G. MacNair.*

6 May 1858.

2341. Mr. *Mangles.*] You stated that there had been a great enhancement in the value of landed property, and a great improvement in the condition of the people; and you said that that was mainly attributable to the number of English settlers. While so much prosperity has been created, and so much good been going on, how is it that there is a diminution instead of an increase in the number of English settlers?—They have been prevented by the expectation of the Black Acts being passed. Since the trade was opened in 1833, the yearly dread of these Black Acts being passed has prevented people settling in the interior who would otherwise have done so.

2342. And yet simultaneously with this fear the improvement has gone on?—Yes, by the people who are there.

2343. Does not that draw others?—No. A man who is settled there already continues there, and does the best he can.

2344. Have not the English settlers shared in the general improvement of the country; has not their prosperity been greater?—To a certain extent.

2345. And yet that has not been sufficient to induce others to join them?—No, they want the protection of the law and security for their property.

2346. How is the want of the protection of the laws compatible with the greatly increased prosperity?—The people who hold the property, and have their capital already embarked there, have done everything that they could to improve the condition of the country, but the laws have prevented new people from settling there.

2347. You do not intend to confine your remarks with reference to the improvement to zemindaries held by Englishmen?—Very much.

2348. You said that if the cultivation of any particular produce, such as sugar-cane, or otherwise, were profitable, the system of collecting their rents by the zemindars would not prevent the cultivation of valuable crops?—No, it would not.

2349. Do you suppose that if the cultivation of cotton were profitable the ryots would not cultivate it?—They would.

2350. To what do you attribute the non-cultivation of cotton?—To the want of proper roads for its conveyance, and the unsettled state of the laws.

2351. If the unsettled state of the laws does not prevent the cultivation of indigo or sugar-cane, how does it prevent the cultivation of cotton?—Cotton is a new thing, and requires new works and advances; indigo has been an established business in a manner. People have been in it for many years.

2352. Are there any works necessary for the cultivation of cotton?—Yes; you require dwelling-houses for the residence of the superintendents, and establishments, with store and press godowns, and heavy advances to natives for which there is no proper law of contract.

2353. Could not they find such dwelling-houses in the larger towns?—No; there are no larger towns; they must erect houses for themselves at the most convenient situation upon the property.

2354. Is there anything to prevent the cultivation of cotton, which does not also exist to prevent the cultivation of other things; is there any peculiarity in cotton?—Yes; there is the want of good roads, as a means of transport.

2355. Does not that tell also with regard to hemp and oilseeds, and other bulky things?—Not to the same extent, because cotton has to be taken overland 200 or 300 miles on bullocks' backs, and it is a bulky thing.

2356. Are not hemp and jute just as bulky?—Hemp is grown in Serajgunge where there is more convenience for carriage.

2357. *Chairman.*] You mean that cotton is such a very bulky article that it will not bear the expense of carriage?—Yes.

2358. Mr. *Mangles.*] Is not that the case with regard to jute?—That is more grown in Serajgunge, where there is transport by water.

2359. Could not cotton be grown in Bengal?—I believe it could.

2360. In the same way as hemp, upon the banks of the streams?—I think not. Hemp will grow in water or lower lands.

2361. Is it not said that the great desideratum for cotton cultivation is water?—Cotton requiries irrigation during the dry season before the rain commences, but it does not require to grow in water; the plant would never live in water, and it requires a high country.

2362. With reference to the administration of justice, do you think that an English judge would do better by using the English language, and having the aid of an interpreter, than by learning the native language, and administering justice through

through the medium of that language?—I think so: he would understand the case better.

2363. Are interpreters more to be trusted than other classes?—I think so; a good class of interpreters could be got.

2364. Are interpreters more to be trusted than other classes?—I think you could get interpreters to be depended upon.

2365. How can you get interpreters to be depended upon when you cannot get darogahs to be depended upon?—You can get a better class of people for interpreters.

2366. Why does not the Government get a better class of people for darogahs?—I cannot say.

2367. Do not they try to get the best they can?—They may.

2368. You said that the payment of the five per cent. loan had excited great distrust?—Very great indeed.

2369. On what grounds?—When they opened the four per cent. loan, they thought the Treasury was full, and that it would be continued and not increased again, and within a twelvemonth or 18 months after that a new five per cent. loan was opened.

2370. Is not every Government and individual at liberty to pay their debts when they please; the men might have had their money?—They are quite at liberty, but they should have kept it at the four per cent., instead of opening it afterwards at five.

2371. Was there any faith pledged that they would not borrow at a certain rate; was not the whole thing to proclaim to the holders of the paper, Here is your money, or here is the four per cent. loan?—The people expected that they had sufficient money, and would not require to borrow so soon again at a higher rate.

2372. Did the Government tell them so?—It was said at the time that there were so many millions in the Treasury.

2373. By whom?—It was said in the financial reports.

2374. From where?—From the Treasury or the Government.

2375. What reports?—The reports of the money in the Treasury.

2376. What reports are published of the money in the Treasury in India?—The people have means of knowing it.

2377. Can there be any hardship or want of good faith in offering people to take their money, or take a lower rate of interest which they prefer?—The hardship was in opening a five per cent. loan afterwards.

2378. How is a man who is offered his money damnified by that?—It lowered the value of his loan 20 per cent.

2379. But he might have had his money if he had chosen?—I suppose some of them might, but it was not supposed Government had sufficient funds to pay off the whole of the five per cent. loan. It was reported they had about 15 millions in the Treasury, which would not have paid off half of the loan, if the holders of the five per cent. paper had all demanded their money. Trusting that Government would not require money soon again, and that four per cent. would be the established rate, many people took the four per cent. paper in lieu of the five per cent. loan. There was no war or extraordinary expenses at that time to require more funds, but within 18 months Government again opened a new loan at five per cent., which shows that their ability to pay off the former five per cent. loan must have been erroneous; that step was an immediate loss of 20 per cent. to every person who took the four per cent. paper, and consequently created great distrust among the native capitalists.

2380. How was a man injured or defrauded in any way according to that choice?—Because he afterwards lost 20 per cent. by it.

2381. That was not the fault of the Government?—Perhaps not.

2382. Mr. *J. B. Smith.*] He was induced by a false representation to invest his money?—Partly that.

2383. *Chairman.*] By an erroneous representation?—Yes; I suppose it was the intention of the Government to reduce their interest.

2384. Mr. *Mangles.*] Can you say when, how, and where those false representations were made by the Government?—They were understood if they were not distinctly made.

2385. Upon what authority were they understood?—There was very good authority to show the people that they had not funds to carry on the government, they afterwards so soon opening a five per cent. loan.

Mr. *G. MacNair.*

6 May 1858.

2386. How can you prove that the Government made a representation that they had so much money more than they really had; all they offered was, to pay the money off, or take the four per cent. loan; that was a free option?—It was, but it injured the people who took the four per cent paper.

2387. *Chairman.*] You think the Government should have shown more foresight?—Yes, it would have been very much better for them.

2388. Mr. *W. Vansittart.*] Your evidence gives me the impression that our legislation in India of late years has been with a tendency to degrade and lower the European, and to exalt the native character?—Yes.

2389. From what period do you date this?—From 1836 or 1838; since Mr. Macaulay made the minutes about the Black Acts.

2390. Do not you think it commenced with Lord William Bentinck, and was followed up by Lord Auckland?—No, I thought it commenced with Mr. Macaulay's minutes.

2391. Was not Lord William Bentinck the first Governor-general who threw open all those high appointments, with their large emoluments, to the natives?—He did encourage it.

2392. He commenced it?—Yes.

2393. That was very much followed up by his successor, Lord Auckland?—Yes, a good deal.

2394. The Lieutenant-governor, Mr. Halliday, is of this school, is not he?—I do not know what school he is of.

2395. He is considered to belong to the young India school, throwing open everything to the natives?—No, he seems to put great distrust in the natives; I think his opinion is more to have more European superintendents.

2396. Are not Mr. John Peter Grant, and Mr. Cecil Beadon, and others, connected with the council and the secretariat, of opinion that if anything, we should legislate more to elevate the native character and keep down the European?—I believe very much so.

2397. You consider that the civilians generally are in the hands of the native omlah?—I think very much.

2398. Do not you think that a native is better pleased with a decision passed by a young civilian than by his own native judge?—Yes; generally speaking he has more confidence in an European court.

2399. Does not he think, at all events, that the civilian was not bribed, and that he cared as little for plaintiff Ram Doss as he did for defendant Sham Sing?—Yes, the civilians are just, but they know they have great power with the omlah.

2400. Does he think the native judge is just and honest?—No.

2401. Would it not be necessary for the native to bribe the native judge as high as he bribes the civilian's omlah; if he gives the civilian's omlah 50 rupees, he would have to give the native judge 50 rupees?—Yes; he must bribe both.

2402. After having bribed the native judge, he would have to bribe the native judge's omlah?—Yes.

2403. In point of fact, he has to bribe, under the present system, the native court just twice as much as he does the young civilian's court?—He requires to do it to a certain extent.

2404. I gather, from your evidence, that you think the native character, at present, is in a very low and degraded state?—The class of court omlahs are too much so; but there are many respectable natives in the country, intelligent and trustworthy.

2405. In point of fact, he is corrupt, cowardly, and devoid of all truth and honesty?—Yes; there is a great want of moral courage and independent judgment in that class of natives.

2406. Have not the native officials and judges, namely, the moonsiffs and sudder ameens, behaved very ill during the late revolt?—In the Upper Provinces they have; and I dare say in Bengal they would have done the same, if they had had the opportunity.

2407. Have the police darogahs behaved equally ill?—In some places in the Upper Provinces they have.

2408. Do you think there would be any difficulty in procuring a sufficient number of young men of good education and family in this country, to go out and fill the situations of moonsiffs and sudder ameens?—No, if they had the expectation of advancement.

2409. Would

2409. Would not that be a great improvement?—Very great indeed.

2410. Do you think that by paying those native judges even higher than they are at present, they would become more honest?—A few might, but not generally.

2411. In fact, you are of opinion that, as at present constituted, we can expect no improvement in the native character?—More European superintendence would tend to improve the native character.

2412. Is not a sudder ameen's salary nearly 900 *l.* a year?—From 600 *l.* to 700 *l.*, 800 *l.*, and 900 *l.*

2413. And a moonsiff's?—They get from 200 to 300 rupees a month, some of them.

2414. And some fees besides?—Yes, they get some fees besides.

2415. You say that the zemindars and baboos of Bengal live principally in or near Calcutta, and not on their estates, owing to the maladministration of justice?—They do.

2416. But do not the zemindars in the Upper Provinces live on their estates?—I have not had much knowledge of the Upper Provinces, and cannot speak of them.

2417. Mr. *Villiers.*] When did you return from India?—Last year.

2418. I take it for granted that you only appear here as a man who has been engaged in some of the productive works of the country?—Yes.

2419. You have not written on the subject of India?—No.

2420. You have not studied its history particularly?—No more than other people.

2421. You intend to convey your impressions as a capitalist with respect to the obstacles to the employment of capital and to Englishmen going out there?—Yes.

2422. You do not pretend to speak with confidence that the Government is more degrading to persons subject to it in India than formerly?—I do not think it is more degrading, but there is more wish to enforce these Black Acts among a certain class.

2423. But you do not speak favourably of the former government of the East India Company as compared with the present?—I do not say they are better.

2424. You have heard the evidence given by Mr. Theobald and Mr. Freeman?—Yes.

2425. From what you did hear, and from what you have stated here, I do not collect that there is any difference in opinion?—No, I concur in all that they said.

2426. And you have dwelt peculiarly upon the imperfect character of the civil service?—The want of business habits, and knowledge of the language by some of their service.

2427. I observe you stated that in some respects they are worse now than they used to be, in consequence of those who are efficient being taken away to other employments?—Yes, being very frequently removed; sometimes three times a year.

2428. You have been in India 20 years?—I have.

2429. Has that occurred more of late years than formerly?—Yes; during the last five years to a greater extent.

2430. Is that owing to the greatly increased territory which the Company has acquired, and the necessity of having civil servants sent there?—I suppose so, and more people leaving the country.

2431. Are the employments better in those territories than those where they have been employed?—I believe they are.

2432. Do you infer from that that the civil service have a strong interest in the annexation or accession of territory?—I suppose they are anxious to annex territory; it gives them additional employment.

2433. Their numbers being limited, and they receiving better employments in consequence, they have a direct interest in accession of territory?—I cannot say they have a direct interest in it, but that system seems to be carried on to too great an extent.

2434. You propose to meet this difficulty of not having a sufficient number of efficient servants, by having a general employment of the non-covenanted or of persons who come out to settle?—Yes.

2435. And you have been asked whether that would not run the risk of the

Mr. *G. MacNair.*

6 May 1858.

Governor-general bringing out persons advanced in life who have not done well here, and their favourites; would not that be met by submitting them to some tests previous to employment?—Yes.

2436. You might have some test of their acquirements and capabilities?—Yes.

2437. And some report of their fitness for the special services in which they are to be engaged?—Yes.

2438. And you think you might have efficient men, equal in number to what you required?—Yes, I think so; gradually people would make it their object to go out and qualify themselves.

2439. From your observation of persons that would be available, and also from your opinion that people are ready to go out, you have no doubt that the evil you complain of could be met?—Quite.

2440. Do you know whether these matters have been brought before the Government of India, and whether they offer any objection to the system being adopted?—I am not aware.

2441. Do you express opinions here which you did not express there?—No, I do not.

2442. Are you maintaining the general opinion out there, or expressing the opinions entertained now by settlers there?—I think I am expressing general opinions.

2443. But you say there is no change of system, and you know of none being contemplated?—There has been none yet.

2444. Were you there when Lord Dalhousie was there?—I was.

2445. Were none of these matters brought under his attention?—I believe they were.

2446. We have heard that remonstrances of various kinds made to the Council are not attended to, in consequence of the persons forming the Council being ignorant of the real interests or being acquainted with the feelings of the people?—I have heard reports to that effect.

2447. You are not satisfied with the constitution of the Council?—No. I think there should be a non-official voice in the Council; there should be mercantile and agricultural men in the Council.

2448. Do you state that because you are not satisfied with the knowledge which the present persons there have of those matters?—Yes.

2449. Do you speak of that from personal experience?—Yes, from the laws they bring forward; they are not acquainted with the working of those laws.

2450. Was Sir Arthur Buller appointed by the Company or by the Government?—It is under an Act of Parliament that two of the judges of the Supreme Court should be Members of the Legislative Council.

2451. That is not the kind of appointment you refer to, when you say "non-official"?—No, I would have planters and merchants.

2452. You are aware that Sir Arthur Buller is not a person appointed by the Company?—He is a judge of the Supreme Court, appointed by the Act of Parliament.

2453. He seems to have made a statement there upon general matters?—Yes; upon his knowledge of the country and his observations.

2454. Was his speech delivered while you were there?—Yes; and it made a great impression.

2455. Was that from the novelty of any person in the Council giving expression to the feelings of the settlers?—Yes, partly; and his independent expression.

2456. Was he answered?—He was replied to, I suppose, in the ordinary manner; but I do not think what he stated was refuted or denied.

2457. You are not aware of any result from his speech?—I think it has had a good effect.

2458. You stated that these darogahs do not improve at all, though they have higher salaries; do you think that if the civilians were more competent, that if they knew the language better, and knew how much they were deceived by these people, from being more acquainted with the habits and the language of the natives, that might be some check?—A very great check. An efficient magistrate can improve the people very much.

2459. I think you stated that the Government have not extended a law of contract which they enforce for themselves, which would be very desirable to have enforced?—Yes, to extend to every one.

2460. Has that been brought before their attention, do you know?—Yes, I believe it has.

2461. And no attention has been given to it?—We formally brought to the notice of the Government the imperfect law of contract; there was a better law of contract formerly; that was done away with in 1850, or somewhere about that time.

2462. Is it in the cultivation of opium that they make their advances?—Yes.

2463. Was a better law of contract given by Lord William Bentinck?—Yes, and it was done away with.

2464. By whom?—I suppose by Lord Dalhousie; it was changed about six or eight years ago.

2465. Does it not greatly enhance the cost of production if people pay so highly for the advances that are made?—Yes, and the uncertainty, because there is a great loss to the natives and Europeans by the advances.

2466. There is no means of recovering them?—Yes, if you get a decree; but it takes two or three years to get it, and the people make off, and you seldom recover the amount of your law expenses.

2467. That applies to cotton as much as to indigo?—More to cotton; it would require 12 months before you got the return from that.

2468. You speak of the growth of cotton commercially when you say it does not answer to grow it in Bengal?—It has not been profitable to the people hitherto.

2469. With respect to the roads, you say the zemindars sometimes object themselves to roads being made?—They do.

2470. Have you ever heard of the zemindars of this country doing the same thing when they were not compensated?—Yes, but they have been offered compensation in India in some instances, and have refused it; they do it from a spirit of opposition to you.

2471. You do not mention that as peculiar to India; you have heard of people resisting improvement all over the world, although it was for their own interest?—Yes.

2472. You stated that they objected to novelties, and that those novelties were owing to the various breaches of faith on the part of the Government complained of by the natives?—Yes.

2473. You referred to certain changes in the law, and changes of administration?—Yes, they show a distrust to these things at first, or any new schemes.

2474. That is the reason why you referred to the resumptions?—Yes.

2475. Was that the general opinion of the Europeans out there, that bad faith had been shown with respect to the resumptions?—Yes.

2476. That it was impolitic, as shaking the confidence of the people in the Government?—Yes, it was considered so.

2477. It was an investigation into title, was not it?—Yes, they were ordered to produce their titles, but they had held the land for such a length of time that the titles might have been destroyed, and burnt, and very few of them held them.

2478. There was nothing more extraordinary in holding their land relieved from taxes, than a person in England holding land where the land-tax has been redeemed, or which is tithe free?—No.

2479. To what extent has the scientific survey in Bengal and Behar proceeded?—In Bengal, when I left it in 1857, there were two or three zillahs finished, and the maps had been published of one or two of them. They were doing the zillah of Jessore in 1857, and Kishnagwah had been finished and mapped.

2480. Could you give the Committee any instances where the zemindars employ Europeans instead of natives, in preference; is it done in the case of works of skill, or in some cases where they cannot get natives to perform their works, or is it from mistrust of their character?—It is from mistrust of their character, they place more dependence upon Europeans; they improve the value of their produce; it is worth fully 25 per cent. more.

2481. You say the natives are untrustworthy, I suppose you mean natives of the lowest kind; you do not mean to say that there are not natives of a certain station that are just as trustworthy as Europeans?—There are very many trustworthy and intelligent natives; but the class of court omlahs are not generally trustworthy.

2482. Would you say that that extends to such a degree that you would not have

Mr. *G. MacNair.*

6 May 1858.

have a native preside in a criminal court at all?—I would not; they are not fit for a criminal court; independent judges are wanted.

2483. Do you mean that they are not fit from want of knowledge, or from want of moral character?—Want of moral character and independent judgment.

2484. Those judges now appointed in the criminal court are, besides that, not qualified by learning, are they, for that office?—No; they just have a smattering of the Company's regulations, but they have no legal training.

2485. They have not undergone any special or professional education?—No, they just cram themselves with the Company's regulations.

2486. Would it be possible to submit them to some test, to prove that they are competent?—Yes, it would.

2487. Has that never been suggested; has it never been complained of that they are ignorant men?—Their ignorance is much complained of.

2488. Has anything of that sort ever been suggested?—They have never had a legal education; there is no legal training for them.

Martis, 11° *die Maii*, 1858.

MEMBERS PRESENT.

Mr. Campbell.	Sir Erskine Perry.
Mr. De Vere.	Mr. Danby Seymour.
Mr. William Ewart.	Mr. J. B. Smith.
Mr. Gregson.	Mr. W. Vansittart.
Mr. Kinnaird.	Mr. Villiers.
Mr. Lowe.	Mr. Willoughby.
Mr. Lygon.	

WILLIAM EWART, Esq., IN THE CHAIR.

Mr. *George MacNair*, called in; and further Examined.

Mr. *G. MacNair.*

11 May 1858.

2489. Mr. *Willoughby.*] YOU stated that you gave a general concurrence to the evidence of Mr. Freeman?—I did.

2490. Do you also give a general concurrence to his evidence on the cross-examinarion?—I do.

2491. You stated that you were yourself favourable to the colonisation of India by Europeans?—I think it would be very advantageous.

2492. In what localities, according to your experience, would it be practicable?—In Lower Bengal, as much as possible, as overseers and people of skill and capital to develope the resources of the country.

2493. In any other place?—In the upper provinces, in the tea districts, and the other different districts, Europeans could be more employed of a different class.

2494. Are you aware that a reference was lately made to the local authorities by the Government of India, and that reports from the several local Governments on the advantage of holding out settlements for discharged soldiers and other persons resident in India have been published?—I have not seen that publication.

2495. Are not disputes constantly occurring between the zemindars, European and native, and the ryots, regarding their rights of property?—Yes, a good many disputes occur.

2496. And disputes leading to serious affrays, attended with bloodshed?—Not so many of late years. Formerly, when Europeans could not hold property, they were more numerous; but since Europeans have held property, they are much fewer.

2497. But they still occasionally occur?—Not often; very seldom.

2498. You heard what Mr. Freeman said about extinguishing the rights of the cultivators, in order that the zemindars might obtain the fee-simple?—Yes, but I do not think that you would require to extinguish the rights of the cultivators. No person who takes the land would require to turn away the ryots; they are the people who cultivate the land and pay the rents.

2499. Suppose

2499. Suppose the case of a zemindar who wanted to increase the rent of a ryot, and the ryot said, "This is contrary to immemorial custom"?—He can do it by the stated rate of the pergunnah. If there was a fixed rate in each pergunnah district it would be fair to do it.

2500. You do not think the annihilation of those rights either just or practicable?—No; it would not be just to annihilate them to a great extent; but to assess them to the neerick of the pergunnah would be just for both parties. When the perpetual settlement was made by Lord Cornwallis it was a sort of understanding that the ryots should be assessed to the amount of the neerick of the pergunnah, which is a stated rate, probably 12 annas or a rupee a begah, or whatever it is, and that they should not be increased above that.

2501. You say there was an understanding; suppose there is a dispute about that understanding, how would you settle it?—It is generally considered that it is an understanding.

2502. Do you think any increase of European planters as proprietors practicable to any extent in the districts with which you have been connected?—No; the present concerns are all taken up; they are all engaged; but they occasionally change hands and new people come in. There could not be much increase in Jessore or Kishnagur.

2503. In regard to the moral, social, and political advantage which you and Mr. Freeman think likely to arise from the settlement of European colonists, would not that depend very much upon the character of the settlers themselves?—It would be the middle or upper class of Europeans that would settle there, and it would have a good effect upon the natives.

2504. In your opinion, are any, and if so, what restrictions required to secure the ryots in their rights and privileges, in the event of any extensive settlement of European proprietors?—Just the stated rate of rents; not to be increased above that would be of great advantage to them, because the zemindars oppress them in that way, and take them at higher rates, and extort a great deal out of them in all the births and deaths and marriages of their family. They probably pay 15 to 20 per cent. yearly in that way in excess of the rents.

2505. You think a law would be necessary limiting the amount of rent which a zemindar could demand?—I think it would be proper to have the neerick in the pergunnah; the neerick is a fixed rate.

2506. You heard Mr. Freeman's evidence in regard to the precautions taken by Government in advertising estates for sale?—I did.

2507. Do you concur in that?—Yes. I think the precautions are not sufficient; they should be more properly defined, and that would save a great deal of dispute.

2508. What precaution would you suggest, in addition to those now existing?—The tenure should be upheld, and the boundary laid down. When you purchase a property, and are allowed to take possession, one half of the quarrels are about the possession.

2509. That refers to the titles?—To a great extent.

2510. You are acquainted with the sale law proposed by Mr. John Peter Grant?—Yes, I have looked into it.

2511. Why was not that passed into a law?—There was a good deal of discussion about it, and it was postponed at the time, I suppose on account of the mutiny, and the Government being engaged in other things. It was an improvement; but it should extend the protection to under-tenures a little further.

2512. I presume the planters have every opportunity of representing any improvement which their experience enables them to suggest upon that or any other law?—They can do so by memorial or petition, but not verbally, not in a Committee like this.

2513. You say in answer to Question 1978, "If Government wish to retain that Eastern empire, I think they must follow another system, and encourage the settlement of Europeans as much as possible; a considerable number might be employed in Government situations, which are at present filled by natives in whom no dependence can be placed"?—Yes; I think it would be very advantageous to employ a number of Europeans in those different offices; and it would be a training school to bring them up for higher appointments.

2514. In answer to Question 2059, you allude to certain offices, such as the Treasury and the Home and Foreign Departments; and you state "for the present pay of these native establishments, I should say a much more efficient

Mr. *G. MacNair.*

11 May 1858.

European establishment could be kept, which would be a good training school," and so forth?—I think so, because in all those offices they employ 20, 30, or 40 natives.

2515. You think a European establishment could be maintained at the same expense as the present establishment?—I think it could, and be more efficient; one European in that department would do the work of five or six of the natives.

2516. Do you think we could hold India if we acted on the policy of excluding, as far as possible, the natives from public employment?—I would not propose to exclude them; I would employ them where they could be depended upon, and where you could get good people for the appointments.

2517. Then you are not of opinion that such a policy would be just to the natives?—Not to too great an extent; the upper appointments they are not fit for, but many of the inferior ones they are fit for.

2518. Do you consider the rent levied by the Government under the zemindary system excessive?—No; in Bengal it is not excessive, it is moderate.

2519. Have not very great improvements occurred of late years in India, such as the introduction of railways, and the construction of roads, canals, &c.?—In Lower Bengal there have been no improvements in the river or canals or roads; in the upper provinces there have been one or two.

2520. Has not steam navigation been introduced?—Principally by private companies.

2521. Not in the first instance?—No; it was commenced by the Government, and then taken up by private capitalists; but there is a great want of rivers and canals being improved in Lower Bengal.

2522. These efforts at improvements of that kind are being continued up to the present time?—Yes, they are in some respects.

2523. And has not a commencement been made in reforming the police?—No, not in the interior; the Calcutta police have had Europeans put in, but in the interior of the country, in the Mofussil, no improvement has commenced.

2524. Has nothing been done in consequence of a minute which Mr. Halliday drew up?—Not that I am aware of.

2525. Are not efforts being made on a very extensive scale to extend education?—Yes.

2526. Have not some of the most respectable planters been recently invested with magisterial power?—Yes, in some of the districts.

2527. That you think a move in the right direction?—Yes, I think that an improvement; you get men of experience appointed who would be a control over the police; if there are rights, their jurisdiction would require to be confined, to prevent them coming in contact with the covenanted magistrates; there is a jealousy between them.

2528. Do you consider, with Mr. Freeman, that it would be a desirable change to introduce barristers as judges in the Mofussil, and that English law should be administered through the English language, to the exclusion of the vernacular?—Yes, I think that would be a great improvement.

2529. Do you know who brought forward the law by which European functionaries, and, as you state, soldiers and sailors, are exempted from the Act you call the Black Act?—Mr. Peacock, I believe, who is the Legislative Member of the Council, brought it forward; but who made the different clauses I am not aware.

2530. You have stated that selections should be made from the planters, and that they should be substituted in time for the present civil servants. What means would a Governor-General just arrived in India possess of obtaining an accurate knowledge of the character and qualifications of the planters?—From his secretaries and the people appointed to select them; a new Governor arriving is always in the hands of his secretaries very much and of the people who have charge of the department.

2531. How do you account for the zemindaries of Lower Bengal being so valuable under the system of administration of which you have given so unfavourable a picture?—Because the Government, I suppose, had no survey or measurement of them when the perpetual settlement was made, and many of them are assessed very moderately and they have increased in value. They are not equally assessed; some are assessed with very little profit, and some where there is very great profit.

2532. You have stated, on behalf of the respectable class whom you represent, your great objections to the Black Act; is not the Government itself liable to be sued

sued in the Mofussil courts of justice presided over by native judges;—I have not known of a case against the Government in the Mofussil in that way.

2533. Can you state that the law does not render them liable?—It does not, that I am aware of. I think it is only the Supreme Court in Calcutta; I do not think they can be pursued in the Company's courts.

2534. Mr. *B. J. Smith.*] Have you paid any attention to the cultivation of cotton as well as indigo?—Upon a small scale I have tried it. I found that a very good description of cotton could be produced.

2535. In what part of the country?—In Jessore.

2536. Is there much cotton grown there?—No, very little. It is grown in Furredpore and Dacca to a greater extent.

2537. What is the quality of the cotton; is it not a short staple?—A short staple; small cotton; there is little attention paid to it there: there is very little grown in Jessore. If more attention was paid to it, it could be very much improved.

2538. Have you any idea as to the produce per acre of the cotton there?—No; the extent I cultivated was so small, I could not form a proper idea of it.

2539. Do you think it could be extended under the superintendence of Europeans?—I think that it could be both extended and the quality improved to a great extent, if they had a better state of the laws, and better roads, and the rivers open for transport. One of the great obstacles to cotton cultivation there is the want of good roads for transport.

2540. And until that want is remedied, there is not much prospect of any cotton being grown in India?—No, there is not.

2541. The price of the conveyance of cotton to the market being a very large element in its value?—Yes, it is indeed. I have heard natives who got it from the upper provinces say that both the land and water carriage was about equal to the value of the article.

2542. As regards indigo; indigo, which is a valuable article, can afford to pay 1 *d.* or 2 *d.* per pound carriage?—Yes, better than a bulky, less expensive article like cotton.

2543. But inasmuch as cotton is only of the value of 1 *d.*, it cannot afford to pay that?—No; it requires the quickest and cheapest conveyance.

2544. What is the progress made in the railways in your neighbourhood?—In our neighbourhood there is only one railway, just sanctioned; it has been surveyed for two years, but it is not begun yet; there is only one railway in Bengal, that is the Northern Railway, which is open to Ranagunge only.

2545. Is it your opinion that there has been a great deal of unnecessary delay in proceeding with those railways?—I think so; at first both the contractors and the Government had considerable difficulty in organising a proper staff of assistants, and they had considerable delay in getting the lands settled by the Government, and the contracts sanctioned.

2546. But you have no doubt that the completion of those railways will add very much to the prosperity of India?—Not the least.

2547. And lead to a great extension of trade?—Yes, and will allow the Government to govern the country with much fewer troops, because they will be able to move them about better.

2548. You think that railways will be an advantage, not only in bringing the agricultural produce to the market, but in taking back at a cheap rate such articles as the natives want?—Yes.

2549. Particularly such an article as salt?—Yes, and European goods of every description: the natives have a daily increasing desire to use all European goods, and if they could be more cheaply conveyed to the interior, the consumption would be much greater.

2550. Is not the article of salt, which is a necessary of life, very much enhanced in value in consequence of the great expense of transport?—It is.

2551. As regards European manufactures, we have been told that the people in India are very fond of going naked; is that, in your opinion, because they have not the means of using European manufactures, or because they prefer it?—It is the custom of the country a good deal, but it is partly from the poverty of the lower class too.

2552. Do people who are able to afford the use of European clothing go naked?—No; the upper class dress themselves more, and of late years there has been more desire to use European cloth and goods.

Mr. *G. MacNair.*

11 May 1858.

2553. You have no doubt that if the natives in general had the ability, they also would use European clothing to a great extent?—I think they would.

2554. Mr. *Campbell.*] You were asked a question whether or not the process of ruin to litigants in the supreme courts of Calcutta was more rapid than in the Mofussil courts, by reason of the legal extortions and expenses of those courts; is that your opinion?—No; the extortions of the Mofussil courts are greater.

2555. Would you be of opinion that the process of ruin would be more rapid in the Mofussil than in Calcutta to parties engaged in suits in court?—In the case of parties in the Mofussil, when they are summoned from their work and taken away, their ruin might be very great.

2556. Is not a party in the Mofussil required to maintain a fighting establishment in the defence of his property, and to bribe very extensively the almoners of the court, which he is saved in Calcutta?—Yes.

2557. Then you think the process of ruin would be more rapid than in Calcutta?—Yes, I think so.

2558. You are obliged to protect yourselves in the interior?—Yes, sometimes.

2559. Would that remark apply to planters and settlers, and the public generally engaged in trade in the Mofussil?—To all classes of people.

2560. And it arises from the imperfect state of the law, and the imperfect state of the police?—Very much.

2561. Would not the practical effect of opening the service be, to secure in the departments of the Government efficient servants?—I think so.

2562. Would not the efficient servant have an incentive to exertion, which he is at present deprived of by the employment of civil servants on the seniority basis, without regard to qualification?—Yes.

2563. Is it not the case with Calcutta barristers, that the pains-taking, efficient barrister rapidly acquires an independence, and the inefficient man is left behind?—Yes.

2564. That is practically your experience?—Yes, it is.

2565. You alluded to the improvements generally in the districts in the vicinity of your factories; do you attribute those improvements to the fact of your now being able to hold property in your own names since 1833, and thereby being able to direct your attention more to improvements than to defending your property?—Yes, and to the circulation of money.

2566. Mr. Freeman stated in his evidence that nine years ago Rammohun Roy was nearly unable to pay his Government revenues; what would have been the effect of his not paying his revenues upon the planters or zemindars that held putnees under him?—They would have been all disallowed, and it would have been very ruinous to the holders of the putnee.

2567. To what extent may putnees be held in Jessore, Kishnagur, and other districts, from Rammohun Roy?—I suppose to the extent of probably 8 or 10 lacs of rupees of rent.

2568. And all the bonus paid for those putnees would have been lost?—Yes, all the purchase-money would have gone.

2569. What effect would the introduction of the Black Act have upon the value of your own property?—It would reduce it in value very much.

2570. Would not most settlers desire to realise their properties if it were introduced?—They would.

2571. What would you do yourself?—I would desire to realise my property and leave the country.

2572. If that desire were general, what might the value of the properties, all being sellers and there being no buyers, be reduced to?—To a fourth of the present value.

2573. If they were all realisers and no buyers, would not they be reduced more than that?—The natives would take the landed property; but the indigo factories would be reduced to nothing.

2574. What proportion would the vats and works and buildings and boilers, in a factory generally, bear to the landed property?—It is about half and half.

2575. That half would be valueless; you would get nothing for that?—Quite so.

2576. With regard to the employment of a native establishment, do you not think that if the European civil servants were more efficient, you could employ more native establishments with less damage to your interest than you do at present?—Yes; if the European superintendence were efficient the native materials under it would work much better.

2577. They would not have the same opportunity of extortion or oppression?—No, they would not; it is for want of European control that they exercise so much of that.

2578. How long is it since planters have been selected as honorary magistrates?—Within the last nine months or so.

2579. Since the occurrence of the mutinies?—Yes.

2580. It was never thought of before?—It was never acted upon before; it was proposed two or three years before; it was just upon the emergency of the mutinies, I suppose, that it was acted upon.

2581. What is your opinion with reference to the interests of colonists and settlers of the present proposed change of Government from the Company to the Crown?—It would be very beneficial, and would give every one more confidence in the Government.

2582. Would it be desirable that the agricultural or commercial interests of India should form a part of the council for the protection of those interests?—Very much so; it would be very beneficial, I think.

2583. What exactions may planters or other residents in the country be subjected to on surveys being effected of their property, or upon any other work being done in the mofussil that they are deputed to do by the civil authorities?—If the surveys are under the control of the natives, there are considerable exactions to get the work properly done.

2584. And is it not possible for you to have the boundary wrongly defined, and favouritism shown in defining the boundary?—Yes, quite possible; the person who can pay most for it may have it decided in his favour.

2585. Those surveys are not conducted under the immediate eye of Europeans?—Not entirely; they are left a good deal to the natives.

2586. Mr. *Villiers.*] What is it that marks the difference between the European management and the native management of estates, which induces you to give such a decided preference to the European?—The European sees that only a proper amount is taken, and that no extortions are taken from the natives, and he sees that they are paid for the work given and the labour taken.

2587. That is if he is an honest man?—Yes; but that class of Europeans are generally so.

2588. It is rather on account of superior morality than skill that you prefer the Europeans?—It is.

2589. From anything you have seen or heard or read, have you reason to believe that the civil service are averse to the increase of European settlers in the mofussil; is there anything like a jealousy of the settlers?—One case occurred lately where the magistrate recommended that the honorary magistrate's power should be cancelled; and it was appealed to the Commissioner and the Deputy Governor, Mr. Halliday, and they both gave judgment that the magistrate's decision was unwarranted.

2590. I was rather talking of your general impression?—I think they look upon them with jealousy in some respects.

2591. Mr. *Kinnaird.*] What is your opinion of the employment of the Sikhs as police?—I do not think the Sikhs would do well for police in Bengal; they are not acquainted with the manners and habits of the Bengalees, and they are of a more irritable disposition, and would not put up with their manners.

2592. You think they would not be adapted as a good substitute for the native police?—They might do for watchmen, but not generally for the police.

2593. We are told that the natives will render no assistance to the police; to what do you attribute that?—To the trouble and expense they would be put to; they are taken away to the zillah, and may be detained there for weeks.

2594. Do you think a properly protective police would be very acceptable to the people, and obtain their confidence?—Very much so indeed.

2595. Are there any elements among the general native population that the Government could avail itself of for any purposes of local government?—Not in the interior; in the large towns there are many of the respectable class of people who would assist the Government in municipal committees and different things, but not in the interior. There you have not the same facilities.

2596. It is stated that the revenue system of Lower Bengal has acted very oppressively upon the ryot?—It is not excessive; it is more from the exactions and bribery and extortions they take out from the people; the mere rents are not excessive.

Mr. *G. MacNair.*

11 May 1858.

2597. It arises out of the revenue system and the land settlement that they have the powers of oppressing the ryot?—That is from the state of the laws and the police a good deal, because the powerful people oppress the weak.

2598. The native zemindars are in the habit of levying illegal cesses on their tenants?—A good deal.

2599. What are they?—For births, marriages, or deaths of any of their families, they take a small assessment from them.

2600. Have they any right to do so by law?—No.

2601. Is it known to the Government that they do it?—Yes.

2602. Has anything been done by the Government to relieve the population of those cesses?—Not that I am aware of.

2603. Those cesses are deemed to be, and are, a great oppression upon the people?—Yes, they are very oppressive.

2604. Do the indigo planters and occupiers of land levy those cesses?—No, they do not; and they take great pains that they shall not be levied by the servants.

2605. Therefore the effect of the increased number of Europeans settling in the country would be, to improve the condition of the people, and to elevate their social position?—It would, and gradually, too, put a stop to those extortions.

2606. And you think there have been in past times various impediments in one way or another to the settlement of Europeans?—The state of the laws and the police, and the uncertainty of the sale laws have been an impediment to them.

2607. *Chairman.*] You mentioned that the natives show a great inclination to use European goods; will you specify them?—English cloths and umbrellas, and hardware for cooking utensils; those are the things they use to a great extent.

2608. Mr. *Kinnaird.*] Are the umbrellas made up?—Yes, made up; there is a great demand for them now in India.

2609. *Chairman.*] I understand you to say that an infusion of Europeans would benefit the natives in two ways; first, it would raise the moral standard among the natives; and, secondly, inasmuch as a European can do five times as much work as a native, it would teach the natives to work better?—Yes.

2610. With regard to public improvements, such as roads and canals, is it not rather a wonder that those public improvements have not been introduced sooner, than that they are introduced now?—Yes; it has been a great loss to the country that they have not been introduced sooner.

2611. Sir *Erskine Perry.*] I have heard you express a very strong opinion against the Black Act; is not the Black Act founded upon the principle of having one law for all the inhabitants of the country, whether Europeans or natives?—It is putting the Europeans under the jurisdiction of the native courts and juries.

2612. You are aware that Europeans in the presidency are under the jurisdiction of native juries?—No, I am not aware of that.

2613. At the Presidency towns, at Calcutta for instance, the juries are taken from a panel consisting of Europeans and natives?—There may be a few natives in it, but they are the upper class of natives, very different to what you would get in the interior.

2614. You could not put Europeans in the interior exclusively under the jurisdiction of Europeans, could you?—I think a European should have the power of objecting to a native jury. A foreigner in this country has the power to object to an entirely English jury.

2615. At the present moment you have native judges in the civil cases in the interior?—Yes, but not in criminal cases.

2616. In magisterial cases?—They have only a limited power over Europeans.

2617. It would be impossible to place European magistrates in every court in the mofussil?—I think it would not.

2618. You have not considered the financial aspect of the case, have you?—European magistrates could be employed nearly upon the same pay as the natives receive.

2619. What is the average rate of pay of a moonsiff?—From two to three, and four and five hundred pounds a year.

2620. Mr. *Kinnaird.*] You consider that owing to the want of truthfulness and reliability upon the native character, Englishmen going to colonize and settle there ought not to be put under the native jurisdiction?—I do not think they should.

2621. Is that the opinion of those who have resided in the country generally?—It is the opinion of all British inhabitants in India.

Mr. *Josiah Patrick Wise*, called in ; and Examined.

Mr. *J. P. Wise.*

11 May 1858.

2622. *Chairman.*] IN what part of India have you resided?—In Eastern Bengal.

2623. Have you resided in any other part of India?—No.

2624. How long have you resided in Eastern Bengal?—Upwards of 30 years.

2625. In what part of Eastern Bengal have you resided?—In Dacca.

2626. I believe you are a proprietor and manager of indigo and other concerns in the interior of the country?—Yes.

2627. In what districts were you the proprietor and manager of those concerns?—In five districts, Dacca, Mymunsing, Furredpore, Burrisol, and Tipporah, and lately in Assam, Cachar, and Sylhet.

2628. Were they extensive concerns?—Yes.

2629. Were they all established in your time, or in your recollection?—Part were purchased, and part established by myself.

2630. What was the effect of the European establishments and operations, on the prosperity and the condition of the country and people?—Wherever Europeans have settled, the condition and prosperity of the people, with a marked improvement of the country, has followed, and if the settlement of Europeans had been encouraged as recommended by Sir Charles Metcalfe, and other great Indian statesmen, the revenues of India might ere this have doubled. It is true since 1833 we have been permitted to settle, but the Indian Government has never ceased to display hostility towards European settlers, and opposed in place of encouraging all enterprise, and the investment of capital so necessary for developing the resources of the country and civilising the natives of India.

2631. Had the native zemindars and capitalists any concerns like yours carried on, on a large scale?—None.

2632. What was the nature of the revenue settlement in your districts?—The perpetual settlement.

2633. Under that settlement, of course the landowner is called a zemindar?—Yes.

2634. Is that settlement favourable to the investment of capital or not?—It is less so than it ought to be. At present, a person purchasing property must expect to be obliged to contest several lawsuits ; he must be prepared to take possession, and to be opposed in doing so, and he must be ready to pay two or three quarterly instalments of the Government revenue before collecting any rent from the estate. It may look a good investment, but it is not a safe one, for after 12 years, short of an hour after you have had possession of property and improved it, with no little outlay and trouble, a suit may be instituted to quash the sale, and in consequence of the mistake of a collector, the sale may be reversed after 17 years, and not only is the purchaser obliged to give up the property, but he must also pay mesne profits over so many years, with probably 12 per cent. interest ; I would not have property in India if I could help it ; no one purchases it who regards safety.

2635. Does the zemindary tenure admit of improvement, which would make it more favourable for the investment of capital, without impairing the security of the revenue?—Certainly, with a better system, better laws, and better men to administer the laws. With Parliamentary discussion and the admission of men into the Legislative Council who have more at stake in the country than their salaries, give safety to life and property, give freedom to the press, and British capital and energy will flow into India. At present property is not safe. Capital and peaceable Europeans cannot settle in safety ; and to make matters worse, we are periodically threatened with the passing of laws, under which no man of property or respectability could feel secure. We settlers say, Reform your system, improve the courts, give good magistrates and a better police, and then only should Europeans be made amenable to the local courts.

2636. Are there any other and subordinate tenures which are suitable to the European settler besides the zemindaries?—Putnees talooks, and talooks paying rent to the zemindars may be purchased and held by Europeans ; also farms from zemindars and from the Government.

2637. What is the feeling generally of the actual cultivator of the soil towards European planters and settlers?—I think the feeling generally is most favourable. It is always the interest of the European to treat them well, to protect them from

Mr. *J. P. Wise.*

11 May 1858.

oppression either by the landowner or the police; they get constant employment, and are regularly paid by the planter; they borrow money largely for the cultivation of indigo without being charged interest, with which they pay their rents to the zemindars, or the exorbitant dues to the money-lenders. Their differences with neighbours and native money-lenders are often settled by the planter; and in sickness, they find medicine and friendly aid. I believe it is an admitted fact, that wherever Europeans have been settled during the late convulsion those parts have been less disturbed, and probably the peace of many of the districts has been preserved by the European settlers; if so, it is another strong reason for a change towards the settler, and that increasing numbers should be encouraged; and the only way of doing so is by protecting them; making extended use of Christians as officials, court officers, and in the police, to check revolutionary movements; follow an opposite course as in past times, and it may be discovered that there are more enemies than are seen, many, but watching the opportunity. I can corroborate from personal knowledge the following statement: "If anything can more clearly illustrate the sense of security in which Indian officials in spite of all warning have indulged, it is that at the very time when this alarming mutiny was about to burst forth in the Bengal Presidency, it was actually proposed so to remodel the criminal jurisdiction of the country, as to subject the few Englishmen scattered over Hindostan to the anomalies of native law, to the tyrannies of native witnesses, who for a few annas will swear away the lives of their dearest friends, to the ignorance of native jurymen, who do not understand the value of trial by jury, and to the tender mercies of native magistrates, armed with a power of summary jurisdiction, unknown even in England, and by means of which an Englishman might be confined in their vile prisons, amidst all the fierce heat of India, for as much as two years." From the "Times."

2638. You appear to think that the experience which we have recently had in the mutinies confirms the inference which you draw, as likely to result from increased settlement by Europeans?—Yes.

2639. Do the natives resort to Europeans to settle their disputes in small matters?—Yes, they do very generally; and many Europeans pass several hours a day settling little village disputes. I have known planters give up two days in the week to this work.

2640. Do you think that from experience the natives have now more confidence in Europeans than they had 20 or 30 or 40 years ago?—I think that European residents are much more respected now than they were.

2641. Do you think that if Europeans were to extend themselves very much, a still greater confidence would be reposed in them?—I think that respectable Europeans settling in the country will always call forth that respect.

2642. In an equal ratio you think the confidence of the natives in the Europeans will increase?—Yes.

2643. In what way principally do you think that an increased settlement of Europeans would be beneficial to the country?—Throughout Bengal there is a complicated system of oppression. Zemindars, talookdars, ryots, and planters are, for want of protection, driven to self-defensive measures; the young magistrate shifted about from place to place, is no protection; money has its influence, and the powerful succeeds. How can it be otherwise? The magistrate, when yet an inexperienced youth, is put over a large district with perhaps 5,000 towns and a million of people, he is almost a stranger to the language, and only two or three years from college; his points of weakness are weighed to a nicety, and are worked upon by the most crafty people in the world; and upon these people (that is, his omlah) he must trust to allow the machine to work. True, he has the aid of pundits and cazees, ameens and principal sudder ameens, with magisterial powers, and perhaps a deputy magistrate; and from these officials to this young magistrate lies an appeal, which is final in the majority of cases. So that the higher court, that of the Sessions Judge, has little power over the magistrate; he has only to deal with cases of higher crime, such as murder and dacoitee, &c., in which men of property and respectability never appear at all. Thus the whole of the most important duties in a district devolve entirely on the magistrate, who, however talented and zealous, and there are many such, wants original training and experience, and who, however anxious to do justice, must find himself in a most trying situation, and overwhelmed with work. This system is one of the greatest obstacles to the settling of Europeans in the country.

2644. Do you confirm the evidence which has already been given of the incompetency of the magistrates sufficiently to understand the language of the country, and of the magistrate's dependence upon the omlah?—I do generally confirm what I have heard as to the state of the police.

2645. What is the state of the country as respects the safety of person and property?—Neither person nor property is secure. Under the present policy and settlement, I would discourage a friend from going to settle in India. I would not, if I could help it, have property in India; who could live in India in safety under such circumstances as I have above feebly attempted to describe, and with the prospect of still greater powers proposed to be given to such courts and magistrates to imprison a European for two years, or to impose a fine of 100 *l.*? A sudder ameen (a native) to have the power to do so for one year, with fine of 50 *l.*; and an ignorant moonsiff (also a native) to have power of imprisonment for three months, with fine of 25 *l.*; the practical effect of which would be to annihilate the value of all the property belonging to Europeans, valued at many millions sterling.

2646. In the present state of the police, could Europeans dispense with their private establishments for the protection of property?—I do not think they could remove the power to protect yourself, and you would soon find you had little left worth protecting.

2647. Have any measures been adopted within your recollection to improve the police?—Deputy magistrates have been appointed, generally natives, and not generally a good selection. Natives do not make good magistrates; they neither give satisfaction to the Europeans nor to the natives of the country. But I understood in India that a pressure from England for the employment of natives had, against the conviction of the local authorites, induced the trial, and it has proved a failure. Some increase of pay has also been allowed to darogahs and the lower grades of police officers, but the general impression throughout the country is, that this has failed to make them more honest; and this is not to be wondered at, as the same class of people continue to hold these situations. They have, under the system, great temptations to be largely bribed, and their continuance in office is very precarious. The first reform must be in the selection of better magistrates, men of more experience and local knowledge; secondly, their continuance in a place, and better paid; thirdly, not shifted into the revenue department when they become experienced magistrates; and, fourthly, a greater recognition of the European element in the subordinates of the courts, and particularly in the police department. The darogah's place might be taken by a European. Thus the magistrates would be strengthened by an efficient honest police by Europeans, and the lower departments filled by natives not residents of the place. The legislative enactment 18 of 1850 protects the magistrates, which is complained of; whilst the bearing and tendency of all other recent enactments has been to deprive the British subject of the protection of the English law as administered by the Crown judge, a birthright we all greatly cherish, and a privilege we want extended all over the country. The European settler has no security for property, and no certainty of reaping the benefits of any improvements. We have a refined system, unsuited to the wants of the people, which encourages forgery and perjury: and the business of the court is generally done by the native, because the European functionary is otherwise too much engaged, or he is new to the district, or about to leave it, or fresh from college, and generally ignorant of the work he has to do. We want men as magistrates of a certain standing, men who can take a plain straightforward common-sense view of a subject, without going into all the niceties of English law, unintelligible and incompatible with the habits of the people. Europeans of education and character have not been encouraged to take the appointments of deputy magistrates; natives of family and fortune and respectability have not been selected; but worn-out darogahs, of doubtful reputation, and others physically unfit, have been chosen for these most important situations. For these appointments, that is, for the all-important situation of magistrate or deputy magistrate, selection as to qualification and personal fitness ought to be the test; and, when found, no remuneration is too great to keep him in the department. Lord William Bentinck's Act 6 of 1832, of not allowing the police to interfere, has been a great boon to the people, considering the loss of property the lesser evil, than the infliction of a police inquiry. Whereas Act 5 of 1848, empowering magistrates to summon parties into court, and give heavy

Mr. J. P. Wise.

11 May 1858.

penalty bonds upon the simple report of a darogah, has been often much abused. Men of extensive property, finding it difficult to satisfy the magistates' sheriff as to the value of the security offered when he is looking out for his consideration in the shape of a bribe; Europeans have often been seriously inconvenienced by being brought from a great distance to give such securities upon a trumped-up report of a darogah, bribed by a zemindar; and the recognizance of 100 *l.* might be forfeited afterwards by a false case made up by an unscrupulous zemindar and darogah.

2648. Am I right in understanding you to say that the increase in pay has not improved the character of the darogahs, but that on the contrary it has increased their exactions?—It has apparently; I have heard that from many zemindars and other people.

2649. I believe that Europeans are liable only partially to the jurisdiction of the country magistracy?—The magistrate has great power over a European, being likewise a justice of the peace; he has power to cause his attendance in court upon the most trifling charge; he can fine him to the extent of 50 *l.*; he can put him under a heavy recognisance, and if charged with more serious crime, has the power to send him to Her Majesty's Supreme Court in Calcutta for trial. The magistrate, in short, has ample power over the European, and often more than he can with discretion use, and much more than any magistrate in this country holds.

2650. What means would you propose for the establishment of a jurisdiction in the interior over Europeans?—The Legislative Council, I believe, admits the reasonableness of our aversion to being tried by the local courts; but still it appears the Legislative Council deems it unjust to exempt us from trial in these courts, upon the principle, I have been told, that we can if hurt, make a noise; we are told also, that we ought not to have the privilege of the Supreme Court, for, if innocent, the privilege is of little importance, and if guilty the difficulties in the way often enable us to escape. Then our merciful friends add, the district judge is good enough for the native, why should he be less so for the European? Now, with proper courts, having independent judges and a jury of Europeans, it would be right to subject us to the local courts; but surely it is not right, expedient, or just, to put us lower, as has so long and lately so urgently been desired to put us, at the mercy of a native judge and a native jury; the manifest object being to drive us out of the country. It is petty charges more than serious ones that Europeans have to dread; a dozen charges may be got up by a vindictive native, and a native magistrate having the power to imprison, would be absolute ruin to the European, and this might be done by men, now acting as deputy magistrates, admitted by the highest authority to be unworthy of public confidence. Suppose these Black Acts had been carried into law, as was desired just previous to the breaking out of this rebellion, the scattered Europeans as a preparative measure might have been lodged in gaol. It has been the aim of the Government of India to lower the European settler in the eyes of the natives, and also to humiliate the higher classes of natives, who now stand aloof from the European official. Many years ago the higher natives used to visit and be received with distinction and kindness by the officials; but it is not so now, and I think that the marked respect formerly shown towards the European has also diminished.

2651. I think you stated that it was the object to drive the European settlers out?—Yes, one would suppose so.

2652. To whom do you impute that object; was it the effect of the laws or was it the intention of those who passed the laws?—The laws would have that effect.

2653. You do not mean to say that any Government would desire to drive settlers out?—One would suppose not, but practically that is the effect.

2654. Have you individually suffered from the consequences of administration such as you have described?—I have seriously suffered; and by way of illustrating the working of the system, I may proceed to narrate a few instances. In the year 1833-4 the estate of Buldakal in the Tipporah district was put up for sale for arrears of revenue. I became the purchaser and deposited the amount required by the law in bank notes and Company's paper, pending the Commissioner of Revenue's approval of the sale; and on that officer's doing so, I paid into the treasury of Commillah the whole amount, 1,15,000 rupees, and received the collector's order to take possession of the estate. I may observe at that time the law permitting Europeans to hold lands in India had not been promulgated, but it had passed all the preliminary stages, so I

was

Mr. J. P. Wise.

11 May 1858.

was obliged to get the permission of Government in anticipation to hold the estate; this was immediately granted by Sir Charles Metcalfe, then Lieutenant-Governor of Bengal. The ex-zemindar appealed to the Board of Revenue against the sale, and the Board had the power to reverse it upon any legal grounds; the petition was sent by the Board back to the Commissioner for his opinion, and that Commissioner was not the same who had previously upheld the sale, but the Collector of Chittagong, temporarily put in charge of the Commissioner's office, and he recommended the reversal of the sale upon grounds utterly unfounded, and in contravention of the law. First, he said the estate had been sold without making it known that the subordinate tenures had lapsed; this was not required, as the Permanent Settlement Laws of 1793 declare this, and every tenant knows it, and one instance of such a notice before a sale could not be shown. Secondly, because the petition stated the estate had been sold at or towards sunset; this was purely false, as the sale took place in open cutcherry about 12 o'clock. Thirdly. That the Collector was a relative of mine, and had favoured me by accepting Company's paper as security for my bid; this, again, was incorrect; but the acting Commissioner did not give himself the trouble of duly inquiring. His thoughts turned upon benefiting the Government, for he reported that it would be fair to the under tenants to give greater publicity; and that as the estate was a very valuable one, he would, in recommending the reversal of this sale, advise the purchase of it on behalf of Government at the next sale. The Board adopted the recommendation, and illegally dispossessed me of a valuable property, and purchased it on the next sale-day, and that estate is now held by Government.

2655. Sir *Erskine Perry.*] What did they purchase it at?—Merely the difference of the increased revenue up to the date of sale.

2656. *Chairman.*] Have you suffered in any other case besides that which you have mentioned?—I have suffered in connexion with other matters in several ways.

2657. Do you consider that the extension of enterprise on the part of Europeans is checked through the circumstance which you have described?—Very much so, I think.

2658. Do you coincide with the other witnesses who have stated the great desirableness of the use of the English language in the courts of law, and the extension of the English language generally?—Yes.

2659. Do you think that an English judge, by means of an interpreter, and using his common sense on a question, would distribute justice better than by hearing through the ears of the omlah, and being obliged to rely on natives for the decision to which he comes?—I think so.

2660. Of course there are large estates and tracts of land in Bengal which were under the Permanent Settlement, but which have reverted to the Government by forfeiture and by other means; in what way are they let?—Generally in farms for a period of years; from five to ten years. The Government let them out in farms to whoever will take them; Europeans hold a great many of those farms.

2661. What is the peculiarity of those large estates?—They are chiefly under the Permanent Settlement. Some of them have lapsed into the hands of the Government; some of the estates have been purchased by the Government.

2662. Do the Government let them out to individuals?—Yes, in farm.

2663. They have reverted to the Government, I understand you to say?—Yes; many estates fell into the hands of the Government in this way; the Government revenue not having been paid, the estates are purchased by the Government.

2664. Are those estates beneficial or otherwise to the settlers?—They are beneficial to the settlers, of course, when taken in farm on reasonable terms.

2665. Do the settlers pay a fixed revenue to the Government?—Yes.

2666. Of course they would rather be zemindars?—Yes.

2667. Are they better or worse than putnees?—They are quite different from putnees; a putnee is a perpetual lease, and this is for eight or ten years.

2668. A putnee is a superior lease?—Yes.

2669. These are like the izaras?—Yes. Izaras are mere farming leases.

2670. Are you acquainted with any of the hill tracts in India, and do you consider them suited for the settlement of Europeans?—I am not personally acquainted with any of the hill tracts; but I have taken some hill tracts in Assam and Cachar for tea cultivation, and I consider them very favourable for the settling of Europeans. Of course the hill tracts near Sylhet, Darjeeling, the Himalayas,

Mr. *J. P. Wise.*

11 May 1858.

and the Neilgherry mountains offer most favourable localities for Europeans to settle.

2671. Mr. *Willoughby.*] Do you speak of that from your own knowledge?—No; I had assistants up in Assam, and I have met people from Darjeeling, but I have never, as I said before, personally visited those places.

2672. What is the tenure of land in Assam?—I believe it chiefly belongs to Government.

2673. Could the Government sell or let it to Europeans?—Of course.

2674. Do the tea districts in the hills afford very great opportunity for the settlement of Europeans?—Yes.

2675. Both on the ground of health and also because there is a great quantity of waste land?—Yes.

2676. And that waste land might be converted to the cultivation of tea?—Yes, or any other produce.

2677. Does not the cultivation of tea offer a great resource of development to India, if it were extended along the Himalayas?—Yes.

2678. Do you think that the natives of India would be likely to extend their consumption of tea?—I think so.

2679. Is there any cotton cultivated in your part of Bengal?—Cotton is grown in large quantities in the Tipperah Hills; it is likewise grown in the Dacca and neighbouring districts, but not extensively. The soil is no doubt suited for producing the finest cotton. We have cheap and abundant labour almost everywhere in India, and it appears to me that capital and Saxon energy is only wanting; assisted, of course, with a ready and remunerative market, and with facilities of getting to it. If Europeans get waste land on favourable terms, and are safe in life and property, India will supply in a few years a large portion of the cotton required by England. India has an abundant population, and no production is better suited for the wives and families to be engaged in than cotton; the soil, the climate, and the requisites for irrigation, when that is required, have only to be attended to, and the result must be, with rail and other means of transport, an abundant supply of the finest cotton, and at a lower price produced, than from any other part of the world. I had cotton growing in a garden near Dacca for many years, yielding three and four crops a-year of the finest quality, pronounced so by men of experience; and from this I am led to think it can be grown of good quality.

2680. That is in that part of Bengal in which you were resident?—Yes.

2681. Are there any obstacles to the extension of its cultivation?—Make it safe for Europeans to remain in India, and give them encouragement by giving tracts of waste land in perpetuity, and India will not be behind Java in productiveness.

2682. Are you in favour of a power of redeeming the land-tax and possessing the fee simple upon the part of European settlers?—European settlers would much prefer it, if they could get the fee simple on reasonable terms.

2683. Has the Company ever tried an experimental farm for the cultivation of cotton within your knowledge?—Yes, they had an experimental farm in Dacca for many years, and expended a large sum of money upon it, but it was totally unsuccessful.

2684. What was the reason of that?—It is very difficult to say why; but one year they wanted seed; another year they wanted money; another year there was a blight come over it; another year a hailstorm came, and at last came a season of caterpillars.

2685. In the districts in which your concerns are situated, what is the state of the roads, and are there sufficient modes of intercommunication in them and between them and Calcutta?—The roads have been much neglected, the small canals for water carriage have gradually been silting up, and the trade and internal communications very much injured in consequence; so bad is it, that for a few thousand rupees a channel might be kept open during the year to a town, or large market, which is now shut for six or eight months. Of course the rivers to Calcutta are always open throughout the year.

2686. Is the country where you have been residing for so many years healthy for Europeans?—Very. I have been there a long time, and I have always found it so.

2687. Have you ever heard of instances of families continuing there for several generations?—No.

2688. You cannot tell how far the experiment may have succeeded, if it has been tried, of families continuing to reside there?—No.

2689. Has

2689. Has your attention ever been called to the circulating medium of India?—I think a gold circulation may be introduced very beneficially. It would draw out vast treasure in silver, which is now buried and out of circulation, to the great benefit of the Government and the population. Sovereigns and half sovereigns would, I think, be a very popular circulating medium; and the value of a sovereign being within a fraction of 10 rupees, the shillings and sixpences might be substituted for rupees, thus securing a uniform currency with this country. The gold mohur is seldom seen, and is always bought up at a premium for hoarding and working up into ornaments. I would also suggest the issuing by Government of paper, something like Exchequer Bills, payable after 12 months, bearing a less rate of interest than Government paper. Such paper would, I think, be of great advantage to merchants, who would use it largely in buying and selling in place of keeping large sums in the banks for which they get no interest.

2690. Would you have a gold coin smaller than the half-sovereign?—You might have a quarter sovereign.

2691. As they have on the European continent at present?—Yes.

2692. Mr. *Campbell.*] What may be the annual value of the indigo produced in India?—The value of the indigo produced in Bengal and the upper provinces may be from 2,000,000 *l.* to 3,000,000 *l.* per annum, varying with the extent of the crops and the market price of the article.

2693. Is that all produced by English capital, and skill, and enterprise?—Nineteen-twentieths of it is produced by British capital and skill.

2694. You have stated that the annual value of indigo produced is from 2,000,000*l.* to 3,000,000*l.*; what may be the value of the properties producing this indigo, and do they belong entirely to English capitalists?—The value of the properties, including the putnees, talooks, and zemindaries throughout India, may be from 7,000,000 *l.* to 8,000,000*l.*, varying with the value of money and price of indigo, and entirely held by English settlers and capitalists.

2695. Has this capital and property been acquired by men who have gone to India with nothing but that capital which a European carries everywhere, namely, perseverance, industry, and skill?—Yes.

2696. How does the quality of the indigo made under European superintendence compare with that made by natives?—That made by natives is from 20 to 30 per cent. less valuable.

2697. How do you account for that?—From the superior care and skill of European manufacture.

2698. Is that applicable to other staple commodities in India, such as silk, &c.?—Yes, to every commodity; silk and sugar, and so on.

2699. The value of silk, or any other commodity, produced by European capital and superintendence is enhanced by reason of that captial and superintendence?—Yes.

2700. Does the cost of capital in India interfere materially with the general production?—It does to a great extent.

2701. On what terms does the native agriculturist borrow from the native banker and capitalist?—He pays from 50 to 75 per cent.

2702. What increase may have taken place, in your experience, in the extent of produce and value in India of staple and other articles of production, such as rice, jute, silk, safflower, oil seeds, &c., by the influence of European example?—The production of nearly all the staple articles has doubled within the last 10 years, and in some of them much more; whilst the price in India has generally increased to a corresponding extent; for example, jute formerly sold at six and eight annas a maund, it now sells at two and three rupees; and in place of 3,000 bales shipped for this country in 1836, the quantity has increased to nearly 2,50,000 bales.

2703. Then you think that this is chiefly owing to the example and the influence and the enterprise of Europeans?—Chiefly so.

2704. And you think that that vast increase within the last ten years may be attributed to the fact of Europeans being enabled to hold lands in their own names to a certain extent?—To a certain extent.

2705. Sir *Erskine Perry.*] I understand that Europeans have not increased in number?—No, I think not in the mofussil.

2706. If that is so, your answer is not quite correct. This increase in the staple article must be owing to native capital and enterprise?—No, I think not.

2707. Mr. *Campbell.*] Have the industrious million participated to a fair extent

Mr. *J. P. Wise.*

11 May 1858.

in the increased prosperity consequent on this increased production and price?—No; I think a very large proportion of the profit has gone into the hands of the money lender.

2708. Differing from other countries, where such a state of things does not exist, increased production and rise in its value, can be taken as no index of the general prosperity of the great body of the people?—It cannot as far as the ryots are concerned.

2709. This, to a certain extent, must be taken as the cause of the exports from this country in exchange for the exports from India bearing no fair comparison?—In the year 1856-7 I observe that the total exports from India exceeded 25,000,000 *l.*, whereas the imports to India were under 15,000,000 *l.*, and the balance of trade consequently had to be made up by bullion shipments from this country.

2710. Would not the increased settlement of European capitalists in India have the effect of adjusting this balance of trade by the natural process of commodity for commodity?—It would doubtless have that effect; and looking at the vast population of India compared with the population of this country, and consequent power of consumption, if the legitimate returns for labour were within the grasp of the million, I consider that the balance of trade should never be against this country, and that if bullion shipments had to be made, they should be from India to this country in place of from England to India.

2711. This state of things must operate prejudicially to the value of profits in two ways; first, in decreasing the rewards of labour; and secondly, from the withdrawal of capital on the retiring of existing incumbents to their native country?—It has that effect.

2712. Then you believe that with better laws, and better protection to property, the planter or settler would retain his interest in such property with as much confidence as if he invested in agricultural pursuits in this country?—Yes, to a certain extent.

2713. Then the practical result of your leaving your capital for such pursuits would be to render the cost of capital more moderate and accessible?—It would; and the large diffusion of English settlers and capital in India would have the effect of improving the habits of the people and increasing their wants. Everything required by India could be better made and introduced from England, leaving India the produce and supply of the raw material. In short, all produce from the soil might be left to India, and manufactured requirements from this country; and this applies as much to the manufactures of Manchester and Glasgow, as to those of Birmingham and Sheffield.

2714. Then you are of opinion that the moral character, and civilization, and material well-being of the entire native population is certain to be advanced by the increase of British settlers in India?—Decidedly so; that is the inevitable result.

2715. Are the natives of India not favourable to such an increase?—Very much so; employment by Englishmen is much preferred to that by their own countrymen, from the general feeling of confidence in the honesty of the European; indeed, with rare exceptions, the word of an European would be preferred to the bond of a native.

2716. What field have you in your own properties for the employment of intelligent Englishmen?—My greatest want at the present moment, and the greatest want of zemindars and planters situated as myself, is steady young men, acquainted with the language. I could give employment at present to a dozen; and vast numbers might find similar employment in the same pursuits throughout India; but the difficulty has been to obtain them, and when you do obtain them, they have no knowledge of the native language.

2717. Do you think that the children of European soldiers, educated in the Hills, with a knowledge of the language and habits of the people, would find speedy employment; and if to the scholastic studies were added the rudiments of agriculture and the useful arts, that they would be valued as assistants and superintendents of all property where capital and enterprise is now embarked, either in European or native ownership?—India has no greater want at this moment than such a class of young men, and they are eagerly sought after by native zemindars and native capitalists, establishing, I think, the fact of the greater confidence they place in Europeans over their fellow countrymen in matters of trust, industry, and skill. Whether we regard India with its vast population, or India naturally beneficial to England, or our soldiers the mainstay

in

in India, I consider that a greater boon could not be conferred on all those interests, or one more calculated to yield abundant fruit, than the education and encouragement by well-organised institutions in the hills for the sons of our soldiers. India would benefit by the spread of truth, intelligence, and skill, and the soldier, in the preservation and elevation of his child, would participate and be improved by its beneficial and moralising effect. I may further remark that such a class, as they become largely developed, would be a strong and natural element to bind and strengthen our hold of India, and a formidable barrier against inroads upon that rule.

2718. To what extent may European capital be laid out in other commodities besides those you have mentioned?—In silk it is very largely laid out, and in jute and safflower purchases, and many other ways.

2719. In fact, the general products of India?—Yes, and those products are unbounded.

2720. The class of men to whom you have referred, in your opinion would open out a large field in India for the employment of capital?—Yes; they are very much wanted.

2721. You had the management of the Rajah of Tipporah's estate, had you not?—Yes, for many years.

2722. In the management of that property how may the police laws have affected him in his connexion with the Government?—He found them equally oppressive.

2723. Can you cite any prominent example of that oppression?—The independent territory of Tipporah borders on the Government property in Sylhet, and in that neighbourhood the people of the hills produce cotton and other commodities, and barter with the people on the plains, and they have places where they come and carry on that barter, and very often there are differences between the hill people and the people of the plains; the people of the hills are truthful, straightforward, and honest, but resentful when cheated or overreached, which is often the case when dealing with the Bengalee; on such occasions, from words they often come to blows, wounding, and sometimes murder ensues. These quarrels, often wrongly reported, bring the rajah into disrepute with the Government. On one occasion a police darogah intimated to the magistrate of Sylhet that a murder had taken place, that the rajah's people had murdered one of the subjects of the Company; the rajah was called upon to give up the murderers, and information was sent to the superintendent of police and to the Government. The rajah made inquiries, and found that the party murdered was actually his own subject, and that the place was within his own independent territory. He intimated this to the magistrate, and requested he would go personally or send some person who would give a faithful report. The magistrate sent his nazir, or sheriff, and that man demanded from the rajah 5,000 rupees to give a correct report that the murder had taken place within the rajah's territory. I was asked what to do by the rajah, and of course I told him not to pay the money, and information was sent by the rajah to the Government again, that he was quite positive as to the fact that the murder had taken place within his hills, and that the man murdered was his ryot. The Government ordered the magistrate himself to proceed to the spot; he went, but not to the place; he went a part of the way, and was duped by the nazir and police, and returned and reported to the Government that it had taken place within the Company's territory. Again the Government was addressed on the subject, now evincing great displeasure towards the rajah for persisting to the contrary, after the magistrate's report. Colonel Lyster, in command of the frontier, was ordered then to proceed to the spot with 100 or 200 men, and if he found the magistrate was correct, to proceed at once to the rajah's residence and wait further orders. The fear was that the Company were going to take possession of the whole territory; however, Colonel Lyster, on going to the spot, actually found that all had been correctly stated by the rajah, and that the magistrate had never gone near the place; he returned to Sylhet, and reported to the Government, and the magistrate, I believe, was censured (though I have no public information of that) and the nazir was dismissed the service; he was dismissed the service by the magistrate, but he was immediately put by the collector as nazir into his court, where he was when I left India, as far as I know to the contrary.

2724. Mr. *Danby Seymour.*] How long ago was that?—That was 12 or 15 years ago.

Mr. *J. P. Wise.*

11 May 1858.

2725. Mr. *Campbell.*] Those are facts within your own knowledge?—Yes.

2726. How do the resumption laws act upon property in your neighbourhood, within your knowledge?—They act very injuriously to the people generally, and the effect still exists. People remember them as a blight passing over the country; money was extorted from them in every possible way; the poor natives clung to their ground, and they lost it, and very often lost their money in trying to bribe away the officials from their doors.

2727. Sir *Erskine Perry.*] When was the resumption law commenced?—It did not commence in Bengal till about 1836.

2728. Mr. *Campbell.*] What was the purport of the law; how did it work so as to be destructive of the property of the ryot or settler?—The effect of the law is very injurious, because the boundaries of estates are not known; large rivers pass through, cutting away half the estate, and, on reforming, often taken by Government. I have seen parts of estates carried away from one side of the river and settled upon the other, taken by Government, and churs formed in the centre of rivers in the same way, taken by the resumption officers.

2729. Mr. *J. B. Smith.*] Is not Dacca the place where the beautiful muslins are manufactured?—Yes.

2730. Has that manufacture become extinct?—It is not extinct, but it is not carried on to any great extent now.

2731. Is the cotton of that beautiful manufacture grown in the neighbourhood of Dacca?—Yes.

2732. Might it be procured to a considerable extent?—Yes; by encouragement, I have no doubt, you could increase the cultivation of cotton of that kind very considerably there.

2733. You have never seen any muslins of the English manufacture equally fine with those of Dacca?—No, none.

2734. What kind of land is that beautiful cotton grown upon?—Chiefly upon the alluvial soil of the country about Dacca. Parts of it are very low, and the cotton is grown upon the low churs that are submerged during a great portion of the year.

2735. Have you ever grown any of it?—I have grown foreign cotton, and it answers remarkably well.

2736. Of this quality?—No, I never grew that; I have seen, however, the cotton growing from which the beautiful muslins are made.

2737. What kind of cotton is it?—It is a small annual.

2738. Is it a short staple?—Yes, it is a short staple; soft.

2739. Is there abundance of land in the neighbourhood suitable to grow that kind of cotton?—There is no want of land.

2740. Is there any want of labour?—No, there is plenty of labour.

2741. What is the value of labour there?—About three rupees a month; about 2 *d.* to 2½ *d.* a day.

2742. Did not the East India Company try some experiments in the growth of cotton in that country?—Yes; they had an experimental farm there.

2743. What was the extent of it?—Altogether about 100 acres.

2744. Was that farm on the high or the low land?—Upon the high land.

2745. Is the high land equally suitable for growing cotton with the low land?—Not without irrigation; where the natives sow cotton is generally in the low alluvial soil, which is damp, and they do not irrigate.

2746. Was this experiment tried with the native seed or with foreign seed?—With foreign seed.

2747. Of the American kind?—Yes, chiefly; it was a green seed, if I remember correctly.

2748. That experiment failed?—Yes, it failed.

2749. Who superintended it; was it an American?—No; he was an Englishman, but he had been in America.

2750. How was it that he failed?—I have just stated as I heard myself, that he complained of the want of seed, and sometimes he did not get money, and sometimes he got too much rain, and sometimes hail storms.

2751. Was this seed to have been furnished by the Company?—By the Government; the Government made every endeavour to introduce it.

2752. And the Government were to furnish him with money?—Yes.

2753. But

2753. But he was not regularly supplied with this, and had not an opportunity for carrying the experiment into effect?—That was his excuse; but I know that the Government spent a great deal of money, for several years, on the experiment.

2754. Did you see the cotton grown there?—Yes.

2755. Was it altogether a failure?—Yes; I have seen it left upon the bush unpulled for weeks and weeks together.

2756. Did the Company furnish him with machines for cleaning the cotton?—Yes, there was a machine sent out for cleaning the cotton.

2757. The Company went to a great expense, but there were no results?—Yes.

2758. Is irrigation possible in that neighbourhood?—Irrigation may be very easily made use of, for there is abundance of water from the rivers.

2759. Would not that very much increase the production of cotton and indigo too?—It would, probably. Irrigating for indigo would be very expensive; it covers so large a surface.

2760. What would be the facilities of getting cotton to market from Dacca?—From Dacca the facilities are by river carriage. It is entirely river carriage. There is no road to Dacca. There is a proposal of a railway, which will of course facilitate the movement of produce to the Calcutta market.

2761. Is the cost by river carriage considerable?—Yes; and it has very much increased of late years.

2762. To what is that owing?—To the increased demand for all kinds of country produce, which has been very greatly increased of late years.

2763. Do you think it would be possible, if Europeans were to go to Dacca, that the cultivation of cotton might be made a profitable object?—I think that a European might carry on the cotton cultivation in the same way as we do indigo. He might give the ryots advances, and they would grow it. It would be a favourable employment for the natives.

2764. It would give employment to a great number of women and children now unemployed?—Yes.

2765. Would not the railway also give great facilities?—Yes, very great.

2766. Might not the navigation be very much improved at a small expense from Dacca to Calcutta?—There are great complaints of the canals leading into Calcutta being choked up by a very large number of boats; sometimes you cannot pass for days in consequence; there is that difficulty; but, otherwise, there is plenty of water communication with Dacca all the year round.

2767. Is that owing to the canals being too small?—Yes. There being only one canal, it was proposed to have two canals, one for boats going in, and the other going out, but I believe that has not been carried out.

2768. Have you any idea of the number of boats that go in?—There are many thousands of boats.

2769. You cannot tell the quantity?—No. The whole produce of India comes through those canals for eight months of the year.

2770. You have heard that notwithstanding all the difficulties to which you are exposed, and by which you are harassed by bad laws and bad police, still planters have settled in your district, and made it a profitable speculation; is it your opinion that the speculation would be less profitable if you had good laws and good police?—No; certainly it would be more profitable if we had good laws and a good police.

2771. Do you think that in the present state of things there is an inducement for an increased settlement in that part of the country?—No, there is not.

2772. Is it your opinion that Europeans or Englishmen, with capital and skill, may find equally profitable enterprises in other parts of our dominions without all those harassing difficulties which they meet with in India?—I think so. I would not go to India; I would take another beat.

2773. If you had known the difficulties you would have to encounter would you have chosen India?—No, I would not.

2774. Would you recommend your friends and relations to follow your example?—Not under present circumstances.

2775. You stated that there was a great increased production of a variety of articles, but that the condition of the people was not improved by that increase of production?—I think a great portion of the value of the production has gone into the hands of the money-lenders; that money is very scarce and very difficult to be had, and almost all the ryots are more or less in the hands of the money-lenders;

Mr. J. P. Wise.

11 May 1858.

lenders; they have their crops mortgaged to them, and they generally take a great advantage of the ryots.

2776. Is there any remedy which you could suggest to improve the condition of the people in that respect?—If Europeans were more settled with money, of course they would become the money-lenders, and would advance for articles required, and they would do it at a moderate rate; a great deal of the produce of the country is now raised by money advanced.

2777. Do I understand you to state that the social condition of the people employed by Europeans is better than the condition of the people employed by the natives?—I think in the neighbourhood of factories, the social condition of the people is better than what you see in other parts of the country.

2778. You think they are better clothed and better fed?—Yes.

2779. And that you attribute to their being more honestly treated?—I think so.

2780. You stated that it was a common practice with the natives to submit their disputes to the arbitration of Europeans?—With the lower orders that is the case; they, in many disputes, go to the factory of the European to have him to settle little differences.

2781. There is no obligation?—No, of course not.

2782. But they prefer it to the native courts?—Yes, and it is very useful; Europeans do a great deal of good in that way.

2783. Both parties consent to the arbitration of the Europeans?—Yes.

2784. And do they usually abide by that decision, whatever it be?—Yes, I think they generally do.

2785. Do they ever refer their disputes to natives in the same way that they refer them to Europeans?—Yes, they sometimes do; a zemindar will not take the trouble of looking into those troubles; he leaves them to his gomastahs and people, and they must pay money for it, and they do not so generally go to them to settle differences.

2786. Do you suppose that it is because of the cheapness that they apply to Europeans, or because of the justice which they get at their hands?—I do not say that the natives could not do them justice; but they come to the European to have little differences settled, and have not to pay for it

2787. Mr. *Danby Seymour.*] Do they ever refer their disputes to a punchyett?—I have always encouraged as much as possible punchyetts, because there are many little disputes that the village elders can best settle.

2788. A punchyett is a jury?—Yes, of five men.

2789. Is the number fixed?—"Punch" signifies five, but the disputes are very often well decided by two or three of the village elders.

2790. Dacca is very near the coast, is not it?—It is about 100 miles from the sea.

2791. What is the nearest point?—Naraingunge; that is about eight miles from Dacca, where ships of 300 tons burthen can come.

2792. Suppose cotton is grown in considerable quantities round Dacca, you might ship it straight to Europe?—Yes, but it is rather a dangerous navigation from Naraingunge to the sea.

2793. The navigation to Calcutta is not very safe, is it?—At some periods of the year it is less safe.

2794. Is not there a project for having steamers on the Bramahpootra up to Gowahati?—Steamers now go up there twice a month; it was interrupted slightly by this rebellion.

2795. Is not there a company in existence for navigating that river on more extended principles?—No, not to Assam.

2796. Do you know what the tonnage of the steamers on the river is?—The Government steamers now plying up to Assam are about 200 tons each.

2797. Are there not a great many settlers in the upper part of Assam?—Yes; tea settlers as well as officials.

2798. Is not the time very great that is required to reach Upper Assam now?—They go from Calcutta to Upper Assam in about 12 or 15 days in steamers.

2799. I mean the ordinary traffic?—It would take six months to ascend as far as Upper Assam in native boats.

2800. How long would it take from Naraingunge up to Gowahati by a native boat?—It depends upon whether it is loaded or not, but certainly not under six weeks.

2801. Have you much communication with Assam?—There is a regular communication twice a month.

2802. Is there much trade?—Yes, there is a great difficulty in getting freight; those two steamers are loaded to the water's edge; the trade might be very much increased.

2803. What is the nature of the population round Dacca; is it Mussulman or Hindoo?—About half-and-half; it was a Mahomedan city.

2804. What is the Hindoo population; is it the regular Bengalee?—Yes.

2805. And the Mahomedans, are they a high caste Mahomedans?—No, they are not.

2806. Are they an industrious population round there?—Yes.

2807. You would find no deficiency of labour for any extension of trade?—None whatever.

2808. With regard to the Resumption Law, was not there a committee appointed by the Government to carry out that law?—No, there was no committee appointed; it must be nearly 16 or 18 years now since those laws were put into active operation. I stated that I thought a great blight had been thrown over the whole of Lower Bengal in consequence, and no corresponding advantage to the Government, I have heard.

2809. If there was not a committee, were not there commissioners or some other officials appointed to carry out the provisions of the Resumption Law?—They appointed special commissioners, and resumption officers named special deputy collectors.

2810. Were not there some distinguished civil servants who refused to act in that case because they thought the laws very unjust?—I believe so.

2811. Are you aware who they were?—No, I cannot name them.

2812. It appears that many officers thoroughly acquainted with the country considered the Resumption Laws very inexpedient and unjust?—Yes.

2813. Have you suffered yourself from the Resumption Law?—I have, more or less.

2814. In what way?—The Law of 1793 was set aside; by that law the Government could resume only on proof of its right to resume. The subsequent resumption laws cast on the parties defendants, who had been 60 or 70 years in possession, the onus of proving their titles.

2815. Does not the power of the Government, suddenly to bring forward such a law as that, render the tenure of all property insecure?—It does.

2816. Do you think there should be some general rule by which, after a certain time, titles cannot be inquired into?—It would be of great benefit; the limit is 60 years on the part of the Government.

2817. Do you not think that limit is too long?—Yes.

2818. What limit do you think would be fair both to the Government and to the settlers?—Twelve years.

2819. In the case of the Rajah of Tipporah, do you think that the mere dismissal of the offending nazir was a sufficient punishment?—I do not.

2820. What do you think it would have been fair, in a case of that sort, for the Government to have done?—It would have been fair at the least to have paid the rajah's expenses.

2821. Do you think the nazir should have been punished besides dismissal?—Yes.

2822. Do you think so slight a punishment as dismissal would deter others?—No.

2823. Do you not think that there ought to be a law by which a servant dismissed the Government service in one department ought not to be employed in any other Government department at any time?—He ought not, certainly, and such an order is sometimes given in dismissing from public employment for grave offences.

2824. Do you think that the people seeing that a nazir dismissed by one officer of the Government was immediately employed by another, really believed that the Government wished to set their faces against corruption?—No; but I am not aware that the Government knew anything of this; of course it was the local authorities that put him in employment again.

2825. Would not the dismissal of an important officer like a nazir, be brought under the eye of the Governor of Bengal?—The dismissal was doubtless a Government order, but not the re-appointment.

Mr. *J. P. Wise.*

11 May 1858.

2826. Could a collector employ so important an officer as that without its being known at Calcutta; ought not the Governor to be cognizant of a fact of that sort?—Certainly, but I doubt the Government being cognizant of the appointment.

2827. Do the planters make their advances through money-lenders?—No.

2828. Do the money-lenders become security for the advances made to the ryots?—No, we make our own advances to the ryots.

2829. But you do not make them through money-lenders?—No.

2830. Do you make up your accounts with the ryots, or do you have a running account?—No; we make up the account every year.

2831. Supposing that Europeans came into the country to buy for ready money, would any impediments be thrown in their way by the planters settled in the country?—No; many Europeans are now purchasing in that way.

2832. Has it been done lately?—Yes.

2833. And is doing now much more than formerly?—Yes, greatly more.

2834. And would be done much more if there were roads?—Yes, railroads in particular.

2835. And the more ready money transactions could be encouraged the better for the country?—Yes.

2836. You said the money-lenders absorbed all the best part of the capital thrown into the country of late years; as the capital increases, do you find that the rate of interest diminishes?—No; it still remains much the same.

2837. Is the money monopolised in the hands of the natives?—Yes.

2838. How do the natives, the money-lenders, employ their money?—They give it out to the ryots and carry on extensive mercantile and banking transactions.

2839. If they give out 1,000,000*l.* in one year, and in 10 years they have 2,000,000*l.*, one would expect that the rate of interest would diminish or the production increase?—The production has increased vastly of late years.

2840. Then all the capital that has been accumulated by the natives is put out afresh to increase production?—A great deal of it.

2841. Do the money-lenders invest in Government securities or property?—Many of them purchase land, and many invest largely in Government securities.

2842. Is the money which you advance obtained from firms in Calcutta?—Yes.

2843. Is that the capital belonging to the firms in Calcutta, or are they merely agents for British capitalists?—They are chiefly agents for British capitalists.

2844. Then the capital comes chiefly from England?—Yes, a good deal of it.

2845. And that as much now as formerly?—Yes, more now.

2846. Speaking of the fine manufactures that used to exist at Dacca, they are nearly entirely destroyed now, are they not?—They exist to a very small extent; you can, however, get the same quality at any time by ordering it to be manufactured.

2847. A fine manufactured article is a proof of civilization, is it not?—Yes.

2848. Then looking to the last 50 years in India, you would say that the population of India has retrograded?—The population has not retrograded I think; Europeans are not so numerous as they used to be, out of Calcutta.

2849. Mr. *Kinnaird.*] Was the magistrate who did not do his duty a European?—Yes.

2850. Had the rajah adopted the usual mode of paying a bribe, he would have saved himself a great deal of trouble and expense?—I prevented the bribe being paid, and the rajah was very much annoyed at it afterwards, because he got a great deal of annoyance and was put to considerable expense.

2851. Bribery and corruption seems to be the ordinary mode of settling those things?—Yes.

2852. I think you stated that you had been upwards of 30 years in India?—Yes.

2853. And your health was very good?—Yes.

2854. How many times have you returned home?—I was 28 years out without ever coming home at all, and I never felt ill until I came home.

2855. Therefore, with ordinary precautions and care, what is your opinion of the chances of European life in India?—I think a European residing there and taking care of his health, leading a sober life, and having plenty to do for both mind and body, he is as likely to have good health there as in any part of the world.

2856. Did you require much medical attendance while you were there?—No, I was never seriously unwell.

2857. You

2857. You said that if the suggestions of Sir Charles Metcalfe had been adopted, European settlement would have been encouraged?—Sir Charles Metcalfe was very favourable to European colonization, and if his views had been adopted subsequent to 1814, of course we should have had a great many more Europeans, and the resources of the country would have been very much developed long ago; and the revenues of India would have been increased greatly.

2858. Is the zemindar at all jealous of the European, as a general rule, coming into the district?—He has sometimes occasion to be so; the European getting a zemindary, it is his wish always to do justice as far as possible towards the poor; I have myself had 1,000 houses of ryots transferred over to a property of mine in one year, leaving a neighbouring zemindar because they were oppressed by him. My object was to take none of the exactions which the zemindars do, and as far as possible to do justice towards the ryots. The consequence is, they generally prefer the protection of a European zemindar, and the native zemindars do not like that, because his property becomes less productive if the ryots leave his estate.

2859. You think that the tendency of the European resident is to raise the social character of the ryot?—Quite so.

2860. You have agreed with all previous witnesses as to the disgraceful state of the police?—I quite agree in that respect as to the police.

2861. Can you make any suggestions for its improvement from your experience?—The great improvement is an able magistrate, with as far as possible a large increase of the English element, the subordinates of the police will then be made honest, and there will be no fear. It is an able man at the head that is chiefly required. I have seen a district in a state of misrule, and in the course of a short time an able magistrate would put all right. Darogahs and every one are put right in a few days by an able man. If he knows his business, he has plenty of power, and the laws are sufficient; he only requires to put them in force.

2862. I suppose the very name and reputation of an effective civil servant coming into a district has a good effect?—Yes, a wonderful effect.

2863. You recommend the introduction of the European element more largely into the police; can it be obtained?—There is no want of it. If you make a respectable situation for a European, and give him the hopes of advancement by good conduct, and raise him up to be a deputy magistrate, and a full magistrate, you will get plenty of Europeans of birth and education to take the lower appointments, with expectation of rising to the higher.

2864. The exclusive character of the civil service has tended to keep them out?—Yes.

2865. You told us that a great number of the native magistrates were very badly selected; who is responsible for their selection?—The Lieutenant-governor of Bengal has the patronage.

2866. You told us of some false cases trumped up between a zemindar and a darogah, is that very common?—Very common.

2867. When you hear of such cases it creates no surprise?—None whatever.

2868. It is a melancholy reality?—An every-day occurrence.

2869. You talked about the effect of the policy of the Government being rather to drive the European away. I suppose you meant that there was not only no favour or inducement shown to them, but that every discouragement is rather thrown in their way?—I think so; I think those laws that have been periodically threatened to be brought upon us have been discouraging, and has led to that feeling of dissatisfaction in India.

2870. With reference to your evidence as to Assam, you said that there was plenty of land to be had there. What is the title that you get in Assam?—It is Government land; you get it for 99 years from Government at a very moderate rate of assessment.

2871. Do those two steamers which ply there belong to Government?—Yes.

2872. They have been apparently not sufficient for the wants of the district?—Not nearly sufficient.

2873. May any private company set up?—Yes; and the Government are ready to retire the moment they do so.

2874. Does the tea cultivation in Assam require European superintendence?—Yes, there are a great many Europeans up there; it requires a great deal of care in looking after.

Mr. J. P. Wise.

11 May 1858.

2875. Is labour cheap there?—No; that is one difficulty in Assam; it is not so easily got.

2876. Would it be easy, if there were proper arrangements, to transport labour?—People are not very fond of leaving their homes; they prefer working at home; there is a difficulty in getting labour.

2877. Mr. *Willoughby.*] In what way has the Government of India exhibited their hostility to the European planters?—I more particularly refer to the Black Acts.

2878. That is the only symptom of hostility of which you are aware?—We blame the Government for not giving us better magistrates.

2879. At what rate do the Government grant leases for 99 years in Assam?—I think the first 15 years you pay no rent, and afterwards you pay four annas up to 30 years, and then you do not pay the full rate until 50 years, and that is only eight annas a begah; about one rupee eight annas an acre.

2880. It is by those favourable terms that the Assam Tea Company has been formed?—Yes.

2881. Are you aware that within the last two or three days the Assam Tea Company have divided nine per cent.?—I have heard that.

2882. Does that case support your opinion, that the Government of India is hostile to the settlement of Europeans?—No, not that particular instance.

2883. Do not you know that similar favourable terms have been offered in the Kumaon districts?—Of course, that is a recent event; I am talking of the Government of India for the last 30 years.

2884. Probably you admit that a considerable improvement has taken place on the part of the Government within recent years as regards planters?—It must be very recently.

2885. *Chairman.*] Do you mean that the feeling of the Government is hostile to settlers, or is it the system?—It is the system that we feel pressing upon us.

2886. Mr. *Willoughby.*] You stated an instance where the purchase of an estate was reversed after 17 years?—Yes.

2887. Was that under your own knowledge?—Yes.

2888. Will you state what the circumstances were?—The law prescribes that you will serve the notice at the residence of the party whose estate is to be sold, and in one of the largest towns on the estate. This notice was served upon the man's house; the man's house was his cutcherry where he made his collections; but it turned out after 12 years, which no man ever found out before, and which was not stated in his petition to the judge to reverse the sale, that this place where his house was and where he collected his rent, although it was in the centre of the estate, was actually not a portion of the estate; it was a bit of La-Khiraj land upon which his house happened to stand, and he proved that that bit of land was not a portion of the estate. But the law prescribes that the notice shall be served upon a portion of the estate, and the sale was reversed in consequence after 17 years.

2889. Did you hear the questions which I put to Mr. Freeman as to the precautions taken by Government when sales of estates are advertised?—Yes.

2890. Do you concur that those precautions are taken on those occasions?—Yes.

2891. That they must be given one month's notice?—Yes.

2892. In what year did this reversal of the sale after 17 years take place?—The reversal of the sale took place last year; within the last 12 months.

2893. How could such a reversal take place under the law where all those precautions are prescribed?—It was a sale not for arrears of revenue, but for a decree; and the facts are as I have stated.

2894. Was there a defect in the title-deeds?—No, the law prescribes that the notice shall be given upon a portion of the property to be sold.

2895. Then it was not the act of the Government, but of the court of law?—It was the act of the collector, and allowing the law to take effect in that way; two judges were in favour of reversal, and one much opposed to it, and it was a question raised in the last court, not in the lower courts, and ought not to have been admitted, I think, at that stage.

2896. You state that the sessions' judges have very little power over the magistrates; are there not appeals from the magistrates to the sessions' judges in many cases?—Yes; but in the greater part of the small cases the magistrate's power is final; the judge's power of interference is very little.

2897. What

2897. What is the number of settlers in the districts that you are best acquainted with?—In the five districts in which I am, there are not a great number of Europeans; there are perhaps not above 30 or 40 altogether.

2898. You have expressed your concurrence in the evidence of Mr. Freeman and Mr. M'Nair, that a great change should take place in the courts of law in those districts; namely, that English law should be administered by English barristers through the medium of the English language?—I think the introduction of the English language would be a great improvement and an able bar.

2899. Do you consider the administration of justice in an unknown tongue would be beneficial to the inhabitants of those districts?—It is unknown just now; the magistrates are very many of them quite unacquainted with the language.

2900. I am referring to the population?—I think the people would learn the English language very quickly, and it would have a moralising and good effect upon them, and if so encouraged become generally known; it gives an entirely new and improved turn to the native mind.

2901. In what towns would you establish courts of law of that kind?—In Dacca, and Mooshedabad, and Patna, and all the large central towns.

2902. A court of that kind would occasion considerable expense?—I should think not.

2903. You think that a court of justice, with the chief officials Europeans, would not be more expensive than a court of justice with a European presiding, and the rest of the establishment natives?—Of course there would be an increase of expense.

2904. And the chief advantages of those courts would be derived by the planters?—No, I think better justice would be distributed for the benefit of all.

2905. How would you obtain interpreters on whose honesty and fidelity you could depend?—There are many Christians well acquainted with the language, whom you could use as interpreters; there would be no want of them.

2906. Throughout the districts?—Yes, there are a great number of half-caste Christians well acquainted with the language.

2907. Can you state the year in which the Tipporah case of murder, in which the rajah was concerned occurred?—It must have been about 16 years ago.

2908. You have alluded to the cotton from which the Dacca muslin is fabricated, and you stated that any quantity of land is available for the cultivation of that kind of cotton?—I said there was a large quantity of land suitable, I think, for cotton cultivation.

2909. Is that land waste?—Some parts; a good deal of land is wasted in the Dacca districts.

2910. Is not the reason why cotton is not grown in India frequently that those interested in the land find that some other product is more profitable?—Of course, they will take to what will give the most profitable returns.

2911. Such as indigo, for instance?—Yes, or silk, or anything else; and it would be a question for the ryots and settlers, after trying cotton, whether it was a profitable speculation or not.

2912. You stated that cotton might be grown, and would give the population employment?—Yes.

2913. What is there to prevent it, if the profit derived from cotton cultivation would be equal to or greater than the profit from the cultivation of any other produce?—I alluded to the children and females of the family, that they are doing nothing, and that a crop of that sort would be very profitable, and might be grown without any increased labour or expense to the family.

2914. Of course, the planter would consider what would be most advantageous to himself?—Yes; he will not grow it if it is not profitable.

2915. Is not another reason for the limited production of cotton in India this: the uncertainty of its price when it is imported to this country, that price being dependent upon a plentiful or scarce crop in America?—The question would be, whether we could grow cotton cheaper than they could do in America. A man is paid a dollar a day there, and with slave labour; whereas he gets 2 *d.* and 3 *d.* a day in India, and the question is whether we could send it to England cheaper than they do from America.

2916. Even under existing circumstances, whenever the price of cotton is high in this country, the quantity imported into England greatly increases?—Yes; the higher price induces shipments from India.

Mr. *J. P. Wise.*

11 May 1858.

2917. You stated that you would not go again to India if you had your choice; has your residence in India been profitable to you?—Tolerably so; I would have been a very rich man if the Government had not taken that property from me 20 years ago.

2918. When did the Resumption Law, upon which you animadverted, cease?—It ceased about five or six years ago.

2919. Was not it an inquiry into titles?—Yes.

2920. In allusion to the exclusive character of the civil service, is it not the fact that what is called the uncovenanted service has very largely increased within the last few years?—The uncovenanted service has greatly increased, chiefly natives however.

2921. I mean both natives and Europeans?—Then of course it has very greatly increased.

2922. And without a corresponding increase to any great extent in the covenanted service?—Yes; we complain that there are not more able men of a certain standing in that service.

2923. Has not there been great progress made in improvements in India of late years; what is called in the common phrase attempting to develope the resources of India?—I do not see a great deal of that; I do not see any new roads or canals; I hear of them in the upper provinces and in the north-west, but it is not the case in Lower Bengal.

2924. Have you not heard that 34,000,000 *l.* have been already subscribed for, or are about to be subscribed for, for the construction of railways that have been proposed?—Yes, I have heard so, and it has been going on for a great many years, but has made very little progress up to this time.

2925. Have not steam-boats been introduced on the rivers in India?—Yes; and that is a great improvement.

2926. And have not considerable efforts been made to extend education?—Yes, to a great extent.

2927. Do you concur in the evidence given by a former witness, that Europeans should be employed in the public service in preference to, or to the exclusion of, the natives?—I do not know what departments you refer to; in a great many of the lower departments you would not get Europeans to fill them, but where practicable I think the Europeans would do the work better, and probably more efficiently than the natives, and would be more to be depended upon in the police.

2928. Do you think such a policy would be just to the natives of India?—There are plenty of appointments for both. The effect of employing natives in important positions seems to endanger our power, and not to employ them is considered by many to be unjust. I have heard, the only native officials who have gone against us have been the thorough Mahomedan deputy collectors and joint magistrates.

2929. You have heard the former witnesses upon the subject of extinguishing the rights of the ryots in Lower Bengal with a view of putting the planter in possession of the fee-simple of the land?—Yes.

2930. What is your opinion upon that subject;—I think we have no right to extinguish the ryot's rights; they have been given to him by the perpetual settlement, and he is as much entitled to them as we are to our rights.

2931. Mr. *Villiers.*] Have you ever met with anybody since you have returned that was disposed to go out to India to take his capital there, and who has consulted you upon the matter?—Not one.

2932. Do you think there are any people who are inclined to go there who are deterred by the reports that are brought home of the obstacles and the disadvantages that the Government present to employment of capital?—I think they would look upon them as discouraging to Europeans.

2933. You were there 30 years?—Yes.

2934. Did you find the same defects in the administration of justice and the same disadvantages which you have named to the Committee when you first went out there as when you left?—They appeared to me when I went out to be less. I think the magistrates were much better men in those days; they were abler men; now we have young men as magistrates over districts; there was no such thing 30 years ago.

2935. You attach peculiar importance to the defective administration of justice, is that as engendering a sense of insecurity to persons and property?—Yes.

2936. Do you say that that applies to natives as well as Europeans?—To both.

2937. Do

2937. Do you think the natives would complain if justice were administered in the English language?—I do not suggest it with the idea that we should have any advantage over them; it is only to have better justice for all.

2938. Do you think they would not soon ascertain whether justice was done?—Yes.

2939. And you believe, notwithstanding what has been said of their impurity generally, that they would appreciate a good administration of justice?—Yes.

2940. Did I rightly understand you to say, that when a sale was set aside 17 years after you had purchased it, the Government took it to itself?—No, that was another property; the sale there was reversed immediately, within five or six months.

2941. The Government did take the property where the sale was reversed?—Yes, the Government purchased it, as recommended by the official who deprived me of my rights.

2942. Has it been profitable to the Government?—Very much so.

2943. Did you make any complaint; had you any reason to suspect that there was unfairness, or did they merely apply a defective law, and take the benefit of it?—The gentleman to whom it was referred to make inquiry did not make inquiry; if he had done so, he would have found that the three allegations were quite untrue; I was no relation of the collector. I paid in the amount stipulated for; and the law was not infringed in any way by the under tenures being upset.

2944. What is the condition of that property which the Government holds itself; is there a good deal of it?—Yes.

2945. Is it a profitable way of holding land?—Government might sell, and be freed from litigation as zemindars with their subjects.

2946. What is the nature of the tenure under them; is it that of a tenant of a zemindar?—Yes.

2947. Do those who pay the rent also pay the revenue?—Yes.

2948. Who manages these properties?—The collector of the district.

2949. Is there much unappropriated land in the province which you are acquainted with?—Yes; but the uncultivated land is not so much where I have been residing; it is more towards the hills.

2950. Does the Government set up that land at so much; can anybody purchase it?—No, they can farm it.

2951. In Assam you say a great deal is unappropriated?—Yes.

2952. Did I rightly understand you to say that there was inconvenience from not making a gold currency as well as a silver currency?—Great inconvenience.

2953. You mean that gold is not a legal tender?—No, it is not a legal tender; the Government will not receive it in payment of the revenue.

2954. And you cannot pay your debts in gold?—No, and the consequence is, that boat loads and cart loads of silver are sent when you have a very small payment to make. The Government will not receive more than one-third of the revenue in bank-notes.

2955. Do the Government issue notes?—No, the Bank of Bengal issue them.

2956. They are convertible notes?—Yes.

2957. I think you stated as your opinion that if gold was currency as well as silver, it would correct the great inconvenience felt in this country, and indeed in Europe, from those constant drains of silver to rectify the exchanges?—There is a very great quantity of silver buried in India, and if there were a gold currency, the natives would immediately convert that into their deposit, and the silver would come into circulation.

2958. Do you mean that they would prefer gold to silver?—Yes.

2959. It would not be so available for their ornaments?—It is chiefly gold they turn into ornaments.

2960. What is the objection to gold being the standard as well as silver?—The impression of the Government is, that gold being largely brought in from New South Wales, it might be given in of a lower value to the Treasury, and cause a loss; that was their impression, and they refused to have a gold coinage in consequence.

2961. What did they expect; have they not a mint there?—Yes; but they might very well have the same coin as we have here; the sovereign is a very favourite coin all over the world, and would be preferred to the present coinage in India.

2962. You do not think that that alone would correct the exchange. Suppose the exchange is generally against us between our trade and India; does not that

Mr. *J. P. Wise.*

11 May 1858.

arise because there is not consumption enough of our products?—Yes, it would not correct it; other mediums must be brought into play to do that; our manufactured articles must go to India in exchange for the raw material.

2963. You are of opinion that it would improve the condition of the consumer in India generally if settlement took place more than it does now; that there would be more capital, more employment, and their consuming power would be greater?—Yes, I think so.

2964. And that, you think, would increase the demand for our manufactures?—Yes.

2965. You state that the natives are well disposed to the settlers, and that they feel that their condition is improved?—Yes.

2966. Has there been any manifestation of that better feeling towards them than to other Europeans during the late mutiny?—In all Lower Bengal there has been no disposition to mutiny; the lower orders have cultivated their fields the same as in former days, and have not sympathized with the mutineers.

2967. And it is in the lower provinces where the indigo planters are principally settled?—Yes, including Tahoot.

2968. Are there any records of those cases that take place in the courts of justice; can you find a report of what has occured in any particular case?—You can in civil cases more freely. In criminal cases they generally burn all the records at certain stated periods, keeping one or two of the principal papers.

2969. Is there anybody on the part of the press who attends in those courts?—No.

2970. There is no supervision of that kind?—No, it is much wanted.

2971. Has not there been a cheap native press circulating in those provinces?—No; there are several newspapers published in Calcutta in the native language.

2972. But not in the Mofussil?—No.

2973. Is that prohibited?—No.

2974. Would it not be attended with some advantage?—Yes, it would be useful.

2975. Have not the Europeans encouraged it?—No.

2976. Have not the planters had a press of their own?—No, they chiefly look to the European papers which are published daily in Calcutta.

2977. Would the press circulate in the Mofussil amongst the natives in their own language?—Yes, they are very fond of news.

2978. Has not the native press been abused in some respects?—Yes.

2979. It has been circulated to the prejudice of natives against the Europeans?—Yes.

2980. Mr. *Danby Seymour.*] Is not there a "Dacca News?"—Yes, lately established.

2981. Mr. *Villiers.*] When you stated that the money-lenders got such an exorbitant interest, to what do you ascribe that; is it to the want of security they receive for their money, or to the scarcity of money in proportion to the demand?—There is an insecurity in lending the money too; but it is the want of money among the European settlers to lend out; we have not the means, and we pay a high rate of interest ourselves when borrowing money.

2982. Is there any want of capital in India, supposing any person wanted, in order to increase his work, to borrow money?—There is great difficulty, seeing they pay 12 per cent., besides other commissions, bringing it up to 17 or 18 per cent.; and no European can get it for less out of Calcutta.

2983. Is that because they offer the security of property in the Mofussil?—Yes; in Calcutta you can get it upon property there at six and seven per cent., and in the Mofussil it is double that.

2984. I think you have confirmed everything that has been said before upon the prospect that the country would present to capitalists going out there, if they were not deterred by bad laws and the spirit of the Government?—Yes.

2985. And that, up to the outbreak of the mutiny, there continued a jealousy or something like a spirit of detraction of those persons who came out from Europe to settle there?—Yes.

Jovis, 13° die Maii, 1858.

MEMBERS PRESENT.

Mr. Campbell.	Sir Erskine Perry.
Mr. De Vere.	Mr. Seymour.
Mr. Wm. Ewart.	Mr. J. B. Smith.
Mr. Gregson.	Mr. Wm. Vansittart.
Mr. Kinnaird.	Mr. Villiers.
Mr. Lowe.	Mr. Willoughby.

WILLIAM EWART, Esq., in the Chair.

William Theobald, Esq., called in; and further Examined.

W. Theobald, Esq.

13 May 1858.

2986. *Chairman.*] I believe you wish to make some indispensable correction in the statement which you made on a former occasion?—Yes; I think it is quite indispensable, in one point of view. I took the liberty of stating my opinion of the effect of Act 4 of 1837 on the restriction which was contained in the statute of 1834. The statute opened India in point of fact only as regards the provinces acquired during the last century. I stated that my opinion was that the effect of Act 4 of 1837 was to repeal the restriction in that statute as respected provinces acquired during the present century; in point of fact, to open the rest of India to Europeans; and I was asked by Mr. Willoughby whether I was aware of the decision of Ouseley *v.* Plowden. I stated that the effect of that decision was to confirm my opinion. At that time I had only seen the remarks of the judges at the trial of the case of Ouseley *v.* Plowden; there were points reserved for their consideration; and I have since obtained a copy of their final judgment, and I find that they held that the restriction upon the right of settling in India remains as it was under the statute of 1834; that is, that India has been opened by that statute only as to those provinces which were acquired previously to the end of the last century, and that we have the right to enter the provinces acquired this century only by licence. The Court does not appear to have given that judgment with very much confidence, and they expressed anything but satisfaction as regards that state of the law.

2987. Did the Court deliver that opinion on a question brought directly before them, or was it an *obiter dictum* as it were, a collaterally given opinion?—No; it was expressly given upon the construction of the statute, consequently the law requires to be altered by Act of Parliament.

Mr. *Josiah Patrick Wise*, called in; and further Examined.

Mr. *J. P. Wise.*

2988. Sir *Erskine Perry.*] YOU have given an opinion upon the unacquaintance with the native languages of the European magistrates. Bengalee, I believe, is the language of the country in which you lived?—Yes.

2989. The population of that country is about 30,000,000?—Yes, that is the population of Lower Bengal, speaking roundly.

2990. What has been the language used in the courts of justice and the police courts?—Hindee chiefly, but Bengalee is the language of the country.

2991. Persian used to be used within a few years?—Yes.

2992. How long ago is it since Persian was abolished?—About 10 years.

2993. That was in Lord William Bentinck's time, I think?—Yes.

2994. That is more than 10 years?—Yes.

2995. Up to that period the administration in the courts of justice was carried on in a foreign language?—Yes, in the Persian language.

2996. It was the language of business of the Moguls, the former owners of the country?—Yes.

2997. Since that period the magistrates and the judges have used the Hindee language?—Yes, chiefly in conducting the court business.

2998. But the Hindee language is not intelligible generally by the Bengalee population?—Not by the lower orders.

Mr. *J. P. Wise.*

13 May 1858.

2999. Not by the bulk of the population?—No.

3000. Hindee is not the vernacular language of the province of Bengal?—No.

3001. Nor is it intelligible to the bulk of the population?—The lower orders do not understand it well.

3002. Have you ever seen either a magistrate or a judge administering his functions in the Bengalee language?—I have; I know several.

3003. How many cases do you think you have heard?—Not many; I know one or two judges who can read the language, but very few of them do.

3004. The great majority of the judges and magistrates use the Hindee language in dispensing business?—Yes, chiefly.

3005. Then in point of fact the objections that have been made to the use of the English language, as the language of business, are equally applicable to the Persian language as being a foreign language, and also are in some degree applicable to the Hindee language?—Yes, it may be considered so.

3006. Have you been much in attendance in the courts of justice in the Mofussil?—No, very little; I have had a good deal to do with them, but personally I have been very little there.

3007. You have stated that you do not think the European judges and magistrates are very well acquainted with the native languages?—Not generally, particularly the young magistrates.

3008. Did you ever, in the course of your experience, hear or know of any judge in Bengal who was capable of giving off a judgment in the Bengalee language, with the reasons for his decision, so as to make himself intelligible before the audience?—There are very few that can do that.

3009. Do you believe that there is a single judge in Bengal who is able to give off a judgment in a language intelligible to the crowd, in the same manner that a judge in this country is able to do?—I know one judge who takes home cases and reads them off as freely as English; that is an exception; I do not think it is general.

3010. Have you ever been in attendance on the Supreme Court at Calcutta to see how the proceedings are conducted there?—No.

3011. You probably are aware, from your experience, that the mode is by having two interpreters in the court?—Yes, I am aware of that.

3012. And that every question put in English by the advocates is translated into the native language to the witness, and heard by the whole court?—Yes.

3013. And the answer in like manner is handed up to the judge, who takes it down in English?—Yes, I am quite aware of that.

3014. The consequence is, that every word of evidence that is delivered in the Queen's courts is intelligible to the whole of the crowd of natives who are assembled?—Yes.

3015. Is it not the fact, also, that the judges in English procedure only judge of the case upon the evidence brought to them in court?—They do so.

3016. Therefore, in point of fact, the evidence upon which the judge makes up his mind is exactly the same as the evidence which is given before the whole of the public assembled?—Yes; but a judge who knows the native character, and the native evidence that is often brought before him, does not, I think, go entirely by that evidence.

3017. He goes, as judges in this country do, by his knowledge of human nature, and the habits of the people?—Yes, perhaps so.

3018. The evidence is patent to the whole world, exactly in the same manner as it is made known to the judge?—Yes.

3019. And you think that is a satisfactory mode of doing business in a country, circumstanced like India, with a few Englishmen placed in authority?—At particular courts; it would not do over the country in the Moonsiffs' courts, for instance.

3020. Not in the small courts where the judge comes in contact with the witnesses, and is obliged to be their advocate as well as judge?—No; and the bar must also be acquainted with English to admit of it.

3021. Suppose this system were introduced into the principal courts, the zillah courts for instance, in the Mofussil, do you see any difficulty in introducing it?—No, you would get interpreters very easily.

3022. The establishment required would be two to three interpreters?—Yes.

3023. Those men are to be got upon very small pay; from 20 to 25 rupees a month

a month would obtain the services of very intelligent young men, educated in Missionary and Government schools?—A larger salary than that would be required for so important a situation perhaps.

3024. Are you not aware that in the Bombay police courts, and the small cause courts, rates of pay like that have been found sufficient to secure the services of competent men?—There are translators in the zillah courts who translate papers for the judge, who get about 100 rupees a month; but of course a better description of men is required for these situations.

3025. If such men are translating the evidence in a zillah court, does it consist with your knowledge, that in such a court, presided over by a European judge, there would always be a number of persons acquainted with the native language and with the English language to detect any mistranslation or misinterpretation upon the part of the interpreters?—Particularly if the bar knew English; they would understand it, and the audience generally would do so.

3026. In using the English language as the language of business in those superior courts, would it not also be very easy to require the judge to record all the evidence, as it is taken at the time, in English?—He would necessarily do so, and always, I believe, does so now; they put down the evidence in English as the case proceeds.

3027. That is the course pursued in the Queen's courts and in the courts of this country?—Yes.

3028. Would not that make a most excellent record of the proceedings in the case upon the very cheapest terms?—It would. I think all records ought to be kept in the English language.

3029. Therefore would not one of the advantages of conducting the business in the English language be that it would afford facilities for appeals to the courts above in the cheapest and simplest manner?—Yes.

3030. If the interpreters were to be corrupt, and give false translations to answers given in open court, are you not of opinion that they would be at once detected by some of the persons in the court?—Yes, the judge and the jury, the advocate and attorney would know immediately.

3031. Would it not also be competent to the Government, if the English language were used in those courts in the interior, to require the judge, whether a native or a European, to be conversant with the language of the country?—Yes.

3032. And you would also think it desirable that he should be conversant with it?—I should.

3033. Do you think there would be any difficulty, with salaries such as are now given to the zillah judges, of 3,000*l.* a year and upwards, to require that barristers appointed to those posts should make themselves conversant with the native language?—No, I do not.

3034. And would there be any difficulty if such a reward were held out?—None.

3035. You do not think the proficiency of the Europeans in the native languages is ever likely to be so great as the proficiency of the natives in the English language?—The natives very easily learn the English language, and they are very desirous to learn it, and this would be a great encouragement to learn it.

3036. They begin at a much earlier period than Europeans, do not they?—Yes, they begin at a very early age and learn it very quickly.

3037. Has not the chief stimulus to the natives to go to the Government schools been the hope of learning the English language?—Yes, with the hope of getting situations in the Government employment, which are greatly valued.

3038. And they do, in point of fact, learn it at an early period of life, and become conversant with the language?—Yes; in Dacca College there are 500 scholars all learning English; the same in Calcutta, and all the provincial towns.

3039. Have you heard some of the native speakers at public meetings in Calcutta?—No; I have seen reports of them.

3040. You are aware that some of them speak English as well as we English do?—Yes.

3041. And sometimes better?—Yes, perhaps so.

3042. As to the native judges, you do not seem to give a good opinion of the native morality generally?—I think their morality is below that of the European, and when beyond the reach of bribery they are too often swayed by personal feelings.

Mr. *J. P. Wise.*

13 May 1858.

3043. And especially you distrust the natives in offices?—I particularly refer to the police offices.

3044. In the police offices the pay is very low?—Yes.

3045. And the powers very large?—They are open to bribes.

3046. And probably in all countries where the power has been great, and the salary very small, a great deal of official immorality is the result?—They are very often turned out of employment; the situation is not very certain; petitions are put in against them, and they consider the place unsafe, and take advantage of that to get as much money as they can.

3047. Do you know enough of the history of India to know that up to the end of last century the pay of European officials was very small?—Yes.

3048. And in those days the complaint of the corruption of Europeans was very great?—Yes.

3049. In the present day probably your opinion would be, that English morality in office stands very high in India?—Yes, it stands very high.

3050. The pay also being very high?—Yes.

3051. Are you of opinion that if the same process was applied to the natives, if those invested with great powers also got adequate pay, there would be an improvement in their morality?—Of course that would be the case.

3052. The reasons why Europeans receive greater pay than natives, are founded a good deal upon Europeans having to leave their own country and to make a great many sacrifices?—Yes, and upon their education and expensive habit; the native judge in his own country has a high social position amongst his countrymen, and 600 *l.* a year is as much as 3,000 *l.* to the European judge.

3053. Is that paper, which you hold in your hand, a return to the House of Commons?—Yes, a judicial return.

3054. Can you state from that return what is the number of uncovenanted Europeans and Indo-Britons in the revenue and judicial service?—The sum total is 3,082.

3055. The number of natives in the same year amounts to how many?—The number of natives is 2,846.

3056. What are the salaries of the natives in the judicial and revenue establishments there, under 240 *l.* per annum?—There are 1,377 and 856.

3057. How many does that make altogether?—Two thousand one hundred and nine.

3058. Out of 2,846 employed, 2,109 get salaries under 240 *l.* per annum?—Yes.

3059. How many natives are there on salaries of 600 *l.* per annum?—Forty-three.

3060. How many are there from 840 *l.* a year to 960 *l.* a year?—Two.

3061. And from 960 *l.* and upwards, how many are there?—Four.

3062. Is it the case that those native judges have the whole bulk, 95 per cent., of the civil business in their hands?—Yes, I believe so.

3063. They have therefore, of course, numerous means of being corrupt, having the whole of the business of the country before them?—Yes, that is the civil branch, but the corruption has been more particularly applied to the criminal branch in my evidence.

3064. And 2,109 of them, the great majority, have salaries under 240 *l.* per annum?—Yes.

3065. Are you aware what the salaries of the European zillah judges are?—£. 3,000 a year.

3066. Do you think there would be any difficulty in making it, to a native judge, a condition precedent of being appointed to office, that he should be thoroughly acquainted with the English language?—No difficulty at all.

3067. And you would have him keep all the records of his evidence, and the judgment he gives, in the English language?—Yes, most decidedly.

3068. So that an appeal should go up to the Court of Appeal in the way I described before?—Yes.

3069. With respect to the Europeans who are settled in the Mofussil, you object to such Europeans being placed under native judges; have Europeans increased, within your experience in the Mofussil?—No, I do not think they have increased.

3070. The districts in India in which they are situated are, in point of fact, very few, are they not?—It is chiefly in Bengal.

3071. Do you think there would be any difficulty in making Europeans in the Mofussil subject to the European courts only; that is to say, to the courts presided over by Europeans, placing down for that purpose a few more European judges in the districts where the planters are located for the transaction of business?—There would be no difficulty; there are only four or five places.

3072. Four or five good judges would be sufficient?—Yes.

3073. Do you think there would be any difficulty in obtaining from the Calcutta bar gentlemen acquainted with the Hindoo language, who would give satisfaction to the Europeans if they were there placed?—No.

3074. If at the same time the salaries of the native judges were somewhat raised, do you think there is reason to believe that with the European example, and with the publicity of their proceedings, an improved purity and official morality would be obtained?—I think so, in time.

3075. Then if those improvements took place, if the planters got competent judges of their own colour and morality, what objection would there be in placing the whole of those provinces under one system of law?—There would be no difficulty if we had good judges and an English jury, and the English language; there is no objection to it.

3076. Do you not think, therefore, that the principle by itself is quite sound of placing the whole districts under one law, provided competent judges be appointed?—Quite so.

3077. And you think the salaries I have mentioned, namely 3,000 *l.*, are sufficient to procure competent men?—Yes. well-trained English judges.

3078. Mr. *Willoughby.*] How many European judges of the kind you have advocated would be required for Lower Bengal?—I fancy there would be five or six zillahs; Dacca and Moorshedabad, and Patna. I speak of the large towns in central positions, where courts of that kind might be established.

3079. Sir *Erskine Perry.*] How many are there now?—There is a judge at each zillah.

3080. You would not by my plan increase the number, so much as the quality?—Exactly.

3081. Mr. *W. Vansittart.*] Dacca is a very fine city, is it not?—It was a large city, and is still a large city.

3082. I suppose there are very many rich Mahajans, and other influential natives, residing there?—Yes, a great many.

3083. Do you consider that they are as respectable and intelligent as their equally swarthy brethren in Calcutta?—Yes, I think so; in Dacca itself there are a great many respectable natives of great intelligence and worth.

3084. It has been stated to the Committee that an European in Calcutta does not like to be tried by a jury composed partially of natives; does that hold good with reference to his feelings towards the natives at Dacca?—I think a European would prefer a jury of his own countrymen, and would consider that he was entitled to have that indulgence.

3085. You say you know the Rajah of Dacca, Tipperah?—Yes.

3086. He is an intelligent, opulent, and advanced-minded native, is he not?—The present one is not; the former one, who is dead, was very much of that character.

3087. How is it that there are so few of these intelligent and advanced-minded natives?—You find a good number of very superior men in India, men of great intelligence and worth.

3088. Do you know Chittagong?—I have been there once only.

3089. Was not there a colony of Christians there?—Yes; Portuguese.

3090. What is the condition of that colony?—It is not in a very favourable state. We have also in the Dacca district large colonies of native Portuguese: they have married and intermarried, but they are not a very good class of people.

3091. They have all deteriorated very much?—Yes; they are uneducated, and have bad habits.

3092. Do not you think that Lower Bengal and Eastern Bengal generally are much more unhealthy than the Upper Provinces?—I never was in the Upper Provinces, but I do not think Lower Bengal is unhealthy.

3093. Not Jessore; Pubna and Purnea?—The natives do suffer occasionally with cholera and fever, particularly after the rains.

3094. Some of our police thannahs, for instance, are very unhealthy; they

Mr. *J. P. Wise.*

13 May 1858.

are under water nearly half the year, from inundations?—Yes, and they are very unhealthy, in consequence, at some places and seasons.

3095. Is it possible, therefore, to get a better class of darogahs, jemadars, mohurrihs, and burkundauzes to be induced to be stationed there than we have at present?—No, if you give them good pay; they are very fond of getting into the employment of Government in the police department.

3096. You think you might get better police material, and burkundauzes particularly?—Yes; there are places of course where they would suffer; I know of several unhealthy thannahs, where they do suffer very much, and they are always anxious to avoid going to those places.

3097. Messrs. Theobald, Freeman, MacNair, and yourself, all seem to agree as to the wholesale bribery and corruption going on amongst the native omlahs; is not that the case?—There are exceptions, but they are few, and they are well known, and it depends altogether upon the magistrate, the great or less corruption of the police.

3098. Do you not think that the natives generally aré very poor?—They are comparatively poor.

3099. Do you not think that, owing to their poverty, the system of bribery is greatly exaggerated?—No; I have a great knowledge of the state of the bribery, and I must say it is very bad in Bengal.

3100. With regard to the resumption laws, you say they have acted very oppressively towards the natives?—Yes.

3101. You must allow that a very large portion of those rent-free or lakhiraj lands had been fraudulently obtained, and that the holders had no sort of right or title to them?—I quite admit that as fact, but after so many years the question of right and the policy became very doubtful; and the practical effect, as seen by myself, was the ruin of many, and the feeling universal that the Government was dealing harshly and unjustly.

3102. They had been fraudulently obtained in very many cases?—They may have been fraudulently obtained. I knew of one instance where property had been pledged to the Government, and it was sold to meet the security; it was bought by a person and was resumed by the Government afterwards, and I thought it a great hardship.

3103. Many of our magnificent provinces, during this late revolt, have been overrun and ruled over by our paid Mahomedan officials and others?—Yes.

3104. Do not you suppose, knowing as you do the native character, that many cases have occurred, and will be proved to have occurred, where they have forcibly alienated large tracts of the estates from zemindars, and made them over in perpetuity to their favourites and retainers?—It is a possible case.

3105. On our reconquering those provinces, would there be anything unjust in our collectors refusing to recognise those tenures?—Of course there would not; but such a case appears to me very different to that in respect to the resumption laws, where certain rules of procedure and registration were prescribed by the law and neglected by the Government, and after the lapse of so many years, where the property may have changed hands many times. In the Chittagong district it was a wholesale sweeping away of the rights of the whole population, nearly causing an insurrection. In the Dacca district it operated very injuriously.

3106. If the special deputy collector, namely, the resumption officer, made an unjust resumption, his decree was appealable to the special Commissioner?—Yes.

3107. And the aggrieved party had an appeal from the special Commissioner to the Sudder Deewanny Court in Calcutta?—I think the special Commissioner's decree was final.

3108. It is now some five or six years since those resumption laws have ceased, so they cannot now operate to the prejudice of any European settler?—No.

3109. Do you agree with Messrs. Theobald, Freeman, and MacNair, as regards the ignorance of the civilians of the language of the country?—Yes, I agree with them generally, that they know the languages imperfectly, referring particularly to very young men now holding the situation of magistrates.

3110. Do you know the Calcutta paper called "The Friend of India"?—Yes.

3111. Is not that a very fair and ably written paper?—Yes.

Mr. *J. P. Wise.*

13 May 1858.

3112. Since you were examined on Tuesday I have received my edition of it, dated March the 11th, and I find this fact stated, "The 'Hurkaru' states that a conspiracy to murder all the Europeans of Baraset"—that is about 16 miles from Calcutta—"and release the prisoners, has been detected at that station. The chief conspirator was an up-countryman, esteemed by the natives as a jogeee. He was supposed to be a person of particular sanctity. The plot was disclosed by a jemadar, at whose suggestion the magistrate of Baraset so secreted himself as to be able to overhear the pretended jogee attempting to inveigle others into his plans. When the man said, 'Should the magistrate come to know of our conspiracy, sooth him with gentle words; should he still doubt, slay him;' the magistrate leapt from his hiding place, and the villain, with an accomplice, a mooktear, was apprehended." How do you reconcile this fact with the ignorance you and your friends above-named represent the civilians as possessing of the native language of the country?—It would not require a great knowledge to know what he said.

3113. We have been told that, except in three instances, no civilian can hold a conversation with a native more than five minutes; this would take more than five minutes?—Perhaps so; that is a single case; with one or two exceptions, I have never known a judge able to take home a record of a case, read it, and write off his decision; but I do not say that this perfect knowledge of the language is all that is required to make a very good judge, for I know to the contrary in many instances.

3114. How do you reconcile this statement with the well-known test that a young civilian has to undergo, namely, that before he can accept an appointment he must be able to read and write an order?—I have not seen a young civilian who could read and write the Bengalee language in that way.

3115. To carry out this system of substituting English in the zillah and Mofussil courts, do you think that a few English interpreters only would be sufficient to conduct the business?—With a good English bar, and publicity, I think they might be well able to conduct the business as proposed.

3116. Would not it be necessary to substitute Europeans for the native omlah?—No, I do not think so.

3117. Do you think bribery and corruption might be stopped by merely having a few interpreters and still keeping up the native omlah?—I think that if the judge is a good judge, or the magistrate a good magistrate, very little bribery can go on, and very little does go on; it is stopped immediately by officials well up to their work.

3118. Do you think that if the native judges were to be paid as high as the English judges, they would be honest?—Very likely they would.

3119. That opinion is not shared in by Messrs. Theobald, Freeman, and MacNair, is it: Mr. MacNair seemed to think that the higher you paid a native the more bribes he took?—That has been the effect with respect to the thannahdars; it is often said that the higher you pay them, the larger bribe they require, but I question this very much.

3120. Some of the sudder ameens, and principal sudder ameens, receive as high salaries as 1,000*l.* a year; and yet are there not instances of their joining in this revolt; for instance, Khan Bahadoor Khan, the sudder ameen of Bareilly, in Rohilcund?—Yes, and there are many other instances, I am afraid.

3121. Mr. *De Vere.*] You have spoken of two sales in which you were concerned, in which reversals took place?—Yes.

3122. One was reversed after 17 years?—Yes.

3123. Did I rightly understand you to say that the cause of that reversal was the irregular service of the notice?—It was upon that account.

3124. Was not that notice required for the protection of the party whose estate was sold?—It was an objection that was brought up; not at first; if it had been brought up at first, of course the sale might have been reversed earlier.

3125. Is it not the fact that the law which requires the service of such a notice was intended for the protection of the seller?—Of course it was; but you ought also to protect a purchaser.

3126. Then the irregularity in this case was, that a notice required for the protection of the selling party had not been properly served?—Yes.

3127. With regard to the second sale, you said that it was reversed after a few months?—Yes.

3128. Had you no appeal from the order of reversal in that case?—No, there was

Mr. *J. P. Wise.*

13 May 1858.

was no appeal against that; I might, perhaps, have appealed to the Governor-general in Council, but I doubt it; it was from the Sudder Board; the Sudder Board recognised the stopping of the sale.

3129. Then you had an appeal, and did not make use of it?—There is no appeal from the Revenue Board as to a sale; I believe they have final powers.

3130. The property was subsequently purchased by the Government?—It was afterwards purchased by the Government.

3131. Was it purchased at an open sale?—It was purchased at an open sale.

3132. Did you bid at that sale?—No. I was put to great inconvenience at the former sale; I had to bring the money from Calcutta, having great difficulty in getting the money; and I was obliged to send it up under guard a great distance, and to send it away again under a guard, which cost a great deal of money. It was during the rainy season, and I suffered great inconvenience; and I did not go to the second sale.

3133. Due notice was given of the second sale?—Yes.

3134. You said that if you had not lost that large property, you would have been a very rich man?—Yes.

3135. Did not you state that the sum paid by the Government was a small advance upon the sum you had paid?—It was merely the revenue that had accrued between the two sales.

3136. Then it must have been a very profitable purchase on the part of the Government?—Yes.

3137. And due notice having been given, you did not bid?—No.

3138. You have suggested the substitution of the English currency for the Indian currency; is there not a closer analogy between the Indian currency as now existing and the decimal system which has been proposed in this country, than between the present English currency and the decimal system?—I believe there is a very small fraction betwixt the Indian currency and the present currency of England. I thought it might be substituted very easily; that is, 10 rupees is about 1 *l.* sterling, the value of a sovereign.

3139. In case the decimal system should be adopted in this country, would not the fact of having substituted the present English currency for the Indian currency form a difficulty in the way of introducing the decimal currency in India?—I think it would.

3140. You said, alluding to your own case, that a settler may have very good health in India; to what part of India does that observation apply?—To Lower Bengal.

3141. The plains of Lower Bengal?—Yes, the plains.

3142. Would you go so far as to say that settlers would have a reasonable prospect of bringing up a family in good health there?—I know a great many who have done so.

3143. What has been the health of their children?—They keep pretty good health.

3144. And do they arrive at the age of manhood there?—Yes; I have known several families.

3145. Have you known any case in which the third generation of settlers remained there?—No; I have often heard that disputed.

3146. If the second generation of a settler can attain the age of manhood, why is it that we have no instance of a third generation found upon the land?—I believe they deteriorate; the second and third generation would be inferior to the first.

3147. Do you mean to say that the children of a settler who arrive at manhood in a state of perfect health are inferior?—I do not think they are equal to those born in this country, and those that are sent home to this country have all the benefits of an invigorating climate, education, and associations so beneficial to develope the mental and physical powers.

3148. Do you mean that they are deteriorated in body or in mind?—Both, but particularly mentally.

3149. To what extent has that deterioration taken place?—Not to any very great extent in the first generation, but the education is not so good in India as in this country; the companions, the associations of England altogether are of very great use to a youth educated at home.

3150. You have spoken of the corruption of the native judges; have you known

known any instances in which that corruption has been proved, and punishment awarded against the judge?—I do not think that I expressed myself so strongly that the native judges were corrupt.

3151. Have you known any instances in which corruption has been proved against native judges, and punishment awarded?—I know of one instance, and the judge was removed from office; but it is not very common.

3152. What was the nature of the corruption charged against him in that case?—He was charged, I believe, with having, through his family interests and servants, taken money; and he was removed from office in consequence.

3153. There was no proceeding against him on the part of the person who supposed himself injured?—Yes, there was a proceeding; no judge can be removed from office without being tried. There was a commission appointed to try the case; the sudder ameens are always tried under a commission.

3154. He was not punished, except by removal?—He was dismissed the public service.

3155. Mr. *Gregson.*] At Question 2929 you were asked, "You have heard the former witnesses upon the subject of extinguishing the rights of the ryots in Lower Bengal, with a view of putting the planters in possession of the fee-simple of the land?" to which you reply, "Yes."—"What is your opinion upon that subject?" "I think we have no right to extinguish the ryot's rights; they have been given to him by the Perpetual Settlement, and he is as much entitled to them as we are to our rights." Do you object to interfere with the rights of the ryots under any circumstances; for instance, by an arrangement to pay the value of those rights?—No.

3156. Is it practicable to make an arrangement with them to purchase their rights?—Yes, there is no difficulty about that.

3157. Sir *Erskine Perry.*] It is done every day?—Yes.

3158. *Chairman.*] You referred to the English language being used in the courts by means of an interpreter; if the courts were worked by means of the English language and by means of an interpreter, would that, in your opinion, do away with the necessity of employing the native omlah?—Of course they would not be required.

3159. Mr. *W. Vansittart.*] Who would take charge of the records, and write out the evidence?—Of course you would require to have omlah for that.

3160. Mr. *Willoughby.*] Is it usual with the planters in Lower Bengal to retain their children without sending them to England?—No; as far as they possibly can they send them to England, when they are able to do so.

3161. About how many instances have occurred within your knowledge of the children of planters remaining in India up to the age of 21?—I have known half a dozen instances.

3162. Mr. *Villiers.*] When you speak of the natives, do you refer only to the Hindoos?—Both Hindoos and Mussulmans.

3163. Your opinions apply to both equally?—Yes, I have a better opinion of the Hindoos than of the Mussulmans.

3164. *Chairman.*] Do you know of any cases where a third generation has been found?—No; it is a question that has been very much mooted whether the third generation would live in India up to the age of 21.

3165. In your experience have you known a third generation in India at all?—No, not up to the age of 21.

3166. Mr. *Seymour.*] What is your opinion upon the subject?—My opinion is, that they do deteriorate in the Lower Provinces of Bengal.

3167. *Chairman.*] Do you, or do you not, think that the apprehensions of the deleterious nature of the climate of India have been much exaggerated?—I think so.

Mr. *James Dalrymple,* called in; and Examined.

3168. *Chairman.*] WILL you be so good as to state in what capacity you were in India?—As an indigo planter and silk manufacturer, and largely connected with sugar.

3169. Were you in the management or partnership of any firm?—I was in the management of the firm of J. & R. Watson.

3170. How long were you in India?—Upwards of 30 years.

Mr. *J. Dalrymple.*

13 May 1858.

3171. Always in the same capacity, as manager?—No; I went out as an assistant first, and then I became a manager and partner.

3172. How long is it since you returned from India?—Three years.

3173. To what part of India was your knowledge confined?—Moorshedabad, Rajshaie, Pubna, Kishnagur, Maldah, and Midnapore.

3174. Your experience is confined to Lower Bengal?—Entirely to Lower Bengal.

3175. Have you many European assistants in your concern?—Yes, we have upwards of 50 in the concern.

3176. Have you had any difficulty in keeping up the number of those assistants?—Yes, we have had great difficulty in keeping up the same class of men.

3177. What was the cause of the difficulty?—The uncertainty of getting on in India, the uncertainty of the laws, and the annoyances of the police.

3178. What was the nature of the business of your firm?—Indigo, silk, and sugar.

3179. In what districts or parts of Bengal were your concerns, and did you employ a large working capital?—We had a very large capital.

3180. Can you state the amount of the capital you employed?—Upwards of 200,000 *l.*

3181. Annually?—Yes, annually.

3182. What do you consider to be the amount of the property the Messrs. Watsons invested in their concerns?—Upwards of 300,000 *l.* in block.

3183. That is exclusive of the annual outlay?—Exclusive of the annual outlay.

3184. How much is the whole annually?—Upwards of 200,000 *l.*

3185. Does that make 500,000 *l.* altogether?—The block is upwards of 300,000 *l.*, and the annual expenditure is 200,000 *l.*

3186. Have you also capital invested in land tenures?—We have.

3187. What kind of tenures?—Zemindaries, putnees, pottahs, izarahs, and all the under tenures common in Bengal.

3188. You have heard the evidence given by several of the witnesses before this Committee?—Yes, I have.

3189. Have you heard Mr. MacNair's?—Yes; I have heard all his, and all Mr. Wise's, and part of Mr. Freeman's.

3190. Do you generally confirm the evidence given by those witnesses?—Yes, I generally agree with their evidence.

3191. With regard to the police and magistracy and the law courts, do you confirm their evidence?—Yes.

3192. The police is entirely native, is not it?—Entirely native.

3193. Do you, with those witnesses, think it would be desirable to have an infusion of European superintendents into the police?—Very desirable.

3194. On what grounds, from your experience, do you complain of the state of the police at present?—They are extortionate; they are corrupt in every sense of the word; they extort from all classes, and get up false cases; they instigate quarrels; they instigate both the lower orders, over whom they have great power, and also the zemindars, to quarrel, and principally with Europeans.

3195. Have you had personal experience of that extortion and corruption?—I have.

3196. Could you briefly and clearly give us a specimen of such corruption and extortion which you yourself have undergone?—Yes, in the case of a darogah; he applied to me for allowance, which he said he had been in the habit of receiving from the former proprietor of a concern that we had just purchased. It was on our taking possession the man came to me for the money. I refused to give it him, and he was dissatisfied. Shortly afterwards he left the district; but before the manufacturing season commenced, the most particular time of the whole year for an indigo planter, when the river is rising, he was re-appointed to the station. He again applied for the money, and I still refused; we had only worked a few days when he shut the factories, by preventing the people from working; he came to me in the evening and asked for his money again, and after much consideration, and seeing that the concerns were stopped through his opposition, I gave him a certain sum of money, the sum of 60 *l.* We got on very well till the manufacturing was about closing again, when he demanded the balance of what he said was due to him, and I again positively refused; he completely

completely shut the factories, and we did not work another day after that; the plant went all under water, and I had only recourse to a magistrate, 54 miles distant. I went to the magistrate, and he happened to be from home; he was out in the district. It was 10 days before I had a hearing. After hearing me he called for the darogah; the darogah came to the station, accompanied by 150 working people and small cultivators, and presented a petition as from them against me, accusing me of murder, arson, rape, and every offence that could be committed, and the magistrate took up the case; but on allowing me to cross-examine them they got confused, and said they did not even know what was in the body of their petition, and they acknowledged that the petition had been written by one of the lower officers of the thannah. For 18 months my case against the darogah for extortion was undecided, and I had several trips to Kishnagur, being called in by the magistrate, and no hearing was given, and the magistrate was shortly after removed; and a new magistrate came, and he called up the case and decided it without giving me any notice, or calling for any of the witnesses. He exculpated the darogah, re-appointed him to another station, and recommended the Government that I should be severely punished for having acknowledged bribing the darogah. We lost a very large sum from not being able to work off the plant.

3197. Was it the original sum of 60*l.* which you gave the darogah to which the magistrate referred?—Yes; that was the money I gave him to allow the workmen to come to the factories; we lost many thousand rupees besides that in being unable to work off the plant.

3198. How was the darogah exculpated?—Merely that the magistrate disbelieved the statement, and said that I should not have bribed a policeman.

3199. On what ground did the magistrate find you guilty of bribing the darogah?—On my own acknowledgment that I had given him the 60*l.* I made a statement of the whole facts as they took place.

3200. Supposing you had not given the 60*l.*, what loss would you probably have incurred?—We lost about 2,000*l.* eventually.

3201. What would have been the loss if you had not paid that 60*l.*?—About 6,000*l.*

3202. Mr. *W. Vansittart.*] In fact you bribed the darogah exactly one year's salary; they get 50 rupees a month?—No, they got 30 rupees at that time.

3203. Then you gave him two years' salary?—It may be; I know that he was in the habit of receiving 150 rupees a month from the factories before we purchased them.

3204. *Chairman.*] In what year did this happen?—It is some 20 years ago; but it is a common thing to this day.

3205. Do you give this case as a solitary instance, or as a general specimen of what may occur to a gentleman situated as you have been, in the part of Bengal with which you are familiar?—I have known many such cases.

3206. Up to the present time?—Up to the present time.

3207. In the long time you have been in the country have you marked any improvement in the state of the police?—No, not generally.

3208. In what way, in your opinion, could the police be improved?—By a greater number of Europeans being employed; by European supervision. The darogahs ought to be under a European nearer than the magistrate.

3209. Have the magistrates, as a body, improved since you have been in India?—No.

3210. Do you generally concur in what former witnesses have said respecting the covenanted magistrates?—Generally.

3211. What is the character of the class called deputy magistrates?—The native deputy magistrate is very unfit for the police.

3212. In what respects?—They want energy; their caste is much against their being able to detect robberies, and they are generally unfit for the police.

3213. Do you complain of them both as protectives and as detectives?—They are not protectives.

3214. Are they good detectives?—No; they are not good detectives.

3215. Is it your opinion, in confirmation of what other witnessess have said, that it would be beneficial to have a more extensive employment of Europeans?—Certainly.

3216. If the uncovenanted service were put on a more independent footing,

Mr. *J. Dalrymple.*

13 May 1858.

could qualified Europeans be found in the country to fill the office of magistrate?—There would be no difficulty I should think.

3217. What salaries do you pay to the persons engaged in your concern?—They vary from 150 to 1,000 rupees a month, with commissions.

3218. Would you be much benefited by having the power of employing a greater number of Europeans in your concern?—Certainly.

3219. That is what you want, in fact?—Yes.

3220. Would the infusion of a certain number of Europeans into your establishment be of utility to the natives in bringing them forward, and almost acting as a means of instructing them?—Yes.

3221. It would be advantageous to you, to the Europeans employed, and to the natives?—Yes.

3222. Have you suffered from the want of a good law of contract in your interest as a European capitalist?—We have suffered.

3223. Will you state how you suffer exactly?—The system of Bengal is all on advance; we advance for everything; when we advance we take a contract in writing from the native that he is to perform certain duties, and if he refuses to do so afterwards, then we have no redress in the courts; we have in our concerns upwards of 20,000 yearly contracts.

3224. And you have not adequate means of enforcing those contracts?—No; we cannot enforce the contracts.

3225. Are you of the same opinion as the preceding witness, that the Government, where it is itself a manufacturer, as in the case of opium, has a separate law of contract, and do you think it would be just to you as an independent planter to have the benefit of that law of contract?—Yes.

3226. What has been your experience of the conduct of the covenanted civil service with regard to yourself and your property in India?—I think the covenanted civil service are very deficient in the language; they are much too young; they have no knowledge of the native character, and they have much greater powers put into their hands than their knowledge warrants.

3227. With regard to the language; are they familiar with the language?—They are very deficient in the language; they are put in power before they have a knowledge of the local language, though they may know the languages as they are taught them, but not to speak them in the country.

3228. Would you draw a distinction between the knowledge that is required for exchanging ideas in common conversation in language, and diving into the difficulties of a case at law in a court of justice?—There is a very great difference between the languages taught in the colleges and the languages spoken in the Mofussil.

3229. Therefore a man passing a very good examination may not always be found equal to the difficulties he meets as a magistrate upon the bench?—Certainly.

3230. Do you speak of that from your own experience?—Yes.

3231. Of course you have known some superior men acquainted with the languages?—Many.

3232. Upon the whole, which way does the majority incline, on the side of the deficient or the superior men?—The very inefficient.

3233. In your recollection can you state that the number of European settlers in the part of India where you have been has increased or diminished, or continued the same?—It continues about the same.

3234. Has it continued the same in Calcutta?—No.

3235. Has it much increased?—Yes, much increased.

3236. To what cause do you attribute the small number of European settlers in the part of the country where you have resided?—To the police laws, the revenue laws, and the difficulties altogether in the country; you are subject to all sorts of false charges and extortions.

3237. Supposing you were a newly-arrived Englishman at Calcutta, with some idea of settling in Bengal, and you went, as you naturally would, to some person of experience to inquire about the country where you were to settle, would the account you would receive from that person of experience be such as possibly to deter you from settling there?—It certainly would.

3238. You agree generally with other witnesses as to the insecurity of property in that part of the country?—I do.

3239. Have you made any observations on the working of the sale law?—I have; I have had much to do with the sale laws.

3240. Do you complain of those sale laws?—Yes

3241. On what account do you complain of them?—In purchasing property, you have many difficulties to contend with as to getting possession; you have disputes about the boundaries, and about the many under-tenures which there may be in the estate; and they are not upheld by the sale law.

3242. In that respect you confirm the statement of former witnesses, that the sale law is not sufficient to give security to the under-tenures under the zemindar?—No.

3243. Have you anything to add to the evidence given by the previous witnesses upon that subject?—No.

3244. You confirm it only?—Yes.

3245. With regard to roads, do you confirm the opinions of the witnesses given upon that subject?—Yes; there are very few roads in Bengal.

3246. Are roads very much required?—Very much required.

3247. Are the roads in Bengal sufficient for the purposes of traffic and intercommunication?—Not at all.

3248. Is it your opinion that a greater number of European settlers, if they were induced to settle in the country, would be one means of improving the roads?—There is not a doubt of it.

3249. The superior civilisation of an old country is impatient of that backward state of intercommunication which exists in a country like India, is not it?—Yes.

3250. Therefore they would have on the one hand a desire to mend the roads, and on the other the capital to improve them?—The roads in our own concerns the planters generally repair, but they do not answer for general traffic, which requires continuous lines of road.

3251. Would you think it possible that the road system in your part of Bengal might be conducted by a road committee; I refer to the cross-roads, not the great roads?—Certainly.

3252. If there were a greater number of European settlers, would there be the materials for forming committees between the natives and the settlers to secure the formation of cross-roads?—Yes, not a doubt of it. The Government for the last two years have been making some local roads through Moorshedabad and Kishnagur, to employ the natives; there was a famine two years ago, and it was to employ the natives, and the money was generally laid out through European settlers.

3253. Do you think it desirable, in a part of the country like that where European settlers place themselves, to encourage, if it were possible, some such means of local self-government as might be given by managing their own roads, and to a certain degree their own concerns?—Yes; if the Government were to make the roads I have not a doubt that they would be kept up by the inhabitants, both European and native.

3254. And that would be a good opportunity of initiating the natives and confirming the Europeans in the habit of managing their own local affairs?—Yes.

3255. You think it desirable that they should learn by degrees to manage their own local affairs?—Yes. They understand making roads; I have known a native make a road for 100 miles, from a religious motive.

3256. Do you think that it would be possible to encourage such a spirit among the natives of India?—Yes.

3257. The planters would naturally be inclined to adopt it from their national habits, and the natives would borrow it from the planters?—Certainly.

3258. Do you know the Nuddea River?—Yes.

3259. Do you confirm the statements of previous witnesses upon that subject?—Yes.

3260. That you might save an immense circumnavigation by a simple line of improved river transit, and that that improvement has not been made?—Yes.

3261. Have you suffered personally from the unimproved state of the Nuddea River?—Yes, in the transport of goods.

3262. Is it a commercial state of suffering, common to all those interested in that part of the country?—It is complained of by all India; the Nuddea Rivers being shut up for certainly nine months in the year.

Mr. J. Dalrymple.

13 May 1858.

3263. But you probably are of opinion that means have been used by the Government to keep the rivers open?—The means used have been very small.

3264. Are you of opinion that those means admit of further improvements?—Much.

3265. Considerable?—Considerable.

3266. What is your opinion of the general state of cultivation where European settlements take place?—Since I went to India it is very much improved, and certainly quadrupled.

3267. You have no hesitation in ascribing that improvement to the settlement of Europeans?—It is entirely owing to European energy.

3268. Is the condition of the natives improved also in those districts where European settlement takes place?—Yes, it is; the lower orders are much better fed and better clothed, and the houses are much better.

3269. Then you naturally draw the inference, that if there were further settlement there would be further improvement?—Yes.

3270. Do you think that if settlement went on to a greater extent, there would be a desire among the European settlers to improve the intellectual condition of the natives by means of schools and elevating their moral character?—Certainly.

3271. Much has not been done in that respect hitherto, has it?—A good deal has been done amongst European settlers by subscriptions.

3272. We have heard of schools in Jessore?—Yes; you only hear of schools at stations, but those who are distant from the stations subscribe.

3273. Do you know any instances of English settlers who have established private schools of their own?—No.

3274. Do you think that if there was a very considerably increased number of British settlers, there is a probability that such schools and such improved means of communication would be extended in proportion to the increased number of European settlers?—There is not a doubt of it.

3275. Mr. *W. Vansittart.*] You have concerns in Maldah?—Yes.

3276. Do you know anything of Darjeeling?—No.

3277. You say that the Europeans in the Mofussil do not increase, owing to the defective state of the laws and the police?—Yes.

3278. Do you not think that it is to be attributed to the superior advantages held out in Australia, Canada, and other possessions for the investment of capital?—No.

3279. Do you mean that there has been no increase of indigo factories and other manufactories in the Mofussil, or do you merely refer to Europeans?—To Europeans merely. There has been a considerable increase in manufactories of all kinds, but there is a greater number of country-born employed now than used to be the case.

3280. If there are more of those factories and manufactories built, surely that would bring more European men and a greater investment of capital; if new factories spring up, surely that must increase the European community?—It has not hitherto increased the Europeans; there are several grades between the European and the native; it has increased the Christians.

3281. I referred to settlers and men of considerable property, like yourself?—No.

3282. Mr. *Lowe.*] Do you think that the British colonies do offer greater inducements than India to settlement?—Yes, I do.

3283. And yet you do not think that those inducements keep people away from India?—The laws in the Mofussil certainly keep more from settling in the country.

3284. If the laws and police were as good in India as in Australia and Canada, are the inducements held out by India as good as those held out by Australia and Canada?—I think so.

3285. Do you think the climate is as good?—Lower Bengal is perhaps not so good; Europeans could not labour in Bengal.

3286. People could not bring up their families there, could they?—Not generally.

3287. Is not that a great drawback?—It is a very great drawback.

3288. Is not a residence among a heathen population a very great drawback?—A very great drawback.

3289. Instead of having a working class of the same elements as at home, the same as in Canada and Australia?—Certainly.

3290. Is not there an element of uncertainty in India that does not exist in Australia and Canada, from the possibility of native risings and rebellions?—Yes.

3291. Do not all those reasons show that, even if those reforms which you mentioned were to take place, it is not very probable that there would be a large European emigration?—No; there may be a larger European capital.

3292. But a large European emigration you do not think there would be?—No.

3293. A young man having his fortune to seek would prefer to go to an English colony, supposing all were done to improve India that could be done?—I am not certain upon that point.

3294. Can you suggest any remedy for the land tenure; you are aware of the land tenure in Australia or Canada, are you not?—No.

3295. A man buys his land in fee-simple, and pays nothing to the Government; could anything be done in India to make the tenure approximate to that?—No; the tenant-right of the ryots stands in the way.

3296. What remedy do you suggest for the grievances you complain of?—That the under-tenures should be recognised by the Government; and that in the event of a Government sale they should be upheld.

3297. How would you prevent the Government being defrauded of its revenue in that case?—By giving notices beforehand; the different tenures would be registered, and it might be easily known what claims there were against an estate before the sale came on. There is a great practical difficulty.

3298. I suppose in a zemindary each party is liable for the whole rent; every acre is liable for the whole rent?—Exactly.

3299. Would you propose to disturb that arrangement, or would you leave it still liable?—It involves a great many questions. I have considered it a good deal. There is the protection of the Government rent. An extensive zemindary might be divided into 50 different tenures by the holder, and in the event of a sale those tenures would be all upset.

3300. Would you propose to relieve any part of the zemindary from the Government rent, or should it be leviable over the whole, as now?—Over the whole.

3301. Each putneedar would be liable to pay the whole rent in default of everybody else?—The whole estate would be sold.

3302. Supposing a small part of a zemindary is upon putnee, the putneedar is liable still for the whole rent; would you propose that that should be continued?—When one portion of the estate is to be liable the other would also be liable.

3303. Each is liable for the whole?—Each is liable for the whole.

3304. Would that be a great discouragement to settlement in itself?—It would.

3305. Supposing every householder in Belgrave-square were liable to the Marquis of Westminster for the whole rent of Belgrave-square, would not that be a great discouragement to taking houses in that square?—Yes.

3306. Is not that the case?—Yes, but under different circumstances. Most of the sales are from fraud; they are not, generally, from being unable to pay the rents, but from fraud, to dispossess some other shareholder or party.

3307. You cannot suggest any remedy which would secure the Government their rents, and protect each putneedar from not being liable for more than his share of rent?—Only that the putneedar should be recognised by the collector. A remedy was suggested by the Indigo Planters' Association.

3308. That would save his putnee from sale?—Yes.

3309. But it would not save him from an unfair proportion of rent?—No; but he would get back what he paid in excess of his own share, through the collector.

3310. With regard to the magistracy, do I rightly understand you to adopt the sentiments of those witnesses who agree with Sir Arthur Buller in his speech in the Legislative Council?—I agree generally with the evidence given on that subject.

3311. You object *in toto* to any European having any case, civil or criminal, tried before a native judge?—Yes, I do.

3312. Do you think it possible entirely to do away with native judges, and replace them by Europeans?—I would not do away with civil judges.

3313. You think there must be some native civil judges?—Yes.

Mr. *J. Dalrymple.*

13 May 1858.

3314. To what extent do you think so; up to sudder ameens?—Yes, and principal sudder ameens.

3315. And moonsiffs?—Yes, and revenue officers.

3316. Do you object to appear before them in your own cases?—No; we generally do appear before them.

3317. Do you consider it a grievance that you do so?—No, we do not consider it a grievance in appearing before a civil judge; it is appearing before a criminal judge that we object to.

3318. You do not object to appearing before a native judge in a civil suit. If one of your men sues you on a contract, do you require that it should be heard before an English judge?—No, we generally take the course the law provides.

3319. Are you content with that, or is it a ground of complaint?—The little chance of a European being heard in those courts is a ground of complaint; he cannot defend his own case except through the mooktears.

3320. Do you wish that done away with, or is it possible to do away with it?—I do not think it is possible to do away with it.

3321. In criminal cases you claim that you should only be brought up before an English judge?—Yes.

3322. You object to appearing before a native judge even in the smallest case?—Yes; but in small cases we have no exemption, and are tried before natives.

3323. Suppose the case of a trifling assault?—Yes, we are tried by natives.

3324. You do not object to it, do you?—Yes, we object to it.

3325. What is the point that you do object to in what is called the Black Act?—That we shall be liable to be tried by natives, and put into gaol by them, if that is passed; at present that cannot be done.

3326. It is the difference between fine and imprisonment that you object to; you do not object to incurring a small fine under the native magistrate, but you do object to a power of imprisonment; is that it?—We object to the natives trying those cases where they can imprison or impose heavy fines; we entirely object to the natives.

3327. You admit that for smaller offences, where fines only are levied, it is necessary that Europeans should submit to native jurisdiction?—Not in criminal cases.

3328. Sir *Erskine Perry.*] If competent English judges were placed down in the districts where the planters are settled, would they be sufficient to provide for those cases brought before them by Europeans?—They would be competent certainly; the present judges have very little knowledge of the laws.

3329. Therefore if the Black Acts were established in India, the appointment of a few English judges in those districts where the English are settled would suffice to remove all those objections that you now have against the Black Acts?—If we were to be tried by English judges, according to English law.

3330. It is only in Bengal and Tirhoot that English planters are to be found in any numbers?—Yes; but that is a very large country.

3331. There is a return before Parliament from which it appears that there are only about 300 settlers altogether in India; have they increased within your recollection?—No, they have not, but they are much more numerous than that.

3332. Do you think that the objections of the planters to the introduction of the Black Act, that is to say, the introduction of one uniform system of laws, would be removed if a few competent English judges trained in law were established amongst them?—I say raise the natives to our standard, and do not reduce us to theirs.

3333. Therefore what you object to is incompetent or corrupt native judges and incompetent English judges?—Yes; we object entirely to native judges.

3334. Would your objections be removed, and would the interests of the natives be promoted, if competent English judges were placed there?—Yes, judges and magistrates.

3335. Then do you think that the objection of the planters to the Black Acts would be removed?—Yes. I mean by the Black Acts the power of the natives over us.

3336. Have you ever been located in any other provinces except Bengal?—Never.

3337. In Bengal, under the perpetual settlement, there is a great facility for purchasing land, is not there?—No; there are very few estates for sale; they are only now and then for sale.

3338. When

3338. When those estates are for sale is there much competition for the purchase of them?—It depends upon the estate; sometimes there is.

3339. How many years' purchase is an estate generally sold for?—It is sold for 10 or 12 years', but putnees and other tenures are sold for much less.

3340. A zemindary is sold for 10 or 12 years?—Yes.

3341. For how many years is a putnee sold?—It differs in different parts of the country; in my part of the country it is only a year and a half or two years' purchase; but then we pay the rent according to the collections, with a small discount for collecting. There are so many different ways of taking tenures in India.

3342. How do you account for a putnee tenure fetching so very small a sum?—Because you pay for the profit on the estate besides the Government rent. By buying at the Government sale, you have only to pay yearly the amount of rent paid to the collector, while in the case of the putnee, you have to pay what the zemindar has been in the habit of collecting.

3343. And that varies from year to year?—Yes.

3344. Do you find that in those sales natives come forward to compete with Europeans for the purchase?—Yes.

3345. And are they generally inclined to go as high in the purchase as Europeans?—They go higher.

3346. In point of fact, you generally get outbid by the natives?—Yes.

3347. Suppose that the Government assessment was set up absolutely for sale for redemption, do you think that that would induce Europeans to buy more largely, assuming that the ryot's tenure remained?—No.

3348. Why do you not think so?—They would have so many difficulties to contend with after purchasing.

3349. If they purchase now, why would not they purchase more freely if they could buy the land out and out, paying the Government a redemption for the land tax?—I have never thought of the matter; I foresee many difficulties with respect to the under-tenures with the ryots.

3350. You of course do not advocate that the ryot's rights should be disregarded by the law?—Certainly not.

3351. You are not aware as to the power of purchasing land in the Upper Provinces?—No.

3352. Mr. *Villiers.*] Do you mean to state that the difficulties of procuring land constitute one of the obstacles to European settlement?—No.

3353. You do not attach so much importance to the law in that respect?—No.

3354. You dwell most upon the administration of justice?—Yes.

3355. I presume you would state in private what you have stated to the Committee?—Yes.

3356. Is not your report of the disadvantages under which settlers labour concurred in by almost every one under the same circumstances who has returned to England?—Yes.

3357. And is not that report calculated to deter people from going out?—Yes.

3358. And if you could give a better report, do not you think that that would encourage settlement?—Yes.

3359. May we not suppose that the very few settlers who go to the Mofussil is to be accounted for from the fact that they make some inquiries beforehand, and are much discouraged by the accounts that they receive?—Yes.

3360. You stated that you had some difficulty in keeping up the number of your assistants?—Yes.

3361. What was the reason of that?—There are fewer Europeans now who go to India than went formerly.

3362. Why is that?—It is from the difficulty of getting employment.

3363. A witness who preceded you stated that he could have given a great deal of employment to Europeans if they had come out?—Yes, but fewer Europeans go out now.

3364. The inducement is not sufficient?—The inducement is not sufficient to take them into the country.

3365. You do not know that they are deterred by the climate?—No; many people who go to India go to invest money, not to become assistants; and in the country the want of security prevents many persons from going.

Mr. *J. Dalrymple.*

13 May 1858.

3366. What would an assistant earn in the way of salary?—It depends upon his experience; we give salaries varying from 150 rupees to 1,000 rupees a month.

3367. Do you know any instance of Europeans being offered to go out to India, where they have been found disinclined to do so?—No, I have not.

3368. Then how can you speak to there being a disinclination on their part to go out?—From the difficulty of getting them.

3369. Would it answer the purpose of any person in your position to send out Europeans?—I have sent out already one or two, but many more are wanted. I am not able to hold out prospects to them which would enable them to make a competency.

3370. There is nothing in the treatment which they receive from the civil service in any way, or from the character of the Government, that would deter them?—Certainly; the whole behaviour of the civil service towards Europeans has a deterring effect.

3371. Did I rightly understand you that the language that is learned in college by a civil servant is not the language which is spoken in the Mofussil?—It is very different.

3372. Therefore no European judge understands the proceedings which take place in the court?—It is only from experience that he can acquire that language.

3373. Are the proceedings conducted in a different language from that which is spoken?—No; the proceedings are conducted in Bengalee, but it is spoken very differently from what it is written.

3374. Do not you know that a civil servant learns the Bengalee language?—Yes, but I have never seen one able to converse with the natives on his coming to the country from college.

3375. That is from an imperfect knowledge of the language, not from being altogether unacquainted with it?—Yes, it is from an imperfect knowledge of the language.

3376. You have spoken of incompetent magistrates; have you ever seen the difference between a competent magistrate and an incompetent magistrate?—I have seen many competent magistrates.

3377. What has been the effect of having a competent magistrate?—A competent magistrate's district is in order. There are few dacoitees, few quarrels, and everything goes on smoothly.

3378. Can you say that the police is better in that case than when the magistrate is incompetent?—Much better. I know several magistrates whose police I should think it impossible to bribe.

3379. You attach peculiar importance to the competency of the magistrate, as far as removing those minor evils which you mentioned connected with the police?—Yes.

3380. What is the opinion among the planters and settlers as to the attention paid to their remonstrances or applications to the Government at Calcutta?—They generally think that no attention is paid to their remonstrances and applications.

3381. These grievances to which you have referred with respect to the police, the administration of justice, and the state of the communications, have been brought before the authorities at Calcutta?—Yes.

3382. They have been brought before the Council by way of petition or memorial?—They have been.

3383. What is the impression amongst settlers with respect to the attention which the petitions received; is it that the petitions are unheeded?—Yes.

3384. To what reason do you ascribe that?—Disinclination, and perhaps the difficulty of being able to comply with them.

3385. Do you mean that they do not appreciate sufficiently the interests and wants of the settlers?—No.

3386. With respect to the Nuddea rivers, has that question ever been considered?—It has often been discussed in the papers.

3387. Has it been brought before the authorities; is there any official report made upon this complaint, that for eight months in the year those rivers are unnavigable?—I believe it has been brought before the Government by the Indigo Planters' Association.

3388. And nothing has been done?—Nothing.

3389. Do you think that it is possible to do anything?—The mouth of the three

three rivers runs through our property, so that I know it very well; and I believe that a great deal might be done.

3390. Would it require a great expense?—It would; not the amount which they collect from the tolls for that purpose.

3391. You are of opinion that, if roads were made, they would be supported by an assessment on the natives, or, at any rate, at their expense?—In the original decennial settlement there was so much assessed for roads, but it was afterwards added to the rent, and not applied to the roads.

3392. Do you mean to say that there was a special rate for the maintenance of the roads?—Yes, I think there was; it was a separate item under the decennial settlement.

3393. When was it discontinued?—Many years ago it was merged in the rent.

3394. Do you believe that there would be any disinclination on the part of the natives, looking at the great advantage of having good roads maintained, to pay something towards their maintenance?—It was proposed some years ago, and that was the objection which the natives made, that they had already paid for that in their rent-roll; what is called the jumma.

3395. Are you alluding to the revenue, or the rent?—To the revenue.

3396. Who do they conceive should keep up the roads?—The Government.

3397. In consequence of the payments which they make for rent?—Yes.

3398. You stated that you had known an instance where a man, from a religious motive, had made a road for 100 miles?—Yes.

3399. Then there is no want of knowledge as to making roads?—No; they are inclined to give the expenses. The road I have referred to was from the Jessore district towards Moorshedabad.

3400. There is no kind of difficulty in procuring the labour for making the roads?—Not in the least.

3401. There is no difficulty in getting labour for any purpose, is there?—At some seasons there is a scarcity of labour.

3402. Do you agree with those gentlemen who have preceded you that the natives are grateful for employment generally, and become attached to the settlers?—Yes, they are. There is a great improvement in the lower orders since I went out to India, in this respect, that the great anxiety of a man who would be called a ploughman in this country is to get a plough of his own; and when those men get ploughs of their own, few of them will work for other people; they will not work for hire.

3403. They become cultivators?—They do.

3404. Do not they become also general consumers of manufactures and everything else if they are better employed?—Yes.

3405. Do you believe that there is a power of consuming more English manufactures than are now consumed?—Yes.

3406. Do you think that that would be the result of allowing English settlers to establish themselves?—Certainly.

3407. Mr. *Willoughby.*] You went out to Bengal, first of all, as an assistant?—Yes.

3408. Did you afterwards become a partner in the factory to which you have alluded?—Yes.

3409. Then you were not disappointed in the expectations which induced you to go to India?—No.

3410. Sir *Erskine Perry.*] Does it consist with your knowledge that a great many planters have been unsuccessful in India?—Many more than have succeeded.

3411. You think that the majority have been unsuccessful?—Yes.

3412. Mr. *Willoughby.*] You stated that you employed 50 Europeans, and that you were in want of a great many more. Does not that arise partly from your not being able to hold out sufficient inducements for them to proceed to India?—No; it is the difficulty after they get to India. A man of small capital can do little or nothing.

3413. Is it not the case that because you are not able to hold out sufficient inducements to Europeans to leave this country to take service in your own concern, that is one of the causes of your want of Europeans?—A man going out to India looks for something beyond merely an assistantship. A small capital in India is of little use.

Mr. *J. Dalrymple.*

13 May 1858.

3414. You state that the covenanted servants of the Government are totally incompetent; are you not aware that the Government endeavour to insure competency by a test on first appointment, and afterwards on promotion?—Yes.

3415. You have alluded to the insecurity of the tenure under the sale law; are you aware that Mr. Grant proposed a sale law which was to recognise under-tenures, provided a certain portion of the revenue due to the Government was put upon the tenure in proportion to its size?—Yes.

3416. Can you state why that law was not passed?—There was so much to be done in order to effect the object of the law, that it could never have been accomplished.

3417. It was in consequence of the objections raised to other parts?—No; there were so many forms to go through.

3418. The planters objected to it upon that account?—Yes.

3419. Did they suggest remedies?—Mr. Grant's sale law was since I left India, or just about the time I was leaving, I think.

3420. You alluded to the want of roads: are not materials for making roads in Bengal very scarce?—There are bricks; they are no great expense.

3421. Is the Government rent in Lower Bengal excessive under the zemindary system?—In many instances it is.

3422. In what part?—On the Ganges, for instance, where the assessment is modern.

3423. Do you concur in the statement which was made by a former witness, that in many cases the zemindars levy eight or ten times what the Government levy?—No, I have never been aware of that.

3424. Are you not aware of any cases in which the zemindars levy more than the Government?—They do.

3425. You state that the rate is excessive; at what rate is it per begah?—I have had particularly to do with the assessment upon the resumption lands.

3426. What rate per begah is levied upon the zemindaries with which you have been connected?—Rice in many zemindaries is only four annas a begah; about three begahs make an acre. The higher lands again have let for eight annas. Then the mulberry and sugar cane lands are much higher. I know some mulberry lands that let for two rupees, and sugar-cane lands for three rupees per begah.

3427. Levying the rent upon the crop and not upon the productive powers of the land has ceased, has not it, in Bengal?—No; the zemindars levy upon the crop, but the Government do not levy upon the crop.

3428. What do the Government do?—They levy upon the soil.

3429. And you are of opinion that those rates which you have mentioned are excessive?—Yes, on the resumed lands; the newly formed alluvial soil.

3430. I am not talking of the resumed lands?—In the zemindaries the revenue is not excessive.

3431. With respect to the making of roads, how would you provide funds for that purpose; do you think that the whole expense should fall upon the Government?—The making of the roads should fall upon the Government.

3432. You think that the whole expense of making the roads should fall upon the Government, although the zemindary is, to a great extent, private property?—Yes; it was provided for in the decennial settlement.

3433. Was it provided that the zemindars should not be compelled to assist?—The zemindars after the settlement were obliged to make and keep up the roads. An assessment was made upon the estates to provide for that, and the Government took it into their own hands, the same as they did with the embankments.

3434. Is not there a fund set aside by the Government for the repair and construction of roads, called the Toll and Ferry Fund?—Yes, there are funds, but I am not aware of their being set aside for roads in my districts.

3435. Is not there a committee appointed in every large town, consisting of some of the principal natives, and the collector and judge, by which those funds are now managed?—Not in large towns; only at stations. Many ferries do not belong to the Government at all, but those roads that are repaired are seldom connected with the general traffic of the country; they are more about the stations.

3436. You have alluded to the Nuddea rivers; you state that they are shut up for nine months in the year, and that the Government have neglected certain means of improvement which they might have adopted; to what means of improvement

improvement do you refer?—They are left to one superintendent, with a few natives under him, and the work is seldom commenced until the inundation has gone down so far that there is no strength of current to keep the channel clear.

3437. To what work do you refer?—To the keeping open of the rivers.

3438. Do you mean by dredging?—No, there is no dredging; there are mats and bamboos placed in such a way that the current strikes them, and carries off the sand.

3439. Would not the expense of such an engineering work be very great?—It would be, but there is a provision for that; there are the tolls; they were instituted to keep the rivers open. Every boat that passes down those rivers pays a toll.

3440. Are not the tolls appropriated for the improvement of the navigation of the rivers?—Not the twentieth part of them.

3441. Then to what are they appropriated?—The Government appropriates them.

3442. They levy a toll for one purpose, and appropriate it to another?—I believe the tolls realise about three lacs of rupees a year, and I think that the expense is not 50,000 rupees a year.

3443. You have stated that education would be greatly extended by an increase in the number of European settlers. Your factories, you state, are worth 300,000*l.*, and you expend 200,000*l.* a year upon them; have you any schools attached?—We have native schools paid by ourselves, and native doctors.

3444. To what extent are European settlers subject to the criminal jurisdiction of the native magistrates; what punishment can a native magistrate inflict upon a European planter?—The native magistrates are of many grades. The only exemption of Europeans is that they cannot be imprisoned by natives.

3445. But you have known him inflict fines?—Yes.

3446. Have any persons on your estate ever suffered punishment by the sentence of a native magistrate?—Natives have, but not Europeans.

3447. Do you know any instance of a European planter having been fined and imprisoned by a native magistrate?—Not to my recollection, but a native magistrate might fine.

3448. I wish to ascertain whether you or your class are subject to the criminal jurisdiction of the natives?—We are subject, in a great respect. The higher punishments cannot be inflicted, but the fines are.

3449. And the imprisonments?—I have never known a European imprisoned by a native.

3450. Although Europeans may be liable, there cannot be any practical grievance, if you, with all your 30 years' experience, are not aware of any case of the kind having occurred?—No, I think they are not liable.

3451. You state that when zemindaries are sold they realise 10 or 12 years' purchase; are you aware that for every acre of ground which the Government has purchased under contract with the companies who are constructing railways, they have paid 20 years' purchase?—No, I am not aware of that.

3452. Assuming that to be the fact, that proves that the value of land has very much increased?—No; it is a very different thing cutting a railway through a man's property and giving him an estate to look after.

3453. Would the railway double the value?—The railway might in some cases go through the best part of the estate.

3454. When you have attempted to obtain European assistants, were you ever told in this country that the conduct of the civil servants was a bar to those Europeans going out?—No, not in this country.

3455. You have alluded to memorials not being attended to by the local government; is it not the fact that all laws, previously to being enacted, are published in the Government Gazette?—Yes.

3456. And has not everybody a right, whether European or native, to make any representation upon the subject of those laws, if they think they are likely to affect their interests?—Yes, they might represent.

3457. And they do so?—In many cases they do.

3458. Do you concur with the previous witnesses in thinking that Europeans should be employed in preference to natives in many situations, which are now filled by natives?—In many cases.

Mr. J. Dalrymple.

13 May 1858.

3459. You are not an advocate for excluding natives from public employment?—No.

3460. It is the higher class of situations that you would give to the Europeans?—Yes.

3461. Do you think that that would be just to the natives?—If a better class of natives could be found it might be considered unjust; but it is seldom that you can get the better class to take employment.

3462. You agree with the former witnesses with regard to the precautions now taken under the old sale law, that is, where a zemindary is put up for sale, there must be a certain notice given?—Under the old sale law notice was given in the Gazette, that the estate was to be sold within a certain time.

3463. And objections must be made within a month after the sale?—Yes; objections by those to whom the property belongs.

3464. What other precautions would you suggest to obviate the injustice of which you complain?—In the case of the zemindaries, which are divided and subdivided into under-tenures, if those tenures were recognised by registration, or there were some court to look properly into their value to see that they were not collusive tenures, then the estates might bring much more money.

3465. Have not much greater efforts been made of late years in endeavouring to develope the resources of India by the local authorities, than was the practice when you first went to India 30 years ago?—Yes, certainly, very much greater.

3466. Mr. *Seymour.*] In the case to which you referred in regard to bribing the darogah, when the darogah first came to you to ask you for money, why did not you go immediately to the magistrate instead of giving it to him?—If I had not given it the factory would have been shut up.

3467. Why did not you inform the magistrate immediately after you had given it to him?—The magistrate was 54 miles off, and I could not go immediately. Magistrates are perfectly aware that bribery is common.

3468. You think that it would have had no effect if you had gone to the magistrate and said, "I am obliged to give this man money, because otherwise he will stop my factories, but I disapprove of it, and I only gave it to him till I could come and tell you"?—I did so in the second instance, and what was the result? the whole of the crop was destroyed, and I got no redress.

3469. Do you think that the Government should have a separate law of contract for their own commercial undertakings, such as opium?—No.

3470. Supposing that they make any alterations in the sale law for their own benefit, do not you think that they should give the planters the benefit of them?—Yes.

3471. If they did so, would not that be a guarantee for the improvement of the law?—Yes.

3472. Do you approve of the exemption of all the civil servants from the law?—No.

3473. The Government, on the whole, has become more despotic of late, has not it?—Yes.

3474. This alteration was introduced only a few years ago?—Yes, in 1850 I believe.

3475. Do you object to having a separate revenue jurisdiction for property, having all questions with regard to the payment of revenue decided by a revenue authority, instead of being brought into the civil courts?—No, I think there must be separate revenue courts, as at present, with an appeal.

3476. Do you think that the servants of the Government look upon independent planters with a kind of suspicion?—Very much so.

3477. Do you think that that feeling might be removed?—It might.

3478. What do you think would tend to remove it?—If the European authorities were made more responsible for their acts, I think it might be removed.

3479. Do you think that the admission of independent Europeans to the Council would have a tendency that way?—Yes, I think it would.

3480. Do you think that an infusion of persons not in the civil service into offices of trust under the Government has a tendency that way?—Certainly.

3481. Do you think that that acts as a check upon the civil service?—It would if it were done to a greater extent; it is not carried out much at present.

3482. If some high appointments were open to uncovenanted servants, do you think that that would make a balance between the two services?—Yes.

3483. Are

3483. Are you aware that the roads about London, where there is the clay, are made with half burnt clay, which answers remarkably well?—No.

3484. Do you not think that by half burning the alluvial soil of Bengal, you would get a good material for making roads?—No, there is too much rain.

3485. If you burnt the soil to the consistency of bricks, you think that it would make capital roads?—Yes, we do so now.

3486. Are the bricks laid down regularly, or are they broken up for making roads?—The usual custom was to lay them down whole, but now they lay them down broken, in the same way as macadamised roads are made here.

3487. Are you aware that in Holland whole bricks are laid down?—Yes.

3488. With reference to the rivers, are you aware that dredging machines have been sent out to Calcutta?—I have seen them in Mr. May's time, 30 years ago, but not since.

3489. Are you aware that some machines have been lately sent out?—No.

3490. Are you aware that the Government have had under consideration the improvement of the canals leading into Calcutta?—Yes; but that is very different from improving the two rivers of which I spoke.

3491. It is proposed to make great alterations with regard to the canals leading into Calcutta?—Yes.

3492. The question of the Nuddea rivers becomes daily more important, because of the great increase of the commerce of Calcutta, especially within the last three years?—Yes, if the Nuddea rivers were put under Europeans, serjeants for instance, they would be kept open much longer; that is to say, if men were to live at the mouth of them.

3493. The great obstacles which now exist to produce coming by the rivers into Calcutta ought to engage the attention of Government very seriously, ought it not?—The attention of the Government has often been called to those rivers.

3494. Are you aware that they have had under recent consideration the Mutlah project, which is a project for making a new port?—Yes.

3495. Would that obviate some of the defects?—No.

3496. Is not every encouragement given to self-government, as far as possible; has not a Municipal Act been passed, by which all towns are encouraged to govern themselves?—I am not aware of that.

3497. Should you say generally that the population of Bengal is under-fed and under-clothed?—It depends upon the weather; in the winter they are certainly under-clothed.

3498. What is their food?—Rice.

3499. But do they get rice?—Yes.

3500. Is there a good metalled road six miles out of Calcutta?—The roads about Calcutta are very good, and they are metalled, but the metal is all brought there, and they do not reach far.

3501. On the road to Jessore, is there six miles of good metalled road?—I never travelled that road.

3502. Are more Eurasians and natives employed by independent planters of late years than was the case formerly?—A good many more.

3503. As you say that you would wish a separate jurisdiction for European planters, would you have any objection to a separate tax being laid upon the planters to pay for those judges?—I dare say that the planters would very willingly pay if they could get justice.

3504. Are there large tracts of waste land in Bengal?—None to my knowledge.

3505. Not even in the Sunderbunds?—There may be in the Sunderbunds.

3506. If you got a tract of rich land, might you not attract labour to it?—Yes.

3507. The wealthier natives live in the European fashion, do not they; they would use the commodities and the manufactures which are made in England to a considerable extent, would they not?—Yes, they wear English clothing.

3508. Do you think that the magistrates in Bengal often keep people in prison unlawfully?—Very often.

3509. Have you known an instance of a person having been kept for six months in prison unlawfully?—I cannot bring any case to my recollection at present.

3510. But it is very common?—Yes.

Mr. *J. Dalrymple.*

13 May 1858.

3511. Do you think that it would be possible to have some kind of habeas corpus, or that the magistrate should show a reason, if he keeps a person in prison for a certain time without bringing him up for trial?—Yes; I have known witnesses kept in confinement for six weeks.

3512. Is it not the common practice to manacle the witnesses?—They are very often put in the stocks at night.

3513. Have you ever seen large bodies of witnesses left for a considerable time till the judge is ready for the case?—Yes.

3514. Guarded by the police?—Guarded by the police.

3515. Why are the witnesses put in confinement?—To prevent other people from mixing with them, to bribe them, or to make them say what they choose.

3516. Is that the only reason?—That is the only reason that can be given.

3517. Do not they very often come unwillingly?—I have never known a respectable native give evidence willingly.

3518. The police carry them off, and oblige them to give their evidence?—Yes, in cases of dacoitee principally.

3519. Have you ever seen as many as 200 or 300 witnesses huddled together and guarded by the police?—No, I have not.

3520. Mr. *Willoughby.*] In what respects has the Government of India become of late years more despotic?—The civilians are much more despotic now than they used to be.

3521. You said the Government of India?—The Government of India and the civilians are about synonymous, I should think, so far as we are concerned, in the mofussil.

3522. In what respects have the local authorities become more despotic of late years?—They are much more against Europeans now than they were 20 years ago.

3523. Mr. *Seymour.*] Are the servants of the Government so responsible now, if they do wrong, as they were formerly?—No, they are not.

3524. Is there not an Act which exempts their conduct from being investigated now?—Yes, I think there is.

3525. Passed within the last few years?—Yes, in 1850.

3526. Cannot the Government now take land without the consent of the owners, which they could not do formerly, for any public purpose; has not the collector a power to do that, or is it only in the Presidency towns?—I am not aware of that.

3527. Mr. *Campbell.*] You say that the police, instead of protecting property, are a fruitful source of quarrel in the mofussil?—Yes.

3528. Would that evil exist to the same extent if you had efficient magistrates?—No.

3529. The police would not have the same means of creating those quarrels as they have with inefficient magistrates?—No.

3530. You have known of several cases where there have been efficient magistrates, where crime and the power of the police to create disputes does not exist?—Yes, I have.

3531. I believe it is an ordinary course with natives in the police, when they are sued, to become plaintiffs instead of defendants, to remove suspicion?—Yes; they make their reports, but that does not make them plaintiffs.

3532. You mentioned also that the previous proprietor of the property which you purchased had this police force in pay?—He had.

3533. Then I suppose it is a very economical way of getting justice to support a police force at your own expense at the factories?—Yes, but it is a bad necessity.

3534. That is a cheap way of having justice, in fact?—Yes.

3535. You are aware that the Lawrence Asylum exists in the hills for the education of the sons of European soldiers?—Yes.

3536. Would young men educated at that asylum, having a knowledge of the native language, be efficient assistants for you to employ?—No doubt.

3537. Would not they be better than men arriving from England without any knowledge of the customs, habits, and languages of the people?—Yes.

3538. Would you recommend an extension of those schools for the education of the children of European soldiers in the hills?—I do not know how far it now goes.

3539. You are aware that in your own concerns there is ample scope for the employment

employment of such persons?—I have not a doubt that most of the assistants would prefer the employment of the Government, were it made worth their while, to remaining as indigo planters.

3540. You mentioned that you advanced for all your indigo and silk works?—Yes, everything.

3541. Large balances may accumulate?—Yes.

3542. What balances, in your experience of 30 years, have accumulated against the ryots?—A crore of rupees, or million sterling.

3543. You think that balances to the extent of nearly 1,000,000*l.* have accumulated from the time that you have been manager and owner of those properties?—Yes.

3544. What amount of those balances have you remitted to the natives?—Many lacs of rupees; more than half the amount perhaps.

3545. You mentioned the difficulty of civilians understanding the local provincial languages of the districts in which you have been, with respect to the law; do not you think that the introduction of the English language would prevent that difficulty?—Yes, it would.

3546. In fact, the law is carried on at present in the Hindee, in the Bengal territory; whereas the language spoken is the Bengalee?—Yes, the Hindee is the language of the court at present.

3547. The Hindee is as little understood by the generality of the Bengal population as the English?—English is less understood, because there is no attempt to make them understand it.

3548. With regard to the subject of health, you have never suffered much in your health, have you?—No.

3549. With reference to the labour market, you were asked if a difficulty did not exist as to colonization by reason of Asiatic labourers being there; do you think that that is any difficulty to the settler?—No.

3550. Do you know any place where labour is more abundant than it is in India?—It is very abundant.

3551. And with more perfect laws, and the facility of roads, canals, and rivers, you yourself know of no other place where better fruits for enterprise exist than in Bengal?—Certainly not.

3552. In your long experience you have realised those results?—Yes.

3553. Would not the registration by a putneedar of his putnee, and his liability to pay the rent to the Government, get rid of the difficulty to which you are now exposed?—It is done in many instances where there is only one putneedar in the zemindary.

3554. If instead of the Government, as at present, making you liable to the whole extent of the zemindary for a forfeiture in case of sale, you had the power of paying your own portion, would not that remedy that difficulty?—Yes.

3555. If the Government allowed you to pay the portion of the revenue that belonged to your putnee, and did not hold you liable to the rest of the estate, would not that be a benefit?—It would.

3556. Would it not secure the putnee?—It would.

3557. This would entirely free you from the responsibility of paying the zemindar's rent?—Yes; the collector already has the power of recognising the putnee in the event of a sale.

3558. With reference to the administration of justice, what effect would your imprisonment when in the superintendence of your works have upon your property at the commencement of manufacturing?—It would be complete ruin.

3559. Are you aware of the value of the produce, both export and import, that passes the Nuddea rivers by the Ganges and up to Delhi and Gurmuctiesur, down to Calcutta, annually?—No; it is a very great amount.

3560. How many boats daily pass those rivers?—I do not know, but the collection of the three Nuddea rivers is upwards of three lacs of rupees.

3561. The boats that pass the Nuddea rivers to Calcutta, by the Sunderbunds, make a circuit of a month, do they not?—Rather more, I should think.

3562. Would not a canal from Rajmahal to Calcutta, and a moderate toll imposed upon boats passing, remedy this?—No, I think it is not wanted.

3563. Is not there a considerable risk and loss in making the circuit by the Sunderbunds?—Very great.

3564. Were you a sufferer during the operation of the resumption laws in India?—Yes.

Mr. *J. Dalrymple.*

13 May 1858.

3565. Do you support any schools at the stations?—Yes; we subscribe for schools.

3566. Do you teach the English language in those schools?—Yes.

3567. That is, in addition to those schools in which you teach the native languages within your own factories?—Yes.

3568. Do you know of any case of torture; has any case come under your observation?—I have known many cases of torture.

3569. *Chairman.*] By the natives?—By the natives.

3570. Mr. *Campbell.*] Do you think that the agricultural and commercial interests might well be represented in the Legislative Council in Calcutta?—Yes, I think they might.

3571. Mr. *Gregson.*] With regard to the Nuddea rivers, you say that the channels are imperfectly kept open by the Government; could those rivers be rendered generally navigable at a moderate expense?—Only for part of the year.

3572. For boats?—For boats. If they were to expend even the amount which they collect upon the rivers they might keep them open for at least five months in the year.

3573. You think that that might be done for all purposes of navigation?—Yes.

3574. *Chairman.*] You have been asked whether a European, thinking of going to Calcutta, would be deterred from going out in your service in consequence of what he had heard happening in your part of Bengal; do you think that a European, hearing of the chance of a false accusation being made against him, as was made against you, accusing him of rape, murder, and arson, would be likely to be deterred from going out?—Yes, I think most probably he would.

3575. Do you think that any man would be disinclined to go out under those circumstances?—Yes.

3576. Are the European settlers on good terms with the natives?—Yes.

3577. With the ryots particularly?—Yes, with the ryots particularly; the ryots are the objects of their care.

3578. And the good understanding between the two keeps increasing?—Yes.

3579. And you think that a greater extension of settlers would habituate the ryots to European intercourse?—Yes.

3580. And would they get attached to the settlers?—Yes, so far as a native can get attached.

Martis, 18° *die Maii,* 1858.

MEMBERS PRESENT.

Mr. Campbell.	Sir Erskine Perry.
Mr. De Vere.	Mr. J. B. Smith.
Mr. William Ewart.	Mr. W. Vansittart.
Mr. Gregson.	Mr. Villiers.
Mr. Kinnaird.	Mr. Willoughby.
Mr. Lowe.	

WILLIAM EWART, Esq., IN THE CHAIR.

Mr. *James Thompson Mackenzie,* called in; and Examined.

Mr. *J. T. Mackenzie.*

18 May 1858.

3581. *Chairman.*] HOW long have you been in India, and in what part?—I was 11 years in India; in Lower Bengal.

3582. When did you return to this country?—Six years ago.

3583. In what capacity were you in India?—I was an indigo planter and a merchant.

3584. Had

3584. Had you indigo factories and zemindaries?—I had indigo factories and zemindaries of my own, and I had the general management of several other indigo concerns and zemindaries.

3585. In what districts were the villages with which you have been acquainted situate, and what amount of Government revenue did they pay?—The villages which I held on lease and zemindaries were principally situate in Jessore, Kishnagur, Pubna, and Baraset. The yearly Government revenue was about 20,000*l.* The indigo concerns which I had the management of were in most of the districts in Lower Bengal, the annual outlay on which being about 60,000*l.* Upon sugar and silk there was about 60,000*l.* a year more; and the Government revenue upon the zemindaries was also about 60,000*l.* a year.

3586. Since your return from India have you kept up any connexion with India?—Yes, I have still property in India. I have been a merchant at home for six years, and am a director of two East Indian railways, and a proprietor of East India stock.

3587. You have heard a good deal said about the defects of the criminal Courts; what are the principal defects of the criminal Courts where you have been?—Expensiveness of the suits; useless forms; the multiplying of appeals and consequent delay; corrupt native officials; no reliance to be placed upon native testimony as given in the courts; inexperience of the young Anglo-Indian magistrates, who are made from the youngest members of the service, in place of the oldest and most experienced; and the utterly inefficient and mischievous system of police.

3588. Under this system, you do not consider that justice is done to the cultivators?—They neither expect, nor have they any chance of it.

3589. Do you mean by the cultivators the farmers?—Yes.

3590. Do you include the labouring class as well as the farmers?—Yes.

3591. What is the smallest cost that a criminal action can be brought for?—About nine shillings; which would be equal to a month and a half's pay for agricultural labour.

3592. When you state that no reliance can be placed upon native testimony, do you apply that to all natives?—I applied it to the evidence given in the Courts, which, as a rule, is generally hired and false, as no respectable native can be induced, under scarcely any circumstances, to go into court to give evidence.

3593. You say that the native officials are corrupt; do you believe the natives look upon corruption as any disgrace?—They do not; any native having authority always expects to make money out of that authority. I believe that the cultivators and farmers are a very hard-working, sober, and industrious class, and perfectly truthful if you go into the villages and ask any question; but give them any authority, and they immediately seem to change their nature and become tyrants, and I believe the real difficulty in legislating for Bengal is in respect to the habits of the people.

3594. Do you mean that they think corruption is one of the ordinary perquisites of authority?—Entirely.

3595. Then it is a perverted sense of right and wrong in the minds of the people?—Corruption is looked upon by a native in quite a different way to that in which we look upon it; the native looks upon it as a perquisite.

3596. Are you of opinion that innocent people are convicted before the criminal tribunals?—I should think, of those convicted of minor offences, at least from a third to a half of the people are quite innocent, but in the more heinous cases it is difficult to get a conviction.

3597. How do you arrive at such a calculation?—For two or three years I took a good deal of trouble inquiring into it.

3598. How many villages had you?—About 200 or 300 of my own, and the general management of from two to three thousand.

3599. And you drew your inferences and made your calculation from them?—Yes.

3600. And you arrived at the inference that one-half were innocent?—I should think one-half of them in minor offences.

3601. This must give the people a general distrust in the distribution of justice?—A very great distrust.

3602. Whose fault is it that innocent people are convicted?—In the first place, I think it is a very great mistake that, latterly, we have made the youngest and

Mr. *J. T. Mackenzie.*

18 May 1858.

most inexperienced members of the Civil Service magistrates in place of their seniors. No reliance can be placed upon the evidence; and if the magistrate were merely to convict upon the oral testimony before him, it is no criterion whatever to go by. A judge ought to be well acquainted with the customs and habits of the people, and decide chiefly upon the probabilities of the case.

3603. You think that this conviction of the innocent arises from two causes, the corruption of the natives, and a want of familiarity with the language and usages of the people, on the part of the magistrate?—Yes.

3604. Do you consider that the police are efficient, or not?—So inefficient, that it would be the greatest blessing to the country to dismiss them all, and there would be much less crime.

3605. Do you consider that the police oppress the people?—Most grievously.

3606. In what way?—The great power of the police in oppressing the people arises from the horror that any respectable native has of giving evidence in a Court; so that whenever a crime is committed, the police pretend that all the respectable people round about are required to give evidence in that case, and they then go and extort enormous sums of money from them to be released from attending at the Court.

3607. Does the system which you have described induce the people to hoard their wealth?—It is to some extent the cause of that.

3608. Do they do it largely in that part of the country with which you are acquainted?—Very largely.

3609. That you know from your familiarity with such a number of villages?—I am quite aware of it.

3610. Can you give us any idea of how far the system of hoarding extends in that part of the country with which you are acquainted?—In the part of the country that I am particularly alluding to at present, in the centre of Jessore, the working classes for the last 10 or 12 years have made very large sums of money by being engaged in the cultivation of date sugar, and what were formerly common labourers have saved a little money; I suppose upon the average they clear 6*s.* to 8*s.* a year, which they hoard.

3611. Do they bury it?—They bury it.

3612. That habit has been long prevalent in India in consequence of the oppresion of the governments under which they lived?—From time immemorial; it has become a habit of the people.

3613. Do you consider that the consumption of any British goods has the same chance among the people in the state of those which you describe, as it would have if such evils did not exist?—I think it is the principal cause of the small consumption of British goods; because any sign of wealth would be an additional motive with the police, the zemindars, and the money lenders to oppress the people.

3614. Will you state what you consider would be the most efficient and simple manner of improving the police?—I should think to abrogate a great portion of the regulation laws which we have introduced, and which are quite unfitted for the customs and habits of the people. I would introduce the system that has answered so well in Scinde and the Punjaub; and in addition to that, I think we ought to have a large introduction of European superintendents. A very good class to select from would be steady sergeants of European regiments, who had passed an examination in the native languages.

3615. With regard to the system of civil suits, have you any fault to find with that?—Yes, the expenses are much higher and the delays far greater than in criminal actions.

3616. Have you had any personal experience yourself in civil suits?—Yes, involving property of from 200*l.* to 30,000*l.*, and I have had appeals to the Privy Council.

3617. Do you complain of the high costs in those courts?—Yes; before final realisation, I have seldom known a case where the expenses of the suit did not exceed the amount in litigation; I mean the legal expenses and the expenses in addition to them, which you are compelled to pay, in order to get the cases through the courts. You have enormous sums to pay for copies of the proceedings; and all must done upon stamped sheets of paper of very small size. Then you have to pay large sums to the mookhtears, vakeels, and amlahs.

3618. Mr. *Villiers.*] It is like dispatch money in this country?—Yes.

3619. *Chairman.*] What do you consider the principal ingredients in the cost of

of civil suits?—The principal ingredients are the sums you are compelled to pay for copies of proceedings, and the dispatch money.

3620. On gaining a decree in a civil suit, can you realise?—No, that is only just the commencement of a series of appeals, all of which you have to go through; and having gone through all this series of appeals, if you attempt to realise the decree, the defendant brings into Court a number of false witnesses to prove that whatever property you attach belongs to some one else. Then the Courts make a long inquiry about it, and if you were to put up that property for sale, it would be sold subject to all those different claims made upon it, and indeed very few will purchase any property sold for a decree in a civil suit; and it is the cost of all these vexatious proceedings that makes the expenses of the suit so enormous.

3621. What number of appeals can there be upon the decision of a civil suit?—Upon the suit itself there might be three, but then it is the multitude of the stages whilst the suit is going through the courts; it is there that the enormous delays are. Unless you have seen a suit in the Mofussil carried on, no one could comprehend the cost and vexation of those delays; it is quite different in this country.

3622. Do you not think that the speedy decision of suits and the stoppage of appeals, is almost indispensable in a semi-barbarous state of society?—The contrary state of things is the greatest evil that can be endured.

3623. If it is bad in a highly civilised state of society, is it not much worse in a semi-civilised state of society?—Much worse.

3624. Are many false actions brought?—I believe the great majority of the small actions are false.

3625. Those are brought against the ryots, are they not?—By the money-lenders, principally, against the ryots, or by a zemindar against any of his ryots, with whom he has any dispute.

3626. The difficulty of procuring money at a reasonable rate of interest is one of the evils in your part of India, is not it?—It is the great evil to the cultivators.

3627. Would the addition of a number of Europeans facilitate the means of borrowing capital?—The natives, as a class, are so unpunctual in their money engagements, that it would be very injudicious for Europeans to lend to any natives, unless they were his own farmers, because of the difficulty of realising your claim by civil process.

3628. Under this system, I conclude that the rights of the poor are not protected?—They are not.

3629. Are the cultivators generally in debt, or otherwise?—Very many of them, I believe, hopelessly.

3630. Do you lead the Committee to infer that the people generally are becoming impoverished under such a system?—The better class of farmers under our rule are generally becoming impoverished; we are creating a small class of farmers. Within the last 40 or 50 years there has been a very large extension of the ground under cultivation; but the better class of farmers live in less comfort than they used to do under the Hindoo and Mahomedan dynasties.

3631. To what do you attribute that deterioration?—In the first place there is no security for property.

3632. Are the debts, which you describe the money lenders as claiming, real debts or false debts?—The majority of them may have some foundation, but the sums that they claim are, as a general rule, quite fictitious.

3633. What are the terms that they charge?—For money advances from 50 to 100 per cent., but when they advance in grain they generally charge from 100 to 200 per cent., because they have to be repaid in kind.

3634. Is there a fixed legal rate of interest in Bengal?—Yes, 12 per cent.

3635. When the money lenders charge so much higher, do not the cultivators appeal to the Courts?—They cannot; because, to evade the law, the sum in the bond is never that actually advanced; besides which, the delays and expenses of civil process are very deterring.

3636. They are deterred by the delays of justice?—By the enormous delays and expenses.

3637. Do you attribute any of those defects to the revenue system?—Not to the revenue system.

3638. Do you agree with the opinion already given to the Committee that the zemindars have too much power?—I look upon the zemindars as having a great

Mr. *J. T. Mackenzie.*

18 May 1858.

deal too much power, particularly in the case where the zemindar pleases to compel the attendance of his farmer at his own house whenever he chooses, although he may live 40 or 50 miles distant; that is a great means of oppression, because if the zemindar wants a present from his farmer, the zemindar's servant goes and says to him, "If you will not pay it you must come to his house."

3639. Sir *Erskine Perry.*] Is that by law?—By law the zemindars can compel the attendance of any farmer they choose; they can compel by force if they choose, under the pretext of requiring an adjustment of the accounts for rent alleged to be due.

3640. *Chairman.*] That is an abuse of power not countenanced by the English landowners?—That power, is, as a rule, less abused by them.

3641. As a class, when they have the means, are the natives willing to meet their money engagements?—I believe, as a class, there are no people so unpunctual in meeting their money engagements as the natives of Bengal.

3642. Is there any practical law by which a zemindar in Bengal can summarily collect his rents?—There are many, but they are not readily available if carried out according to the proceedings of the courts.

3643. If I understand you correctly, both the law is defective and the means of carrying the law into execution?—I blame more the means of carrying the laws into execution than the laws themselves.

3644. Do you believe that this difficulty in the prompt collection of the rents is a great cause of disputes and affrays in that part of the country?—I think it is one of the causes of those affrays; because when a village is in arrear, the zemindar sends out a body of men to collect the money forcibly, and they generally go and plunder the village as well as collect the rent.

3645. How do the English zemindars do in such a case; have they recourse to forcible means for collecting their rents?—In some cases.

3646. Then that leads to such laws as the Affray Bill?—Yes, naturally; that is one of the causes.

3647. The revenue laws we may conclude are bad?—Some of the revenue laws are very good, but it is the inefficient administration of them that I complain of.

3648. Do you believe that new revenue laws are necessary?—No; I would rather repeal a number of the existing laws, and give efficient administration to those most in accordance with the habits and customs of the people.

3649. Your principal reform would be confined to the administration of the laws?—Yes.

3650. What do you believe to be the average extent of cultivators' farms in Bengal?—They vary very much according to the quality of the land; but I assume, as the average through Bengal, 12 acres.

3651. What is the average rent per acre?—Taking the average of Bengal, I should assume that the farmers pay about 4 *s.* of rent, and 2 *s.* of illegal exactions; that would make an average of 6 *s.* per cultivated acre per annum.

3652. Is that the English acre?—The English acre.

3653. To whom do those exactions go?—To the zemindars, their servants, and the police.

3654. Of course they would not be made by an English zemindar?—Not by the zemindar himself; but even with the English, with the very best intentions, their native servants will exact perquisites from the people.

3655. It is a deeply seated vice in the constitution of society that causes the evil, and not always superior power?—It is so.

3656. It is the machinery by which the power acts, even when it is not the power itself?—Whenever a native gets power, he always abuses it.

3657. What is the average gross produce per acre?—I should estimate the money value gross produce per acre at about 32 *s.* through the whole of Bengal.

3658. What is the average gross produce per acre which the Government receive as revenue?—In Bengal about from a sixteenth to a twentieth of the gross produce is revenue.

3659. Would there be difficulty in now legislating to give complete security to under tenures of cultivators with ample security for the Government revenue?—There would be the greatest difficulty, if not impossibility, arising from the habits of the people: for unless a sale for arrears of Government revenue were to cancel nearly all the under tenures, fraudulent titles would be given to an extent that would interfere with the value of the estate, and prevent the Government revenue being collected.

3660. Has not the very stringency of the sale laws of 1845 prevented frequent resort to sales of zemindaries?—It is the only instance on record that has caused punctual payment by the native.

3661. Do you believe that any slight change in the sale law of 1845 would give security to under tenures?—I think the extension of the 26th clause would; under that clause all leases granted in good faith at fair rents, if registered within two months from the date of execution, and approved of by the revenue collector, stand good for 20 years, even although the property is sold for arrears of Government revenue; now if that clause was extended to such cultivation as date trees, where the farmer only gets his remuneration after six or seven years, but for a subsequent period of from 50 to 60 years; I would make that clause apply as long as those lands were under such cultivation.

3662. Are the date tree plantations specially excluded from the benefit of the law?—No; upon date trees, for the first eight years, the farmer gets no return, but he gets a return afterwards for from 50 to 60 years; so that a 20 years' lease is not sufficient for him. I would considerably extend the time.

3663. Is new legislation on the subject of sale required, or would it be advisable?—I do not think new legislation on the subject of sale required, nor do I think it advisable.

3664. Why not?—Because since the time of Macaulay's commission, we have been in India making a wholesale manufactory of laws. The laws we have introduced one year, we have repealed the next. We had the Legislative Council making laws; we had the Sudder Court of Calcutta giving the construction of the law, and in many cases the terms of the law and the construction were quite opposed. That the Government afterwards stopped; and I think the great mistake we make in legislating for India, is that we legislate for the people of India after our ideas and the habits and customs of this country, quite forgetting that they are entirely inapplicable to those of the natives.

3665. Then might not you by an infusion of adequate experience of the native character among the Legislative Council that make the laws render it possible to frame laws to meet the exigencies of the case?—I look upon it that in Bengal it occasionally is not laws that are required, it is justice; it is much better to have a summary injustice than the certainty of a long tedious delay of litigation.

3666. Then am I to understand that to leave the sale law as it is, would be better than to reform any mischiefs complained of in the present state of the law?—The objection I have is a political one, and that is shared in by many of the oldest and most experienced officers of the Company. Since the enforcement of the resumption laws, the only standard we have in India with the natives, is the law of the perpetual settlement, and if we commence changing and abrogating that, I think the natives will lose all confidence in us and our legislation, and the zemindars might think that by-and-bye we intended to do away with the perpetual settlement altogether. The most experienced people in India have been very averse to tampering with anything that related to the perpetual settlement for merely political reasons.

3667. Could you suggest any legal method by which the cultivators might again become the real possessors of the land?—I would permit the zemindars to purchase the fee simple of the Government revenue, they would then be able to re-sell the farms to the cultivators in perpetuity. This would give a free trade in land, and either the settler or the farmer, if he wished a portion of the land, could secure the fee simple as in this country.

3668. Are the cultivators of India desirous of acquiring land?—I believe there are no people in the world that would make such sacrifices to acquire land.

3669. At how many years' purchase do you suppose the zemindars would redeem the Government revenue?—At from 25 to 30 years' purchase.

3670. Have you any data for supposing that they would give 25 to 30 years' purchase?—I have frequently talked upon the subject with the principal zemindars in Bengal, who are all in favour of data that would give 25 to 30 years' purchase. I infer that from the very high prices which are paid for released Lakhiraj land, which is the only land that would be in analogy with such a title as could then be obtained; also the extreme price paid for the putnee talooks; and the zemindars objected, and very properly in my opinion, that 20 years' purchase that the Government paid them for land taken for the railways was not sufficient; they wanted 25.

3671. If the zemindars redeemed their land revenue at 25 to 30 years' purchase, would

Mr. *J. T. Mackenzie.*

18 May 1858.

would they have a large profit in reselling the farms to the cultivators at a smaller number of years' purchase?—A very large profit, because the gross sum which the zemindars collect from their estates in many cases bears no proportion whatever to the revenue they contribute; and as they would only have to redeem the Government revenue, they would sell out at the gross rental which they receive from the farmers.

3672. The Lakhiraj lands are free?—Yes; they were originally granted for religious purposes, both by the Hindoo and Mahomedan dynasties, and these grants have since been confirmed by us.

3673. Have the people in India the means, and have you any data for believing they have sufficient funds, to meet such payments?—There must be ample means; for the annual gross produce of Bengal at the place of production is estimated at from 70,000,000 *l.* to 90,000,000 *l.*; and within these last 20 years there has been a balance of trade in favour of India, amounting for that period to 140,000,000 *l.*, and for the adjustment of which about 40,000,000 *l.* has been paid to Bengal in bullion, the difference being required for the home charges of the Company.

3674. How do you make that calculation of 40,000,000 *l.* going to Bengal?—From the Custom-house returns.

3675. Would this bring the hoarded wealth out into circulation?—I believe it would be the most efficient or the only means of bringing the hoarded wealth into circulation. The farmers in India being so desirous to procure land, they would at once resort to their hoarded wealth to buy their farms.

3676. You think, I infer, that there is a great deal of hoarded wealth in India?—Yes, a great deal.

3677. And that the circulation of that hoarded wealth might be a great boon to the country?—Yes; and with respect to the hoarded wealth, there is a general belief in Bengal that an immense quantity is lost. The men go and hide it, not telling their own families where it is, and when they get imbecile or in their dotage they do not tell about it, and it is never found.

3678. Would there be any political advantage in the cultivators becoming in this manner possessors of their farms?—Yes; I believe it would be of the greatest political advantage, because both the zemindars and the cultivators would then have a direct interest in the supremacy of our rule and its continuance, having purchased up their portion of the Government revenue; for they would know very well that if any new conquerors took India they would re-assess them.

3679. You wish to give the cultivators as well as the zemindars an interest in the proprietorship of the soil?—Yes.

3680. And you think that would be a guarantee against internal disturbance as in other countries where there are small proprietors, as in France?—Yes.

3681. What do you propose should be done with the money so realised?—As security to those who had redeemed in this manner their portion of taxation I should apply it, in the first instance, to paying off the existing loans. I would even take a portion of the money in payment of the loans at a fixed rate, and as the average interest we pay at present on these loans is about 4½ per cent., if the land was redeemed at 25 years' purchase, there would be a saving to the Government of half per cent, and the surplus might be invested in profitable irrigation works, which where they have been adopted have yielded a return to the Government of 30 to 50 per cent. besides immensely benefiting the people.

3682. Are you overstating the probable results?—I have thought well upon it, and talked with many people, and that is the result I have come to.

3683. Are the present zemindars of Bengal generally descendants of old families?—No, the zemindars of Bengal are, many of them, contemporaneous with our rule.

3684. Do you believe that under the Hindoo and Mahomedan dynasties wealthy families remained for many generations?—I think it was the same as under our rule; wealthy families remained for only two or three generations; the real old families of Bengal were the cultivators, who were the real proprietors of the soil.

3685. Did they hold their property in direct descent from the earliest ages?—Yes.

3686. Did the perpetual settlement do any injustice to this class?—It did the greatest injustice; in no history do we ever read of such a spoliation of a people.

3687. How is that?—By it we transferred the proprietary rights from those cultivators

cultivators to the zemindars. It is a great question whether the latter were hereditary tax-gatherers or not, but we transferred the real proprietary rights of the farmers to those tax-gatherers.

3688. You do not question the fact of their being tax-gatherers, but whether they were hereditary tax-gatherers or not hereditary tax-gatherers?—Yes.

3689. Therefore the present race of zemindars are all new men?—Nearly all new men. The principal man, the Rajah of Burdwan, is I believe descended, like many others, from the native officials engaged in the perpetual settlement, and by which they made enormous sums of money.

3690. Do the zemindaries frequently change proprietorship?—Very seldom.

3691. Do the zemindars live as absentees away from their property to a great extent?—Since the law subsequent to 1840, and particularly by the law of 1849, which was most injudicious in conferring enormous powers upon young magistrates, they have compelled absenteeism in a great measure. The respectable natives do not like now residing upon their estates.

3692. Is there a great difference between the management of the European estates and the native estates?—There is a considerable difference in some, but it depends in a great measure upon the European; of course there are good and bad European as there are good and bad native zemindars.

3693. Are the estates better managed where the proprietor, whether a native or a European, employs European superintendence instead of native superintendence?—Unquestionably.

3694. Am I to understand you to say that the European superintendence very much increases the value of the property?—It very much increases the value of the produce, gives greater security to the people, and in some degree relieves them from oppression.

3695. It therefore follows that it is the interest of the native zemindars to employ European superintendents?—As much as they can.

3696. Is it the interest of the ryots that European superintendents should be made use of by the zemindars?—Of the greatest interest to them.

3697. Do you consider the civil service, take it as a whole, in Bengal an efficient body?—When I was in India I imbibed the general prejudice that the civil service as a body were not efficient, but since I have been at home, and have had more experience, I should say that, as a body, there is none under Her Majesty's Government so efficient as the superior servants of the Company. I may be permitted to say that we never hear of the public money being squandered in India in the way it is in this country.

3698. You speak of their moral character, do you?—I speak of the inefficiency of the heads of departments in this country. In India every man has risen by his experience, and, upon the average, is efficient; whilst in this country it is quite the reverse.

3699. Do you complain of the proceedings of any members of the civil service in suits where natives and Europeans are parties; is partiality shown where the Government are parties to the suits?—Amongst the younger members of the service, when there is a case between a native and a European, I think there is always a leaning on the part of that young member in favour of the native, but the higher courts are quite impartial as between the native and the European. Where Government is concerned in a suit, I think there is a partiality shown to the Government by the young Collectors; but where the natives are the judges there is the most gross partiality shown. They do this from a mistaken belief that if they acted independently, Government would be displeased with them; but nothing could be more impartial than the higher courts of the Company, where Government is concerned; and when a case comes before the Governor-General in Council, it is decided entirely upon the equity of the case, and all legal technicalities are thrown over; but it is a long series of appeals, in most cases, before you reach that point.

3700. To what do you attribute the leaning of the younger members of the civil service in favour of the natives?—The native cases are always most complete in false evidence, and they, being strangers, believe this evidence; and it is only after a man has had a little experience of the native character that he does not believe their statement. As he gets more judgment and experience he acts more independently.

3701. It is the superior organisation of falsehood on the part of the natives?—Yes, he has not had experience of that.

Mr. *J. T. Mackenzie.*

18 May 1858.

3702. Then, so far, I understand you to modify your former answer with regard to the complete efficiency of the civil service, by the representation which you make of the inexperience of the younger servants?—It is the younger members who are magistrates that are inexperienced; the higher members, such as Collectors and Judges, are very different.

3703. From your experience, do you believe that any defects exist in the civil service, and if so, what are they?—I believe the principal defects are: that they make the youngest and most inexperienced the magistrates, and the whole safety and security and happiness of a district depend upon the efficiency of the magistrate. Next, they promote a man from being a magistrate to being a Collector. Now, during the time he was a magistrate he had very little, and in some cases no experience whatever of revenue suits. Then, from being a Collector he is promoted to be a Judge; and having, in his capacity as magistrate and Collector, had no experience whatever in any civil suit, he is called upon at once to decide the most difficult and intricate civil suits, and questions of inheritance and possession of property and land.

3704. Do you consider that a previous education in law is required on the part of those persons who are to be judges afterwards in civil cases?—The earlier system that prevailed in Bengal 35 to 40 years ago, was far preferable to the present one.

3705. Do you think it desirable to unite the magistrate and collector in one?—I would go further, and make the magistrate the oldest and most experienced officer in the district, and at the highest pay, instead of being the youngest at the lowest pay.

3706. Would you recommend a union of the two offices?—It would be preferable to the present system.

3707. In some cases, or generally?—In the perpetually settled districts I think it would be more desirable than in others.

3708. Are you of opinion that any higher revenue could be raised than at present?—I believe that a much higher revenue could be raised with less pressure upon the people than at present, because both in Akbar and Shah Jehan's time, they received double what we do in revenue.

3709. Do you consider it desirable to raise a larger revenue?—By bringing an immense extent of land in the North Western Provinces under cultivation, and getting a revenue from them, you might do it; you could not increase it in Bengal; but it might be desirable to impose an income tax upon the now untaxed money lenders.

3710. Would your proposal be rather to extend the area of cultivation than to raise the assessment in Bengal?—Entirely; we could not increase the assessment on land.

3711. Do you believe that in former times the internal communications of the country were better than now?—Unquestionably; during the Hindoo and Mahomedan dynasties the interior of the country was intersected by roads; during our rule we have merely made great military roads.

3712. Are the remains of those roads which existed under the Hindoo and Mahomedan dynasties, traceable in your part of the country?—Yes, they are traceable.

3713. What do you consider the best means of increasing the revenue?—The first means to increase the revenue would be to give an efficient magistracy and police, to give security to property; next to intersect the country with good roads, to open up the means of communication, and bring lands into cultivation which are now lying waste; and in districts that require irrigation I would have a large and comprehensive system of water supply.

3714. Do you think that a summary and equitable system of administering justice with few appeals would be a very great advantage?—I am quite convinced that it is the chief thing that is required. You want a simple system of Courts by which you can enforce engagements freely entered into, and that will induce capital to go into the country; but at present if any man advances money to a native, other than his tenant, it is lost.

3715. Is it better to run the risk of occasional injustice in the case of abolishing appeals than to have prolonged delay by means of an extended system of appeals?—In a country like India, unquestionably the shorter system is the best.

3716. Can you give us any idea of the sort of notion which the cultivators entertain of their relationship to the East India Company?—The general belief amongst the cultivators is this: that India belongs to our Queen, but that she has leased

leased it to the Company for a certain sum of money, and after they have defrayed the expenses of collection and all the expenses of Government, whatever sum is over belongs to them as a body of shareholders; they look upon them exactly as a lessee.

3717. Can you state how you arrived at the opinion of the natives?—I had 140,000 people in the villages, which I held of my own, and I was in daily intercourse with them, and took a great deal of interest in their affairs and opinions, and talked to them freely.

3718. Was this idea entertained by the better educated natives?—Yes, even by the large zemindars; it is the nearest approach they can make to the fact.

3719. Of course your opinion upon this subject is strictly limited to the country where you have been living, that is, Lower Bengal?—Yes, all my remarks are entirely limited to that district.

3720. Is the name of the Queen as well known in India as that of the Company?—Quite, because the rupees are struck in the name of the Queen, and bear her effigy.

3721. Do you think that the transfer of the Government of India to the Crown would or would not increase the stability of our rule in that country?—Ever since I have been in India, and at home, I have constantly advocated that; it would give a great stability to our rule, India being governed in the name of the Queen; because, as the natives look upon the Company as simple lessees, they would, no doubt, look with much higher respect upon the *employés* and servants of the paramount power.

3722. Do you think that such a transfer would be favourable to the increased settlement of Europeans in India?—Unquestionably it would, if added to good Government.

3723. In the villages, with so many of which you have been acquainted, were there any Christian cultivators?—There were a few, and they were very industrious.

3724. With what feelings were those persons looked upon by the natives?—The natives looked upon them in this way; they seemed indifferent whether they turned Christians or not; and as for the missionaries coming amongst them, they were very glad indeed to see them. But if any of the Government officials took a prominent part in missionary matters (as the natives cannot draw a distinction between what a Government officer does in his public capacity and what he does in his private capacity), they would immediately say, "The Government are interfering with our religion," and a great apprehension and fear would be got up; but where perfectly unconnected with the Government employées, the natives are very glad to see the missionaries; they do not mind about natives turning Christians, so long as they suppose there is no pressure from Government upon them.

3725. An entire freedom of missionary effort, uninfluenced by the Government, you think would not be objected to, and would find its best security in such freedom?—I am quite confident of it, and it was the opinion of Bishop Heber that any seeming assistance on the part of the Government would be fatal to missionary efforts.

3726. Would not the free and not unduly influenced extension of Christianity be an advantageous thing for the encouragement of settlement in India?—Yes, it would, if unaided by the Government, either directly by grants, or indirectly by its servants.

3727. I draw from your evidence that you have had considerable experience in the cultivation of date sugar; can you give us an idea of the extension of the cultivation of date sugar in your part of India; is it increasing much?—There is a small area of about 100 miles by 200. Date trees will flourish all through Bengal, but it is only in this small area where they will produce sugar; that area runs from Calcutta in a north-east direction; they require to be within the actual influence of the sea-breeze, and neither too near nor too remote; that would give you an area of about 20,000 square miles; the date produces upon an average about a ton and a half of sugar per acre, and if one twentieth of this land that is fit for the cultivation of the date tree were under such cultivation, it would give about 900,000 tons, say three times the annual consumption of Great Britain.

3728. Has the cultivation of the date tree much increased in your experience?—It has very much increased, and it merely wanted the security of the land to have had a further enormous increase; the security of land to Europeans would have increased it tenfold.

3729. Do you allude to the security that would be given by an extension of the

Mr. *J. T. Mackenzie.*

18 May 1858.

the 26th section of the Sale Law?—Yes, that would have given a sufficient security.

3730. And what other security was required?—Good police and good criminal courts.

3731. Is not the sugar produced from the date tree of an inferior description?—No, there is more saccharine matter in it than in cane sugar.

3732. Does it require a more artificial process in the production?—No; it is made into what is called goor, and then khar, and that is turned into sugar. The sugar which comes to this country, and is known as Dobah and Chowgah sugar, is principally date.

3733. Where are the refineries?—There are some at 70 and at 150 miles from Calcutta, and there are three very large refineries near Calcutta.

3734. Do you think the increased cultivation of the date tree sugar is likely to have an extensive influence upon the sugar market?—It would be the greatest benefit to the people of India and to this country; when once the tree is under bearing it is not subject to climate. After heavy European outlays upon the extension of the cane cultivation in Bengal, it was found to be so liable to the white ant, that it did not pay to plant; but when once the date trees come into bearing, they last from 50 to 60 years, and you can grow other crops between them.

3735. And so simple a system of making sugar as that would require small European superintendence?—The natives make it into the rough sugar, and they sell it to the European refineries, where one European might be capable of making from 1,500 to 2,000 tons a year.

3736. It would be an encouragement both to the native cultivator and to the European refiner?—It would be the greatest encouragement both to the native cultivator and to the European refiner, and would lead to the settlement of many more Europeans as refiners in India.

3737. These trees are held in small lots, are they not?—Two other Europeans and myself planted very largely, but I do not know of any other Europeans having done so; they are principally held by the smaller farmers.

3738. I believe there is a remarkable increase in India, as elsewhere, in Manchester and Liverpool, and other places, of the number of Greek traders who now act as merchants in various parts of the world?—Immense. When I went to India first scarcely a Greek was known; now about one-third of the trade between Calcutta and this country is carried on by Greeks. I believe in a few years it will be the same as in the Mediterranean, the Levant, and the Black Sea, that the Greeks will have beaten the Europeans completely out of the Calcutta trade.

3739. To what do you attribute that?—Our principal London Indian houses now are not merchants, but merely agents, doing very little upon their own account. The smaller houses have introduced the expensive system of hypothecating their bills of lading to the banks. The Greeks appear to have large available capital, and assimilate more with the habits of the natives than we do; their habits and customs of deception are much more in accordance with those of the natives than those of Europeans.

3740. They are two nations long debased by despotism, and therefore more congenial in their minds and characters than a free nation and a despotically governed nation would be?—That is the answer I wish to convey.

3741. Mr. *De Vere.*] What is the practice on the expiration of the leases of the occupiers as to re-lettings or renewals?—In India if you occupy a farm for 10 years without a lease, it gives you a right of occupancy, and the zemindar cannot turn you out; he may increase your rent legally only to the pergunnah rates. If your lease has expired, and you take a new lease, you can enter into new terms for it, if you wish to renew it; but in India I believe it has been held that the right of occupancy by a cultivator, at a fixed rent for 10 years, gives him the right of occupancy in perpetuity; the zemindar cannot legally turn him out, but he may increase his rent as a farmer.

3742. When the occupancy ceases, are the lands let again by competition; I refer to the occupant of the soil?—It is a very rare case where the occupier of the soil occupies it upon a lease at all; because when he has occupied the soil for 10 years he has a right, as long as he pays the rent, to hold it; the zemindar cannot turn him out.

3743. What is the course of inheritance by which the land descends in the family

family of the occupiers?—It depends entirely upon whether it is a Hindoo or a Mahomedan; it follows the custom of the Hindoo or the Mahomedan law.

3744. I think you said that a man's duties in the office of magistrate give him no experience that can guide him when promoted to be a judge?—None whatever; he has never had a civil suit before him.

3745. Has the magistrate no function for hearing small civil cases, such as wages?—That is merely a question of contract; in a question of contract he has.

3746. Would not the hearing of those cases give him some experience when he came to decide more important cases?—Not the slightest, and the cases are very rare and unimportant.

3747. Does not his experience as a magistrate enable him to judge of the value and bearing of evidence, and is not that knowledge particularly important for a judge in India, where false evidence is prevalent?—It is necessary, of course, to have that, but it gives him no idea of the law of inheritance, &c.; and, moreover, parol evidence, which is everything in criminal cases, is of the slightest possible value in civil suits as they are conducted in India.

3748. It must give him experience as to the value and bearing of evidence?—It gives him experience as to the reliance that may be placed upon evidence not documentary, but none as to the value of documents.

3749. You have recommended a comprehensive system of irrigation; would it be possible to organise a system of irrigation by which advances should be made for that purpose by the Government, and repayments by instalments with interest to be made in certain proportions by the owners and occupiers of the soil?—I should think that it would be very complicated; I believe that the present system of the Government of making a fixed water rate is much better. The parties benefited by the water pay a water rate for the water they use.

3750. You think that a better system than that of making Government advances?—It is much more simple.

3751. Mr. *Gregson.*] You spoke of the works of irrigation yielding a profit of 40 to 50 per cent.; in what district was that?—In the North-Western Provinces, in Madras, and in Bombay. The Government returns show a profit derived averaging from 30 to 50 per cent., besides enormously benefiting the people. We do not so much require extensive works of irrigation in Bengal.

3752. What is the length of time before this profitable return of 30 to 50 per cent. is realised?—In some of the instances in the Upper Provinces they have had a return upon the second year.

3753. But generally, what is the average time?—We are quite in our infancy at present with regard to the question of irrigation. The Ganges canal is a very great work, and has commenced giving a very large return.

3754. Do you know to what extent capital has been applied to works of irrigation?—I believe about 800,000 *l.* has been applied by the East India Company, exclusive of having sanctioned an outlay of 2,000,000 *l.* for the great Ganges Canal; I am speaking from memory.

3755. Has much capital been expended by individuals?—I am not aware of any.

3756. You spoke of date sugar, and you said that the produce might be easily raised to 900,000 tons; what is the present produce?—In Bengal the Government wished to get returns upon that, and they sent into the districts to count the trees; but the natives were immediately apprehensive that there would be a tax; that the Government were going to assess the trees; so that the returns which were made up were false. But I made an estimate on my own account, and I assume when I left India that it was about 80,000 or 90,000 tons. I should think, at present, it might be about 150,000 tons. In any other country the export of the sugar is some criterion; but in Bengal, as the great consumption is amongst the people, the export is no criterion of the quantity raised.

3757. What is the produce of cane sugar?—We have five different descriptions of it.

3758. Speaking generally of the whole, what is the produce of it?—About a ton and a quarter per imperial acre, against a ton and a half of the other.

3759. What is the total produce of that cane sugar?—The greatest part comes from the North-Western Provinces, with which I am not so well acquainted.

3760. Do you know the relative cost per ton of the date sugar and the cane sugar?—You must form a judgment in this way: where the planters have grown the cane sugar upon their own account, they found that it was so expensive that they

Mr. *J. T. Mackenzie.*

18 May 1858.

they could not do it. I believe there is no place in the world where you can make sugar so cheap as from the date trees of India.

3761. Do you know the relative cost of the cane and the date sugar?—I should say that it would pay the ryots very well to grow date sugar that would not cost them above 12*l.* a ton.

3762. And how would it be as to cane sugar?—I should think not under 20*l.* or 24*l.* a ton.

3763. And you say that the date sugar has more saccharine matter in it than the cane sugar?—Yes, so the return shows.

3764. You mentioned that the Calcutta houses are not merchants but agents, and you stated that the Greeks are rising rapidly in consequence of their deceptive practises; do you not think that the absence of deception upon the part of the English houses would be rather an inducement to the natives to deal with them in preference to the Greeks?—The Greeks assimilate more with the people; they go in themselves amongst the natives, and look after all the little details of the things.

3765. Is not that rather annoying to the natives than otherwise?—No, a native rather respects a man who is a good cheat, if he does it effectually and is not found out.

3766. He rather admires him, and prefers him to a European who does not cheat?—Yes, it would seem so.

3767. With reference to caste, are you of opinion that the Hindoos and Mahomedans do equal justice to the Christians as to their own people?—It is quite out of the question to suppose that a Mahomedan judge would do so, because his prejudices are entirely opposed to those of any other sect.

3768. Are the natives as much prejudiced against the mixed race of Indians as against the Europeans?—I am not aware that the natives are prejudiced against Europeans.

3769. I thought you said that the natives generally would not deal equal justice to Christians as to Mahomedans and Hindoos?—A Mahomedan may be very much attached individually to a person, but when it comes for him to deal with the Europeans as a class, he is entirely opposed to them.

3770. Do you speak in the same way with respect to the Hindoos?—Not so strongly. They are much more liberal in their religion and manners than the Mahomedans.

3771. What is the feeling of the Hindoos and Mahommedans towards the mixed race, as compared with the feeling towards Europeans?—The natives as a class despise the mixed race, but they do not the Europeans.

3772. Would you on that account provide European magistrates and European Courts for Europeans and East Indians as Christian courts?—I would allow no European to be tried by any native, for I am convinced that he does not get a fair trial; I should make the highest European officials try the Europeans and East Indians in the district Court; I mean such as the Commissioner.

3773. You would exempt East Indians and Europeans from the native official Courts entirely?—Not from the civil Courts, but I would exempt them entirely from the jurisdiction of the native criminal Courts.

3774. Mr. *W. Vansittart.*] I gather from your evidence, that your general views coincide with those of Messrs. Theobald, Freeman, Machair, Wise, and Dalrymple, namely, that the system of police is as bad, corrupt and useless as a police can be, and that the laws, with the exception of the sale laws, are very badly administered?—I go still further than they as to the police. I approve of the sale law, but think it might be improved upon. The administration of all the other laws is decidedly and notoriously bad.

3775. I understood you not to find fault with the sale law?—Not as a law, it is simply with the administration of it.

3776. I thought that you did not think that there was any alteration necessary in the sale law?—No.

3777. Have you seen a letter in the "Times" newspaper, regarding the employment of some native Christians by the magistrate of Hooghly as a police for that district?—Yes.

3778. What do you think of that arrangement?—I do not quite comprehend the letter. If they are to be employed as an exclusive class, I think it injudicious; if the guard is to embody Christians with all other denominations I think it very judicious.

3779. Is not the native Christian population in India very large?—It is such a fraction that it is scarcely countable.

3780. Are there not native Christians in most districts?—A few.

3781. Are there not many both at Jessore and at Dacca?—Very few.

3782. You do not think it possible to carry out this system to any great extent in India?—I look upon it that it would be impossible, you have not the Christians.

3783. Do you agree with Messrs. Theobald, Freeman, Machair, Wise, and Dalrymple, as regards the ignorance of the civil service, when they have said that there are not three civilians in the Mofussil capable of conversing with a native for five minutes together?—I entirely disagree with them upon that question, so far as my experience of the civil service has been with respect to all members appointed since 1839. Before that time Persian was the language of the Courts; since that time the civil servants all pass examinations in Bengalee before they go out to India. After they have been six or eight years in the country they are very good linguists, and there are none but what can read and write it.

3784. You say that the young and most inexperienced civilians are made magistrates, then collectors, and then civil and sessions judges, and you think that that is a great defect?—Yes.

3785. After a young man has been an assistant to a magistrate and collector for two or three years, and then a magistrate for five or six years, do you really think that there is any great difficulty, with all the regulations at his elbow, in efficiently performing the duties of a collector?—Very great difficulty; the regulations are so complicated and confused.

3786. Do you not think that the collector's duties are very simple as laid down, by what you can learn from the regulations?—If he was sure that he could get the right regulation to bear; but he is entirely at the mercy of his omlah, as to whether it does bear or not.

3787. You do not think that the knowledge of the native language which he has acquired by being an assistant and a magistrate, would enable him to shake off the thraldom of his omlah as a collector?—Not until he has had experience of the law; no doubt it would give him the habit of knowing what credence is to be placed upon testimony.

3788. Do you not think that the collector's duties are very simple; for instance, the sale law is very simple; the Dakhil Kharaj cases, or register, are very simple, and the Lakhiraj cases are all finished?—There are the resumption of the lands on the formation of new churs and the resumption of lands which belong to the Bheels, and have now become arable lands, and those are all Government questions still decided by the collector. There are also the butwarras, or the sub-division of estates, suits for setting aside distraints, and summary suits for rent.

3789. You do not think that a magistrate being made collector is a good system?—Not at all.

3790. You think the old system of the combination of the magistrate and collector preferable to their separation; are you aware that they have never been separated in the North Western Provinces, and that by a recent order of Mr. Halliday, the two offices are to be united in Bengal?—I am quite aware that in the North Western Provinces they have never been separated, and I think it is a very good thing; I understand that the order has been passed, but not carried into effect.

3791. With reference to a question put to you by an Honourable Member, do you not think a civilian having been a magistrate is a good training for him to undertake the duties of a session judge?—It is a very good training; the best training that he could have.

3792. You could not have a better training for a session judge than to have been a magistrate first?—It would be impossible.

3793. With regard to the civil duties of a judge, do you think that the magistrate would be able to perform them?—I think that the mistake is in making a person a civil judge who has had no experience in civil cases.

3794. You do not object to a magistrate becoming a session judge, but you object to his becoming a civil judge?—Yes; I think that is the right distinction to be made.

3795. You say that summary injustice is better than the present tardy system of

Mr. *J. T. Mackenzie.*

18 May 1858.

of justice; do you, therefore, suggest that the present system of appeal should be abolished?—A great many of them; I would have only appeals upon law, and not upon fact.

3796. Would you suggest that the Punjaub or non-regulation system should be introduced?—Some modification of it, I think, should be introduced; I think that system is much preferable.

3797. Will you kindly explain the non-regulation system?—The non-regulation system, as distinguished from the other, is this. The one is justice and the other is law. You have a simple question of justice there. The magistrate decides upon the merits of the case, untied by the regulations or anything of the kind. It is more in the old style of an Indian hakim; he hears the evidence, and decides summarily upon it.

3798. Mr. *Villiers.*] He is not tied down by any rules of the Court?—No; while in the other case the whole time of the magistrate is taken up with preparing and writing useless forms.

3799. Mr. *W. Vansittart.*] In point of fact, the law is carried quicker into execution under the non-regulation system than under the regulation system?—Yes.

3800. Do you mean to say, then, from that, that a sessions judge under the present system has considerable difficulty in having a capital sentence passed upon a person by the Sudder Deewanny and Nizamut Adawlut at Calcutta?—There is the greatest difficulty in getting his decisions confirmed, on account of the forms that have to be gone through. It was all but impossible to convict under the old forms, and the same remark applies to thuggee.

3801. You think that the Sudder Deewanny and Nizamut Adawlut is rather a clog upon speedy justice in India?—Yes, and a great curse to the people.

3802. You appear to have a very bad opinion of the native character generally; for instance, that the zemindars have too much power, and that the lower orders are very unpunctual in meeting their engagements?—Yes.

3803. Do you mean the Committee to understand that there are no intelligent and advanced-minded natives?—There are a few very intelligent and very advanced-minded natives.

3804. Do not you consider the Rajah of Burdwan to be one of this kind?—Yes.

3805. Are there not a great number of that description?—No, I should think that he is one of the very few exceptions.

3806. You say that the natives, when they obtain a little power, are sure to abuse it?—As a rule, always.

3807. Is it true that indigo planters are in the habit of keeping large bodies of latteeals, or bludgeon-men, to coerce the zemindars and the ryots?—The principle is the same in India as the feudal system was in this country. When the courts are utterly useless, every man is obliged to protect himself, if he wishes to get justice done. It is useless going to the courts, and so he helps himself.

3808. What are your views regarding the native sudder ameens and moonsiffs?—The sudder ameens and moonsiffs, as lawyers, are very competent; but I apply the remark to them as I did to the natives, that whenever you give them power, they expect to make money out of that authority more than any salary that you could pay them.

3809. You think the young civilians' courts far preferable to the ameens' courts?—Yes, unquestionably, for fairness and incorruptibility

3810. Do not you think that you might get, for the salaries paid to those suddeer ameens and moonsiffs, very respectable men?—I think we might for sudder ameens' pay, but not for moonsiffs'.

3811. Do you think there would be any difficulty in obtaining a number of young men of good family in this country to go out to India to fill the situations which are now held by the suddeer ameens and moonsiffs for their present pay?—There would not be much, perhaps; although the pay is not sufficient for a European, except that of a principal sudder ameen.

3812. Mr. *Lowe.*] You state that the native evidence is almost always false?—Yes, as given in Court.

3813. And yet you think that there ought to be no appeal from the decision of the judge, on matters of fact?—No, because I consider that the party taking the direct evidence is the best judge of what reliance should be placed upon that evidence.

3814. You think that he is a better judge than a court of appeal would be, that did not see the witnesses?—Much better than a court of appeal.

3815. Would not the fact of there being a court of appeal over the judge, induce him to take more pains in sifting that evidence?—I should give in India one appeal in every case, but no more, and that only where the Court, in the first instance, was a petty or subordinate one.

3816. Sir *Erskine Perry.*] Do you know why the system of appeals has been so general in India?—The natives have an idea that it is to compel the use of the Company's stamped paper.

3817. Is it not the case that the Company have been obliged to put in office gentlemen who are young, or who are not acquainted with the law, and have, therefore, been obliged to establish a rigid system of appeal to watch those men; is not that the principle?—I cannot answer that question.

3818. Mr. *Lowe.*] Would you have the proceedings of the Court carried on in English?—In the Mofussil courts certainly not, because the natives would have no reliance upon the decision. If the appellate Court in Calcutta were a mixture of civilians and English lawyers of 10 or 12 years' standing, it would be very advisable to have the proceedings in English. But I do not think that it would be advisable to have the proceedings in English in the Mofussil courts, because the natives would have no confidence in the decisions.

3819. Are you of opinion that the civil servants of the Company who preside in those courts, are able to conduct the proceedings in the native languages?—For the first four or five years as magistrates they do it very imperfectly; afterwards as judges, collectors, and commissioners they do it efficiently.

3820. You have heard it stated that a magistrate is very often in great difficulty in deciding a case from not understanding colloquially the language in which the case is conducted; is that in accordance with your experience?—It is with a magistrate of two or three years' standing, but not with a man of six or seven years' standing.

3821. Is not it a very important consideration that a judge should be deciding upon a case which is conducted in a language which he does not colloquially understand?—Unquestionably; but it is of the utmost importance to secure the confidence of the people.

3822. You think that the people would have more confidence in a wrong decision where the proceedings were conducted in the native language, than in a right decision where the proceedings were conducted in the English language?—As a class, they would lose all confidence if the proceedings were conducted in English.

3823. Even suppose that the decision in English should be more just?—That is assuming that it is more just; I do not think it would be.

3824. Take the case of magistrates who do not thoroughly understand the native languages, will you state why you think that cases would not be better adjudicated if the proceedings were conducted in English?—You have to legislate for the natives as well as for the Europeans, and the natives would be dissatisfied and would distrust your Courts, if the proceedings were in English. There is no analogy whatever between our Courts in Bengal and our Courts in Ceylon.

3825. Do you think that the young magistrates would decide better if the case was conducted in English, than when conducted as now in the native language?—I think it is more experience of the character of the evidence that is required in order to arrive at a just decision. No reliance can be placed upon the testimony that is given; you require experience of the witnesses.

3826. Taking the magistrates, who are not always men of great experience, do you think that they would decide better if the proceedings were interpreted to them in a language which they do understand, than they would do if the proceedings were carried on in a language which they only partially understand?—They would, unquestionably; but who would answer for the honesty of the interpreters?

3827. Then you do not think that the confidence of the natives will depend upon the good decisions of the court, but rather upon the language in which the proceedings are conducted?—They would regard the language far more as a general rule than the decisions. The natives in the interior get copies of their cases from the court; they sit round about the copy in the village and they read the decision, and one man acts as a magistrate and the other as a judge, and they plead and talk of it all through the village; and if the proceedings were conducted in English, everything of that kind would be put an end to.

3828. Does not it sometimes happen that a magistrate in giving judgment,

Mr. *J. T. Mackenzie.*

18 May 1858.

from his ignorance of the language, makes obvious mistakes in the nature of the case upon which he adjudicates?—Yes. I have stated that in nearly one-half of the minor cases they convict innocent people.

3829. Does not he show his ignorance in his decision?—That is frequently the case.

3830. Does not that create distrust in the tribunal?—No; the natives say that it was their misfortune that the magistrate did not know better, or that he was deceived or misled by the people about him.

3831. They say, at any rate it was in the native language?—Yes; they hear the decisions, and they have confidence in them.

3832. Do you think that natives should be allowed to be judges in any case?—In civil cases, but not in criminal cases, where Europeans or East Indians are parties.

3833. And in civil cases up to what amount?—Wherever you have native agency I would have a strict European surveillance over them, with unquestionably good lawyers and good administrators.

3834. You would have native civil judges, with an appeal to an English judge?—Yes.

3835. Is there any other improvement that you could suggest in the judicial system?—The great defect of the civil system, is the multiplying of appeals and the proceedings of the Court. In this country, when you get a decree, that settles the question. In India, when you get a decree, you have generally 20 different suits.

3836. In a single appeal?—In appeals and contentions arising from a single suit.

3837. With regard to the police, do you consider that the present police in Bengal is better or worse than having none at all?—I think that they would be much better with none, than with those now employed.

3838. What is your suggestion for remedying that evil?—I would put steady men from the different European regiments who have passed an examination in the native languages as superintendents; but as a general rule, when young civilians enter the service, I would put them into the tannahs, and so let them obtain a good knowledge of the customs of the people.

3839. You have spoken of the sale law; that is the sale by the Government of the land of a defaulter of revenue?—Yes.

3840. Do you not think that if the Government undertakes to sell a man's land, it should give a good title?—Any party claiming an interest in a property so sold must make an objection within 15 days, or else, afterwards, no objection can lie. I would make the collector send up his proceedings to the Commissioner 15 days before he advertised the property for sale; and it once having been passed by the Commissioner, and put up for sale, there should be no appeal from that, and whoever bought the property would be the final purchaser.

3841. Do you think that the analogy of the Encumbered Estates Court in Ireland would apply; that the Government should give a good title to the land?—They do give a perfect title at present after the final confirmation of the sale.

3842. The Committee have understood from former witnesses that it is open to other persons to object to the formality of the sale?—They can do so by indulgence and exceptionally within 30 days.

3843. Ought not the Government to look to that, and not to throw that risk upon the purchaser?—The only reason for which you can upset the sale for arrears of revenue is from the insufficiency of the notices.

3844. Ought not the Government to take that upon itself, and not throw it upon the purchaser?—I have proposed that these inquiries should be made before the sale, in place of afterwards, and that if an estate is put up and sold, there should be no appeal from it.

3845. Sir *Erskine Perry.*] What native languages do you speak?—I speak a little Hindoostanee, and Bengalee pretty well.

3846. Which do you speak best?—Bengalee.

3847. Have you been present in the native magistrates' Courts yourself?—I have been present when the Europeans have been presiding.

3848. But only in those Courts?—I have been once or twice in native Courts in civil cases, where the sudder ameens presided.

3849. Do the Europeans administer judicial duties in Hindoostanee or Bengalee?—In Bengalee.

3850. For the most part?—Entirely.

3851. That

3851. That evidence differs from the evidence which we received from Mr. Wise?—I speak from an experience of many years in different districts.

3852. Have you ever resided at Calcutta?—Yes.

3853. Have you been present in the Supreme Court?—Yes.

3854. The business there is conducted in the English language entirely?—Yes.

3855. The decisions being in English, and the proceedings being in English, have you ever heard that dissatisfaction is caused to the native mind?—No; because the natives who have the cases there, generally speaking, speak English; they are the principal people in Calcutta.

3856. Do not you know that there are about 95 per cent. of the cases in the Supreme Court that are native cases?—I suppose fully that.

3857. And do you think that of the 95 per cent. half of the natives having those cases speak English?—I suppose that 20 per cent. of the whole cases used to be from three or four native families.

3858. Do you think that of the 95 per cent. of cases brought before the Supreme Court 10 per cent. of the parties understand English?—I think that very likely 15 to 20 per cent. understand English. In taking mortgages the natives often put a jurisdiction clause in their deeds to secure the hearing of any dispute in the Supreme Court, because a party advancing money prefers to make his advances upon such mortgage to having to go through all the tedious delays of the Mofussil courts.

3859. Whatever may be the per centage of the parties who know English, do you think that the natives of Calcutta are dissatisfied with the decisions and the proceedings of the Supreme Court?—Not at all; they have the very highest opinion of the Court, and the greatest confidence in it.

3860. Are you acquainted with the Small Cause Court?— I have never been in it.

3861. Are you aware that the smallest causes are administered by an English judge, and in English?—Yes.

3862. Are the proceedings of that Court popular in Calcutta?—Very popular.

3863. Are you not inclined to correct the statement which you made, that if the proceedings of the Courts were conducted in English it would give dissatisfaction to the native community?—There is not the slightest parallel between the two cases. You require to have been a resident in the Mofussil and in Calcutta to know the difference between them.

3864. If in a court, such as the Small Cause Court in Calcutta, where the proceedings are conducted in the English language, causes are decided to the satisfaction of the natives, how do you distinguish that from a similar court 10 miles off, filled with similar people, and with similar cases?—The causes decided in Calcutta are generally simple contracts, or questions of sale, or any minor criminal actions, but they are quite different from the complicated cases which occur in the Mofussil courts with reference to the proprietorships of land, the division of property, and the Resumption Laws.

3865. Do you not think that those cases which arise in the Small Cause Courts include cases of fraud and conspiracy, and the most complicated cases in which evidence has to be sifted and weighed that can be brought before a court of justice?—It is very rare, and when it is so they have the best barrister in Calcutta to conduct them, when they can afford it.

3866. Do you see any distinction between a case occurring in the Small Cause Court in Calcutta and a case occurring in the Mofussil?—The cases are perfectly distinct.

3867. With regard to the tenure of land in the Mofussil, are there any village communities having rights?—That was a great mistake in our perpetual settlement that it almost did away with them.

3868. Are there any talookdars?—Yes.

3869. What rights have they now?—There are a great variety of the talookdars.

3870. Are there a great many proprietory rights of different kinds?—A great variety.

3871. As to the ryots' tenures, have they a perpetual right of cultivation?—If they occupy for ten years, except as lessees, they have a perpetual right of occupancy, and they cannot be turned out, although the zemindar has the power of increasing their rent to the pergunnah rent.

Mr. *J. T. Mackenzie.*

18 May 1858.

3872. As to the question of the Christian police corps, are Christians excluded from any Government service in India?—To my knowledge, I do not know of any native in the capacity of a darogah, or moonsiff, or sudder ameen, who is a Christian; there may be, but not to my knowledge.

3873. There is no law against it?—There is not.

3874. I believe the native Christians, generally, are not of a very high class in society?—As a rule, they are generally of the lower class, particularly of what are called the weaver class, in the districts of which I speak.

3875. Probably the exclusion from office would depend more upon their unfitness for office, than upon any rule of the Government?—The Christians of whom I speak, would not, from their education, be fitted for the higher appointments.

3876. You do not believe that there is any rule upon the subject?—I am aware of no regulation to that effect; but in practice, there were none of them employed.

3877. Do you think that the East India Company would sanction any exclusion of native Christians who are fitted for office?—There is a general impression that that has been the course of the Government, but I cannot say whether well funded or not.

3878. Surely in Calcutta, there must be native clerks in the Government employ, who are Christians?—Yes, there are.

3879. Do not you think that European officers would employ the same class of men in the Mofussil, if they found them ready and fit for office?—Yes; a number of the descendants of the Portuguese, are employed in the Mofussil as clerks.

3880. I did not refer to the Portuguese, but to the natives?—I think they ought to be employed if fit for it.

3881. In your opinion, are there any obstacles to the settlement of Europeans, with capital in the mofussil?—The laws, I think, in a great measure, prevent the settlement of independent Europeans. I think that the law of 1840, and the law of 1849, giving the enormous power that those laws do to a young magistrate, naturally enough tend to prevent any man subjecting himself to it. Again, the natives are so superior in fraud and chicanery, and so unscrupulous, that in business transactions they have become too much for Englishmen.

3882. Your remedy would be to appoint only experienced men as magistrates?—Yes.

3883. And you would give those summary powers rather to the elders in the service than to the young men?—Yes.

3884. You are of opinion that the exercise of summary power is far more difficult, and requires far greater facilities than the exercise of judicial powers where there is an appeal?—Yes.

3885. Mr. *Willoughby.*] You stated with regard to small civil suits that they were frequently brought by money lenders for the purpose of extortion?—Rather for some sinister purpose.

3886. And you stated that the natives as a class were so unpunctual in money payments that it would not be safe for Europeans to make advances?—Not unless to the people of their own villages.

3887. May it not arise that the number of the suits originates in the unpunctuality with which the natives discharge their obligations instead of their being brought for purposes of extortion?—No, because the native knows that if he gets his judgment it is of little or no use to him; it is obtained to hold it as a threat over the party.

3888. If a man will not pay his debts there is no other alternative?—He could never realise the debt by the process of the Court.

3889. You have stated that the native zemindars generally, and Europeans occasionally, resort to force to collect their rents?—Frequently. A large village will occasionally stand out and say that they will not pay their rents.

3890. Is it not the object of the laws that are complained of, which are enacted by the Government, to prevent such proceedings, and to protect the rights of the zemindar and those under him?—Yes, but by the revenue laws the zemindar is compelled to pay his revenue every three months, or else his property is sold. There is no practical law by which he could collect his rent in three months.

3891. Under the zemindary system, is the Government rent excessive?—It is smaller than it has ever been under any former conquerors in India.

3892. Can

3892. Can you give the Committee an idea of the average rates?—I should assume it to be about a sixteenth to a twentieth of the gross produce; I do not suppose that the Government revenue would average 1*s.* 6*d.* per cultivated acre at the very extreme, taking it all through Bengal.

3893. Then the rate at which the revenue is levied cannot be one of the causes which oppose the settlement of Europeans?—No; for there is no country in the world where the people pay so little rent as the people of Bengal.

3894. What is the general condition of the ryots in the parts of Bengal in which you have resided?—There are so many classes; there seems to be a tendency in the labouring classes to become small farmers, men with one plough and so on; I think that there is a great increase amongst that class, but a decrease amongst the better yeomanry, as they would be called in this country; they do not live in the same comfort as in ancient times.

3895. You are an advocate for the redemption of the land tax, and you stated that the zemindars could then sell to the ryots; the object of my question is to ascertain whether they would have the means of paying the amount?—A great number of them would; there is a middle class in the villages, and a number of the respectable farmers would have ample means.

3896. You alluded, in your answer to Question 3699, to suits being filed against the Government, although you stated that there was a leaning on the part of the native and inexperienced European judicial authorities towards the Government, it is the fact that any person may sue the Government in the courts of law in the Mofussil?—Yes; I have had several cases against the Government myself.

3897. And you have known of suits being decided against the Government?—Yes, I have had several decrees against them myself; those suits were decided by the Company's judges.

3898. You have alluded to the inexperience of the magistrates on their first appointment; is not one of the causes of that inexperience the fact that, under Lord William Bentinck's administration, all original jurisdiction was taken from the European authorities and vested in the natives?—In the criminal courts the magistrates have as much original jurisdiction as ever; but in subdivisional courts a few of the native magistrates are permitted to exercise original jurisdiction, with no appeal to a magistrate, and only to the judge.

3899. Under the former system a young European was vested with very limited jurisdiction, and so rose up to the authority of a sessions judge; but now that school for training is done away with?—Yes, exactly.

3900. Is it the fact that the Government, as far as it can do so, with the view of insuring competency, prescribes tests for passing in the native languages on original appointment, and further tests on promotion?—Yes.

3901. You alluded to works of irrigation; what is there to prevent the great zemindars establishing works of irrigation, seeing that they are not liable to increased demands upon the part of the Government?—It would be very difficult to get five or six zemindars to agree together upon the principle of doing it; and in order to pay, it must go through a large tract of country; I believe it can only be done by the Imperial power.

3902. Who do you think should pay the expense of those works of irrigation from which the zemindars alone would derive the benefit?—I should propose that the Government should levy a water rate upon the occupiers of the lands benefited by the irrigation.

3903. Would not that be opposed by the zemindars under the permanent settlement?—We do not require irrigation in Bengal.

3904. To what part do you refer?—Principally to the North-West Provinces.

3905. You have alluded to missionaries; is there any opposition on the part of the Government or the local authorities to the operations of the missionaries?—None whatever.

3906. May not as many missionaries as like resort to India, and freely conduct their operations?—Quite freely.

3907. Has the number of European settlers increased in the parts of India with which you are familiar?—No, I should think it has rather decreased. There may be more Europeans, but fewer settlers.

3908. To what cause do you attribute that?—The principal cause was that in 1848 the Union Bank failed in Calcutta, and with that a number of the mercantile firms went. They had been in the habit of making large advances to the indigo factories, and in Kishnagur and Jessore, and other districts, they

Mr. *J. T. Mackenzie.*

18 May 1858.

have been obliged to curtail the European establishments. Four concerns adjoining each other in Kishnagur used to disburse about 400,000 *l.* yearly; they have spent latterly only 200,000 *l.*

3909. You have given a very unfavourable opinion of native honesty; was not the Union Bank a European concern altogether?—European and native.

3910. But it was chiefly managed by Europeans?—Yes, chiefly.

3911. And there were great complaints of the management, not only on account of carelessness, but something worse?—You must draw a distinction. Had the Union Bank carried on its concerns for five years more, it would have paid every one in full; but their securities, being forced upon the market at a period of panic, realised but little. I was in no way connected with it. The directors were all Calcutta men; many of them attached to the Queen's Supreme Court, and the rest merchants and attorneys.

3912. Do you agree that civilians appointed since 1839, cannot read and write, and speak Bengalee fluently?—As a body they can speak it; I may illustrate that. An Englishman goes down to Scotland; he may go down to Aberdeen or the west of Scotland. He cannot understand exactly the dialect of each of the places which he passes through, but he understands quite well what the people say to him, and they understand what he says to them. In each district of Bengal there is a peculiar dialect. It is quite possible that any civilian going there at first does not understand the peculiar dialect of that part of the district, but as a rule every tolerably efficient officer can read and write Bengalee.

3913. Mr. *J. B. Smith.*] Do the natives understand him?—Yes, they do.

3914. Mr. *Willoughby.*] You have alluded to the want of roads in Lower Bengal; is not that partly to be attributed to the great want of materials?—No. I have made a great many roads in Bengal, and we found that you could make very good fair roads for about 100 *l.* a mile. If you wanted to make pucka roads of brick, they come to about 1,000 *l.* a mile.

3915. Is not there a toll and ferry fund established by the Government?—Yes.

3916. To what purpose is that fund appropriated?—To keep up the roads intersected by the ferries.

3917. Is not there a sort of municipal body established to control the fund?—Yes, composed generally of the magistrate and collector, and one or two of the settlers.

3918. Were you yourself ever upon one of those committees?—Yes, for a number of years.

3919. You do not concur with preceding witnesses that courts of law, upon something like the same principle as the Supreme Court of the Presidency, should be established in the Mofussil?—I think it would be very unadvisable; and the principles and rules of practice would be inapplicable, detrimental, and misunderstood.

3920. A system of that kind would require that the administration of justice should be conducted through the medium of interpreters?—Entirely.

3921. And you think that that would be a very great evil?—I think that it might almost endanger our empire.

3922. You have alluded to the Greeks settling and increasing in Calcutta; is there any obstacle to British subjects settling in Calcutta in the same way?—None.

3923. Do not gentlemen of your class proceed to India, not with a view of permanent settlement, but with the ultimate view of returning to England, after having secured the object for which they go there?—As a rule, all the people go to come back.

3924. Were you disappointed in your expectations, or did you prosper?—I was among the few fortunate people; I was very well satisfied.

3925. Are not the planters in the habit, whenever they can do so, of sending their children home?—Yes, always.

3926. Do you know any instances of European children being kept in India up to years of maturity?—There is a great distinction to be made between the Portuguese and the British subjects.

3927. I allude to British settlers?—As a rule it seems to be almost physically impossible. You do rear the people, but if they are kept in India about six or eight years they seem to degenerate, both physically and morally.

3928. According to your experience, have the Government, or the local authorities, evinced any hostility towards the settlement of Europeans?—No, not

as

as far as I am aware since the repeal of the Act forbidding Europeans to hold land.

3929. You have alluded to its being impossible under the ordinary law to convict for Thuggee and Dacoitee?—It was impossible to convict for Dacoitee until they extended to that offence the law applicable to Thuggee.

3930. And that law has completely succeeded as far as Thuggee is concerned? It has very much improved the state of things, and Dacoitee has decreased considerably since that law was introduced. The accused are convicted on the evidence of approvers from among the accomplices; and the laws of evidence are not very strictly insisted upon.

3931. Have not much greater efforts been made of late years in endeavouring to develope the resources of India, than was the practice when you first went to India?—No; I do not know what the Government have recently done, with the exception of guaranteeing the railways.

3932. Have they done nothing in the way of promoting steam navigation?—No; not recently.

3933. Did not the Government set the example by introducing steamers upon the Ganges?—Yes; I was concerned in one of the other companies. The Government set the example, but I do not think that it was done by the Government as an inducement for the Europeans to follow, but merely for their own imperial purposes.

3934. What do you say with regard to the Assam Tea Company?—The Government introduced that unquestionably; but that was many years since.

3935. Is not that a great advance in the development of the resources of India?—Yes.

3936. May not the same be said as to the Kumoan plantations?—Yes.

3937. Mr. *Villiers.*] Would you say that no further reforms are needed, as the Government are now advancing so rapidly in improvements?—I think that a number of practical reforms are required.

3938. You have stated that there is no hostility on the part of the Government in India to settlers, that there is no jealousy on the part of the civil service, and nothing to deter settlers?—As a body, the Government certainly have not offered any hostility. There may be individual cases of the civilians being rather jealous of the Europeans in the district.

3939. Did I understand you correctly that the administration of justice is so defective that it actually drives people away from their properties?—The inefficient administration of justice is, I think, the principal cause of the respectable natives being so many of them absentees, and as soon as a European gets money he wishes to get to Calcutta out of the jurisdiction of the native magistrates.

3940. Is the administration of justice worse now than it used to be?—I speak of when I first went to Bengal in 1838; I think in 1850, when I left India, it was worse than when I first went.

3941. Were there some regulations respecting magistrates, or did not some circumstance occur in 1840 and 1849 which provided an inferior magistrate?—It provided an inferior magistrate, and gave him such an enormous power that I believe there is no country in the world where such a magistrate has so much power.

3942. Or where he is so inefficient?—Where a man in office as a magistrate is so inefficient, and has got such enormous power, by it he can ruin any zemindar he pleases.

3943. What was that law which was passed in 1840 which increased the power of the magistrate, and provided less for his qualification?—It was a law by which, if there was any dispute about property, the magistrate could go upon the spot, or send and enquire, and the party that had held possession of the property for the preceding month was kept in possession, and the magistrate referred the disputants to the civil courts to settle their disputes. That law was very good; but in 1849 they passed an additional law, as a sort of rider to this, by which the magistrate, after putting one party in possession, might bind the other party over to keep the peace in any amount that he chose; the magistrate also taking security from the other party to an unlimited amount. In India you can prove anything; it is only a question of a few shillings, and where you can do that you have only to get a few witnesses to

Mr. *J. T. Mackenzie.*

18 May 1858.

prove that a man has committed a breach of the peace, and the magistrate has the power to enforce the penal bond against that man.

3944. Do you persist in saying that the magistrates are inferior, as far as their competency is concerned, as well as having greater powers than used to be the case?—Unquestionably since the time of Lord William Bentinck, because before that they were older men, and more conversant with native habits.

3945. Do you refer to some regulation that has taken place since Lord William Bentinck's time, allowing younger men to assume the office of magistrates?—I do.

3946. Men were older when they were made magistrates in Lord William Bentinck's time, and they are now younger by some regulation that has been passed?—Yes.

3947. Your proposed alteration is that no man should act as a magistrate until he has more experience; where should he acquire that experience?—It is very difficult to say where the school should be; but I think that the best way would be to make him superintendent of police, giving a criminal jurisdiction, but no judicial power; making him, in fact, work personally under a magistrate, or session judge, or circuit commissioner.

3948. You find them defective just the same in the criminal courts as in the civil courts?—As a rule they are not so defective in the civil courts, because as a rule they have been 16 years in the service before they are made judges.

3949. Would there be any difficulty in their practising in the criminal courts in the same way as they do in this country?—I think it would not answer, for this reason, that they would be upon an equality with the native pleaders, and I think that in India you ought to keep up the European magistracy as a dominant race. Therefore I would not have them pleaders, and afterwards judges.

3950. What is the deficiency which you point to in those persons who are magistrates; is it their want of knowledge of the habits of the people, or is it their want of learning?—It is their want of knowledge of the habits of the people; they believe the evidence, instead of believing the probabilities of the case.

3951. You mentioned a change in the way of making the magistrate a collector?—For the purpose of getting more efficient officers.

3952. Is not there an objection to their being magistrates and collectors; would not the collector enforce the magistrate's decision before any appeal could be made?—In every case I propose one appeal; many suggestions have been made upon that subject, some of them by Mr. Grant, than which nothing could be better. The union of the fiscal and judicial duties would not clash prejudicially except in rare cases.

3953. Was not the system altered in Lord William Bentinck's time?—Yes.

3954. Were not the collector and the magistrate one?—Yes.

3955. And he altered it?—Yes, he altered it.

3956. You stated that the land revenue in Bengal is less now than anywhere else in India, or than at any former time under any conquest?—Most decidedly.

3957. Do you think that that is consistent with your other statement, that the ryots are worse off than they have ever been under any rule before?—They are worse off; there is less security of property to the ryots in Bengal than they ever had under any other rule.

3958. Have you ever considered what they were exposed to under any former conquerors?—They had a summary system of justice, and the truth was often arrived at by threats and torture; if a man was caught in a theft, very likely his hand might be chopped off; the native talookdars in those days used to have what the natives called Paradise cages, iron cages into which people were put and tortured.

3959. That was summary justice?—Yes, that was summary justice.

3960. And you would prefer to return to that?—Not at all; but I would prefer to have suits quickly and summarily decided.

3961. But you refer to the past times, when those practices were in force?—Yes; but I do not advocate those barbarous practices.

3962. You talk of facilities being afforded for irrigation by redeeming the Government debt?—The Government debt amounts to about 60,000,000 *l.* at present;

present; the Government revenue derived from Bengal is 3,500,000*l.* If that was sold at 25 years' purchase, they could first pay off the whole of the Government debt, and the surplus might be invested in profitable irrigation works, which would return the Government some 30 or 40 per cent.; so that the tax-payers would have a security that, as they had redeemed the tax, they would not be called upon for fresh taxes.

3963. Do you propose to pay off the public creditor?—I would give the people the option; if the parties redeeming their land choose to redeem in the public debt, let them do so, or in money.

3964. I thought you talked of paying off the debt itself?—I would give the parties the option, if they please, in place of paying the money to pay it in Government securities, because it would give immense confidence to the natives in redeeming, if they thought that they should take the public debt as part of it.

3965. Your proposition of paying off the Government debt has reference to paying off the land-tax?—Yes, entirely.

3966. I understand you to say that you do not object to the sale law?—I only wish it modified.

3967. What is the obstacle to the cultivation of the date?—What is required is to give a permanence to the title, which under the existing law you cannot have; I have alluded to one clause of that sale law in which I should make the words "20 years," apply for 50 years, or as long as the lands were so cultivated.

3968. You want an alteration of the sale law?—I want that modification of it.

3969. You are of opinion that we could extend our trade with India, in the export of the manufactures of this country?—To a very enormous extent.

3970. Is that by improving the condition of the natives?—By giving security that the show of wealth would not be an additional reason for oppression.

3971. Do you think that we could extend it to the amount which we have to correct in the balance of trade, which you put at 2,000,000*l.* a year?—For the last 20 years it has averaged a bullion remittance of more than 2,000,000*l.* a year, but for the last four years it has been something like 7,000,000*l.*

3972. Would you go so far as to say, that if our laws were improved or better administered, and more security were given, and more temptation offered to settlers to go out to India and take out capital, the natives would consume the manufactures of this country to that extent?—I have not a doubt of it; the average yearly consumption of our manufactured goods is only 10*d.* a head upon the population, and our goods are highly appreciated and much desired.

3973. Have those defects in the administration of justice to which you have alluded ever been referred to the Legislative Council, or to the authorities in Calcutta?—The authorities in Calcutta have been referred to frequently. There was Mr. Dampier, the superintendent of police, one of the most efficient men in the service; he mentioned that he was sick of making new laws for the people of India, for he found that every new law the natives turned into an additional means of extortion.

3974. What is the fact with respect to persons who complain as strongly as you and others do of the administration of justice; what attention do they receive on the part of the authorities at Calcutta?—Every civility is shown to the parties.

3975. Everything short of redressing the grievances?—They think to redress grievances by enacting new laws; and I say, "If you would repeal three-fourths of your existing laws and give efficient administration to the other fourth, that is what is required."

3976. The reforms required are not effected?—No; not such as I have suggested.

3977. And you see with no apprehension the transfer of the government from the Company to the Crown?—Not the least; I want, with that, a good system of government; I think it would give stability to our rule in India.

3978. While in India you thought the civil servants inefficient?—Yes.

3979. Since you have returned to this country you have thought otherwise?—I have quite changed my opinion.

3980. That is since you have ceased to have experience of them?—Since I have had experience of how the departments are conducted at home I am better able to appreciate the officials in India by the contrast.

3981. Do you speak of the civil departments at home, or of the way in which the

Mr. *J. T. Mackenzie.*

18 May 1858.

the public generally manage business?—I speak entirely of the Government offices in this country.

3982. You do not allude to banks or commercial speculations, or the way in which railways are carried on?—No.

3983. Are you a director of Indian railways?—Yes; of two.

3984. And a proprietor of Indian stock?—Yes.

Jovis, 20° die Maii, 1858.

MEMBERS PRESENT.

Mr. Campbell.	Mr. Lowe.
Mr. De Vere.	Mr. Seymour.
Mr. William Ewart.	Mr. J. B. Smith.
Mr. Gregson.	Mr. Villiers.
Mr. Kinnaird.	Mr. Willoughby.
Mr. Knight.	

WILLIAM EWART, Esq., IN THE CHAIR.

Mr. *James Thompson Mackenzie,* called in; and further Examined.

Mr. *J. T. Mackenzie.*

20 May 1858.

3985. Mr. *Kinnaird.*] WAS your health good in India during the whole time you were there?—No; I was obliged to come home once, and once I went to Singapore. I was twice given over as almost dead.

3986. Was that owing to the climate?—No; it was owing to undue exposure in both cases.

3987. Do you think that a European, with care, can enjoy a fair measure of health in India?—The Europeans residing in the agricultural districts, as a class, have nearly as good health as those at home.

3988. You would not dissuade anybody from going out with a view of settling?—Certainly not.

3989. You think that by using common precautions, and not unnecessarily exposing themselves to the sun, Europeans may enjoy good health in India?—Yes.

3990. I think you mentioned in your evidence that there were very few native Christians in India?—Very few.

3991. Are you not aware that there are at least 5,000 in Kishnagur?—If the Government have official returns to show that there are 5,000, I should admit it; but if they have not, I should doubt it very much indeed.

3992. Are you not aware that in Backergunge there are at least 1,600?—That may be; but it is a very populous district; and Kishnagur has a population of from 800,000 to 1,000,000; and even 5,000 out of that is very few.

3993. You referred to an article written by Mr. Pratt: at the end of that article there is a statement showing that there are no less than 400,000 Christians in India?—I very much doubt there being 400,000 native Christians in India.

3994. Did I rightly understand you to advocate the complete exclusion of Christians from any employment under the Government?—Certainly not.

3995. Then should they be found equally healthy, equally robust, and equally capable, there could be no objection to employing them as well as others in the police or in any other department?—What I advocate is, that if the parties are qualified for any Government appointment, their religion should not be a disqualification, nor should it be held specially to qualify them for an appointment.

3996. I believe that the East Indians are very numerous in parts of Lower Bengal?—No; principally in the large towns; in Calcutta, for instance.

3997. Are they not very numerous in the lower parts of the Mofussil?—There are very few there.

3998. You spoke of the Greek merchants being in large numbers in Calcutta, are you aware that there are only about eight Greek houses in Calcutta?—I am not aware of that from my own experience, but I should think that was about the number.

3999. And there are altogether in Calcutta about 150 merchants and agents?—There are not eight English firms doing as much business as those eight Greek firms who, I believe, as will be shown by the exports, do one-third of the trade from Calcutta to this country.

4000. I suppose the reason for the success of the Greek is, that he attends more to the business personally in all his bargains and trade than perhaps the British merchant does?—I should attribute it to the Greeks combining together in a great measure, in any operations. They act entirely as a body, which the English merchants do not; they act quite independently of each other.

4001. A former witness has recommended the issue of some convertible Government paper, like our Exchequer bills, at a low rate of interest, and payable at fixed periods as an investment for capital waiting for employment in India; do you join in that recommendation?—If payable at terminable periods, such as three and four and five years, I think it would be very useful to the Government.

4002. And received in payment of revenue by the Exchequer?—If Government would take it in payment of the revenue it might be very useful to the people.

4003. Are you of opinion that it would be an advantage to open the Legislative Council to the non-official classes?—If you would restrict it to the British merchants and not pay them, allowing them to be unpaid members, I think it would be a very great advantage.

4004. You are aware that some British merchants are on the Legislative Council in Ceylon?—Yes, I have been in Ceylon.

4005. It is found practically to work very well there?—Practically it works very well there; but if you would allow me to say so, there is no parallel between the settler in Ceylon and the settler in India, because the European settlers in Ceylon have, as a rule, employed very few natives, and have scarcely any commercial or social intercourse with the native inhabitants; they get the labour over from the Malabar coast, and so both the settlers and their labourers are an alien class.

4006. Mr. *J. B. Smith.*] I understand you to state, as your opinion, that it is indispensable to the encouragement of European settlement in India that Government should afford complete protection to life and property by the establishment of good laws, and an efficient police?—Yes.

4007. You say that those essentials do not at present exist, and that the result is that the natives are afraid to be known to have money?—Yes.

4008. You say that hoarding to a great extent exists now, from the same causes as have occasioned it to exist from the earliest ages, namely, a constant apprehension of plunder?—Yes.

4009. Are there not reasons for supposing that an enormous amount of money is buried in India?—There is every reason to suppose so.

4010. And, whilst so buried, it is as utterly useless as if it were yet in the mine?—Quite.

4011. If this money could be brought into circulation, would it not be a great benefit to the community?—A great benefit to the community, and to the country.

4012. You suggest, as one means of bringing it into circulation, to permit the zemindars of Bengal to purchase the fee simple of the Government tax upon their lands?—Yes.

4013. Supposing this course were practicable, if the Government applied the money received for the redemption of the land-tax to the extinction of the like amount of their funded debt, their financial condition would not be worse than it is at present?—It would be better by half per cent., because they could redeem at 25 to 30 years' purchase; and the average interest of our debt at present is about four-and-a-half per cent., including the last loans; and redeeming at 25 years' purchase would be only equal to four per cent.: so the Government would gain half per cent. in the financial operation.

4014. Suppose they could effect it at such a rate as would just redeem the like amount of debt that the tax produced, then they would be in this condition: on the one hand the revenue from the land-tax would be diminished, but on the other hand their expenditure for interest on their debt would be *pro tanto* diminished?—Exactly; the one would equalise the other.

4015. If the land-tax were thus redeemed, would not the Government be savers by the expenses of collection?—Not very largely.

Mr. *J. T. Mackenzie.*

20 May 1858.

4016. Are there not a great number of persons employed in the collection?—The expense of enforcing the collection in the permanently settled districts of Bengal is very small, because the Government there look to the estate and not to the proprietors.

4017. Do you know how much the expense of collection is in Bengal?—There have been various estimates made upon it; but the Government themselves cannot arrive at the exact amount, because the collector, as well as being the collector and collecting the Government revenue, is the revenue officer in whose court all cases of rent are brought by the proprietors, lessees, or whatever people they may be; so that it is very difficult to estimate what is the actual proportionate amount that should be allocated by the Government on account of the expense of collection.

4018. At the same time that the Government would be released from the expenses of collecting the revenue, would not the tax-payers be gainers, by being relieved from the exactions of the corrupt native tax-gatherers?—It would be an enormous advantage to them.

4019. If it were practicable for every 1,000 rupees received for land-tax to extinguish the same amount of debt, the State would be no losers, while the tax-payers would be greatly benefited?—Upon every 100 rupees extinguished the tax-payer would save 50 per cent. in illegal exactions, assuming him to be a cultivator of a free estate.

4020. Would it not be a great advantage to the people as well as to the Government, if they had an opportunity of investing their money in land, instead of burying it in the ground?—Very great.

4021. If the land-tax were redeemed, would it not be a great encouragement to European settlement, seeing that settlers could then possess lands on the same terms as in any other of our possessions?—The greatest encouragement, because then a European could purchase, with a perfect title, the piece of land which he required for his purpose.

4022. If a good system of registration were adopted, and suitable laws were enacted for the protection of parties in the enjoyment of their property, you think it would be a great encouragement to settlement in India?—The greatest encouragement, the chief thing required, would be, first, a complete survey of the country; every tenure should be registered, and the registered proprietor should be recognised as the proprietor of that estate.

4023. Would not the free circulation of wealth and the enactment of good laws tend to the improvement of the whole people, by affording means of employing capital and giving increased employment to labour?—Yes, the greatest.

4024. Would not the consumption of British manufactures be greatly increased under such circumstances?—It would very soon be doubled and trebled.

4025. Is it not reasonable to expect that the Government would be better able to raise a greater revenue from an improving population than from an impoverished population like the present?—Unquestionably.

4026. And that there would be a great increase in the imports?—A very great increase. The Government have both an export and import duty, so the larger the amount of trade, the greater the revenue the Government would receive.

4027. With regard to roads, so far as your observation goes, were the roads better under the Hindoo and the Mahomedan rule than at present?—From all inquiries I could make, and from the vestiges of the roads that have existed, I should say that the internal communication of the country was much better under both the Hindoo and the Mahomedan rule than it is at present. The village communities, now no longer in being, are understood to have maintained their respective proportions of the roads.

4028. Do you think that as soon as the country is opened out by railroads there will be a greater influx of Europeans?—The railways will do an immense deal; but in addition to the railways, you require roads to act as feeders.

4029. But will not the existing state of the laws and the police still be an obstacle to extensive settlement in India?—Until you improve the police there is no security for property; every man must protect himself.

4030. The Government a few years ago put a stop to the circulation of the gold currency; do you think it would be advantageous to restore it?—Most advantageous.

4031. Would not the circulation of gold release a large amount of silver which is now hoarded?—A very large amount of silver; and it would be an immense saving

saving to this country, because the balance of trade could be discharged by the shipment of gold from Australia direct to India instead of being sent to this country, and thence to the Continent to be exchanged for silver for transmission to India; whilst, if the late unfavourable drain should recur, it might be difficult in two or three years to procure the silver required: for already the value has increased some 10 per cent.

4032. Inasmuch as gold goes into a smaller compass than silver, would not the natives be more disposed to hoard gold than to hoard silver?—If you improve the system of police, then the natives will think of using their money for the acquisition of property instead of hoarding it; if the same system continues, it would no doubt lead to an increased hoarding of bullion. If you had a gold currency in place of a silver one, with the same inefficient system of police, it would rather tend to increase the hoarding.

4033. My question was, whether there would not be a preference of hoarding gold to silver; would not there be a larger quantity of silver released?—Greater in bulk but not more in value.

4034. Would there be a preference of hoarding gold to silver?—It would be much more convenient to hoard, being in a smaller space.

4035. Mr. *Villiers.*] What is the hoarding amongst the natives for; do not they make ornaments of the silver?—I did not refer to the ornaments of silver. The natives use the silver and gold as ornaments, and they very frequently hoard the ornaments in addition to the gold and rupees.

4036. They use gold as much as silver for ornaments?—Those that can afford it prefer gold to silver for ornaments.

4037. What was the date of the prohibition of gold as a currency?—It was after the discovery of the Australian mines; strictly speaking, I believe that gold never was a legal tender in Bengal; there was an order of the Council passed, I do not recollect the year, I think it was about 1840, authorising the collector to receive the gold mohurs at a fixed rate; the Government, after the discovery of the Australian gold, merely cancelled the former order of the Council.

4038. Gold was never a legal tender?—I think I have seen it stated, that prior to 1780 or 1790, it was, in some parts of India; but not subsequently, I think.

4039. Do you know what the policy of the former Government was in preventing gold being the standard as well as silver?—The perpetual settlement in Lower Bengal was made in rupees; it was at a fixed rate of rupees; a number of the Company's loans were made at a fixed rate of rupees, and the pensioners of the Company were paid at a fixed rate of rupees; and the Government had a great doubt about the policy of introducing a gold currency, as to how far it might interfere with the engagements which they had entered into and which were payable in rupees.

4040. Mr. *J. B. Smith.*] When the Government received those gold mohurs in payment of the revenue did they receive them at a fixed price in silver?—They received them at a fixed price in silver of 16 rupees for the gold mohur; but during the time I was in India the gold mohurs, coined by the Company, were generally sold, in the interior of the country, at a premium of about 10 per cent.; what were called the old gold mohurs were generally at a premium of 20; being of very pure gold; and the natives used them, in a great measure, for making ornaments.

4041. Mr. *Villiers.*] What is the date of the establishment of the mint at Calcutta?—It was established by Colonel Forbes; I think about 1830 to 1832.

4042. Mr. *Willoughby.*] Are you aware that in 1853 a circular order was issued by the Calcutta authorities, enjoining their collectors and others not to receive gold in payment of the Government revenues or other dues?—Yes; there was such an order; there was a minute of the Council formerly passed, authorising those gold mohurs to be received, and when the Australian discoveries came into effect they cancelled this minute, as I have previously stated.

4043. *Chairman.*] Do you think that if the redemption of the land tax were allowed, many of the zemindars would avail themselves of it?—I think a great many of them would; I should say the strongest argument for their doing so would be that three-fourths of the whole of the estates in Lower Bengal are mortgaged, and the mortgagees, for their own security, would insist upon the redemption of the land, and after this law had been carried into effect very few would advance money upon an estate until the land-tax was redeemed.

4044. Do you remember having read a report of Mr. Thomas, of the civil service,

Mr. *J. T. Mackenzie.*

20 May 1858.

in favour of a scheme for the redemption of the land tax, which is inserted in the Appendix to the Report of the Committee on the Cotton Cultivation of India?—Yes.

4045. Mr. *Villiers.*] Does the mint only coin silver?—Silver, gold, and copper.

4046. Mr. *Willoughby.*] On what data do you suppose that the natives, or any one else, would be induced to redeem their estates at 25 or 30 years' purchase?—From the high price at which the La-Khiraj lands that have been released command, from the very high prices paid for putnee talooks, and the price which the Government have paid to the zemindars for the railway lands at 20 years' purchase, and to which the whole of them objected, they said that they ought to have had 25 at least; and I think they ought.

4047. Would you propose yourself to effect redemption at that rate?—Yes, freely.

4048. What interest does the capital which you have invested in putnees or other tenures yield?—When I had putnees they yielded but little, if any, money return; the zemindaries yield from six to twelve per cent., dependent wholly upon the improved condition of the property.

4049. With regard to the roads under the Hindoo and Mahomedan rules, to what period do you refer?—In Shah Jehan's (the grandson of Akbar) time, unquestionably the country was covered with roads; that was the golden age of Bengal, but even up to the time of our taking the dewanny in Bengal the roads were in a much better state than at present, though not, by tradition, equal to what they were in Shah Jehan's time.

4050. Your opinion of that time is chiefly gathered from tradition and the books?—Yes, from tradition, ancient manuscripts, and the vestiges of the roads.

John Abraham Francis Hawkins, Esq., called in; and Examined.

J. A. F. Hawkins, Esq.

4051. Mr. *Lowe.*] YOU were a servant of the East India Company?—I was.

4052. In what year did you go to India?—In 1822.

4053. When did you come home?—In 1849.

4054. What office did you hold in India, and where?—I was, for a short time, an assistant in the office of the Register of the Sudder Dewanny Adawlut in Calcutta, and then an assistant to the magistrate, and register of the suburbs of Calcutta. I was then joint magistrate of Baraset, about 16 miles from Calcutta. My next appointment was being for a short time in charge of the office of the Remembrancer of Legal Affairs, in which I had charge of the Government suits in the different courts. After that I was Magistrate and Collector of Purnea, to the north-east of Bengal. I was then Judge of Purnea. I was then Acting Session Judge of Shahabad, a little above Patna, in Bahar. I was then Commissioner of Circuit and Revenue of the Rajshaie division; that was in Bengal. Then I was Register of the Sudder Court for 10 years, and was then a Judge of the Sudder Court.

4055. For how long?—For two years.

4056. After your return, you were one of the Law Commissioners?—Yes; and I was appointed secretary, afterwards, of the Law Commission.

4057. What are you now?—I am in the Examiner's Office in the India House, conducting the judicial and legislative correspondence with India.

4058. Your total service has been almost entirely judicial?—Except that I have been also a commissioner and a collector of revenue.

4059. Several witnesses have spoken with regard to the Black Act, or rather Bill; how did that Bill originate?—The last proposed Black Act is to be found in these words of the Law Commission Criminal Procedure Code: "No person whatever shall, by reason of place of birth, or by reason of descent, be, in any criminal proceeding whatever, excepted from the jurisdiction of any of the criminal courts;" that was the proposal.

4060. What are the names of the Law Commissioners?—The Master of the Rolls Sir John Romilly, the late Chief Justice of the Common Pleas Sir John Jervis, Sir Edward Ryan, Mr. Cameron, Mr. Macleod, who, as well as Mr. Cameron, was one of the Law Commissioners in India, Mr. Thomas Flower Ellis, and Mr. Lowe. For a time I was one of the Commissioners, and upon the resignation of Mr. Millet, the secretary, I was appointed secretary to the commission.

4061. What was the date of that?—About the middle of 1856.

4062. Mr.

4062. Mr. *Villiers.*] There were several persons that had acted in India who were on that Commission?—Yes; Sir Edward Ryan, Mr. Cameron, Mr. Macleod, Mr. Millet, and myself, had all been in India.

4063. Mr. *Lowe.*] Did the passage which you have read emanate directly from the Commissioners, or how did it arise?—The whole of the Black Acts that have been issued for the last 20 or 25 years go back to the Act of Parliament of 3 & 4 Will. 4, c. 85. An enlarged power of legislation was then given to the Council of India, including a power of legislation with regard to all Europeans. There was a proviso in the Act which said that there should be no legislation to the effect of making Europeans amenable to the criminal courts in the Mofussil in capital cases. When that Act came out, a despatch was sent to India on the 10th of December 1834, from the Court of Directors, which has these words: "When the Act says you shall not pass laws making them capitally punishable otherwise than by the King's Courts, it does, by irresistible implication, authorise you to subject them in all other criminal respects, and in all civil respects whatsoever, to the criminal jurisdiction of the Company;" and every Law Commission that has proposed to deal with the administration of criminal justice in the Mofussil in India since that time, has recommended a clause to the effect of making the Europeans in the Mofussil amenable to the Company's criminal courts.

4064. *Chairman.*] Then it was an inference drawn from the words of the Act of Parliament by the directors?—Yes.

4065. It was an expression of their opinion?—Yes; but it has been thoroughly adopted by the Law Commission in India. Shortly after the Commission was appointed in England by the 16th and 17th of Victoria, the Commission received instructions from the President of the Board of Control, Sir Charles Wood, directing them to proceed to the amalgamation of the Supreme and the Sudder Courts, and, in fact, to have one system for the whole of India. Then those codes of procedure, and those rules for the constitution of various courts, were framed upon the understanding and upon the principle that they were to be applicable to the whole of India, superintended by one high court for each Presidency, which court was to be held at the presidency town.

4066. Mr. *Campbell.*] That being a fusion of the Supreme Court and the Sudder Court?—Yes; that being a uniting of the two together.

4067. Mr. *Lowe.*] Then had the Commissioners no discretion left them to make any alteration in favour of Europeans?—It appears not; their instructions are precise. "The intention of amalgamating the Supreme and the Sudder Courts in each of the Presidencies has already been announced to Parliament, and the first matters we are anxious you should take into your consideration are those preliminary measures necessary for the purpose." So that it seems to have been announced to them that the amalgamation of those two courts and the formation of one system for all India was a foregone conclusion, and that they should carry it out.

4068. *Chairman.*] Therefore the Commissioners acted in a ministerial capacity only?—With regard to that they acted in a ministerial capacity only.

4069. Mr. *Lowe.*] It would not have been in their power, I presume, to have made courts to which natives should have been liable, but from which Europeans should have been exempted?—No; I do not think that was the intention of the instructions communicated to them.

4070. What are the provisions in the Commissioners' scheme which are disapproved of in India by the European population?—That is the main one I understand to have been disapproved of, and also some provisions with regard to the jurisdiction of the criminal courts.

4071. By the Commissioners' scheme a European can be called up before a moonsiff in a criminal court?—Yes, supposing the whole code to be entirely carried out as it stands.

4072. What jurisdiction of native judges in criminal cases would Europeans be liable to if the scheme of the Commissioners had been carried out in its integrity?—They would be liable to the whole of the criminal courts of every class. There are two classes of courts that are called subordinate criminal courts; criminal courts of the first class, and criminal courts of the second class. The first assistant to the magistrate and the principal Sudder Ameen are to be judges of the subordinate criminal courts of the first class; then the second assistants to the magistrates and the moonsiffs are to be judges of the subordinate criminal courts of the second class.

4073. Is the second assistant to the magistrate a native?—No, he is a European;

J. A. F. Hawkins, Esq.

20 May 1858.

European; the first assistant to the magistrate has more extended power than the second, but they are both Europeans.

4074. What powers have those two subordinate courts in the way of punishment?—"Judges of the subordinate criminal courts of the first class are empowered to pass sentence in all cases tried by them, provided that they shall not for any offence sentence any person to imprisonment for a term exceeding one year, or to fine exceeding 200 rupees," and the lower court "shall not for any offence sentence any person to imprisonment for a term exceeding three months, or to fine exceeding 50 rupees."

4075. So that the effect was that the first court could imprison a European for a year, and the second for three months?—Yes, if brought before them; the full impression on the minds of the commission, however, was, that the Europeans would not be brought before them. It was supposed that the magistrate never would refer a case, in which a European was a defendant, to a native judge.

4076. They could not entertain the jurisdiction without its being referred by a European magistrate?—Except under a special order of the Government.

4077. Mr. *Campbell.*] The first and second court could not hear any case without an order of the Government?—It is a general provision that the moonsiff shall receive no criminal case at all originally of any kind whatsoever; that it shall be referred; that he shall only try cases upon reference by a magistrate.

4078. Mr. *Villiers.*] The magistrate being a European?—Yes.

4079. Mr. *Campbell.*] That is on reference to the moonsiff?—Yes; on reference to the moonsiff, or the sudder ameen either; but there is a clause in the code allowing the Government specially to authorise any judge of any class to receive cases without reference from a magistrate. All those cases those judges would have the power of trying and punishing, but upon reference by a magistrate, the Government may dispense with the magistrate's sanction by giving a general power to those officers to receive cases directly.

4080. Mr. *Villiers.*] An order of the Government may give a general power to those judges to hear cases?—"Criminal cases shall be brought before the subordinate criminal courts by reference to the magistrate" (that is, the European magistrate of the district). "It shall, however, be at the discretion of the Government, respect being had to the public convenience, to authorise a subordinate criminal court also to receive such cases on complaint, preferred directly to such court, or on the report of a police officer."

4081. Do not you consider that that is an order that has reference to particular cases, and not a general suspension of the rule that the magistrate shall refer everything to the judge?—No, that was not the intention of the commission. It was generally believed by the commission that, for the public convenience, the Government would give their authority to the judges of the subordinate courts at a great distance from the magistrate to receive cases; that instead of compelling a man to come and go 50 miles, the Government would, in such cases, authorise the moonsiff upon the spot to receive cases within his jurisdiction without going to the magistrate.

4082. Mr. *Lowe.*] The intention was not to get Europeans under native jurisdiction by a side wind?—Certainly not; it was never thought of.

4083. That being the state of the law, do you think that it was fraught with any practical grievance to the European community?—I should think that by them it would be thought a practical inconvenience.

4084. In what way?—I could easily understand a great objection, on the part of Europeans, to being made amenable, criminally, to the courts of the native judges.

4085. Would it really have brought them under the courts of the native judges?—I do not think it would; I think the magistrate would have kept all their cases in his own hands.

4086. What is your own opinion with regard to the claims of the European residents in the Mofussil not to be criminally tried by a native judge?—I consider their claim a good one, I would not put them under a native judge.

4087. Was that the opinion of the commission?—The question was raised in the commission, and the opinion was, that in drawing up a general procedure for one set of courts for the whole of India, there must be one system of procedure for the whole. The Commission were also of opinion that Europeans should be made amenable to the Mofussil Courts, but that it was not likely that the magistrate would make over a European to the subordinate judges.

4088. You

4088. You are of opinion that it is not right that the European residents should in any case be brought before native judges in criminal cases?—No, not before native judges.

4089. Will you state the reason for your opinion that the English residents in the Mofussil ought not to be tried criminally before a native judge?—I believe the impression upon the mind of a European would be that he would not get justice. Now, a native may have a twofold feeling, either a national feeling as against the European; or, on the other hand, a feeling of fear that he must do more for the European than he would do for one of his own countrymen. Either case would be prejudicial to the true administration of justice.

4090. *Chairman.*] In either case the balance of justice would be disturbed?—Yes.

4091. Mr. *Campbell.*] From your own great experience of the natives, what is your opinion of the tendency of the natives if placed in authority over Europeans?—I have known natives willing to do justice to all; at the same time I think there are many natives in office who might be influenced by that feeling of nationality.

4092. Mr. *Seymour.*] Would you consider East Indians to be Europeans; if either father or mother was European, would you put them in the English category?—Yes, much more than in the native category.

4093. Mr. *Lowe.*] Will you state shortly what the recommendations of the commission were with regard to the criminal procedure for India; how was a man to be tried according to the plan recommended by the commission?—There are two ways of bringing a man before a magistrate; in the first instance, the one is by complaint to a police officer for the more serious crimes, who investigates upon the spot, and inquires into the truth of it; and if there is ground, he sends the case to the magistrate with the parties and witnesses. In cases of assault, and those that were excluded from the police officers' jurisdiction, complaint would be preferred by petition to the magistrate himself; he proceeds to take the evidence in either case, and punishes if it is within his jurisdiction, and commits to the session court if it is not within his jurisdiction.

4094. Is there any indictment?—No; there is a charge, the charge being that the man has been guilty of a certain crime with reference to a particular clause of the penal code; and the way to discover what particular crime he has been guilty of (that is, the particular act of crime, and its circumstances) is from the evidence given before the magistrate, a copy of which has to be furnished to the defendant.

4095. The legal conclusion is drawn from the depositions?—Yes, those depositions being given, together with a copy of the charge, to the prisoner.

4096. Upon that he is tried?—Yes.

4097. Is that a good criminal procedure in your opinion?—It is.

4098. What provision is there for appeals in criminal cases?—There is at present, I should explain, a right of appeal upon the record; that is to say, when a man has once been tried by a subordinate court and punished, he can appeal to the next superior court, and insist upon its retrying him upon the record. This code does away with that; it gives a man a right of petition to the appellate court, but it leaves it at the option of that court to call for the record or not, and to reject the petition at once, if it sees ground for doing so.

4099. I believe there is only a single appeal?—Yes, there is only a single appeal, giving however, the High Court at the Presidency a general control over the whole criminal administration.

4100. Mr. *Villiers.*] Are any of those offences punished capitally?—There is no court but one, which is the highest court of all, that can sentence capitally.

4101. *Chairman.*] Is the power of appeal not subsequent to trial only, but subsequent to the punishment also?—The man has been sentenced. The law gives a power of appeal after conviction upon the record, but the punishment is not suspended.

4102. Mr. *Seymour.*] Is there corporal punishment in India?—Corporal punishment was entirely abolished, but it has been since admitted with regard to juvenile offenders.

4103. If a man was sentenced to corporal punishment, would it be inflicted before the appeal?—It used to be in former times.

4104. And then there was an appeal afterwards?—The man had a right of appeal in all cases. Some magistrates might have suspended the infliction of the

J. A. F. Hawkins, Esq.

20 May 1858.

punishment, and others not; when the sentence was to flog a man, it was generally found more convenient to flog him at once than to keep him in confinement, with a chance of appeal.

4105. Mr. *Lowe.*] Some gentlemen have given evidence before us that there ought to be no appeal; is that your opinion?—No, it is not.

4106. Will you state why?—I should say that a power of appealing to a higher court is necessary, and especially under a system of this kind, where you have a large number of natives scattered all over the country, exercising criminal powers, the best way of showing how those powers are exercised by those several criminal judges is by a petition of appeal to the superior authority. Then again, I have always looked in India upon the right of appeal to the Superior Court in Calcutta as of the utmost use in helping to equalise the administration of criminal justice throughout the various districts; you have a sessions judge in one district who will sentence a man to 14 years' imprisonment for a case of burglary, while in another, for the same offence, a man is sentenced to five or six years. The Superior Court having all this before it, has it in its own power to equalise the administration of criminal justice throughout the country, and does very beneficially exercise that power.

4107. Passing to Sir Arthur Buller's speech; you have read that?—Yes.

4108. With some portions of it you agreed?—Yes.

4109. In that part, for instance, in which he deprecates a European being tried by a native judge on a criminal trial?—Yes.

4110. But he does not go with what you have noticed?—I think he has mistaken the object that the commission have in view.

4111. He does not notice the fact that a European could not be tried except by an order of the magistrate?—No; but Sir Arthur Buller has taken objection to the provision which says that the High Court and Session Court exclusively shall have jurisdiction in respect of "offences however punishable under any clause of the penal code charged against public servants of the first four classes described in clause 14" (that is, of the penal code) "whether as such public servants or otherwise." There are four classes of public servants who are to be tried only by the Session Court, or the High Court in Calcutta. Sir Arthur Buller takes exception to this rule, on the ground that the civilians and the military officers of the East India Company are protected, and those only; that the commission have gone out of the way to give protection to them, while they leave all the other Europeans in the Mofussil subject to the jurisdiction of the other courts, and he objects to that; now, those four classes run as follows in the penal code: "first, every covenanted servant of the East India Company; second, every commissioned officer, military or naval, in the service of the East India Company; third, every commissioned officer of the King's army while serving under the Government of India." We have disposed under those three classes of the whole of the Queen's and the Company's covenanted servants. Then comes the fourth class; "every judge." Sir Arthur Buller seems to have supposed that the commission intended by that the European judges. Now, it does not cover a single European; they are all natives; every European judge in the civil service is disposed of in the term "every covenanted servant of the East India Company." From the clauses I have read to the Committee with regard to the criminal courts, you will find that every moonsiff and every principal sudder ameen, is a criminal judge; the same may be said with regard to the civil code; the civil code commences with saying that, "There shall be three grades of judges in each zillah or district, zillah judges, principal sudder ameens, moonsiffs," and it was intended by the commission that every man exercising judicial power in the Mofussil, should be tried only by sessions judge; the distinction was intended to be entirely official, and the code goes on with other clauses which show that; that whereas certain European official authorities in the Mofussil were to be tried by a certain court, so by that same court were certain officials of the natives to be tried. The reason for the rule was, that you are obliged to maintain a distinction of that kind in India; the people have not the same notion of official disparity, as compatible with an equality in the eye of law which you have in this country. Once allow a principal sudder ameen to be brought even for an assault before a moonsiff, and that man's influence is for ever gone. It was to protect, and to secure the position of, the public officers in the Mofussil, that those clauses were drawn, and Sir Arthur Buller has mistaken the purport of them; my own opinion is that the thing should have gone further, and have made some distinction

distinction with regard to Europeans; but Sir Arthur Buller has mistaken the full intent and purport of the clauses as drawn by the Law Commission.

4112. The question was not between official and non-official Europeans, but between officials and non-officials of any kind?—Yes; every principal sudder ameen and every moonsiff being a judge is by this clause only triable by the sessions court.

4113. With regard to trial by jury, what trial by jury is afforded to a European under this code in criminal cases?—He is to be tried by a jury of which the number is not to be less than three nor more than nine, the rule being that "criminal trials before the sessions judge, in which a British subject, or an European, or an American, or an East Indian, or an Armenian, or a person of any other class to which the Governor-general in Council may see fit to extend this rule, registered according to such rules as the Governor-general in Council shall prescribe, is the defendant or one of the defendants, shall be by jury, of which at least one-half shall consist, if such defendant desire it, of persons so registered."

4114. What is the reason of that rule with regard to the constitution of the jury, partly native and partly European?—The prosecutor may be a native and the defendant may be a European; it secures so far to the European, that one-half at least of the jury shall be Europeans; and it requires for a conviction two-thirds at least, together with the consent of the judge; and that was considered to be sufficient security for the European.

4115. Turning to the civil jurisdiction of the courts, will you state what the procedure recommended by the Commissioners is?—The leading salient points of the procedure are, the total abolition of written pleadings that we now have, the examination of the parties, the framing of issues, and the single appeal.

4116. How is the examination of the parties and the framing of issues to be done?—First of all, the plaintiff takes out a summons in a form given here, and there is a day fixed for the hearing, and on that day the parties are to appear; and then the rule is, when they do appear, that "in all suits in which both the parties appear in person, or by attorney or vakeel, before the judge, they or their attornies or vakeels may be examined orally by the judge; and it shall be incumbent on them respectively to answer such questions in regard of the suit as he may think proper to put to them." That is the preparatory examination, and upon the statements of the parties the issues are prepared. There may be a subsequent examination of parties as witnesses; they may be twice examined, first for the framing of the issues, and then further to get more particularly at the facts of the case.

4117. Then the judge may decide at once, if the parties come prepared?—Yes.

4118. What do you think of that as a matter of procedure; is it adapted to the wants of India?—It strikes me as being the real essence of the whole procedure, and one which is admirably suited to the people; we have had it lately under a law; the new law of evidence enacted in India in 1853 allows the parties to be sent for and examined, which was totally unknown before. The experience of that law is that it has been found to answer admirably; it cuts the case short in the commencement very often by bringing the parties face to face.

4119. Under the law of 1853 the pleadings have taken place before the parties?—Yes, and there are to be no pleadings here whatever; nothing in a written shape, except certain statements referred to in the rules.

4120. *Chairman.*] Is not there a power in the person summoned, to send another person to represent him?—Yes; but the power still exists in the court to send for the principal.

4121. Do you approve of that power of substitution?—Yes, I do, for a country like India.

4122. Mr. *Lowe.*] There are some persons whose dignity would be hurt by attending the court?—Yes.

4123. And there are other people who are old, and would be unable to attend?—Yes; and women cannot appear in public; you must have such a power.

4124. Have you seen some statements addressed by Mr. Theobald to the President of the Board of Control, and which have been published?—Yes.

4125. There is a statement with reference to this procedure; have you seen it?—Yes. I think that Mr. Theobald is a good deal mistaken.

4126. Will you be good enough to state in what respects?—Mr. Theobald says, in the first instance, at page 20, that, "it is little but a re-casting of the existing procedure." Now I think that he is mistaken there.

 4127. Will

J. A. F. Hawkins, Esq.

20 May 1858.

4127. Will you state some of the differences?—The entire abolition of the present written pleadings and the substitution of the examination of the parties makes a great difference in the case.

4128. Is there anything else in which you think Mr. Theobald is mistaken?—Mr. Theobald says: "One of Mr. Bentham's great objects was, to bring the parties litigant before the judge, as a father brings his children before him in their quarrels (venerable sage, that saw in justice the exercise of the most benevolent affections!) at the very first step of a litigation. Without this being done, a procedure would not, I apprehend, be natural according to Mr. Bentham. This is not done in the code." It appears to me to be done in the code.

4129. Is there any step previous to bringing the parties before the judge?—Nothing but the summons.

4130. Could that be dispensed with?—No.

4131. The second step after the summons is the appearance of the parties before the judge?—Yes, and the examination.

4132. Which may be final?—Yes; it may not be necessary to framean issue at all; the parties may come to an understanding at once.

4133. Are there not two sorts of summonses, one requiring the party to come and frame the issues, and the other requiring the party to come up for final judgment?—Yes.

4134. So that it depends upon the plaintiff whether the case shall be decided summarily or delayed?—Yes.

4135. You do not consider that observation of Mr. Theobald's to be borne out?—No; I think that a little examination would show that nothing more could be done than has been done with a view of expediting matters.

4136. Do you know the procedure in the Punjaub?—Yes.

4137. Is it in any respects more summary than what is recommended here?—No; in the Punjaub code, the rules require that there should be something in the shape of a plaint.

4138. This is even more summary than the county court jurisdiction in England?—I believe it is.

4139. This is to be applied both to Europeans and to natives?—To all.

4140. Parties are allowed to give in written statements?—Yes.

4141. What is the power, and what is the object of it?—"For the purpose of assisting the judge in framing the issues, the parties, or their attornies, or vakeels may tender at the first hearing of the cause written statements of their respective cases, which statements the judge shall receive and peruse, and put on the record; but he may, nevertheless, frame the issues from the allegations of fact which he collects from the oral examinations, notwithstanding any difference between such allegations of fact and the allegations of fact contained in the written statements so tendered by the parties, or their attornies, or vakeels. No such written statement shall be received after the first hearing of the case, unless called for by the judge under the power hereinafter contained. It shall be competent to the judge, at any time before final judgment, to call for a written statement, or an additional written statement, from any of the parties, for the purpose of assisting him to frame or amend the issues." That power was considered an advisable one to give to the courts, in order to get at the bottom of those very intricate cases which we sometimes have in India, and it was considered a good one by the commission.

4142. The statements are not in the nature of pleadings presented by either party?—No.

4143. But they are statements reduced into writing which might be difficult to bring out in oral exmination?—Yes; it is stated distinctly that they shall not be by way of answer one to another.

4144. Is there any other statement of Mr. Theobald's which you wish to correct?—No; there are one or two points upon which I think he is mistaken with respect to the jury trial.

4145. It has been stated to the Committee that it would be a great improvement if the proceedings in the Mofussil courts were conducted in the English language; what is your opinion upon that subject?—To that I entirely object.

4146. Will you state your reasons for that objection?—I believe that the impression upon the minds of the natives would be that it was an act of gross injustice; and I do not see how the proceedings are to be carried on in English,

as

as the natives understand only their own language, without creating a sense of injustice in the minds of the natives.

4147. Are you of opinion that suitors do practically suffer from the ignorance of the civil servants of the East India Company of the native languages?—They may do so in petty criminal cases at the commencement of the civil servants' career; but I believe that a man is competent to carry on his duties in the native language probably within the first six months, certainly within twelve months. As men are trained now, they are obliged to pass an examination in the native languages in all the early stages of accession and promotion to office. Twenty years ago the proceedings in the courts were conducted in Persian; but since that they have been conducted in the vernacular language.

4148. *Chairman.*] Did the native understand the Persian when it was the language of the law courts?—He did not; but there was not a single court where there were not a number of persons who did understand Persian, and who could convey to the mind of the native suitor what was intended by the Persian documents. But you will not find scattered over the country, and attending upon the courts, people who could convey to the natives what was intended by a document drawn up in English.

4149. Mr. *Lowe.*] It is stated that the proceedings in the courts in Bengal are carried on in Hindee?—There is no such thing as Hindee proceedings in the Lower Provinces at all. Those who have made the statement have mistaken Hindee for Hindostanee. The European officers of the Government probably speak Hindostanee better than they do any other language; but it is not to be supposed that Hindee or Hindostanee would be altogether unintelligible to the great portion of the people in Bengal. When a regiment from Behar or the Upper Provinces comes down to Barrackpore or Berhampore, it is not to be supposed that what they say is perfectly unintelligible to the whole of the Bengal community. They get on as well as others. But the fact is that the civilians do understand the language of the country in which they are employed, and they can converse in that language with the people who are brought before them.

4150. Do you think that it is right that the Hindostanee should be used in the courts of justice in Bengal?—No; it is not used: as far as the record of the local court goes, it is entirely in the Bengalee. I speak of what I recollect of India, and of the cases coming before me as a judge of the Sudder. The summonses were in Bengalee, every document was in Bengalee, the evidence was in Bengalee, and the order of the court was in Bengalee.

4151. *Chairman.*] The Hindostanee is used in the higher parts of India?—The Hindostanee is spoken in the higher parts of India, but it is the *lingua franca* of India; and if a man can speak Hindostanee well, he will get pretty well through most parts of India.

4152. Mr. *Lowe.*] You have stated that the young inexperienced civil servants do make errors from not understanding the native language?—Yes, occasionally.

4153. Do you think that it is right that the judges should learn the native language at the expense of the suitors?—Certainly not; but there is not much of that; the probabilities of a young civil servant going wrong in the petty cases he has to try might be greatly avoided by good superintendence over him. By sending him out occasionally to a police tannah at a distance from the head station, and into the district for purposes of local inquiry, where he could find nobody but natives to talk to, would soon get him over his difficulties.

4154. Are gentleman placed in those situations at an earlier age than used to be the case?—The magistrate is brought to the office of magistrate at an earlier age than he used to be.

4155. Do you think that that is an improvement?—No.

4156. How has that happened?—From the overgrowth of territory, as compared with the strength of the service.

4157. The civil service has not been augmented in proportion to the augmentation of our dominion?—No.

4158. Supposing it could be afforded, a great deal would be gained by an increase of the civil service?—Yes; and I would adopt the plan in Bengal which has been adopted in the Upper Provinces, of having the Magistrate and Collector united. There are objections to it, but I believe that the experience of the older officer would be of infinite value in the magistrate. The natives understand the system thoroughly; they understand the union of functions in one officer far better than being sent for what they want from one officer to another.

J. A. F. Hawkins, Esq.

20 May 1858.

4159. It has been suggested that it would be desirable to increase the civil service from the uncovenanted service in India; that is, to give the Governor-general a power of employing gentlemen of the uncovenanted service in offices, which have hitherto been appropriated to the covenanted service?—That is a very large question, and the way in which I would look at it is this. The service in India has been kept free from jobbery by a nomination to the service in one quarter from home, and a nomination to office by another in India. Those who send out our civilians from home, can do nothing with them after they once get to India. Those who employ them in India have no part whatever in the nomination of them to the service. Now you would break down that if you gave the nomination to the service and to the office both to the same individual; and I think on political grounds that the thing is to be objected to.

4160. You have stated that the commission were ordered to take measures for the amalgamation of the Supreme and Sudder Courts; are you of opinion that that amalgamation is desirable or practicable at the present time?—I do not think that it is either desirable or practicable at the present time.

4161. Will you state why?—The amalgamation of those two courts is a thing that I would keep in view, but I should look at it as far distant. You have now different courts of law, presided over by judges who have been trained very differently. The two systems of the Queen's and Company's courts are now, whether in regard to procedure or law, very different from each other; and I do not see how it is possible to proceed with a satisfactory amalgamation. A great deal must be done before that amalgamation can take place. There should be an approximation in the system of justice administered by the Queen's courts and the Company's courts; it should be done gradually, and then perhaps the one may slide into the other. What I mean is this: you have four codes of procedure for the four different sides of the Supreme Courts: the Law, the Equity, the Ecclesiastical, and the Admiralty. You have those four different codes in the Supreme Court. You have a different procedure in the Company's courts. What I would like to see, in the first instance, would be, a simple code of civil procedure adopted by the Supreme courts for all sides of the court, and that the Company's courts should have the same code. Then you might have the same penal code, and in most respects the same criminal procedure adopted by the Company's courts and the Queen's courts. A construction put upon the code of law or the code of procedure on the part of the Supreme Court, watched as it would be by the Company's courts, would give us the benefit of the judgment of the Supreme Courts, and we should have the same codes of procedure, the same criminal law, and to a great extent the same kind of administration. Then as to civil law, there is no such thing as a substantive civil law beyond the law administered to the Hindoos and Mahomedans. I desire to see a substantive code of law prepared for the Mofussil, and it might be founded upon the principles of English law. With regard to the law of contract, we could very easily frame a code of laws which would embody some of the leading principles of the Hindoo and Mahomedan and English law. That law introduced and acted upon in the Mofussil would bring us a point nearer to the law administered by the Supreme Court, and then you might carry it even further. I should have no objection to see a barrister from the Calcutta bar put upon the Sudder Bench. In this way we should approximate both as to procedure and as to law, and in the course of time the two courts would be much better prepared to slide into each other than they are at present.

4162. Will you explain the present state of the law in India, out of Calcutta, a little more fully. Suppose a Hindoo sues a Mahomedan, what law prevails?—The law of the defendant; but the case supposed can scarcely happen under the personal law, say of inheritance, for in a case of that kind both parties would be Hindoos, and the same with regard to Mahomedans. Where the Hindoos and Mahomedans sue each other is with reference to contracts. A contract is under no law in the Mofussil. The Supreme Court administers the personal law not only with regard to cases of inheritance, succession, marriage, and adoption, but it also includes contracts.

4163. In Calcutta if a Hindoo sued a Mahomedan the law would be the law of the Mahomedans?—Yes.

4164. If, on the other hand, a Mahomedan sued a Hindoo, it would be the law of the Hindoo?—Yes.

4165. If a Frenchman sued an Englishman what would the law be?—The English law.

4166. If

J. A. F. Hawkins, Esq.

20 May 1858.

4166. If a Frenchman is defendant, under what law would he be sued?—Under the English law. My impression is, that the Supreme Court administers the personal law only of the Hindoos and the Mahomedans. In the Mofussil we have the administration of personal laws with regard to Hindoos and Mahomedans concerning all cases of inheritance, succession, marriage, adoption, and caste; but the personal law there does not extend to the law of contract. In such cases there is no law in the Mofussil except the law of equity, justice, and good conscience of the judge; he has no other law to follow. That is the great want in the Mofussil, that we have no written law, no authoritative code or digest of any kind; and I look upon the want of a written law as tending to demoralize the people, by promoting litigation. When you have a Hindoo or a Mahomedan brought into our courts upon their own laws, I have seldom seen a case in which it has not been a question of fact rather than of law. For instance, a man will say, "So-and-so died, leaving two sons;" and the other party will say that he died, leaving three sons; but the moment you settle the matter of fact, they do not dispute the question of law; and I believe it would be much the same if you gave the people a written law, as I have above stated. If you gave them a law that they could follow out of court, you would prevent a great deal of the litigation and the evil that goes on. A Mofussil substantive civil law is a great desideratum in India.

4167. Though the English system of law says that no contract is valid without consideration, another system says that, if solemnly made, it is valid without consideration; it entirely depends upon the judge?—Yes.

4167*. There is nothing to decide in those cases under the law in the Mofussil?—No, nothing whatever. A man might go and look for a case that had been decided before.

4168. Did the Law Commission consider that question?—Yes.

4169. What was their opinion upon the subject?—That there should be a law.

4170. When was that report made?—That report was made in 1856.

4171. What practical steps did they recommend to be taken?—That a digest of substantive civil law should be prepared; that was recommended by all the commission, with the exception of two dissentients, Sir John Jervis and yourself.

4172. We agreed in the necessity of providing a law, but we only differed as to the manner in which it should be done?—Yes.

4173. Whether it should be by a code or by the adoption of the English law?—Yes.

4174. Has any step been taken to carry out that recommendation?—None whatever, that I know of. If I may be allowed to refer to it, here is a letter of Sir Laurence Peel's, he being the Chief Justice of the Supreme Court of Calcutta, upon the same subject. He writes to Sir Henry Hardinge, the Governor-general, in July 1845: "The questions which your letter proposes to me I am enabled to answer without delay, because I have previously given the subject a full and anxious consideration. The *lex loci* Act, if accompanied by a digest of such parts of the English law as it was deemed expedient to introduce into the Mofussil, would introduce no difficulties, subleties, or technicalities whatever. It is, in my opinion, indispensable to the success of this experiment that a digest should form a part of it, which might readily be enacted." That was what he then proposed, and his words express the wants of India as to a code of civil law.

4175. Would not the labour of a few weeks be sufficient to prepare a law of contract practically sufficient for the wants of India?—Yes; the most unfortunate thing that we have had to contend with in India is, the apparent dislike there has been to receive anything at the hands of a Law Commission. I am afraid we have suffered from that.

4176. Is there a little jealousy in that respect on the part of the civil service?—I do not think that the proceedings of Law Commissions have got into the hands of the civil service, generally.

4177. But on the part of the higher authorities?—I think it an unfortunate thing that more countenance has not been given to the Law Commissions, because there are in the hands of the authorities in India, and in this country, the labours of Law Commissions for the last 25 years, which if once adopted would give India a very different administration from what it has now.

4178. Mr. *Campbell.*] That experience has not been reduced to law?—We have these labours here reduced to two as superior codes as you will find anywhere.

J. A. F. Hawkins, Esq.

20 May 1858.

where. However, the authorities are not to blame for this, because they had it before the Legislative Council when the mutiny broke out.

4179. Mr. *Lowe.*] The Commission prepared two codes?—Yes; the civil procedure and the criminal procedure, which are far superior to anything which they now have in India.

4180. You were one of the original Commissioners?—I was one of the original Commissioners.

4181. Did the Commission enter upon their labours under a distinct understanding and undertaking from the Government, that what they recommended should be carried out?—That was the impression upon the minds of the Commission.

4182. It has been stated that the civil servants of the Company have been anxious to obtain some Act protecting them from liability for their conduct as such civil servants; that is founded, is not it, upon the case of Calder *v.* Halkett?—Yes, but it is a mistake.

4183. In what way?—I held the office of register of the Sudder Court in Calcutta for 10 years, and that was the channel for the communication of all correspondence upon legal subjects with the Supreme Government; and I believe I can say that, during the whole of those 10 years, not a single letter upon the subject passed through my hands. Here is the Act, which was passed in the year 1850, giving protection to the judicial officers of the East India Company in the Mofussil; and it agrees almost word for word with the recommendation of Sir Laurence Peel himself, who was the party to originate it. I have the letter of the Supreme Government sending home Sir Laurence Peel's letter, and the Act itself is almost a copy of a paragraph of his letter.

4184. What is the effect of the Act?—It is very short: "No judge, magistrate, justice of the peace, collector, or other person acting judicially shall be liable to be sued in any civil court for any act done or ordered to be done by him in the discharge of his judicial duty, whether or not within the limits of his jurisdiction; provided that he at the time, in good faith, believed himself to have jurisdiction to do or order the act complained of: and no officer of any court, or other person, bound to execute the lawful warrants or orders of any such judge, magistrate, justice of the peace, collector, or other person acting judicially, shall be liable to be sued in any civil court for the execution of any warrant or order which he would be bound to execute if within the jurisdiction of the person issuing the same."

4185. What was the case of Calder *v.* Halkett?—It was a case of false imprisonment that Mr. Halkett, the magistrate of Nuddea, was charged with by Mr. Calder. How the case was decided in the Supreme Court I am not quite prepared to say, but I think it was given in favour of Mr. Halkett, under the Act of Parliament which protects judicial officers. That was overruled by the Judicial Committee of the Privy Council, who seemed to think that the protection which the law intended to give was not of that nature that Mr. Halkett claimed.

4186. The effect was that the civil servants of the Company had not that protection which magistrates and judges in England have?—Yes. Sir Laurence Peel says, in proposing this law, "This, as far as the courts of the East India Company are concerned, will make the law what I believe the intention of the Legislature to have been to make it. The decision of the Privy Council in the case of Calder *v.* Halkett, has given a different meaning to the Act, and that decision of course must be followed by Indian courts. In my opinion, justices of the peace are very inadequately protected, as well as inferior judges generally;" and the Act, as I have stated, is almost word for word, a paragraph of his own letter.

4187. It has been stated to this Committee that the Government of the Company has become more arbitrary of late years, and it has been attributed very much to that Act?—That I cannot say.

4188. With regard to the indigo planters in the Mofussil, and their relations to the ryots, does the state of the law at this time afford the indigo planters any means of getting undue control over the ryots?—I do not know that it gives them any means of getting undue control over the ryots. When an indigo planter has once made his advance to the ryot, he has his immediate summary application to the court if the ryot does not carry out the terms of the contract.

4189. How does that work practically?—It depends very much upon the character of the planter; in some places it works well, in other places it is thought to be an engine of oppression.

4190. Is

4190. Is it not the fact that it is very much the practice to get a decree against a ryot?—That is supposed to be for the purpose of getting a hold upon the ryot.

4191. He does not exactly perform his contract, and then a decree is obtained against him?—He gets a contract to cultivate so much indigo, and he gives indigo that will not pay off the sum that he is indebted to the planter; the planter has the option to go to the court to get the balance, and he gets a decree which may or may not be enforced. If it is not enforced he has a hold against him for the future; if the ryot should go off to a rival planter he has a hold against that man by the decree, which he can put into force at any time.

4192. Then from that moment he has great power over him?—Of course if he chooses to exercise it.

4193. Practically when such a decree is obtained, the ryot does not leave the indigo planter?—No; he may go and tender the whole of the balance in court if he chooses, and get rid of the decree.

4194. A good deal has been stated before the Committee with reference to Mr. Grant's sale law; are you familar with the details of that law, and with the objections taken to it?—The objection which the indigo planters took, was chiefly with respect to the working of the Act.

4195. What was the object of the Act?—One of the leading objects of the Act was to give protection to under-tenures under the revenue laws; now under-tenures are not protected, that is to say, the moment an estate is sold for arrears of Government revenue, every intermediate tenure between the zemindar and the cultivator of the soil, with certain specified exceptions, is immediately abrogated; it falls to the ground. One of the great objects of Mr. Grant's sale law was to give protection in such cases.

4196. How was that to be accomplished?—By a local inquiry, to ascertain whether it was a fair rent that the intermediate tenure holder was paying.

4197. Supposing it was a fair rent?—Then he proposed to maintain the tenure.

4198. If he thought that it was a *boná fide* transaction?—Yes; in fact a *boná fide* transaction is now maintainable under the law, notwithstanding a sale, if it is for 20 years.

4199. If it is for less than 20 years, it was proposed to maintain it if the result of the inquiry was favourable to the putneedar?—Yes.

4200. Mr. *Villiers.*] The inquiry is as to whether it is a *boná fide* transaction, not as to the rent being a fair rent?—It is as to whether it is a *boná fide* contract, and also as to whether the rent is a fair one.

4201. Mr. *Lowe.*] The inquiry respects both?—Both.

4202. Was not that question whether the rent was a fair rent, a substantive consideration?—I have several papers relating to that subject which I shall be happy to hand in to the Committee.

4203. With regard to the Opium Contract Act with the Government, what is the nature of that Act; does it give the Government a summary remedy against people to whom they have made advances?—The old law did so. That law has been altered in some respects; a new opium law came out last year. The officer who made the advance had the power of proceeding against the man to whom the advance was made, and of enforcing his claim.

4204. How was he to proceed?—Supposing the party taking the advance had not cultivated the specified quantity of land, he first called the man before him, and went into the evidence upon the subject, and fined him, and levied the penalty.

4205. If he did not pay the fine, what happened?—He was sent to prison for a certain number of weeks or months.

4206. Will you state what the new Act is?—By the new Act there is also a penalty on the cultivator who has received advances neglecting to cultivate the full quantity of land; that is a penalty that may be enforced by the opium officer.

4207. With a power of fine and imprisonment in the same way?—To the extent of three times the amount of the advance.

4208. And in case of default of payment, what is to be done?—My impression is, that it is to be enforced in the same way as a decree of court. You take the man's property and sell it, or send him to gaol. With regard to all other penalties for embezzlement and illegal purchase of opium, and various other offences formerly punishable by the opium officer, the party must now be tried by a magistrate.

J. A. F. Hawkins, Esq.

20 May 1858.

4209. Does the law limit the power of the officer?—Yes, he must go, as a prosecutor, before a magistrate.

4210. Mr. *Lowe.*] The power of adjudicating, except in one case, is taken out of the hands of the officer, and put into the hands of a person who is more impartial?—Yes, and into his hands in preference to the judge, with reference, I presume, to those provisions of the penal code which include offences against the revenue laws.

4211. It has been suggested, that it would be a great boon to the European settlers to make the provisions of the old Opium Act apply to their dealings with the ryots?—You could not give to the indigo planter the option of sending the man to gaol. In the one instance you would have a man acting in his own case, while in the other instance it was a public officer, having no personal interest.

4212. You think that it would not be a good thing?—No.

4213. You think it would be against justice?—Yes; there were some offences under the old indigo laws made punishable criminally by the magistrate, which are not so now, those laws having been repealed.

4214. With regard to the redemption of the land tax, what is your opinion upon that subject?—From the high price that you would have to pay, probably 25 years' purchase of the Government revenue, to redeem, I do not think that it could be done; I think it quite hopeless.

4215. You heard Mr. Mackenzie state that he was willing to redeem at that price; suppose persons are willing to do it, do you see any objection to it?—No; anything that could be done to throw capital into the land I see no objection to.

4216. Is not a great deal of the difficulty, with regard to the tenure of land in Bengal, owing to the want of a complete survey and valuation of the land?—Not so much with regard to tenure as to the ascertainment of what is comprehended in the tenure. As good a survey in Bengal as there has been in the North West Provinces would have saved us a great deal of trouble and litigation.

4217. *Chairman.*] How far has the existing survey of Bengal proceeded?—We have had no recent accounts from India. They have spent about 20 lacs of rupees, but there have been no reports for a long time as to what has been actually done. Beyond some districts in Behar, and a few in Bengal, there is no account of the progress of the survey I believe that for the last two or three years there have been no regular reports.

4218. Mr. *Lowe.*] Has not there been some Commission to resume la-khiraj land in Bengal?—Yes; there were certain officers, called special Commissioners, appointed for the trial of cases of resumption. That was done by a law which was passed in the year 1828.

4219. What has been the result of that?—The result of it has not been good; it has given a great deal of dissatisfaction, though the thing proceeded upon a sound principle, which was, an inquiry into the titles to hold land rent free, many of which were forged and many were false; and it had been held out to the people from the very commencement of Lord Cornwallis's system, in 1793, that all those titles were liable to inquiry; but I think the inquiry was postponed too long, and when once entered upon, it was entered upon too extensively, and the effect was a great deal of dissatisfaction.

4220. And alarm?—And alarm.

4221. You think it was not worth the alarm and dissatisfaction?—I do not think it was.

4222. The delay in executing decrees is very much complained of?—Yes.

4223. How does that arise?—You cannot take a man's property in attachment for a decree of court, but you may have a dozen people who rise up and claim the property, and there is a law-suit to be gone through with every individual.

4224. The remedy for that would be something that would make the ownership of property notorious?—Yes; and this code of procedure which you propose, which carries out the principle of personal examination from first to last, would be effective. The very circumstance of being able to call the man into court who sets up a claim, and to examine him upon that claim, would put an end to many false claims.

4225. A decree may stand over for 12 years without being executed?—Yes, it may.

4226. Do you think that that is a proper regulation?—No. I think that it should be enforced within a reasonable time; but it is a mercy to some people to allow

allow the decree to stand over. But I may state, that the whole system of the law of limitation needs revision: 12 years is too long; it ought to be six years for all cases of contract, though not as to inheritance.

4227. Is that limitation established by regulation?—Yes; the time is calculated from the date of the cause of action.

4228. *Chairman.*] The law of title has no limitation, has it?—There is a prescriptive title of 60 years; but ordinarily if you have a claim for real property upon contract, or otherwise, you must bring it within 12 years.

4229. Do you think that a law of limitation is required generally in India?—Yes; a more stringent law than the present law.

4230. I refer generally to the limitation of actions?—The question has been considered over and over again, and it has generally been considered that a new law is advisable.

4231. Mr. *Lowe.*] What is the rate of interest recognised in Bengal?—None at all; it used to be 12 per cent. The Usury Act, which was passed last year or the year 1856, has done away with all rate of interest.

4232. Anything beyond 12 per cent. before was illegal?—Yes; it not only could not be recovered, but it vitiated the contract.

4233. With regard to the police; what is your opinion as to the state of the police in Bengal?—It is bad.

4234. What remedy have you to suggest for that?—I have been thinking of it for the last 20 years, and I can scarcely say how it should be done. One thing is, to improve the officers with whom you work by giving them a higher pay; that has been recently done.

4235. You refer to the native officers; the darogahs, for instance?—Yes; and there would be a great improvement in the police by your locating deputy magistrates in various parts of the districts now under the entire control of a zillah magistrate.

4236. The deputy magistrate is a European?—No, not necessarily; I would prefer more Europeans, but I do not think the financial considerations would allow of it. With regard, to the more subordinate officers of police, I would like to see a greater infusion of the European element, beginning at posts close to the magistrate's station. It will not do to send out Europeans at all distances from the magistrates' courts, who are unable to speak the language, and who may treat the natives in a way that would not be desirable. There is no man perhaps more sensitive than the native upon that point, and there is no man in the world who understands better what gentlemanly treatment of him is. Were you to infuse more of the European element, and begin under the eye of the magistrate, and extend it by degrees as you got good hands, you might greatly improve the whole of the police by so doing; but then comes the financial consideration. Both as to the extensive employment of European deputy magistrates, and the infusion of a larger European agency into the police, you have difficulties to contend with on the part of the Indian Chancellor of the Exchequer.

4237. You do not think that taking intelligent serjeants out of Her Majesty's regiments, and placing them in the police, would be a good thing?—Yes, commencing near to the eye of the magistrate. When he knows his men, and can trust them to go further from him, I would extend the place.

4238. With regard to the criminal law, by which a man is tried in Presidency towns, and in the Mofussil, is that of the same personal character?—In the Mofussil it is called the Mahomedan law, modified by the Regulations.

4239. Is there one criminal law for all India?—Yes, beyond the Presidency towns, and within the Regulation Provinces.

4240. And that is the Mahomedan law?—That is the Mahomedan law.

4241. And not the English law?—And not the English law. It is called the Mahomedan law, but there are very few remnants of the Mahomedan law.

4242. Englishmen are subject to the English law?—Yes, and in petty cases the magistrate has a special jurisdiction under an Act of Parliament.

4243. What does a Frenchman do?—He is tried by the English law in Calcutta.

4244. And in the Mofussil?—Then by the modified Mahomedan law. An Act was passed in the year 1832, which said that any person not a Mahomedan was at liberty to ask for a jury, and was to be tried by that jury without any intervention of a Mahomedan law officer.

4245. Were the jury to be of his own race?—He might be a Frenchman, and

J. A. F. Hawkins, Esq.

20 May 1858.

in that case we could not get a French jury; but if he was a Hindoo he might be tried by a jury of his countrymen.

4246. Mr. *Villiers.*] Without reference to race?—Yes.

4247. Mr. *Lowe.*] With regard to the law, suppose that a Frenchman committed murder in the Mofussil, under what law would he be tried?—The Mofussil law.

4248. That is the Mahomedan law?—Yes, that is the Mahomedan law as above explained. In all cases formerly, the Mahomedan law officer sat upon the bench; he is now dispensed with, and we may have a jury.

4249. Mr. *Villiers.*] If an Englishman commits a murder in the Mofussil, where is he tried?—He must be sent to Calcutta to be tried.

4250. Mr. *Lowe.*] Can you mention certain instances of the inconvenience of the practical working of that law?—It occurs wherever a European is guilty of any offence of that kind at a distance from Calcutta. I have just had two cases pass through my hands; one was the case of a man in Lahore for embezzling a trifling sum of money. That man was sent down to Calcutta to be tried by the Supreme Court, 1,300 to 1,500 miles away, at a very great expense to the Government. There was a case occurred the other day in which a man was sent from Ootakamund, in the hills at Madras, to be tried for opening a letter which passed through his hands. He was a European postmaster, and it cost the Government about 2,000 rupees to prosecute him for stealing 200 rupees; and of course, when a European commits any crime, he must be sent down, together with every witness, which is a great hardship upon the people, except in the case of petty assaults, which, under the Act of Parliament, the magistrate himself may punish.

4251. You stated that the magistrate has a discretion in referring a European to the criminal court over which the native judge presides; what does he do supposing he does not refer him?—If this code were passed he would try him himself, or commit him to the Session Court, but that is not the case now.

4252. It does not depend upon the reference of the magistrate now?—No; the magistrate cannot himself punish a European, except in petty cases.

4253. What was your plan if he did not refer him?—That he should try him himself, or commit him to the Session Court.

4254. Mr. *Willoughby.*] The magistrates have a very limited jurisdiction over Europeans, even in the Mofussil, in their capacity of justices of the peace under the old Act of Parliament?—They have no penal powers whatsoever, as justices of the peace under the Act of Parliament referred to.

4255. Have they not, under the Act of the 53 Geo. 3?—It is a mistake to suppose that they have that power as justices of the peace; it is as district magistrates. The clause of the Act which gives that power does not speak of a justice of the peace, but of a zillah magistrate. It has been referred to the Advocate-general at Calcutta as to whether the magistrate was required to sign the summons, or the warrant for the arrest of a European, as a magistrate or as a justice of the peace, and the answer has been that he acts as a magistrate, and not as a justice of the peace; he may be sworn in as a justice of the peace, and take informations against a European; but then he would send him down to Calcutta, and if he was not a zillah magistrate, and had not the powers of a magistrate, he could not punish him; he must do that as a magistrate.

4256. Mr. *Campbell.*] If I understand you rightly, Sir Arthur Buller's reading of the Black Act is incorrect as regards the exemption in favour of the Queen's or the Company's officers?—He is incorrect in so far as considering that the whole four classes exempted from the jurisdiction of the inferior courts include only Europeans, whereas the fourth class includes natives; that is to say, if I read Sir Arthur Buller's speech right.

4257. I understand you that if this Black Act had been put into operation, a junction of the Supreme and the Sudder Courts was to have taken place?—Yes, the amalgamation of the two courts was part of the scheme.

4258. Was not the Black Act attempted to be introduced recently, before that junction of the Supreme and the Sudder Courts had taken place?—I cannot say what the proceedings or the intentions of the Legislative Council might have been; it was thus prepared, and it was intended that the whole should have been one general scheme. No doubt it would be advisable that a great portion of that procedure should be passed independently of that amalgamation.

4259. Mr. *Lowe.*] Was not it an attempt to take out a portion of it, letting the question of the amalgamation of the Supreme and the Sudder Courts stand over

for

for a time?—Yes; it was an attempt to take the codes of procedure made for the amalgamation, independently of the amalgamation.

4260. Mr. *Campbell.*] You mentioned that the authority of a magistrate, or other officer of the service, would be materially damaged by subjecting him to trial by a native official?—Yes.

4261. Does not it occur to you that an independent resident or planter might, in a pecuniary sense, in reference to his property, be equally damaged by being subjected to trial by a native?—I object to it altogether, criminally; and with reference to the subject generally, I would say that I would not subject a European to the magistrate, with regard to a summary jurisdiction, to the same extent that he has over a native. The European never having been subject to the Mofussil Courts, if I were to subject him to the Mofussil Courts, and to the jurisdiction of the magistrate, I would proceed with the same jurisdiction that the magistrate has in the Presidency towns. I think that it would be unnecessary to give him that same summary jurisdiction over the European that he has over the native, but rather he should have a smaller jurisdiction, and for a higher offence Europeans should be tried by the sessions judge, with a jury.

4262. You object to the introduction of the English language in the Mofussil Courts?—Yes, I do.

4263. You are aware that in Ceylon the English language is the general language of the Courts?—Yes.

4264. And that the people there are generally conversant with the English language?—Yes.

4265. Is there anything to prevent the people of India from acquiring the English language in the same way?—You have a vast population to deal with, old and diverse languages to which they are attached. As an abstract question, I should like to see the people of India in possession of an English education, and of the English language. You have, however, been carrying on the old system far too long to admit of a ready transition to another. Powerful influences would be arranged against you in the attachments and strong partialities of the people for their own languages, and the large body of Vakeels and Mookteears, who exercise considerable influence, and who would be displaced by the introduction of the English language, would do all in their power to increase and strengthen the opposition to any such attempt. My fear is that the introduction of the English language into the administration of justice, would be viewed by the natives throughout India more as a badge of conquest, and an act of injustice, than in any other light.

4266. Do you think that conducting the proceedings in a language with which the judge is only partially acquainted is beneficial to the people of India?—At all events, the people like it, better than doing so in a language with which they are not at all acquainted.

4267. Would it not be desirable to gradually attempt the introduction of the English language, seeing that the fruits flowing from it are so good in other places?—I do not see how you could do it gradually, except by English education.

4268. Would you make the experiment in any one district where it might be optional to the people which language they took?—I am opposed to that; I do not think you could do it without causing alarm to the people generally.

4269. On first appointments a system of competitive examination exists in this country?—Yes.

4270. Do you think that there is any objection to that system of competitive examination existing for posts in India, where great efficiency would be required in the officers; would it not be beneficial, as testing the efficiency of the officers for employment?—Yes; but you scarcely have a field large enough in India, except among the natives.

4271. A man having passed the competitive examination here is endorsed for life in his employment in India, and there is no encouragement to the efficient officer over the inefficient; do you think that any benefit would result from having competitive examinations for the situation of magistrate and collector, or any other situation?—I would go about improving the service in another way. I think that you cannot go about it in a worse way than you are doing at the present moment. The candidates for the present competitive examination are young men of 22 or 23, and it appears to me that this system of competitive examination at home has been framed much more for the benefit of the Universities in England than for the benefit of the people of India. To take a

J. A. F. Hawkins, Esq.

20 May 1858.

man at 23, and then allow him to stay in England till he is 25, and then send him out to India, is not the way to get a good officer for India. He is too old, and he will not pick up the language in the same way, and will not submit in the same way that we did as boys to the drudgery of inferior situations. The way is to take your men at 18, and then educate them for a period not exceeding four years, expressly for India, in jurisprudence, law, political economy, Indian languages, history and geography, and to insist upon their attending so many circuits, and attending the county courts. In that way you would raise up a body of men far more efficient than the present; and if they were trained properly at home you would want no competition in India. But to send out a man at 25, because he is a good literary man does not seem to me to be a good way of getting an efficient service.

4272. Mere scholistic qualification does not meet practically the wants of India?—Certainly.

4273. You are of opinion the superior and same judicious selection here would supersede the necessity of a competitive examination out there as vacancies arose?—Yes, that is the point; get efficient men here, and you would not want competition for particular appointments in India.

4274. You object to throwing the covenanted civil service open to the uncovenanted service, by reason of the jobbery that might be encouraged, and you gave as an example, that inasmuch as the first appointments emanated with the Court of Directors, and they had no further control over the civil servant in India, the service was free from jobbery?—Yes, but now competition is substituted for nomination by the Court of Directors.

4275. Do you not think that emulation in the service should be encouraged, and that a deserving uncovenanted officer should have advancement, the same as a deserving non-commissioned officer is open to having a commission given him?—I would give encouragement by the prospect of promotion, but the officers should rise in their respective services.

4276. Is not the service of India one service; is not the uncovenanted magistrate performing duties which are nearly analogous to those performed by the covenanted magistrate?—Then you open the question, can you do it for the European uncovenanted magistrate without doing it for the native in the same position. Now I do not think that the time has come when you can put the natives into the higher offices.

4277. What is there to prevent your excluding them if they are not qualified. Because they are not qualified, is that any reason why the uncovenanted European officer should be excluded?—I do not see how you could admit one without the other; and I do not see how you can bring the natives in. It is not a mere question of personal qualification for the duties of a particular office.

4278. With reference to the jobbery; you must be aware that it is competent for an influential Director here to write to his friend the Governor-General, or his other influential friends in India, to exercise a little fatherly care over his protegée?—There is not the slightest doubt of it. But I would take the opinion of any man who knows the civil service in India whether it is not particularly free from jobbery.

4279. Would not interest do more for a man than his acquirements?—I do not think that it would in India.

4280. From the extension of our territory, you say that India is under-supplied with civil and judicial officers?—Yes; the civil service at large is, I think, undermanned.

4281. Do you not think that that might be remedied to a great extent by a further efficient police, with a larger European organization, and might not the duties of the civil service be materially abridged by a more efficient police?—Unquestionably; a great deal of the work done by assistants would be done then by other officers.

4282. So that if you increase the police, and had it made efficient, there might not exist the same necessity for an increase in the civil service?—No, I do not think that it would do away with the necessity altogether; but it would abridge it.

4283. You are aware of the existence of an asylum in the hills called the Lawrence Asylum?—Yes.

4284. Do you not think that young men educated at that asylum might be very profitably infused into the police of India?—Yes. My only fear is, whether they would last in regard to health.

4285. Have

4285. Have you ever been in the hills yourself?—Very little; but I have been there. I have no doubt that Europeans would keep their health there pretty well; but I should doubt whether those born and bred and brought up there would stand the plains very well.

4286. It has never been finally satisfactorily proved what is the duration of life in the hills with respect to the generations, whether it is one, or two, or three?—No, there has not been time for that.

4287. You have just mentioned the great inconvenience of bringing Europeans from remote parts of India for trial by the Supreme Court for criminal offences: would you recommend an extension to Allahabad, Delhi, or Lahore, of the Supreme Courts which are now held at the Presidency towns, with a view of saving the cost and trouble of bringing criminals long distances for trial?—No, I would not.

4288. What would be your objection to that?—I do not believe that the natives would like it. I speak of what I know of India; I believe that they dreaded the extension of the Supreme Court.

4289. You think that the occurrence of offences among Europeans would not be sufficient to warrant it?—No, it would not. The Committee may be aware that Lord Macaulay some years ago expressed a strong opinion of the dread of the natives of the extension of the Supreme Court; and he spoke from documents and petitions that were presented to the Council when the natives thought that the Supreme Court was about to be extended.

4290. Mr. *Willoughby*.] You have alluded to the inexperience of the judicial authorities in some respects; do you recollect that in Lord William Bentinck's time all civil jurisdiction was transferred from the European judicial authorities to the native?—Yes, nearly all original jurisdiction.

4291. Has not that been one of the great causes of the deterioration of the service, by destroying a school in which Europeans were trained?—Yes; unquestionably it has been a great evil that the office of register was abolished; that was upon the civil side.

4292. And the assistant register?—There were no assistant registers in Bengal.

4293. Those who are in favour of establishing courts of justice on the principle of the Supreme Courts in the Presidency towns have stated that they think that it is practicable, and would be even beneficial, to administer the English law through the medium of the English language, by means of interpreters; do you think that able and honest interpreters could be found?—If you could get the most honest interpreters in the world, you never would satisfy the natives, when the administration of justice was carried on through the medium of a language which the people did not understand.

4294. You have stated that if magistrates and deputy magistrates were placed in greater numbers in Bengal, there would be an improvement; you are aware that that is in force and works well in Bombay?—Yes; there has been an alteration in the Bombay police within the last three years, by giving a larger European agency, which has answered remarkably well.

4295. In Bombay assistant magistrates are placed in subordinate districts?—Yes.

4296. The resumption laws are not in force now?—No; the practical operation of them has ceased.

4297. You have alluded to the Mahomedan law being the criminal law in the Mofussil, with modifications; what do you mean?—The basis of the Cornwallis system was, that the Mahomedan law was to be administered; but it has been modified at various times, by various regulations of the East India Company, which have done away with the distinctions that the Mahomedan law draws as to the various kinds of crime, and have done away with the distinctions that it draws as to various kinds of evidence; all those distinctions have been done away with, and the laws we administered under those regulations, which are considered as modifications of the Mahomedan law.

4298. Have not they done away with some of their punishments and penalties?—Of course; mutilation was the first; you could not keep that.

4299. Then in fact the law administered is that of the Company's regulations, rather than the Mahomedan law?—Yes; it is called the Mahomedan law, modified by the Company's regulations.

4300. You alluded to the alterations in the system of preparing young men for

J. A. F. Hawkins, Esq.

20 May 1858.

India; is it not the fact that the second examination which, under the report of the Commission of which Lord Macaulay was president, was prescribed, has been discontinued?—Yes, it was omitted last year; but even if the examinations had been continued, it appears to me that the time given to the additional branches of study was not sufficiently long to qualify the candidates.

4301. It is to be feared, certainly, that under the present system the young men who proceed to the civil service of India are not likely to have the small degree of jurisprudence which was acquired by the tuition at Haileybury?—Certainly not; you take a man as you find him.

4302. In this important question the Court of Directors have no voice; it solely rests with the Board of Control?—Yes; that is, by Act of Parliament, and the Board of Control passes its own orders upon the subject.

4303. Mr. *Gregson.*] You stated that the civil service is under-manned; do you know the number of civil servants in India?—Altogether I think about 800 in the three Presidencies. I am not quite clear upon that subject.

4304. To what extent would you suggest that that number should be increased?—I should like to see them increased by one-half; that is, I would raise them to 1,200 at once.

4305. With regard to competition, would it not be desirable to have some competitive examination at the three Presidencies of Calcutta, Bombay, and Madras, amongst the civil servants themselves for the different appointments?—I would rather see the examination which now exists. At present a man cannot pass into a superior grade without going through an examination, and that is carried on for two or three steps at the commencement of his career; it is not so when he gets to the higher offices.

4306. Would you extend that to a system of competition?—You might extend it to a system of competition, but the ground of competition is too limited. There might be half a dozen men ready for examination; probably not more.

4307. You propose to increase the pay of the darogahs. It has been stated in evidence, that the higher pay they receive, the higher bribes they expect?—I do not think that is so; all this has been done since I was in India; but we have made better judges than we formerly had by giving them good pay, and I do not see why we should not make better darogahs by giving them good pay; and in the course of time I think you will get a better class of men.

4308. You propose that the civil servants should be appointed at the age of 18, and remain in this country, going round to the different courts. Do you propose that they should come into the receipt of any salaries from the age of 18?—No; they educate themselves now at their own expense up to the age of 22, and then offer themselves for examination.

4309. From 18 to 22 are they to be educating themselves further at their own expense?—Certainly.

4310. Mr. *Knight.*] What sort of position does the indigo planter hold in India; is it that of a gentleman; has he a large house and establishment?—Yes. There is a wide line, and I think it unfortunate, drawn between the service of the Government and the indigo planters. Perhaps it is pressed upon us more by circumstances than anything else. I have known a number of indigo planters who were perfect gentlemen, fit associates for anybody; but I recollect, on one occasion particularly, when I decided a case in favour of an indigo planter, where the man who lost went to my superior and said, "I cannot get justice from that officer; he dines with the indigo planter." I believe that the indigo planters and the civil servants do take a view of each other which is perhaps forced upon them from the positions which they occupy, which is very unfortunate. The indigo planter very often lives at a distance from the station, and is never heard of except he appears in court for doing something contrary to law; and the judge gets the idea that every indigo planter is an obstreperous gentleman. The indigo planter hears of the judge, not as the judge actually is, but as his agent reports him to the indigo planter, and he very often imposes upon both; he imposes upon the indigo planter, and gives as his reason for the dismissal of a case in court that the judge has acted unjustly, or that the judge did so and so, or that he wanted so and so; they are both represented to each other in false lights. But this kind of thing is forced upon us by the difficulties of our position. We cannot get the native to understand that we are unbiased, and impartial, and not acting unfairly in favour of our own countrymen, if we associate with them as we might otherwise do.

4311. Does an indigo planter generally go to India with the view of becoming a planter?—I cannot speak very decidedly upon that question; but I fancy that many of them do go out to factories that belong to their relatives and friends.

4312. Taking capital with them?—Some of them a good deal.

4313. Are there others who go out in some lower capacity, and who rise?—I do not know that they rise; they have generally European or Eurasian assistants in their factories; that applies to very many of them.

4314. Do you think that 5,000*l.* would be sufficient to enable a man to go out to India as an indigo planter?—I am not acquainted with these things; but I should think that he might begin with that.

4315. Do the indigo planters carry on other businesses in India; are they merchants of any sort?—Some of them are.

4316. Do they deal in English goods?—No; they deal more in native produce; sending home native produce, sugar, and so forth.

4317. Do they frequently come back to England, having made money?—Yes, they do.

4318. Is it a competency that they make, or is it a tolerably large fortune?—That I cannot tell you. I have heard of some making large fortunes.

4319. Do you not think it is curious that there are not more men who go out to India; is it because it is not so well known?—Some have objections to the system under which they are obliged to live; and in some districts, perhaps, there is not room for more. Indigo requires a very large extent of land; it is not every kind of soil that will grow indigo; and then again I believe many of them have objections, indeed they have stated them, to the system under which they are obliged to live.

4320. You think that some improvements might be made which would enable a much larger number of English to go out?—I cannot say a much larger number. I think that improvements might be made which would induce some persons to look upon the administration in a more favourable light than they do at present.

4321. Is there room for a great extension in the cultivation of cotton or sugar?—Yes, no doubt, both with regard to cotton and sugar.

4322. And tea?—Yes, I believe so.

4323. And that would be much facilitated by an alteration in the administration?—I cannot say that. I believe that a great many would be willing to go, and do go; whether the cultivation would be largely increased or not, I cannot say. I do not think it would.

4324. Do you think that a man with 3,000*l.* or 5,000*l.* would have a better chance of making a fortune in India than by staying in England?—That I cannot say; I am not competent to speak on those points.

4325. Mr. *De Vere.*] Can you state whether, in your experience, there is any obstruction thrown in the way of the settlement of Europeans on the part of the East India Company?—Not since the restriction debarring them from holding lands was taken off; to my knowledge there has been none.

4326. Now that those restrictions have been removed, are you aware whether there is any indirect discouragement on the part of the East India Company as tending against colonisation in India?—I am not aware of that. There is this impression, I have no doubt, on the minds of many officers in India, that they would rather see the lands in the hands of the natives than see them dispossessed to any great extent. There is nothing that you now have to contend with in the North Western Provinces of a more difficult character, not to speak in stronger terms, than the fact of the dispossession of the old landed proprietors by the natives themselves, capitalists and merchants; in the settlement of the country that will probably be found one of the greatest difficulties to contend with. Now, were the natives to be ousted to any large extent by European landed proprietors, I believe that politically the thing would be difficult, if not something worse, to the Government. If they once got the notion that people were coming out from England, not simply for the purposes of settlement or for the purposes of Government, but to oust them from their lands, to which they cleave as to their life-blood, it would be a very unfortunate state of things.

4327. Are you of opinion that any prejudice exists on the part of the Company as against European colonists?—I am not aware of any at all.

4328. And, *à fortiori*, you are not aware of that prejudice operating in any way upon the conduct of the officers of the Company with respect to colonists?—I am not.

J. A. F. Hawkin Esq.

20 May 1858.

4329. Do you know of any now existing obstacles operating against European colonization in India?—The chief is the police system, and the system of judicial administration, to which the settlers say that they object; I know of nothing as a question of administration beyond that. As far as I have been able to gather from the views which they have expressed, the system of administration has been stated by them as an objection, and I give them credit for what they say.

4330. *Chairman.*] You stated that there was a great objection to the introduction of European police, in consequence of the financial difficulties of the question?—Yes.

4331. Do not you think that the introduction of capital into India is one of the greatest objects of those persons who had the improvement of India at heart?—No doubt of it.

4332. Is not it worth while paying a large sum of money for the security of personal property, and thereby encouraging the introduction of capital?—Yes.

4333. Do you not think that a good system of police, which would tend to give security to person and property, and which would encourage the introduction of capital, would be highly desirable?—Yes; but the introduction of capital into a country like India, where the land for the most part is private property, is very different from introducing capital into such colonies as Australia and Canada, where there is a quantity of spare land.

4334. Is not it worth paying to have a well-conducted police, which would bring repose to the country, and thereby encourage the introduction of capital?—Yes.

4335. Therefore, though it might be costly, might not it be desirable to have it?—Yes, no doubt of it; and also upon the ground of giving the people better justice.

4336. I think you stated, with regard to the exemptions which are mentioned as existing in the speech of Sir Arthur Buller, that it was only officials who were exempted?—Yes.

4337. Would not those exemptions of officials give an advantage to the European official over the European non-official?—Unquestionably, with regard to the amenability to certain courts; but that is the very distinction which I hold to be essential to the mind of the native, you must give a certain position to office.

4338. You stated that the introduction of the English language into the courts of law would be objectionable; supposing it were introduced, and notwithstanding that the natives found from a long experience that justice was well and admirably administered; would they or would they not be likely to be reconciled to it?—I believe that nothing that you can do, will reconcile the native to the loss of his own language in the administration of justice.

4339. If you heard that persons very conversant with the natives, had said that the English language could be introduced in certain parts of India, would you attach any value to their experience?—No, I could not; I should believe them to be wrong. In a case of this kind I must take my own knowledge and experience of the natives, and form my judgment upon them.

4340. You hold notwithstanding that abstractedly, if it could be effected it would be desirable?—Yes.

4341. But you consider it impossible to introduce it even in the most gradual manner?—I think it impracticable to introduce it as the language of official administration among the natives.

4342. I understand you to speak very much in favour of the system of appointments, which has hitherto prevailed in consequence of the appointments being made at home, and the promotions being made in India?—Yes.

4343. Do not you think that a system of fair examination might be substituted for the system of appointments which has hitherto prevailed?—Yes, it has been introduced at home.

4344. Contrasting the system of competition with the system which has hitherto existed of appointment here, and nomination here, which do you think is the better system?—Unquestionably *cæteris paribus*, the system of competition is the better; but when you come to the details, you will find a number of difficulties in the way of competition for particular offices in India.

4345. With regard to the Mahomedan and Hindoo laws, did you state that in cases decided under the Mahomedan and Hindoo laws, the parties are satisfied with

with a simple establishment of the fact?—No. What I say is, that when you have these Hindoo and Mahomedan cases brought into your courts, you will generally find them turn upon questions of fact, the law being undisputed when the fact is ascertained, which leads me to the conclusion that had they a code of laws for all other purposes, there would be less of litigation than there is now. The people show a willingness to abide by a written law.

4346. The Hindoo and Mahomedan law is certain?—The Hindoo and Mahomedan law is at the present time almost certain, except upon a very few points.

4347. So certain that the instant the fact is decided, the law steps in and decides the point?—In 99 cases cases out of 100. In fact out of the vast population of India almost all their cases of succession under the Hindoo law, and other legal points, are decided out of court.

4348. Therefore the Hindoo and Mahomedan law would contrast strongly with the present vagueness and uncertainty of the law, when administered by a judge who relies entirely upon his own opinion?—There is no law in the one case, except what the judge considers to be justice.

4349. There can be no uniformity of law?—There is a want of uniformity of law, and the consequence is increased litigation.

4350. You mentioned the importance of having Europeans who come into contact in their official capacity with the natives, brought up in such a manner as to make them fit to act properly towards the natives?—Yes.

4351. Have you ever heard of a plan which has been suggested, whenever India is again restored to order, of having the children of the soldiers of the English army brought up in the hill districts, in such a manner as to prepare them for taking situations under the Government?—No; I do not know that any plan has been thought of, with the intention of educating them for appointments.

4352. Supposing it were so, do you think that it would at all coincide with your views as to the propriety of especially educating persons who are to come into contact with the natives?—I think that you might make use of them, and thereby obtain an improved body of persons for parts of the administration of India.

4353. Would not they have the advantage of being habitually brought up from their early youth in contact with the natives—It depends entirely upon the system. You might be up there in the hills almost as much separated from the natives as in England.

4354. Suppose you educate them specially?—Yes, but you might educate them specially in certain points at home.

4355. Would that give you any advantage over the persons who are casually introduced into India?—Yes, but the grand experiment has to be tried with regard to their health, which has not been settled yet.

4356. Mr. *Willoughby.*] You alluded to the police being an obstruction to the colonization of Europeans; is not the climate also an obstruction to the colonization of Europeans?—Unquestionably. Temporary settlers may repair to India, but the climate is an insuperable barrier to colonization.

4357-8. And also the fact that the best parts of India are now densely populated and occupied?—Yes.

Chairman.] My question applied exclusively to the hill districts.

4359. Mr. *Lowe.*] Would you wish to retain competition, or not, in England?—My own view is that of a mixed competition and nomination; I mean to say that I wish the plan of nominating four to every vacancy had been tried; that would have given you nearly as large a number of candidates for the service as you now get by competition, but you would have had the selection of the nominees.

4360. Who should nominate the four?—When the place was first proposed, the patronage was, as it is now, in the hands of the directors.

4361. Are you aware that in a recent case three gentlemen were nominated by one of the Secretaries of State, and that they were all three plucked?—No; but it is of importance that your men should be well selected; much of the management of a district in India depends upon the deportment of the man at the head of the district. Treat the people as a gentleman should treat them, and have respect for their feelings, and you will manage the district with an ease no man can understand in comparison with the difficulties the man has to encounter who is rough to the natives, and treats them unkindly.

4362. You would have them to enter at 18?—Yes; I would give them an education up to 22.

J. A. F. Hawkins, Esq.

20 May 1858.

4363. And give them a judicial training?—Yes, to all, because the collectors are *quasi* judicial officers.

4364. Mr. *Villiers.*] Have not all the persons who are appointed judges a judicial training now?—No; they enter upon the discharge of their duties without any special training; the step of the register, which preceded that of the judge, has been done away with for the last 30 years, and a man gets upon the bench of the civil court without any training but that which he has gone through on the criminal side.

4365. At what age could he get upon the bench of the civil court?—It may be after 15 or 16 years' service.

4366. He could not be appointed before that time?—Not ordinarily; the office of civil and sessions judge is held by the same officer; he is a criminal judge, and also a judge upon the civil side, but he exercises criminal powers as a magistrate long before he comes to the civil bench.

4367. And a magistrate may be appointed after he has been there five or six years?—Yes.

4368. He might be then only 23 years of age?—Under the old system he might be 24 or 25, but under the present system, 30.

4369. Did you refer, in the reports which you made to the Law Commission, to the incompetency of the judges?—Nothing of that kind was done; it was not the duty of the Commission; their duty was to prepare a code of procedure and rules for the amalgamation of the courts.

4370. Did not you consider yourself very much fettered by that direction on the part of the President of the Board of Control?—The Commission had precise instructions to follow, and to those they adhered.

4371. Mr. *Lowe.*]—Was not that unaviodable by the Act of Parliament, which only gave us the power to inquire into such things as the President of the Board of Control pointed out?—Yes.

4372. Mr. *Villiers.*] I think you stated that Sir Arthur Buller was wrong in reference to the exceptions that were made, he having not taken that distinction that you do of its being official?—He did not take the distinction to its full extent; evidently his idea was that all the four classes excepted were Europeans; had he gone into the code more particularly, he would have seen that the last class, judges, included others than Europeans.

4373. Was he wrong in stating that; is he not right actually that the native judge is an official?—I do not know that he mentions that.

4374. The native judge is an official?—Yes, clearly.

4375. Did not he complain that European settlers were not exempted?—Yes.

4376. He did not dispute the fact that all officials were exempted?—No, he did not actually dispute it.

4377. All officials are exempted, whether they be natives or Europeans, holding offices?—Yes, of certain classes.

4378. But what he pointed out was, that Europeans and persons of great importance were not exempted also?—He pointed out that Europeans, generally, are not exempted, while persons of importance are.

4379. And he was quite right in that?—Yes.

4380. You agree with him in your view?—Yes, as to certain courts.

4381. Mr. *Gregson.*] Is not the competition for the civil service of India now open to an unlimited number of candidates?—It is.

4382. You propose to limit the number of candidates to four?—I do not propose it; I would rather it had been done originally.

4383. Mr. *Lowe.*] You have been asked with regard to the competition existing in India; would not the competition existing in India very much destroy the power of the Governor-general over the civil service, and make it independent of him?—Clearly, if you compel him to take an individual for a particular office.

4384. Is not it found necessary to give the Governor-general the patronage, in order to give him the authority?—Yes, and you must let the Governor-general select his own men for particular appointments.

4385. Has a man who gets on the Sudder bench ever had any instruction in the law of evidence?—No, except what his own experience has given him.

4386. There is no provision whatever for his acquiring that?—No; he has grown up with what he has seen, but nothing more.

4387. With no legal knowledge of evidence?—No, except what he gets by reading English law books.

4388. Would not it be most invaluable if every civil servant of the East India Company were instructed in the principles of the law of evidence?—No doubt.

4389. So as to teach him the distinction between hearsay and written evidence, primary and secondary evidence, and so on?—Yes, no doubt of it.

4390. Mr. *De Vere.*] Does not a man's experience as a collector give him considerable knowledge of the law in the revenue cases which he has to administer when he becomes a civil judge?—Yes, and my opinion has been for a long time that it is extremely difficult for a man to exercise the office of a judge except he has been in the office of a collector. I have known men on the Sudder bench having never passed through a collector's training, who found it difficult to deal with intricate cases of land tenures.

4391. You said that justice being administered in the English language would produce a fear in the mind of the natives that justice was not being done?—Yes.

4392. Is not there a feeling that the attempt to administer justice in English would be an insult to their national pride?—There would be some feeling of that kind; I will not give it that term; it would create an immense deal of dissatisfaction.

4393. Upon political as well as economical grounds?—Yes, they would think that we were forcing it upon them as their rulers.

4394. *Chairman.*] You think that the magistrates should have an education in jurisprudence generally?—Yes, I do. I would prepare them all for the judicial office.

4395. You have also mentioned that from the peculiar susceptibility of the Indian mind, great tact is required in dealing with the natives?—Yes.

4396. If there were places for the education of the children of the soldiers, all those nice points might be attended to, so that the persons brought up there might be brought up with a special view of directing and managing the people of India?—I believe that education of that kind generally would be very beneficial for people intended for offices in India; they would become familiarised almost imperceptibly with what was necessary and right.

4397. Being in India itself, if their studies were properly directed, they would have practical means of acquiring a knowledge of the natives?—Yes; no doubt of it.

4398. Mr. *Villiers.*] Is not there a very different mode of dealing with the natives from that which you think proper; is there not a sort of contemptuous and harsh way of dealing with them?—Since I left India I have heard of that growing up, but when I entered the service, and to the close of my service, I believe the general desire on the part of the European officers of the Government was to treat the natives with kindness and consideration. In some offices in India, the young civilian has only natives to speak to. I once held an office of that kind myself. I believe there was, and is, many a civil servant who fully comes up to the proper level of his duty in his treatment of the natives, and in respect for their feelings. I hear, however, that that kind of thing does not prevail so extensively as it once did, and the expressions which one sometimes hears applied to the natives are painful; it looks as if there was a deterioration in that respect compared to what it used to be.

4399. *Chairman.*] Do not you think it very desirable that persons specially educated for Indian objects should be brought up with that considerate regard?—Everything should be done to impress upon them that their lives are to be spent for the benefit of the people among whom they are to live.

4400. Mr. *Villiers.*] Is not it the result of so many people going out with the intention of coming back that they do not feel that interest in the country, or the people, which other colonists do in other countries?—There is something in that; there is much more prospect of returning to England than there used to be, when people made up their minds to live there for a number of years, or to die there.

4401. People go out with a view of making a fortune and coming home?—Yes.

4402. *Chairman.*] If it be the case that people are less likely to reside in India, is not it the more desirable that counteracting attempts should be made to give them proper and refined feelings towards the natives?—Yes.

4403. Mr. *Gregson.*] In what part of the district were you surrounded by natives?—In one of the Bengal districts.

4404. Is that the case now?—Sometimes, where there are joint magistracies; At the station to which I refer there was not even a medical man.

Martis, 1° die Junii, 1858.

MEMBERS PRESENT.

Mr. Campbell.	Sir Erskine Perry.
Mr. William Ewart.	Mr. J. B. Smith.
Mr. De Vere.	Mr. William Vansittart.
Mr. Gregson.	Mr. Villiers.
Mr. Kinnaird.	Mr. Willoughby.
Mr. Lowe.	

WILLIAM EWART, Esq., IN THE CHAIR.

John Abraham Francis Hawkins, Esq., called in; and further Examined.

J. A. F. Hawkins, Esq.

1 June 1858.

4405. *Chairman.*] I BELIEVE you wish to correct some observation you made at the last meeting of the Committee?—Yes; I wish to offer an explanation with reference to Question 4259. The question is, "Was it not an attempt" (that is the question brought forward with reference to what is called the Black Act) "to take out a portion of it, letting the question of the amalgamation of the supreme and the sudder courts stand over for a time?" The answer is, "Yes; it was an attempt to take the codes of procedure made for the amalgamation, independently of the amalgamation." Now, that will bear a construction as if there was an attempt upon the part of the Legislative Council to smuggle through this Black Act without bringing in the whole code as prepared by the Law Commissioners in England. Now, there was no attempt on the part of the Legislative Council to smuggle anything in, or to do anything that was not perfectly right and proper; and the best explanation will be a sentence from the speech of Mr. Peacock, in putting the code upon the table of the Legislative Council. Mr. Peacock laid upon the table of the Legislative Council the whole of the report, as prepared by the Law Commission at home, with the exception of that part referring to the amalgamation of the supreme and sudder courts, and therefore it was an introduction into the Legislative Council of part of what was prepared by the Law Commission at home, but not the whole of it. With regard to the civil procedure, Mr. Peacock says, "It was unnecessary to point out the details of the procedure which the Commissioners recommended in the second chapter of their code, from the commencement of a suit to the final decree. It appeared to him that, on the whole, it would very much simplify the procedure which now obtained. He did not mean to say that he coincided with the recommendations of the Commissioners in every particular; but he had thought it best, considering the care which had been bestowed on this code, to publish it to the world in the form in which it had been proposed. He thought it would be better for the Council to let the code go forth to the public in the form in which it had been proposed by the Commissioners at home, in order that it might elicit the opinions and suggestions of all persons competent to advise upon the subject; and, consequently, he had made no substantial alteration in it." That was with regard to the civil code, as prepared by the Law Commission. With regard to the criminal code, he says, "The code had been prepared with great care, and in his judgment would very much simplify the procedure of the courts of criminal judicature; but there were certain articles which might give rise to difference of opinion. He had thought it right to insert them, as framed by Her Majesty's Commissioners, and to leave every Honourable Member to adopt any amendments which it might appear expedient to make after considering the communications which the publication of the code might elicit, and the Report of the Select Committee to whom the code would be referred." It appears, therefore, that it was rather out of deference and respect to the Law Commission that it was put in the form in which it was upon the table of the Legislative Council, it being put there complete, with the exception of the part referring to the amalgamation of the courts, and then left to the members of the council to suggest such alterations as they thought proper.

4406. Sir

4406. Sir *Erskine Perry*.] You were a judge in the Sudder Adawlut?—Yes, for two years, and I was registrar for about 10 years.

4407. I think Bengalee is not the language of the Sudder Adawlut?—The Hindoostanee is the language of record. All the documents from the Zillah courts of the Bengal districts come up in the Bengalee language.

4408. And so also throughout the Mofussil. In Bengal, latterly, the judges are becoming conversant with Bengalee, but Hindoostanee is the language of business in the court?—Certainly not, as far as I recollect; that may have been the case within the last 10 years. When I was there, every document was in Bengalee.

4409. In what language does the judge speak when addressing the vakeels?—Generally in Hindoostanee, when speaking to the vakeels.

4410. Hindoostanee is not intelligible generally to the Bengalese?—I should say that to a great extent it is intelligible, but I fancy that the judges can make themselves understood through the officers of the court so as to be perfectly understood.

4411. Do you think that judges, dealing with a language of that kind, with which they are imperfectly acquainted, are able to carry on argumentation properly with vakeels speaking their own language?—There is not a vakeel in the court that does not understand the Hindoostanee language.

4412. Going through Bengal, the bulk of the people do not understand Hindoostanee?—I do not think that any man speaking Hindoostanee well will find himself in difficulty in Bengal.

4413. I am talking of the arguments that take place in the court?—He could not carry on an argument.

4414. That being so, how is English more foreign to the uses of the system than Hindoostanee. Persian, which was the language of the courts before, and Hindoostanee now, are both of them not the languge of the people?—They are not the language of the people, strictly speaking; but whether the proceedings be conducted in Hindoostanee or Bengalee, what I say is, that the language can be understood, and the whole of the proceedings of the court can be understood; if you substitute English, the thing is unintelligible to everybody.

4415. The records of the court are in Bengalee?—They are.

4416. But the proceedings are in Hindoostanee?—Yes, generally, the oral proceedings of our civil courts.

4417. You admit that the bulk of the population do not understand Hindoostanee?—Not at all; but what is going on in court, if carried on in Hindoostanee, it is my belief is understood by the greater part of the audience in court.

4418. Is not that inconsistent with your admission that the bulk of the population do not understand Hindoostanee?—I believe that everything that is carried on in Hindoostanee is intelligible to a great portion of those in court. I cannot say that it is so to the very lowest orders of the people.

4419. Is it the case that a man coming up and speaking Bengalee has his evidence interpreted into Hindoostanee?—Yes; I should think that that would be the case sometimes, but not always.

4420. And therefore a Bengalee witness would have to give his evidence in Bengalee, which would be interpreted into Hindoostanee to come up to the judge?—The judge, for the most part, would perfectly understand him.

4421. What would be the difference between the evidence being given in Bengalee in the court, and being translated to the judge sitting on the bench into English; the Bengalee answer would be made known to the whole court. You said that if the proceedings were conducted in English, it would create an impression that there was injustice?—Yes. Hindoostanee is not the language of the people, but it is intelligible to the people.

4422. There is an affinity between Hindoostanee and Bengalee?—Yes.

4423. Is it greater than between Spanish and French?—I am not prepared to say that it is not.

4424. And therefore if a judge does not understand Bengalee, a witness speaking in Bengalee would have to have his evidence translated into Hindoostanee?—Yes; but that is arguing from premises that do not exist. It appears to me that the judges do understand Bengalee.

4425. Are you able to say that of the whole number of functionaries?—Yes, of the greater number when I was there, and now I should say the whole; because they pass an examination in Bengalee.

J. A. F. Hawkins, Esq.

1 June 1858.

4426. If that is so, why do they conduct the business in Hindoostanee?—Because the vakeels, especially those of them who are Mahomedans, prefer it, and the majority of the judges themselves speak it more fluently. I have no doubt that if you carried on the proceedings entirely in Bengalee, in the course of a twelvemonth the judges themselves would speak it.

4427. In those parts of India where the languages are different, such as the Mahratta, Canalese, Teloogoo, and so on, the Hindoostanee is more remote?—Yes.

4428. I do not understand, if a foreigner is administering justice in a country, why it should be more unpalatable to the natives to have the evidence given in the native language and translated into the language of the judge sitting on the bench?—You might, and you would have, in very many of the Mofussil courts, under those circumstances, the judge alone in court understanding the English language besides the interpreter; you would have the great majority, in fact all of your audience, understanding the native language only; you would have one individual understanding both languages; and the natives would at once come to the conclusion that the whole of the administration of justice is in the hands of the interpreter; and your administration of justice would be considered, in the course of a twelvemonth, a mockery and a sham.

4429. Is not there a desire on the part of the young natives to learn English, in order to promote themselves in the service; and would not the vakeels make themselves masters of English?—Certainly not in the interior, for a very long time.

4430. Not if it was the door to employment?—It is the door to employment now, and you do not find a single vakeel speaking English.

4431. Why should they do so?—It might be an inducement to them to do so if you introduced the English language into the courts.

4432. If the system which I speak of would be considered a gross injustice upon the native, how do you reconcile that opinion with the fact that in all the Presidency towns the natives have petitioned over and over again in favour of the Supreme Court system?—I was not aware that they had done so.

4433. That has been the case within the last few years; there have been numerous petitions to the House of Commons, expressing great satisfaction with the Supreme Court system?—I would not argue from the Presidency towns to the Mofussil; I think nothing can be more dangerous. The appeal should be made to the natives of the Mofussil themselves. Twenty years ago it was distinctly stated by Lord Macaulay, that nothing was more dreaded by the natives than the extension of the jurisdiction of the Supreme Court.

4434. Is not that opinion of Lord Macaulay's very much contradicted by the fact, that for the last few years petitions have come up over and over again in favour of the extension of the jurisdiction of the Supreme Court?—Unquestionably, if such be the case.

4435. Were not also the evils which Lord Macaulay spoke of very much founded upon the expensiveness of the Supreme Court?—Yes.

4436. Those expenses have been very much diminished of late years?—Yes.

4437. And it lies with Government to diminish them still further?—Yes.

4438. You say that you contrast the opinions of the Presidency towns with the Mofussil, and you think that the opinions of the Mofussil should be preferred upon the subject?—I do.

4439. In the Presidency towns, have not the natives the two systems to contrast one with the other, the Sudder Adawlut, or Company's system, and the Queen's system?—They have.

4440. And they have not such powers of comparison in the Mofussil?—No.

4441. If the natives in the Presidency towns prefer the Supreme Court system, having the two systems to compare together, and the Mofussil has only one, surely the opinion of the natives in the Presidency towns is most to be relied upon?—They get ideas in the Presidency towns, of which the natives in the Mofussil know nothing, and with those means of forming a judgment in the Presidency towns, it would be still unacceptable to the Mofussil, the inhabitants of which must be the best judges as to the language they prefer. With regard to the number of petitions, I should look upon that in some qualified degree, as to the opinions of the natives in the Presidency towns; my own opinion is, that there would be a large body of natives who would be adverse to the extension of the jurisdiction of the Supreme Court in those towns.

4442. The jurisdiction of the Supreme Court cannot be extended in the Presidency towns, because it is universal?—There are a large number of natives who would be adverse to the extension of the jurisdiction of the Supreme Court over the Mofussil.

4443. How do you account for the expression of opinion of the natives in favour of a fuller foreign system of English law and English lawyers?—If those petitions have come up, I cannot say anything against them; but my own opinion is, that there are a large number of natives in the Presidency towns who would be adverse to the extension of the jurisdiction of the Supreme Court over the Mofussil.

4444. Mr. *J. B. Smith.*] Why do you think so?—I believe they prefer the present system, which they consider to be the administration of their own law more in accordance with their own notions.

4445. Sir *Erskine Perry.*] Why should a trained English judge, administering law in the Mofussil, having passed in the native language, find it more difficult to administer the native law according to the habits and customs of the natives, than it is to a Company's judge to administer it in the European language?—I never said it would not be so easy.

4446. You said you thought it would be more agreeable to the natives to have the law administered according to their own laws and customs?—The Mofussil does not know the Supreme Court; they do not understand it, but they do understand the Mofussil system, and have no desire to change it for that of the Supreme Court.

4447. Do you not think that a trained judge, who is seen to be deciding entirely from his own experience and the evidence, and who gives his decisions according to justice, would be palatable to the natives?—Certainly, speaking their own language.

4448. With regard to the Small Cause Court, in Calcutta, that was established before you left India, was not it?—No, not under its present system; it was a court of requests when I was there; the law was passed in 1850, when I was not in India.

4449. You are aware that the cases in that court are chiefly those in which natives are concerned, to the extent of perhaps 95 per cent. of the entire cases?—I am not aware.

4450. At Bombay 95 per cent. would be the proportion?—Perhaps so.

4451. And there is an exclusively native audience?—That I cannot say.

4452. If the proceedings there conducted by an English judge, in the English language, by means of interpretation, give satisfaction, does not that lead you to say that the same system would succeed in the Mofussil?—I think not. I do not think that you can argue from the Presidency to the Mofussil; you have had it in the Presidency towns for a vast number of years, but there is nothing of that kind in the Mofussil. There is a sufficiently large audience in every court in the Presidency towns to convey to the natives a knowledge of what is going on in the court. Those who attend the courts know something of English; that is picked up at the Presidency towns; but there is nothing of that sort in the Mofussil; and if you were to introduce English into the vast majority of our courts in the Mofussil, there would not be a man who would know what was going on.

4453. If vakeels obtained employment by being conversant with English, they would spring up at once?—Yes, but you must still carry with you the great body of the people. I may state, that I do not think that the people prefer it in Calcutta; they get on with it; but if you were to poll the natives in Calcutta, I suspect you would find that they would rather have their own language than the English; they cannot help it.

4454. Ought not an experienced judge to have his own instrument, namely, the English language, as the instrument for conducting his business?—I would say infinitely rather let the judge going into the interior of the country have the native language as his instrument.

4455. And then he becomes subject to the corruption and venality of his omlah?—If proper precaution were taken that would not be the case, I believe.

4456. Is it not the case that the system is so much deprecated that the non-regulation system is much preferred by modern legislators?—That is because the procedure is bad. The proceedings have been carried from the equity courts in England to a people to which they are not suited. I believe that that was the origin

J. A. F. Hawkins, Esq.

1 June 1858.

origin of the Cornwallis code. In the non-regulation districts the proceedings are conducted in the native languages.

4457. Is it not the case that a good English judge does not make justice yield to forms, but makes forms yield to justice?—Yes, I should think so.

4458. You knew Sir Lawrence Peel, and several of his eminent brethren on the Bench, did you not?—Yes.

4459. Do you not think that acquaintance with the science of law enables a good judge to frame the forms of his court so as to make them coincide with justice?—Unquestionably; I think that the training for the judicial office is deficient.

4460. Is it not the case that gentlemen who are not acquainted with law are apt to give forms an undue preponderance?—Certainly.

4461. Do not all those reasons lead to the conclusion, that in order to administer justice in the Mofussil it is far better to have trained judges than to have gentlemen taken from the collectorates?—Unquestionably I think so. When I was examined by the Committee on the last occasion I advocated a system of training for the civil service.

4462. Are you acquainted with French?—I knew it as a boy tolerably well, but 30 years in India have pretty well rubbed out the French.

4463. Do you think that any gentleman on the Bench would be competent to hold an argument with a French lawyer at the Bar?—That I cannot say. I am not prepared to answer that question.

4464. If you think that he could not, will you state what is the distinction between French and Bengalee or Hindoostanee; in every case is not the judge at an immense inferiority?—I think that is exaggerating the want of information upon the part of the Mofussil judges. I have been to many of our courts, and I can state that the judges carry on their conversations very easily indeed with the vakeels.

4465. I have heard from very able men in your service, Sir George Anderson, for instance, and others, that any European judge attempting to give a charge to the natives in the native language would make himself ridiculous?—There are a great many judges who could not give a charge at any length to a jury; but at the same time, I believe by the way in which they speak the language, they make themselves perfectly understood by the jury as to what is their opinion and view of the evidence, though they may not speak in classical language.

4466. Has not that rather a bad effect upon the public?—Certainly it might have; but I think that those are assumptions that experience would scarcely carry out.

4467. Do you know Sir William Sleeman's works?—Yes.

4468. Do you recollect that he states in his works that the European officials are really so little acquainted with the foundations of the language, that they cannot hold an argument upon the grave topics of morality and philosophy?—Very likely.

4469. Surely legal reasoning requires at least as much knowledge of the language as those other subjects?—I think not, for the judges are familar with legal terms.

4470. Mr. *Villiers*.] Do not we administer justice in Wales in the English language, and is that thought to be a hardship?—No, it is not; but you must consult the wishes of the vast body of the population of India, who love their language, and who would think it an infringement upon what they conceive to be their rights, if you were to administer justice to them in a foreign language. You have 180,000,000 of people to deal with, scattered over the whole country, speaking divers dialects, and who are wedded to their language.

4471. You are satisfied that they would be discontented with such a mode of administering justice?—I believe that if you were to launch this subject in India, you would touch a chord that would vibrate from north to south and from east to west.

4472. Sir *Erskine Perry*.] With regard to Ceylon, although English is the language of the courts there, and appears to give satisfaction, you say that the Cingalese language is not so ancient as that of India?—In that I may have been mistaken, for the language of the Buddhists of Ceylon comes down from a very ancient time. But you may make an impression upon Ceylon long before you can make anything like the same impression upon India. And in Ceylon there is but one language to deal with.

4473. One district has not much communication with another; in the north of Ceylon they have the Tamil language?—I am not speaking from personal knowledge of Ceylon.

4474. They have a Hindoo population in the north of Ceylon and a Cingalese in the south, and there are two different languages, and yet the English language is administered freely in all the courts?—Yes, but I do not think that you can argue from so small a place as Ceylon to India.

4475. Do you think that the Mahrattas of Bombay care a bit about what is going on amongst the Bengalese, 1,200 miles off?—No; but if you touched the point of language they would all equally feel it. In Calcutta the record of every order being drawn up originally in the judge's handwriting, in his own language, is conveyed to the people in Hindoostanee in the Sudder Court.

4476. Mr. *Villiers.*] With regard to the Sudder Courts, the proceedings are in Hindoostanee, and in the Supreme Courts the proceedings are in English?—Yes.

4477. Mr. *Vansittart.*] Do not two distinct languages exist in our courts in what is called the Bengal Presidency, namely, the Bengalee language in Lower Bengal, and Hindoostanee in Behar and the Upper Provinces?—In the Bengal Presidency there are two distinct languages. The Bengalee is used in the Lower Provinces, and what is called the Hindee is used in the provinces of Behar and the North West Provinces.

4478. Bengalee is entirely and solely used in Bengal Proper, but from Behar up to the Punjaub it is the Hindoostanee?—Yes; the Hindee is the language of the country, and Hindoostanee is frequently spoken. With regard to Orissa, Oorea is used.

4479. Civilians appointed to Lower Bengal are obliged to pass an examination in the Bengalee language before they are eligible for an appointment?—They are.

4480. Do you not think that the natives consider that the Supreme Court is a much more expensive court than our Mofussil courts?—They do.

4481. Do not you think that the amalgamation of the Supreme Court and Nizamut Adawlut would be popular among the natives; for instance, two-thirds of the judges to consist of men of the covenanted service, and one-third of the Queen's or English lawyers?—The amalgamation does not necessarily follow from that; that is the mere putting one or two European barristers as judges into the Sudder Court. The amalgamation would be the doing away with the different proceedings of all the courts, and the making but one court for India. I am not prepared to say that it would be popular, but I see no objection to having one or two barristers appointed judges in the Sudder Courts.

4482. From your evidence I gather that you are not in favour of introducing the Punjaub or non-regulation system into Bengal, Behar, and the North Western Provinces?—Then that would be a wrong inference from my evidence. What I am in favour of is, introducing a far more summary procedure than that which now exists; and I would advocate the introduction of that code which was prepared by the Law Commission in England, which would give just as expeditious a code of procedure as the Punjaub code; but I infinitely prefer the non-regulation code to the system which now exists in the regulation provinces.

4483. You think that the system of appeals in the Mofussil courts is too tedious?—A great deal.

4484. Mr. *Willoughby.*] You have alluded to the test which a civilian is obliged to undergo before he is first of all introduced into the public service, and afterwards, upon promotion; can you give the Committee any information on that subject?—I have here the rules for the examination, which I will hand in to the Committee. (*The same were delivered in.*)

Vide Appendix.

4485. The Canalese, the Teloogoo, and other dialects have been alluded to; is it not a fact that all the civil servants who are appointed to serve in those districts are obliged to pass in those languages?—Yes; so far as I am aware, there are rules for examination in all the Presidencies.

4486. The fact is, that the object of the Government is to qualify their servants in the vernacular languages of the different parts of India?—Certainly.

4487. Under the belief that the administration of justice must be more efficiently conducted in the vernacular than in a foreign language?—I do not believe that the Government ever entertained the idea of introducing the English language.

J. A. F. Hawkins, Esq.

1 June 1858.

4488. Mr. *Campbell.*] You are aware that there are annual grants made by Government for the education of the natives of India in the English language?—Yes.

4489. To what do those grants amount?—I do not know.

4490. Do not you think that the introduction of the English language into the courts would practically make it the interest of the entire population to know the English language, and would it not economically and efficiently aid the labours of the Education Commission?—Unquestionably it would; but, at the same time, it would be a very unpopular means of doing it.

4491. Then you are of opinion that advantage has been derived by the people of India by the introduction hitherto of the English language among them?—Certainly it has raised them, and I should trust that the more you introduce English literature among them the higher you will raise them; but I believe that it would be taking the thing by the forelock to insist upon the introduction of the English language into the courts of justice.

4492. You think that the ends of justice would not be so well subserved by the knowledge of English which the judge possesses as by the imperfect knowledge which he possesses of the native language, and his consequent subjection to the native omlah?—I believe that the ends of justice would not be so well subserved; I do not mean that justice would not be so well administered, but you could not convey the idea that it was so to the native mind.

4493. *Chairman.*] You do not object to the gradual introduction of the English language?—No; I do not object to the gradual introduction of the English language among the people.

4494. And there might come a time when you would not object to the introduction of it into the courts of law?—As an abstract question, I am in favour of the administration of the law in English, but at present I believe you could not do it.

4495. Was not there a time when even in the Supreme Court English was comparatively unknown to the natives frequenting that court?—Certainly.

4496. And now, since they know the language more or less, they do not object to it?—I hear no objections to it. The people have grown up with it.

4497. Might not the same removal of objection take place in the Mofussil courts?—It might in time, but it is a very long way off.

4498. Sir *Erskine Perry.*] Are you aware that the Romans introduced the Roman language into their conquered provinces?—Yes, wherever they went they introduced it as the language of business.

4499. *Chairman.*] You are aware that the Norman law was at one time the law of this country?—Yes.

4500. And all the statutes were in French?—Yes.

4501. Mr. *Gregson.*] You say that you do not object to the gradual introduction of the English language; how do you propose to introduce it gradually?—By extended education.

4502. Mr. *Campbell.*] Do not you think that the natives of India respect us in proportion as we uphold and respect our own institutions, our own language, and our own religion?—Yes, I do.

4503. Do not you think that, acting upon that principle, we ought not to appear to be ashamed of our language?—I do not think that you are ashamed of your language by not introducing it into the law courts. With regard to the introduction of our language merely, I do not think that if we did not introduce it the natives would consider that we had a want of respect for ourselves, but rather that we were acting from a motive of consideration for them. But when the very general question is put to me whether as Europeans we should stand upon the broad platform of European institutions with regard to our religion and our institutions generally as respects ourselves, then I answer the question unhesitatingly in the affirmative.

4504. Mr. *Kinnaird.*] And, if anything, you think that we have rather failed than otherwise in that respect?—It is a hard question for a man who has served the Government of India for many years, and is still in their service, to answer; but if you want an answer, I say that we have.

Mr. *Neil Benjamin Edmonstone Baillie*, called in; and Examined.

Mr. *N. B. E. Baillie.*

1 June 1858.

4505. *Chairman.*] HOW long have you been in India?—From 1823 to 1844; about 21 years. During the whole of that time I was in India I never came home.

4506. You have not been there since?—No.

4507. To what part of India are your observations confined?—My residence was exclusively in Calcutta.

4508. Have you ever considered the subject of the obstacles to the settlement of Europeans in India?—I have; chiefly in connexion with the judicial system. I ought to mention to the Committee that I was an attorney of the Supreme Court for almost the whole of the time that I was in India. I commenced with serving articles three or four years; I then was admitted an attorney of the Supreme Court, and I continued so to the end of my career in India. I was also for about 12 years a vakeel of the Sudder Dewanny Adawlut; and for six of those 12 years I held the office of Government pleader in the Sudder Dewanny Adawlut. I had therefore considerable opportunities of knowing generally the judicial system, and matters connected with it, including the system of land revenue, which is also connected with the judicial system.

4509. Do you consider the state of the police in Bengal to be an obstacle to the settlement of Europeans in India?—The native police is very defective, and I think it admits of very great improvement; a Company's magistrate is at the head of the police, and of course what I say does not apply to him; but to the native police, which is very bad. I believe there has been no evidence given with reference to the police which does not concur in stating them to be nearly as bad as they can well be; and I concur generally in that view of the native police. I think it may be considered an obstruction to the settlement of Europeans; not in particular to the settlement of Europeans, because it is, probably, less an obstruction to the settlement of Europeans than to the settlement of the natives themselves; that is, the faults of the native police press more heavily upon the native than upon the European population; and therefore in that point of view the police cannot well be said to be an obstacle to the settlement of Europeans; at the same time I consider the native police very defective.

4510. Is it defective as a protective force?—Yes, it is defective as a protective force, and as a preventive force; but I allude more particularly to its defects as a detective force, which I ascribe in a great degree to ignorance; I do not think they have the same notions of evidence, the same ideas of tracing out and detecting crime from all the surrounding circumstances, that you find in the detectives in England. I think that the natives generally have very imperfect ideas of circumstantial evidence. The common belief seems to be, that a fact can be proved only by the testimony of witnesses speaking directly to it, or by the confession or acknowledgment of the parties. That was the impression made on my mind from a consideration of the evidence in civil suits particularly; I found that it was almost all of a direct character; many witnesses swearing positively to the same fact, with slight variations to account for their own knowledge of it; and I came to the conclusion, chiefly from my experience in the civil courts, and also from some knowledge of the original sources, from which the notions of the natives on jurisprudence have been derived, that they have but a very imperfect idea of detecting a crime from its surrounding circumstances, and scarcely any of proving it in any other way but that of direct testimony to the fact, or the confession of the parties. In this way I account for one of the worst practices of the police, that of endeavouring to extort confessions from suspected parties, or evidence against them from witnesses who really sometimes know very little about the matter.

4511. Their want of comprehension of the means of tracing circumstantial evidence drives them upon the more direct and often more cruel system of extorting it?—Yes; but I do not adduce this by any means with the view of extenuating their conduct. I believe that they are guilty of almost everything that has been said against them, but I think that in the particular instance alluded to their conduct arises in a great measure from ignorance, and I think that the true way to meet that is by instruction, and therefore I agree with Mr. Hawkins as to the employment of European serjeants, and would go farther, and say that European detectives might be employed with advantage to show the natives how to practice

Mr. *N. B. E. Baillie.*

1 June 1858.

an art in which they seem to me to be just as ignorant as of the guidance of a locomotive engine till they are instructed. Those are faults of the system, as a detective system; and the amendment seems to me to be necessary to complete the system which we ourselves introduced without a sufficient instrumentality; we trusted entirely to the instrumentality which we should get on the spot, and I think that we have been deceived. In order to introduce the detective system of England, it is not enough to have magistrates; but there must be those subordinate agents, without whom the system cannot work.

4512. With regard to the state of the civil procedure do you consider that that is an obstable to the settlement of Europeans in India?—I would make the same remark with regard to the civil procedure that I did with regard to the police, I do not think it presents any peculiar obstacle to the settlement of Europeans. I have been acquainted with a great many Europeans who were settled in the Mofussil, and particularly with the most respectable class, in whom I had many friends, that is, the indigo planters; I have heard their evidence, and I may state that I never knew a single indigo planter deterred from settling in the Mofussil, or who thought of inquiring as to the state of the police before he went there, and I never heard of any man who was driven out in consequence of it. Therefore I do not think the defects, great as they are, and I believe they are very great of the civil system, fall with any peculiar pressure upon the European population.

4513. Are they such as might deter a person at a distance from settling in Bengal who thought of settling there?—I do not think they are.

4514. What are the objections you yourself admit as existing in the system of civil procedure?—It is bad in many respects; chiefly that it has become, for it was not so originally, a heap of technicalities, and therefore the sooner it is done away with the better. It was a procedure adopted very much in accordance with English ideas; it was carried to India by Englishmen, and was very different from the existing procedure of the country; and one of the great evils of the procedure is, that we carried a system there, and fancied that we did everything when we carried the system and the judges (for we took English judges also), without recollecting that a subordinate agency also was required. Barristers and attornies form a most important part of all English procedure, and we expected to find a substitute for those in the country, but were deceived. I think the natives had little idea of professional advocacy; and one of the chief evils of the system was this want of subordinate instrumentality to carry it out.

4515. Does the same defect in principle pervade several of our institutions in India?—I believe so. Instead of fighting and quarrelling with the men placed at the head of those systems, the civilians I mean, and fancying you can make the systems better by substituting other men, you will find the fault lies very mainly in the want of that subordinate agency which you have not in India, but an abundance of which you have in this country.

4516. You say that it is European agency which you consider desirable in this case as in the previous case?—Yes. The Committee will observe that I am speaking of an English system transported into a foreign country. I am talking of the faults of that system arising from its being transplanted incompletely; the system may be essentially bad. I think it is not a good system. But I say that it was essential for that system that you should have carried it out with an adequate agency. And the great defect is that it is an English system without a machinery for carrying it out. Now, I may mention the way in which the want of that instrumentality operates. All the cases brought into courts of justice in this country are got up by attorneys well acquainted with the rules of evidence, and acting generally under the superintendence of counsel. On the other hand, in the Company's courts the cases are got up by vakeels necessarily at the bottom of their profession, from their practising in the inferior courts, and native mookhtars, who have, I believe, only the same limited ideas of evidence that I have alluded to, and which belong to the state of society. In consequence, every suit is loaded with the statements of many witnesses repeating the same thing over and over again, and speaking generally, as of their own knowledge, direct to the fact at issue. There must be many cases in which actual witnesses to the fact cannot be obtained; but our system has afforded the utmost facilities for supplying their place, and the testimony is almost invariably false. This I conceive to be the *rationale*, to a great extent, of the failure of the civil system of procedure in India.

4517. You think, therefore, that the remedy would be an infusion of European knowledge to lead the native in the conduct of evidence, as before in the conduct of the police?—Yes, in the preparation of it.

4518. And even if we introduce a more simple and unobjectionable course of procedure in India, would you still think that the introduction of European agency would be necessary?—The opinion that I have now given has reference to the existing system. I conceive that it is necessary, if you wish to carry out this English system, that you should have an English instrumentality, and the true way to get it would be to improve your vakeels as much as you can; but I think there is a better system than the English system. I think the English procedure was not adapted to India, where there was nothing like our procedure existing before; they had nothing but the simplest procedure, and it is a return to that simple state of procedure that I think is far better than attempting to perfect the English system; and that simple system is just the system recommended by the late Law Commission, to which I had the honour to be Assistant Secretary. Now, I think that in this simple system you have the means of getting over what I consider the great and radical defect of our civil procedure in India, which is the want of reliable evidence, a want arising very much from the ignorance of the natives as to the true nature of evidence. The only way is by an examination of the parties themselves; that is the keystone of the recommendation of the Law Commission.

4519. Would the simplification of the legal procedure which you recommend be favourable to an extension of European settlement in India?—It has this moderate bearing upon the question: that every improvement of legal procedure is a removal of difficulties; when a European comes to enforce a contract he is in the position of requiring a reference to the law, and of course simplicity of procedure is a matter of great importance.

4520. I understand you to recommend the simple course of procedure sanctioned by the Law Commission?—Yes; all simple systems are the same; they are merely bringing the parties together to inquire what is the dispute between them, and then you find what is the real matter in dispute, and examine them as to that matter.

4521. Sir *Erskine Perry.*] In fact, in one word, you mean the county court system?—Yes, the county court system; I speak of it as the best means I know for rectifying what I conceive to be the great defects of the existing system.

4522. *Chairman.*] What is your opinion of the propriety of continuing the use of the native languages in judicial proceedings?—In the court of the zillah judge and the Sudder Dewanny Adawlut, where the judges are always Englishmen?

4523. How far do you think the use of the native languages might be relaxed in those courts?—Those courts are practically courts of appeal. The judge, under the new system, may have some original jurisdiction; he may take some original jurisdiction to himself; but practically at present they are courts of appeal; and the record comes up to them from the native courts, where everything is in the native language; and I think, particularly as the system has existed for some time, and is in force, and is giving satisfaction, and I am very averse to great changes at this moment in particular, I should much prefer that the system of record in the native language remained as it is in the court of the zillah judge, and also in the Sudder Dewanny Adawlut. I think if the record were made in English, and the whole proceedings were in English, you would drive out of the zillah courts all the regular practitioners, and you would have, probably, none to carry on the current business; and you would drive away the omlah, and give very great dissatisfaction in the zillah, by taking away the few creditable situations now left to the natives. For these, and some other obvious reasons, I think that the record should remain as it is, in the native language; I see no sufficient reason for changing it; but more particularly with reference to that part of the new system of procedure recommended by the Commission in England, I think, as so much of it depends upon the examination of the parties, that in all cases where an Englishman is a party, he ought to have the means of using his own language, and the judge should speak to him or examine him, either in the first instance or as a witness, always in his own language. To that extent I think the English language should be introduced into the zillah courts. I think it might have another beneficial effect, of giving the judge exclusive jurisdiction in all English cases, as he will have the power of calling up any case from the lower courts; and I think that would be a very great advantage, because an English judge is the only person who can thoroughly understand an English

Mr. *N. B. E. Baillie.*

1 June 1858.

case; and it would give every one the benefit of being thoroughly understood, and that is the only way in which the European can have that benefit. To that extent I would let the English language be used in the zillah courts. That does not at all apply to the use of it by the advocates; I see no good reason whatever why the proceedings should not be conducted in the same way as now, in the native languages.

4524. You would not carry it so far as it is carried in the Supreme Court?—No, I would not, for the reasons I assign, and those which were assigned by Mr. Hawkins, that the body of the natives would not have the same confidence in the administration of justice; and the only object I know for the introduction of the English language at all is, that the party should be thoroughly understood, that justice should be adequately and properly done to the parties before the judge; and if that object is satisfied, that is all that is required.

4525. Do you approve or otherwise of the proposed subjection of Europeans to native criminal judges?—No, I do not; I think, more particularly in present circumstances, that it would be very impolitic, and I should be very sorry to see it indeed.

4526. The Committee have heard a good deal of the inefficiency of the English judges; could they be safely selected in the same manner as the native judges?—The native judges are selected from the great body of the people; they are examined and are introduced in the first instance, I believe, into the minor grades of moonsiffs, and from that they are advanced to the higher grades. I do not think that would do for European judges; I do not think you could recruit for the higher offices in that way; but the question remains whether you might not recruit them in a different way from that in which they are now recruited; that is, from the exclusive service. We know that the zillah judges are entirely appointed from the covenanted service, and though it would not do to select them in the same manner as the natives, it does not follow that they might not be selected in some other way. The most obvious way is to take them from the bar, as in England; and a most natural question is, whether a zillah judge might be appointed in that way from gentlemen practising at the bar of the Sudder Dewanny Adawlut or of the Supreme Court.

4527. Do you or not think it is highly desirable that a judge should have gone through a previous training in jurisprudence?—I think it is highly desirable at the present moment that the judge should have a training in jurisprudence, because there is nothing else for his guidance; but if there was a substantive law and a proper code of procedure for the country, I should not give much for a general training in jurisprudence; it is a training that a native cannot have, nor the country in general.

4528. Should the judge have a previous legal education?—Under the present system it is desirable that he should have a previous legal education.

4529. Do you consider that there is a want of substantive law?—In the first place, I consider the great cause of the inefficiency of all our systems to be the carrying of an English system there without complete agency to work it out; and, in the second place, the want of a good system of procedure; and, in the third place, the want of a system of substantive law. I think all those three things operate. And as you have a good procedure in the system recommended by the Law Commission in England, all you want is a substantive law; and if you had a substantive law with the new system of procedure there would not be much necessity for instructing your judges in any other system of jurisprudence.

4530. Did the Law Commission consider that point?—Shortly, but just at the close of its proceedings, it recommended a substantive law for India.

4531. What do you consider to be the great legal distinction between the Mofussil and the Presidency towns?—In respect of substantive law, the great distinction is that they have, properly speaking, no substantive law in the Mofussil, except for particular classes of cases, and in the Presidency towns they have the English law in all its different branches; they have the common law, and the statute law, and the equity law, and the ecclesiastical law, and the admiralty law, and the whole of the English law. There is thus a great difference between the Presidency towns and the Mofussil. I look upon the Mofussil and Calcutta as being just as distinct in matters of law and practice as two foreign countries.

4532. Do you think that a supplementary law is required to fill up the void beyond the personal law existing among the Mahommedans and Hindoos?—I do, certainly.

Mr. *N. B. E. Baillie.*

1 June 1858.

4533. That is what you mean by a substantive law?—Yes; the term substantive law is used to mean all law that is not what Mr. Bentham terms adjective law. The sense in which I use it, is, that it is that which embraces everything except procedure. There is some doubt with regard to the law of evidence forming part of one or the other; but when I talk of a substantive law, I do not refer to the law of evidence as being a part of it.

4534. Do you consider it desirable, both for the European settler as well as the native, that there should be a smaller number of appeals?—I do; I think that one appeal is quite enough. I think particularly that one of the greatest defects of the existing system is not only the frequent appeals, but the special appeal of which the natives are particularly fond.

4535. What is a special appeal?—A special appeal is a second appeal founded upon some point of law or regulation. A general appeal is founded upon evidence. The special appeal may be founded upon everything else but evidence.

4536. A special appeal is upon law points?—Upon law points; it is usually founded upon something that is opposed to the regulations, or opposed to the Hindoo or the Mahommedan law. The special appeal has most commonly gone upon technical points, and has served more than anything else to build up that mass of technicalities which I conceive the procedure now is; and no part of the new system is better than that which abolishes all special appeals, except in reserved cases.

4537. Do the special appeals stand in the way of judgment being passed on the merits of the case?—Yes; they almost always turn upon technicalities.

4538. The Committee have heard something of the want of capital in India; have you ever turned your attention to that large subject?—I have; I think that one of the greatest wants of India, is the want of capital; I do not know that there is anything in the law, or in the present state of India, that prevents the flow of capital into the country; I do not know of anything in particular.

4539. Do you coincide with those, who state that the high rate of interest is one of the great evils in India?—I think so. It aggravates very much the want of capital, particularly in Calcutta. It is one of the greatest evils in India; it is occasioned in a great measure by the mode in which the Government goes into the money market, to supply its necessities; I think that the pressure of the Government, and the financial operations of the Government upon the Calcutta market has more than anything else, tended to derange it, and to raise the rate of interest to a great height.

4540. Do you mean, when you say a want of capital, a want of the development of capital?—No; I mean the want of substantial capital; I believe, in opposition to a great many people who have a fancy that India is enormously rich, that it is very poor; I hear people talking of the natives hoarding and burying money, but I have never seen any great evidence of that; we never read of any great discoveries of buried coin. In my opinion there is very little to justifiy that notion.

4541. You think that there are resources in India, and that those resources require development?—Yes; and what we want is to tempt English capital there.

4542. Do you think that any inconvenience arises from the use of silver as the sole circulating medium?—Yes, very great. I may state one reason in connexion with the notion of money being buried largely in India, which is that silver does disappear very rapidly in India. It is sent out in large quantities, and it goes and cannot be traced. My idea is that it is absorbed to a great extent in the country itself which is very much owing to the changes which have been introduced by us in the mode of paying rent and revenue since the extension of our dominion in that country. Originally, I believe, almost all rent and revenue, or at least to a very great extent, was received in kind; and the introduction of our system, which we recommended as far back as Lord Cornwallis's time, to the zemindars, namely, to take their rent in money, sufficiently accounts for a large absorption and waste of silver; and there is no necessity to revert to the other theory of its being buried.

4543. Have you ever turned your attention to the desirableness of substituting a gold currency for the present silver currency?—I may mention the very great inconvenience of a silver currency. I recollect a case in which a lac of rupees, which is 100,000, was to be tendered; it was to be sent in hackeries or carts by cross-roads across the country. A lac of rupees is a very considerable weight; there are about 2½ rupees to an ounce of silver. This had to be sent for the pur-

Mr. *N. B. E. Baillie.*

1 June 1858.

pose of making a tender. It was in connexion with a case in the Sudder Dewanny Adawlut, where the party was to get possession on tendering a lac of rupees. By the time he arrived with his hackeries, having been exposed to the danger of robbery, he was met by an order of the Sudder Dewanny Adawlut, suspending the decree; so that he had his labour for nothing. If, instead of its being silver, there had been a gold coinage, both the expense and the danger would have been reduced; but it would have been better still if there were a paper currency.

4544. This extreme predominance of silver coinage is an inconvenience to the Europeans as well as to the natives; and you consider that it would be an advantage to both parties to have a simpler and more comprehensive system of currency?—Yes; but it is difficult in some respects to alter it. In the mode in which indigo is cultivated it would be difficult to do without a large silver currency; for I believe that in indigo planting there is an immense number of small contracts with the ryots, and the payments which they receive are so small, that probably they would require to be paid in silver.

4545. You have stated your opinion with respect to the scarcity of capital, and the high rate of interest for money; what is your opinion of their effect upon the agreements with the ryots?—I think it probable that the terms of these agreements might be more liberal to the ryot if capital were more abundant and interest lower.

4546. What is your opinion of the necessity of coercive legislation with regard to the agreements with the ryots?—The agreements are of a very peculiar character; I do not think that legislation has interfered in any way with them, except in respect of indigo and opium, and some continuance of coercive legislation with respect to these seems to be necessary.

4547. What has been the progress of that legislation?—The ryot who receives an advance has very little inducement to keep his engagement; he receives a small advance, and he is to receive a certain price for his indigo at the end of the season. I should think that inducement was hardly sufficient; however, I cannot very well speak upon that point; but he requires to be frequently compelled to perform his agreement, and I should suppose that the inducement is not sufficient to protect him against the temptations to break his agreement. Coercive legislation, therefore, has been found necessary; and under Regulation 6 of 1823 the ryot who does not cultivate the land may be compelled to do so by a suit at the instance of the indigo planter. The indigo planter usually takes a penalty in his agreement; he therefore can sue for the penalty if the ryot does not perform his agreement, that is, does not cultivate the land in the terms of the agreement. He has two remedies: he may apply summarily, or he may proceed by a regular suit. In the summary remedy he can only get a return of his advances; in the regular suit he may obtain the whole of his penalty, in case of fraud or dishonesty on the part of the ryot. The only thing, therefore, that it seems to me he can reasonably object to is, that he cannot recover his penalty, and therefore has not sufficient means to compel the ryot to perform his agreement, except by a regular suit. By a summary suit he can obtain the return of his advances; but I believe that that is not sufficient to compel the ryot to perform his agreement, and therefore the planter has some right to complain; but under the new system the distinction between summary and regular suits does not exist. Under the new system everything would be summary; and therefore I think, if the new system were adopted the indigo planters would have the utmost that the law ought to do for them in enabling them to compel the ryots to perform their agreements; and I would not go further.

4548. The indigo planter has not the same summary remedy as the Government have under the opium system?—The difference now is, that the opium agent can impose a penalty of three times the money advanced upon the opium cultivator, if he fails to perform his agreement. He can do it summarily, whereas the indigo planter has not the same summary means of enforcing his penalty against the ryot who refuses to cultivate; but that distinction will be abolished by the new procedure; and as soon as the new procedure is in operation, there will be no distinction between the coercive power given to the opium agent over the opium cultivator, and the power given to the indigo planter over the indigo cultivator.

4549. And you approve of the adoption of the summary proceeding?—Yes; I think it would be better; I think that the indigo planter is entitled to have the same summary means, because, unless he can do it summarily, he loses season, and his loss may be very great.

4550. The

Mr. *N. B. E. Baillie.*

1 June 1858.

4550. The Committee have heard of the effect upon putnees of a sale of the zemindary by the Government for arrears of revenue; what is your opinion upon the propriety of sustaining the putnee notwithstanding such sale?—The putnee is a very convenient means, to the indigo planter, of getting command of the soil; and therefore if the putnee could be sustained in any way without disadvantage to the state, and without objections in other respects, I would be for sustaining the putnee: but I think that it ought not to be sustained as against the purchaser for arrears of revenue, I think it would lead to very great inconvenience, and to an ultimate separation between the Government and the land, if those putnees, which are perpetual leases, were sustained against a purchaser of an estate sold for arrears of Government revenue. It would have the effect of converting the Government revenue into a mere rent-charge, which it is not at present. A putnee is a perpetual lease which, after a man has got, he is very much inclined to create a sub-putnee out of; and in Bengal there are a great many sub-putnees, and not only sub-putnees, but sub-sub-putnees. These are called dur-putnees and se-putnees. Now, if you sustain the original putnee against the purchaser of an estate sold for arrears of revenue, I do not see how you can stop short of maintaining the dur-putnee and the se-putnee; and I believe that, ultimately, if you were to sustain putnees in the manner proposed, you would probably be doubling the whole ryot population of the country; you would have the ryot as a putnee holder, or a dur-putnee holder, or se-putnee holder, and the actual cultivator under him; and therefore I think it is impossible to sustain a putnee against a purchaser for arrears of revenue. The complication of title would be perfectly enormous; because if the title is complicated in the first instance by the putnee, the putnee must be complicated by the dar-putnee, and you would lose all benefit of the system of registration which is to some extent in operation.

4551. Are not leases for terms not exceeding 20 years protected?—Yes, under the new Act of 1845; and that appears to me to be the utmost extent to which you can safely go.

4552. It would seem more natural to protect putnees in perpetuity?—Yes; but if you protect anything in perpetuity you cut off ultimately the connexion between the Government and the soil.

4553. Do you consider that coercive legislation, to which you have alluded, has succeeded or failed?—There is a great deal of difference of opinion upon that point. I have long been watching the effect of the progress of indigo cultivation in India, and have seen a great deal of its ups and downs, and the conclusion which I come to (it may be erroneous) is that upon the whole, considering the tremendous losses which have been sustained upon the one hand, and the few fortunes that have been made upon the other, indigo has been productive of a loss instead of a gain to the community. I have scarcely known any person connected with indigo in Calcutta who was not ruined by it. I was a witness of the ruin of the ancient agency houses; and there was an unfortunate institution, the Union Bank, with which I was connected; they all got, one after another, into indigo; and no agency house that has ever become connected with indigo, and continued so for a sufficient time, has come out unscathed. Therefore my opinion is, that that coercive system, that that system of applying capital by advances to the cultivators, is not an advantageous way of applying capital to the country; and I ground that upon what I conceive to be a fact, that there has been, upon the average, a loss upon indigo.

4554. What do you consider to be the proper mode of applying capital?—The simple honest mode is to give the ryot a fair price for his produce.

4555. In fact, you would recommend the abolition of advances?—No, you could not do that. I consider it an unfortunate system, demoralising and oppressive to the ryot, and I consider that an extension of it to anything else would not be beneficial, and that if it cannot be done without more coercive means being used against the ryot, it ought not to be done at all.

4556. Do you consider the encouragement of the importation of English capital into India of great importance?—Yes; everything that can tempt English capital to India is of great importance.

4557. You have complained of the Government interfering with the money market?—Yes, the Government is driven by its necessities into the money market, and that has the most evil consequences upon the money market in Calcutta. You may get money to-day at five or six per cent.; to-morrow a new loan is

Mr. *N. B. E. Baillie.*

1 June 1858

opened at a higher rate of interest than the Government has been paying hitherto, and money will rise up four or five per cent. The fact is, that there is no reliance to be placed upon the money market, and I ascribe a good deal of that high rate of interest to the speculative indigo contracts, which have raised the rate of interest very high upon indigo. I have known many men advance money upon indigo, and get 12 per cent., or more by commissions upon it, and that and the fact that the Goverment is forced to be in the money market, is one of the causes that render it so difficult to obtain money on reasonable terms in India.

4558. Some evidence has been given to the Committee as to the desirableness of allowing the zemindar the power of redeeming the land-tax, and giving the occupier the chance of buying from the zemindar the fee-simple of the land; what is your opinion upon that subject?—As to the fee-simple, first let me disabuse the minds of Englishmen upon that subject. You never can get the fee-simple of the land by the mere redemption of the land-tax. The fee-simple of the land supposes you to have the land to do with it as you do with your own in this country. Now you cannot have that in India, because the land is all in the possession of the ryot cultivators, and anything which you can do with the Government can never get you the fee-simple of the land, and it is merely a question whether it is an advantage, upon the whole, for you to get land without its being charged with the Government revenue, or to get land which is so charged. Now, as to the question of applying capital to land, it appears to me that it is more advantageous on the whole to get land charged with revenue, than land without it, because if your sole object is to get command of the productive energies of the soil, you get them much more readily by purchasing land charged with revenue, than if you bought the land free of revenue; what is it that makes a man desire to get a putnee instead of buying a zemindary out and out? a putnee is a thing charged with a much larger annual payment than a zemindary; but the man gets a putnee at a much less expenditure of capital than a zemindary, and for the same reason he would get the land now at a much less expenditure of capital, than if there were no revenue charged upon it. Therefore I do not see that it is a matter of any great consequence whether the man has the means of redeeming the land tax or not.

4559. It has been stated to the Committee, that the zemindar having redeemed the land tax, the land might then be sold to the ryot, who would then have the fee-simple of the land?—In theory, I do not see that there is any impossibility in it, but in practice I cannot conceive that a poor creature who has only a few rupees a month, and a few begahs to cultivate, should ever be able to acquire zemindary rights over a great extent of country.

4560. The evidence that has been given, has had reference to the ryot obtaining zemindary rights over his own allotment?—His allotment is of really very little value; it is a mere fragment, and of little value unless combined with many other similar fragments, which could not be done without what I conceive does not exist in the country at present; that is, a power on the part of the ryot to sell his right.

4561. Mr. *Willoughby.*] I presume that your remarks apply to those parts of India where the permanent settlement is in force?—Yes.

4562. *Chairman.*] You think that you could not introduce the system of small cultivation, by which the ryot would be the proprietor of his own small portion of land?—Yes; but my idea is that it has little direct bearing upon the point of your inquiry; as there appear to be the same facilities in dealing with the ryot now as there would be if he had the zemindary right in addition to his own.

4563. Mr. *De Vere.*] You have spoken of the use of the English language in the zillah courts; do you believe that the use of the native language in those courts tends to the denial or perversion of justice at present?—The mere use of the native languages I cannot say, in my opinion, tends to the perversion of justice; I do not think it does. I am speaking of my own time, which is a time considerably back, and of the men that I knew; and certainly those men seemed to me to be fully acquainted with the native languages, to such an extent as to enable them to do justice in them.

4564. But you suggest that in some cases in those courts an examination of the Europeans might be profitably made in the English language?—Yes, I think so, because it is necessary to have an examination of the parties under that system, which I think ought to be adopted with as little delay as possible; and wherever there

there is an examination of the parties, it is necessary, not so much for the instruction of the judge as the convenience of the party himself, that he should be examined in his own language. I think that justice should generally be administered through the medium of the native languages.

4565. Would you translate the English examination which you have suggested into the native language, for the purpose of making it intelligible to those conducting the native pleading?—I think in that particular case it would be necessary that the other party should know what is going on, and the judge probably would be able to do it; it is of great importance that the other party should know, for the object of the examination would be entirely lost otherwise; unless each party knows what the other is saying there would be no means of obtaining the object of bringing them face to face.

4566. You suggest the examination of a European in the English language on the principle of examining a witness in the language in which he can best bring his evidence, and with a view to the subsequent translation of his evidence into the language recognised by the court?—Precisely for that reason, and with a view of stating it to the other party, if the judge could not do it himself upon the spot, which I think he probably could.

4567. You have said that you think the high rate of interest upon money injurious to the progress of India; what is a high rate of interest but a means of making capital productive in the hands of those who hold it?—One would suppose that it ought to have that result; but suppose there is a high rate of interest upon a speculative contract, it has not that result, for it results perhaps in the loss of the principal as well as the interest, and that is very much my idea of the nature of the contracts I allude to, and I told you that upon the whole my belief was that there was a loss upon them.

4568. Does not a high rate of interest tend rather to discourage than to encourage improvident speculation?—Not always; the man who is speculating highly gives the temptation of a high rate of interest, without which he cannot get the means of carrying on his speculation.

4569. Will not a man give more for money in proportion to the security and advantage with which he can invest it?—He may do so, but we know that a man will give more for money for a speculative necessity than he will with reference to the good way that he has of investing it.

4570. In other words, is not the high rate of interest upon money a proof that there are now existing means in India of rendering capital, even when borrowed at a high rate, profitable in the hands of the borrower?—It is a large question. In the particular case to which I allude I do not think that it is; I think that the high rates of interest upon money, which have been familiar to us in India, have been almost all connected with speculations that have been unproductive, and have turned out losses. A high rate of interest is sometimes procured with safety to the capital, but very frequently capital as well as interest all goes, Calcutta was a highly speculative place in my time, and the rate of interest was generally high.

4571. If the rate of interest were lower, that is, if money were more easily procured, would not it lead to more wasteful expenditure and speculation?—It might, or it might be laid out in legitimate investments; I do not know that I can enter into the question minutely.

4572. Why should the high rate of interest upon money operate more against the employment of money in safe and industrial investments, than it operates in speculative and gambling investments?—Because there is a high rate given in speculative and gambling investments; it raises the rate of interest for legitimate purposes just as much. I believe the rate of interest is artificial in Calcutta, and therefore being artificially high, it is high for good investments as well as bad.

4573. Is the soil which forms the sites of large cities and towns held by freehold tenure?—I cannot speak of the soil of any town except the town of Calcutta, and the soil of Calcutta is held in a very peculiar manner; I think it is very likely that the soil of other towns may be held in something of the same fashion. The Government attained what was called the zemindary of Calcutta before it became possessed of the dewanny right to the revenue. Being the zemindar of Calcutta, it had ryots under it, the cultivators of the soil, just as any other zemindar has in any other zemindary. But the Government treated its ryots as if they were the real proprietors of the soil, and therefore it gave them, in fact (though not that I am aware of in theory) a fee-simple in the soil, subject only

Mr. *N. B. E. Baillie.*

1 June 1858.

to the payment of a certain annual rent per begah, generally speaking, of about two rupees; and all our tenures in Calcutta are of that character. They are founded on what are called pottahs. It is difficult to say what right a pottah did convey in the native idea, but all Calcutta is built upon ryots' tenures, those ryots' tenures having been treated by the Government, *quâ* zemindar of Calcutta, as if the ryots' tenure were proprietary.

4574. What is the usual term of building leases in Calcutta and the other large cities of Bengal?—I am happy to say that the system of building leases has not been introduced into Calcutta. There was in my time no building lease in Calcutta, everything was bought out and out, what you would call the fee-simple of the land; in my time there was no such thing as a lease of years, except an ordinary lease for residence; sometimes the attorneys used, in creating a mortgage, to create it by a demise of 1,000 years, but there was no building lease that I am aware of granted in that way.

4575. What are the means by which a person wishing to settle in India, and to invest his capital in the country adjacent to the towns, could acquire a fixity of residence in the towns themselves?—I believe that the zemindars of the villages which afterwards became comprehended in towns (for towns are in some instances creations of our own) gave a pottah, which was leave to build on; it was a question, and I believe is still a question, what right really was conveyed in a puttah, which did not define anything; for they did not define by time or by life. I think the impression is generally, that when given for building purposes, they did convey a right to the soil; and I rather think that the Act I. of 1845, which protects farms up to 20 years, specially mentions pottahs granted for building purposes.

4576. Does not the indefinite nature of this right conveyed by pottahs form a considerable impediment to the investment of capital in India?—It has not, in my opinion, in point of fact, done so; all the indigo factories that I have ever been acquainted with were built on those pottahs, and except in instances where the pottah was given either for a time, or a life, I have never known any attempt to oust an indigo planter on the part of the zemindar; and therefore, in point of fact, they have, although not in theory, yet in practice, been treated as though they conveyed the fee-simple of the land.

4577. How far do you conceive that encouragement could be afforded to persons intending to invest capital in the cultivation of the soil by increasing the facilities for acquiring freehold tenures in towns?—An Act might be passed declaring those freehold tenures. In Calcutta we do not want it; when we buy and sell land commonly in Calcutta, the attorneys who are the means of conveying it never inquire into the origin of the title, and therefore, practically, it is no impediment whatever to the settlement of Europeans; it might be so theoretically.

4578. Mr. *W. Vansittart.*] I think you have not been in the receipt of any salaried appointment from the Government during your stay in India?—At the first commencement of my office as Government pleader I had a salary of 40 rupees a month, and in addition to that the regular fees of all the suits with which I was connected; that salary was afterwards raised to 500 rupees a month, but was reduced by the authorities in England from 500 to 300.

4579. You have not been generally a salaried officer of the Company?—Not otherwise than I have mentioned.

4580. What is your opinion of the civilians generally as regards their knowledge of the language and the administration of justice?—All my knowledge of them refers to a period anterior to 1844, and then, I must say, speaking chiefly of those in the Sudder Dewanny Adawlut with whom I was intimately acquainted, I can scarcely recollect a single instance of any man who did not seem to me to be fully competent to the conduct of business in the native languages.

4581. With regard to those residing in the Mofussil, what is your opinion?—I had not the same means of judging as to them. I had only their decisions, which came up to me for the purpose of appeal to the Sudder Court, and then I could only judge of the merits of the decree; therefore I cannot speak as to their qualifications further than this, that I ascribe the great cause of what I must admit to be many defects in the decrees that have come in my way to the want of any certain rule upon the part of the unfortunate judge, who had nothing whatever for his guidance, and therefore was frequently lost.

4582. What is the state of feeling that appeared to you to exist between civilians

civilians and indigo planters?—I cannot speak from personal knowledge upon that subject.

Mr. *N. B. E. Baillie.*

1 June 1858.

4583. Have you heard the evidence of Messrs. Theobald, Freeman, and other witnesses?—No; I did not hear Mr. Theobald's evidence at all; I heard Mr. Freeman's.

4584. Upon what grounds and data do you suppose those gentlemen formed their very unfavourable opinion of the abilities and qualifications of the civilians?—I cannot say.

4585. You have stated that, notwithstanding the defects of our Mofussil courts, you do not think that indigo planters and others have ever been deterred from settling in India?—That is my belief. I never heard in conversation any man talk of it as a great grievance; it is always talked of as an annoyance. A man will tell you that he is obliged to pay so much to bribe the omlahs. I never knew a case where a man was influenced to prolong or shorten his stay by the state of the law, bad as it is.

4586. You object to Englishmen being subjected to the native functionaries?—Yes, I do, to native magistrates.

4587. Do you object to natives being appointed to high official situations?—Yes, I do; my reasons in both cases are political. I would say that with regard to the appointment of natives to higher situations, that I was asked the question when examined before the Committee of the House of Commons in 1853. I then said that I thought that they were improving very much, and that, intellectually, I thought they might be considered qualified for higher situations. I thought there was still some moral deficiency on their part, and if they had been promoted to the highest situations at the time that I was acquainted with the native judges, I did not think that the natives themselves generally would be satisfied with their decisions, or would be entirely free from suspicions as to their honesty. I then gave my opinion entirely as a judicial question. I was talking of the qualifications of the men morally and intellectually for judicial functions. Now it is given upon political grounds. I think, politically, the natives should not be appointed to those high situations.

4588. In addition to your previous opinion, subsequent events have confirmed your opinion of the unfitness of the natives generally to be employed in those offices?—They have opened my mind to another view of the subject. I had considered the subject only judicially, and I discarded every other consideration from my mind in applying it directly to the question whether they were morally and intellectually qualified for higher judicial offices. Now, I do not discard other considerations; in fact, the judicial considerations are entirely subordinate to the others in my mind.

4589. Do not you think that we could get young men of very good family and education from this country to fill the situations of sudder ameens and moonsiffs with the present salary?—I doubt it very much; I think a man must have been some time in India before he is efficient; and by the time he has lived long enough in India to acquire all the knowledge to render him efficient, he has become a more valuable machine than you could purchase at that rate.

4590. How would you improve the system of sudder ameens?—I think you cannot do better than retain the natives; I wish to retain the natives; I think it is of great importance to retain the natives; and I think that politically it would be a mischief of the most enormous kind to withdraw the natives from the situations which they now hold, and I should not be surprised if it led to an insurrection of the people.

4591. Is not Khan Bahadoor Khan, who was our sudder ameen of Bareilly, now the ruler of Rohilcund; and is not that the only province we have to reconquer?—I believe he was sudder ameen; I do not know.

4592. Have not several of the other sudder ameens behaved very badly during the late revolt?—That may be, but still I would not put a ban upon every native of the country.

4593. You do not think it would be advisable to substitute European agency for native agency?—No; I think it desirable to reserve as much as you can for the natives.

4594. *Chairman.*] You want to intermingle Europeans with the natives, to guide the natives?—Yes, to guide the natives.

4595. Mr. *W. Vansittart.*] Do you not think the natives consider that the Supreme Court is a much more expensive court than our Mofussil courts?—I have

Mr. *N. B. E. Baillie.*

1 June 1858.

I have no doubt they do, for the fact is so; the regular course of proceedings is more expensive in the Supreme Court, but by the knavery of many of their own agents, the mookhtars, the expense is sometimes really greater in the Mofussil than in the Supreme Court. The advantage of the Supreme Court is, that the practitioners are all men of character, more or less, and therefore there is no irregular expenditure in the Supreme Court; there is a vast irregular expenditure in the native courts, an expenditure for which the courts are in no way responsible, but an expenditure connected with the employment of inferior native agency.

4596. There is a higher class of agents in the Supreme Court than in the Mofussil?—Yes.

4597. Do you think that the amalgamation of the Supreme Court and Nizamut Adawlut would be popular among the natives; for instance, say the judges to consist two-thirds of men of the covenanted service, and one-third of the Queen's or English lawyers?—I think generally, upon the question of amalgamation, that the elements will not do well to combine together; I think practically, that it is a question exceedingly difficult.

4598. You are in favour of keeping them separate?—Yes; I would give them first something in common; I would introduce the new system of procedure into the Mofussil courts; if it worked well, it might be introduced into the Supreme Courts, and then if they had the same common system of procedure the course would be prepared for an amalgamation in other respects.

4599. You say that what we want in India is a new substantive law; without our present system of procedure how could that be brought about?—A substantive law is one of the great wants of Mofussil India. I believe that the Law Commission was of opinion that all India might be brought under the same substantive law. I rather think that they intended that the substantive law should apply to the Presidency towns as well; but, if I may venture to express an opinion in opposition to men for whom I have the greatest possible respect, I think that it would be better, as the Presidency towns have had English law so long, to retain English law in the Presidency towns. The fact is, that there is a great deal of English law which is quite inapplicable to the Mofussil. I would take the case, for instance, of mercantile law. There is a good deal of mercantile law applicable to inland transactions, but there is much of it connected with the sea, and I think it is of great importance that the mercantile law of the whole Empire should be, as far as possible, the same; indeed, if you could go further, and make the mercantile law of the whole world the same, it would be a great advantage; that is one reason why I would not change the law of the Presidency towns; the two systems of the Presidency towns and the Mofussil are just as much separate as those of France and England, and I see no reason for forcing them unnaturally together; at this moment, particularly, I think it highly undesirable.

4600. Mr. *Gregson.*] You say there is a want of capital and a high rate of interest in India; what, in your opinion, are the obstacles which prevent the transmission of capital from this country to India?—I do not know that there is anything to prevent it. I believe there are great means of employment, and I believe capital does go largely from this country to purchase produce. I do not think it is advisable to lay it out in that particular manner the Committee have been talking of; but if you send out money to purchase goods in the marts of India, I do not see any objection.

4601. Mr. *Willoughby.*] Does not the system of indigo advances exclude the general European capitalist?—I think that when a man comes to Calcutta with money, he might be tempted to lay it out in this speculative manner that I mentioned, in indigo, and, in fact, a great deal of the professional capital made in Calcutta is embarked to a very considerable extent in that way.

4602. The fact is, that the crop has been forestalled by the settlers on the spot by the system of advances?—Yes, of course, the crop is always advanced for, and is restricted to the indigo factor, who makes the advance.

4603. Did you hear Mr. Hawkins's evidence?—Yes, I did.

4604. I gather from your evidence that you concur generally with that gentleman, except upon the particular points you have mentioned?—There is hardly any judicial point upon which I differ with him; we long worked together upon the Law Commission, and therefore it is natural that we should think together upon those subjects.

4605. You

4605. You have alluded to the defective state of the police up to 1844, when you left India; you are aware that many attempts have been made since, and especially recently, to improve it?—Yes, I believe so; but I do not know that any attempts have been made in the way of instruction where it is most wanted; I believe there are attempts in the way of a preventive police; there is some talk of a military police as a preventive police.

4606. Are you acquainted with the system introduced in the Bombay Presidency?—No, I am not.

4607. From what class would you select the European subordinates?—The military serjeants, if they are competent, and I believe they generally are competent. We had an excellent deputy superintendent of police in Calcutta, taken from that class; Serjeant M'Cann was his name.

4608. As a general rule, do you think they would be trustworthy?—I should hope they would.

4609. I allude more particularly to that bane of the soldier, drink?—The conductors of artillery are selected very much in that way, and are very highly respectable men; and I do not see why, on a good salary, European serjeants might not be exceedingly useful in connexion with the police.

4610. I conclude you are not aware that what you recommend was the practice in the Island of Bombay, and that the whole body were discovered to be corrupt, and were discharged?—I am not. What I wish to impress on the Committee is that there is a fault in the native mind which requires to be removed; that there is ignorance which requires instruction. I have only suggested a remedy, but still the fault is there; and to improve the system that particular fault must somehow be rectified.

4611. You have stated some very strong objections against the judicial system introduced by Lord Cornwallis, and you made sundry suggestions for its improvement: is not the system which you advocate in reality the native system, that is, the system which prevails to this day under the just native Governments?—I cannot speak with regard to the system that prevails under any native Government; but that simple system was the Mahomedan system; and I think it highly probable that the Mahomedan system was generally adopted in India.

4612. You have alluded to the courts of law, presided over by European judges, being more courts of appeal than of original jurisdiction; that change was introduced by Lord William Bentinck?—Yes.

4613. And is not that in your opinion one of the reasons why the judicial administration of India may have deteriorated by abolishing the school in which the Company's judges were trained?—I think there is no doubt of that; one of the greatest faults in the modern system, so far as a European is concerned, is, that he has no means of instruction; the judges with whom I was acquainted were men of the old school, trained in the regular way of the old service; that is, they ascended gradually through the revenue, and were judges before they became judges of the sudder, but now they have not sufficient means of experience in the lower grades of the service, which is a great evil.

4614. You have stated that you would allow Europeans to plead in their own language in the courts of law in the Mofussil; is that if the case was between European and European, or if the defendant was a native?—What I said was not so much applicable to the advocate, as to the party himself.

4615. Supposing the defendant is a native, is it your opinion that English should be used as far as the plaintiff is concerned?—I think as under the new system it is necessary to examine the parties, if a European plaintiff should come to be examined, it is of great importance that he should, in all cases, be examined in his own language.

4616. You confine the English procedure to the examination of the plaintiff or defendant?—Yes; I would give a man, from the necessity of the case, the use of his own tongue.

4617. Sir *Erskine Perry.*] That is inevitable is it not, that if an Englishman comes up, he must give evidence in his own language?—Yes, he does so now when examined as a witness; under the new system he might be subjected to a double examination, first for eliciting the points in dispute, and secondly as a witness.

4618. Mr. *Willoughby.*] Then you confine your recommendation to his own evidence?—Yes, I think that there should be a language of the court; that that language should be the native language, and that the advocates of the court should be obliged to use that language.

Mr. *N. B. E. Baillie.*

1 June 1858.

4619. Sir *Erskine Perry.*] You would make no change at all, in fact?—Very little.

4620. What change would you make?—Under the new system the parties are required to appear in person, which they are not much under the present system, and I would give an English party the free use of his own language. At the same time I may say that I see no objection to the use of English if the pleaders on both sides understand English, as is now the practice in the sudder; I think the present practice, which gives an option, better than the old practice, which required Hindostanee in all cases.

4621. Mr. *Villiers.*] You do not attach any importance to the public not understanding it?—I think in general the parties, if they happen to be present, and their agents would prefer that the proceedings were conducted in the language they understood; but if they had much confidence in their pleaders it would not be a matter of much importance. I found, in my own practice, that when my clients had learned to confide in me, they did not care in what language I spoke, but before I had made some way in the court they told me that they preferred to hear me speak in Hindostanee.

4622. Sir *Erskine Perry.*] Have not you seen this occur in the Sudder Dewanny Adawlut, when the rule was to have the Hindostanee language, that an English advocate would begin in the Hindostanee language, and would break out into a little English; and the judge, in the same way, would commence a sentence in Hindostanee, and also break out into English?—No, I do not think that occurred in my own practice. I do not mean to say that I was very fluent in the language, but I have no recollection of breaking out in that way; but I was no doubt obliged to shorten my speeches, which was perhaps rather an advantage to the judge; perhaps an advantage of the native language, that is, that speeches are not a tenth part of the same length that they are in English.

4623. Mr. *Willoughby.*] In case a native is wronged by a European settler, what means has he of obtaining redress?—In the Mofussil, at present, the English magistrate has no jurisdiction whatever over a European, except in a certain class of cases, cases of assault, I think, chiefly; and for those cases he may punish to the extent of a fine of 500 rupees. I think that is a great defect in the present system. I think it has the effect of giving practical impunity to a European settler for every offence except the graver kinds of crimes. Now I conceive that it is necessary that the English Mofussil magistrate, not the native magistrate, ought to have a jurisdiction over a European to the same extent as in Calcutta.

4624. In the event of any extensive settlement of European settlers being practicable, how would you propose to protect the ryots, seeing that at the present moment there is this defect?—I would subject the Europeans to the ordinary criminal judicatories of the country, with the exception of the native judges and magistrates.

4625. Sir *Erskine Perry.*] You would increase the jurisdiction?—I would give the same jurisdiction as in Calcutta; upon the whole I would not extend the jurisdiction over men more than is absolutely necessary; I think the less change you make at present the better.

4626. What power of imprisonment has the magistrate in the Mofussil?—Only a 500 rupee fine I think.

4627. Are you sure that he has not a power of two years' imprisonment?—I do not know. I speak of his jurisdiction over Englishmen.

4628. Mr. *Willoughby.*] It has been stated that the process against defaulting cultivators is more stringent under the opium regulation than the indigo regulation; is that the case?—I do not think that it is so in reality if you consider that the Opium Act has two purposes, one with regard to the cultivation of the poppy, and the other as to the dealing with the manufactured opium; the manufactured opium is contraband; there are a great many provisions in the Act that refer to that which are more stringent, but in the matter of a contract with the ryot to cultivate opium and a contract for indigo, I do not see any great difference in the stringency of the opium regulation over the other, excepting this, that the one is summary to the extent of a penalty of three times the advances, and the other is by regular suit. I think that a great objection, but I think that would be remedied by the new code of procedure.

4629. Did you state that all indigo planters are ruined men?—I did not say that, I believe. I believe there are some instances to the contrary; I did not mean

mean to say that. Probably there is a loss, on the average; but it is not to indigo planters alone. I mean, taking into account all the capital that is advanced upon it from Calcutta (the great source from whence it issues), and taking everybody who has been connected with indigo from the beginning to this time, my conviction is, that there has been a loss upon it, and that it arises, in some degree, from that peculiarly speculative and bad mode in which it is cultivated, a mode that was barely tolerated by the old law of the country.

Mr. *N. B. E. Baillie.* 1 June 1858.

4630. You have alluded to the agency houses who failed; was not the cause of that failure that they had made advances at high rates of interest on the indigo factories, and that when the money pressure came they could not realise their capital?—I believe that has always been partly the cause of the great failures in Calcutta. I cannot say, as to the original agency houses which failed in 1833, that that was all, because I think there was a vicious system in other respects that contributed to their losses; but, taking all the parties connected with indigo in every way, there has been, I think, rather a loss than a gain, which I ascribe to this peculiarly pernicious mode of advancing money.

4631. Their advances were made, and they could not realise when they wanted the money?—No doubt that was a great cause of the failures of the original agency houses.

4632. Did you state that by the sale law of 1845 a putnee tenure is recognised for 20 years?—No; I consider that a farm held for 20 years is not a putnee; that is an ijarah.

Jovis, 3° die Junii, 1858.

MEMBERS PRESENT.

Mr. Baillie.	Mr. Knight.
Mr. Campbell.	Sir Erskine Perry.
Mr. De Vere.	Mr. J. B. Smith.
Mr. William Ewart.	Mr. Villiers.
Mr. Gregson.	Mr. Willoughby.
Mr. Kinnaird.	

WILLIAM EWART, Esq., IN THE CHAIR.

Mr. *Neil Benjamin Edmonstone Baillie*, called in; and further Examined.

4633. Sir *Erskine Perry.*] I UNDERSTAND from you that you do not think the mal-administration of justice in the interior has deterred British capital from finding a location there?—That is my impression; I do not think it has; that is, it has not deterred Englishmen from settling there.

Mr. *N. B. E. Baillie.* 3 June 1858.

4634. At the same time we learn that there has been no increase of British settlers in the interior for the last 25 or 30 years?—I have heard that stated, and believe it may be so; I have no knowledge of the fact.

4635. Is it not the fact that the parts of India in which British capital and settlement have most flourished have been the Presidency towns, Calcutta, Madras, and Bombay?—No doubt of it.

4636. In point of fact, the British settler and capitalist feels just as much protection at Calcutta, Bombay, and Madras, as he would in Liverpool or Bristol; is not that the case?—Yes, I should say so; I do not see why it should be otherwise.

4637. Would not that lead to the conclusion rather that the protection by the laws in Calcutta, Bombay, and Madras has had great influence in those results which I point out?—It does not follow, I think, necessarily. It appears to me that the settlement of Europeans at those places is more to be ascribed to the peculiar character of the places; that it so happens that those are the great channels of communication. We know, in point of fact, that Calcutta is the principal navigable mouth of the Ganges, and the Ganges is the canal of all the Upper Provinces of Bengal, and all the trade of the country comes down in that direction, and therefore people would naturally settle there.

Mr. *N. B. E. Baillie.*

3 June 1858.

4638. That argument would not apply to Bombay or Madras, where no navigable rivers find an exit?—No, it does not; but there must have been some considerable trade direct to those ports, or else Europeans would not settle there. I do not suppose they went to settle because they would have the protection of the Supreme Court. I do not thiuk that was the inducement to settle there. I think the inducement must have been of a different character quite; that it was for the purposes of their trade, and having gone there they were glad to have the protection of their own laws.

4639. Is it not the fact, that when Bombay came into our possession it was a barren island, with 4,000 or 5,000 poor people upon it, with no trade at all?—I believe so.

4640. Do not you think, therefore, that the administration of justice in Bombay must have had a great operation in attracting that great commercial industry that exists there?—I think they must have been attracted by other causes. Europeans settling largely there of course are desirous to have justice properly administered; but I do not think that merely the prospect of having justice properly administered is the moving cause to induce a European to settle there.

4641. If no trade were to be obtained by the operation of capital, a proper administration of justice would have no effect in attracting people there; but if there are attractions for the employment of capital, do not you think that the proper administration of justice would have a great effect in inducing settlers to go there?—I place very great importance upon the proper administration of justice certainly. Having been always connected with it myself, in some way or other, I am perhaps inclined to exaggerate its importance; but I do not believe it is a moving and inducing cause for people to settle in a certain place; it would not induce them to settle in Sierra Leone, for instance, merely because justice may be well administered there.

4642. I do not put to you the case of a Lord Chief Justice Coke being put down upon a barren island in the Pacific attracting settlers there; that would be an absurdity. But in a place where there is capital, does not the administration of justice attract settlers and capital to that locality?—It may be so; but I do not think that people think much beforehand of the administration of justice.

4643. How do you reconcile with that opinion the clause which is contained in contracts, that parties shall be suable and have the right to sue in the Supreme Court?—The contracts must be made always with British subjects, and that sufficiently accounts for there being engagements for submitting the other party to the jurisdiction of the Supreme Court. Two natives cannot enter into an engagement with each other that a matter between them shall be determined by the Supreme Court; the contract must be between a native on the one hand and a British subject on the other.

4644. Are you sure that you are right in that statement?—I think so. According to my impression, when I was practising the law in both places, I think we used to introduce a British subject for the very purpose of making the jurisdiction.

4645. If the administration of justice was as satisfactory in the Mofussil court, would there be anything to prevent Europeans in Calcutta from trying their cases in a court within two or three miles, at Hooghly, or the neighbourhood?—The Mofussil court is a *terra incognita* to a European; he would not like, of course, to have his matters decided in those courts, because he knows nothing about them.

4646. If a court is within a mile or two of a jurisdiction, he would have an opportunity of finding out how justice was administered in that court?—I do not think he would have confidence in it, and perhaps justice is not so well administered. It would be absurd to say that justice is so well administered by the Company's courts as on the common-law side of the Supreme Court. I would not for an instant compare the administration of justice upon the common-law side of the Supreme Court of any of the Presidencies with the administration of justice in any of the Company's courts; but I would compare with it (and perhaps with advantage to the native courts) the administration of justice on the equity side of the Supreme Court.

4647. You admit fully that the administration of justice upon the common law side of the Supreme Court is much superior to the administration of justice in the Mofussil courts?—Unquestionably it is much superior in every possible way, greatly in respect of the rapidity of decision.

4648. You left India in 1844, did you not?—Yes.

4649. You

Mr. *N. B. E. Baillie.*

3 June 1858.

4649. You are not, therefore, aware of the reforms that have been made on the equity side of the court since that period?—I believe that the proceedings in equity courts here have been shortened, and I suppose that is now the case in Calcutta; but my remark with regard to the equity proceedings in the Supreme Court does not apply so much to the procedure of courts of equity as to the inapplicability of that particular kind of procedure to the country. I believe, according to my recollection of it, that a great deal of its value formerly rested upon the fact that it afforded the means of examining the parties upon oath, the defendant always, and by means of a cross bill the plaintiff in like manner. The inapplicability, therefore, of equity proceeding to the natives was this, that no dependence could be placed upon the native oath, and that the answer brought out nothing, and the cross bill brought out just as little, and the suits went on interminably.

4650. You speak of your experience of 14 years ago?—Yes.

4651. You are not aware of the reforms that have been made in the Supreme Court upon the equity side?—I have only a general idea of them.

4652. Do you know that the judges take *vivâ voce* evidence in equity?—No; in that case the whole equity procedure seems to be changed, and I do not see why it should not be made the same as in the common law courts.

4653. Do you know that the judges take the references themselves, instead of referring them to the masters?—That is a great improvement; the reference to the masters is what I chiefly allude to, as prolonging indefinitely the suit.

4654. The administration of justice on the common law side is much superior to the administration of justice in the Mofussil courts generally?—I should say so, without any doubt.

4655. And the reform which you chiefly advocate is an improvement of the procedure in the Mofussil courts?—Yes, with the addition of a substantive law.

4656. The system at present existing is to do a great deal in writing, is it not?—It is entirely in writing.

4657. The evidence of the witnesses is taken by deposition?—Yes; but under a recent Act the witnesses ought to be examined by the judge himself, and I believe they are.

4658. The first evidence is taken in writing by the omlah of the court, is it not?—It was formerly the practice, and a very bad practice, but has, I hope, been discontinued.

4659. If the procedure which the Commissioners in England have advocated be adopted, the evidence and nearly all the proceedings would be *vivâ voce*, would they not?—Yes, they would be *vivâ voce*.

4660. You have recommended the abolition of written pleadings?—Yes.

4661. And you recommend the judge taking the evidence himself from the witnesses as they come up?—Yes; as to written pleadings I should say that with some qualification.

4662. That being so, if an English judge is administering justice in the Mofussil, would it not be much simpler that he should take down the evidence that he hears in his own language; and would not such taking down of the evidence be an ample record of the case for the courts above?—He might, if he was an English judge, take it down in his own language, and I suppose he would do it for his own guidance, and so far it might be an assistance to the judge; but if the witness were a native, he would require to examine him in the native language, and then translate his evidence for himself upon his notes.

4663. Suppose the course were to hear the evidence, as in the Supreme Court, through the medium of interpreters, would an establishment of two interpreters to each court cost as much as the large body of omlahs now employed?—I should say with regard to the large body of omlahs, that the only officer that I am aware of at present is what is called a sheristadar in the Mofussil courts; and in Calcutta, in the Sudder Dewanny Adawlut, each judge had a peskar and a missel-khan, or reader; in the Mofussil he has only one in attendance upon him; in Calcutta he would have two; and therefore the expense in the Mofussil would certainly be less under the present system than that of interpreters. Some officer, too, would be required to take down the evidence from the interpreter, as in the Supreme Court.

4664. Is it not the case that in the Supreme Court there is a much larger establishment, and is not the sheristadar's office full of four or five reporters?—The evidence cannot be taken down by them.

Mr. *N. B. E. Baillie.*

3 June 1858.

4665. Does the establishment of a native judge only consist of a sheristadar —I mean that part of the establishment between which only and the system of interpreters there can be any parallel; there is a large part of the establishment which is entirely out of the court. In the sheristadar's office there is a good deal of business connected with the records of the court. But the establishment that the judge has for his assistance in the proceedings before him is, in the Mofussil, I believe, confined to one officer, the sheristadar, and in Calcutta there used to be two.

4666. And the sheristadar has nobody under him?—I think not in court; he must have a good many people in his office. The exact number I do not know; but with the judge himself, as his assistant in court, I believe there is only one officer, the sheristadar. I cannot speak with certainty, but that is my impression, and I know in Calcutta there were only two officers, a peshkar and a misselkhan.

4667. As to the substantive law which you recommend for the Mofussil, I suppose you have heard the scheme of deluging India with English law and English lawyers derided?—I cannot say derided, but I have heard it a good deal discussed.

4668. Do you know what the rule is as to introducing English law into a colony, and into India?—There is no rule for introducing English law into India. I believe that in such colonies as New South Wales, composed entirely of English settlers, English law is carried by the English judges, and they have an entire English establishment, but that would not be the case at the Cape, I suppose.

4669. Do you know what the rule is in the English law, as to the English law being carried to the colonies?—I do not know the particular rule.

4670. Is it the rule that they only carry so much of the English law as is applicable to their own situation?—I suppose it is so.

4671. And that all the municipal law and police regulations, and everything affecting local customs, is not imported into a country or colony where English law is carried?—I should think so.

4672. Is that the rule by which the Supreme Court of Calcutta have been guided in their application of English law to the litigation of people who come before them?—I can hardly say that it is.

4673. Then you do not recollect the decision of Lord Brougham, in the great case of the "Mary Lyons"?—Yes, I do, generally.

4674. In which the Privy Council in this country held that those portions of the common law that really did not apply to a country like India, were not applicable?—I forget the particular ruling in the case.

4675. If that should be the case, and the rule of law, if the English law was introduced as a substantive law in the Mofussil, would it not afford a good rule, founded upon jurisprudence, for all controversies that arise between man and man? —I do not think it would, with regard, in particular, to the sale of land. I do not think that there is anything in the law of England that could regulate the sale of land in India.

4676. Surely if the English law were introduced, full effect would be given, as in this country, to all local customs respecting law, would it not?—I think that it has not been the case, and may therefore infer that it would not be done.

4677. Of which court do you speak?—The Supreme Court. I am talking of the universal practice in Calcutta, and of my own practice for a great many years as a conveyancer. We have introduced the feudal conveyance of England, the same as in this country; and I believe it to be utterly inapplicable to that country.

4678. That class of decisions has been overruled by the Privy Council?—With great deference to your judgment, I should not say that the simple decision of Lord Brougham in that case could be said to overrule this great mass of practice which I allude to. I am telling you the manner in which land is commonly conveyed between parties in Calcutta; it is done by lease and release; mortgages are made in the same way by lease and release, or demise of 1,000 years; and I think all this inapplicable to the country.

4679. *Chairman.*] You only speak of the system of coneyance as practised in Calcutta up to the year 1844?—Yes.

4680. You cannot say whether any reforms adopted in England since that time have been likewise adopted in Calcutta?—No.

4681. Sir *Erskine Perry.*] Is not the law administered in the Mofussil this, that first

first of all the judges must be governed by Acts of Parliament and regulations?—Yes.

4682. Secondly, in the absence of such Acts, by the usage of the country?—Hardly.

4683. Are you sure that I am not quoting from the regulations?—It may be so. I am speaking from recollection. The probability is, we mean the same thing; I speak with reference to the phraseology of the Bengal regulations.

4684. The third rule is, that if no such usage appears, they are to go by the law of the defendant?—That was the law; but that law was altered, I think, in 1831. That was the law in theory, but I do not think it was ever the law in practice.

4685. Is not this the governing rule which prevails all over India, that in the absence of specific law and usage, justice, equity, and good conscience alone are to govern the judge?—Yes.

4686. That is really the substantive law which the judge is to administer?—Just so; where there is neither regulation nor Act of Parliament, nor Hindoo nor Mahomedan law applicable according to the regulations to the particular case, the judge is to determine by justice, equity, and good conscience.

4687. Would it not be an immense improvement if the judges, instead of this rule, were able to refer to the jurisprudence of any civilised nation, whether the civil law or the English law, to find a rule applicable to the case?—I think it would be decidedly better to have almost any law of any civilised nation rather than to leave things to the vague ideas of different men as to what is justice, equity, and good conscience.

4688. Without drawing any contrast between the civil or Roman law, and the English law, you admit that the jurisprudence of either country would, in most transactions of life, afford a rule for the guidance of the judge?—That is stating it perhaps, a little too largely. I do not think it would. I am speaking with reference to a vast variety of subjects which it is hardly possible for a man to keep in his mind's eye. But, generally, I should say that there are many cases occurring in India to which I do not think any rule of English law would be justly applicable.

4689. Without drawing any contrast between the excellencies of the civil law, or of the English law, would not a judge, being able to refer to the jurisprudence of either, have great advantages in administering justice, instead of being governed by the general rule of equity and good conscience?—I do admit most unqualifiedly that the power of referring to any rule of any civilised nation is much better than having no rule at all.

4690. And in any application of the English law to the Mofussil, full stability will be given to all local customs, and also to the rules of inheritance and marriage, which are personal laws?—That is now the course adopted in India with regard to matters of inheritance, marriage, caste, and religion, because such is the positive law of the country, and the judge would probably follow a similar course in the case supposed.

4691. Is not that wise legislation?—Clearly; so far it is wise.

4692. And if English law were introduced into India with those qualifications, do not you think that it would supply the defect which you point out of the want of a substantive law?—I have endeavoured to explain how I think it would not be sufficient; and I believe that practically it would be introduced in many cases without the qualifications, as in the case of the feudal conveyance alluded to.

4693. And I suppose you do not think that English settlers settling in the Mofussil would be gratified to find that the rules of jurisprudence to which they were accustomed also prevailed with the judge in the controversies before them?—I have no doubt they would.

4694. Would that be advantageous to the country generally or not?—To the individual, but not to the country generally.

4695. Are the rules such arbitrary rules that they are merely suited to Englishmen, and not to the world in general?—Many are arbitrary.

4696. If those arbitrary rules are not imported into India, if the law is administered soundly, would not it be advantageous to the country generally?—Take the case of a purchase of goods not delivered, and perishing in the hands of the seller; how should that be regulated? By English law, the peril is said to be on the purchaser.

4697. Does it signify much which way the rule is fixed in those cases where third parties are concerned; is not the object to have a fixed rule?—General rule is

Mr. *N. B. E. Baillie.*

3 June 1858.

is required, and would be quite enough when once determined; but in the first or second application, and perhaps in many subsequent applications, before the rule is understood to be the rule, the application of it might, I think, be unjust.

4698. Do you admit that in that case it would be better to have that arbitrary rule that you speak of, than to have 50 decisions from one judge in equity one way, and 50 a different way?—Yes.

4699. And that might happen under the existing law?—Yes, and that is a great evil.

4700. Would it not therefore be much better, both for the natives and the English settlers, to have one system of rules laid down, which a judge with common industry may make himself master of?—It would certainly be better.

4701. And would it not be easy also if that were the system, to have little simple hand-books of jurisprudence to be handed about, and made subjects of study?—It might be, I think.

4702. Would it not be easy for the Government, if the English law were made the substantive law in the interior, to publish themselves small hand-books on the principal subjects of jurisprudence, contracts, dealings with persons, and so on?—It might be so; but the preparation of hand-books would not, I think, exclude the rest of English law, into which it might be necessary, as it were, to make excursions, in order to explain what might be obscure in the hand-books. It would be hardly possible to avoid a reference to English decisions, which would be a great evil with native judges. I admit that a great deal might be taken out of the law of England, but it ought to be permanently cut off from the great body of English law by an Act of the Legislature, and made with suitable additions the law of India.

4703. That is the rule of the English law, is not it?—It may be the rule of the English law in theory, but it has not, I think, been the rule of English law in practice.

4704. And that system has been applied to Calcutta and the Presidency towns in the mode I suggest; namely, that the judges have decided on each occasion how much of English law is imported into India?—In practice I believe not; my impression is, that in all cases to which the Hindoo and Mahomedan law does not apply the judges have applied English law. By Act of Parliament the judges are required to apply, in matters of contract and dealings between parties, the law of the defendant; but in practice, when I was in the Supreme Court, I cannot charge my memory with any case in which there was an application of the Mahomedan law of contract to a Mahomedan, or an application of the Hindoo law of contract to a Hindoo. There is very little of any Hindoo law of contract; and much of the Mahomedan law of contract is utterly inapplicable to the present times (the law of sale in particular being complicated with their peculiar notions on the subject of usury); and therefore it was scarcely possible that the court could have applied the Hindoo and Mahomedan law to cases where it was required according to Act of Parliament. Therefore English law has been applied generally, except to cases of marriage, inheritance, and so on.

4705. Is not the law of contract in all cases much the same; that the parties are bound to perform the contract?—Parties are generally obliged to perform their contracts; but I allude to cases where there is no evidence of any contract sufficient to regulate the matter in dispute between the parties, and then it is that the judge must have reference to some other standard; that is, to the law of the country. I beg to observe, too, that much of English law might be introduced in practice by professional men (as in the case of conveyance), and the judge might have rather to follow than lead in determining whether a particular part of English law is applicable to the country or not; and until determined by a judicial decree, there would be doubt.

4706. Are you aware of the mode in which the inhabitants of the Presidency towns have shown their satisfaction or dissatisfaction with the application of the English law to their contracts?—No, I cannot say that I have seen any particular evidence of their satisfaction or dissatisfaction.

4707. You are not aware that they have petitioned this House over and over again in favour of the continuance of the Queen's courts, and expressed great dissatisfaction at their removal?—Very likely they may have done so; they know very little of anything else but English law. The natives of the great English towns reflect very much the opinions of the English about them; and therefore their opinions are not of so much importance as they would otherwise be.

4708. You

Mr. N. B. E. Baillie.

3 June 1858.

4708. You think they are led by the nose?—I would not go so far as that; I think it is rather a harsh expression to say that they are led by the nose; but I think they reflect English opinion, and have very little opinion of their own. In the little correspondence I have now with natives I find very much a repetition of English opinions.

4709. Do you think the English settlers in Calcutta, if they were dissatisfied with the working of the Queen's court, would express opinions in its favour?—Certainly not. I remember they were very much dissatisfied with the working of the Queen's court at one time in Calcutta, and expressed very strong opinions against it, and in the matters to which I refer there were very great alterations made, in consequence of those complaints of the English settlers; I allude particularly to the fees of the officers of court.

4710. Therefore if the natives are reflecting the opinion of the English settlers, probably the opinion of the natives is a sound one?—In matters of that sort I think the opinion is likely to be sound, and I have told you that I highly approve of much of the proceedings in the Supreme Court. I think that the common law proceedings and the criminal proceedings are generally very good.

4711. Do you think that the appointment of trained judges in the interior, to those situations where the emoluments are sufficient, say 3,000 *l.* a year, would be an advantage to the administration of justice?—It is a very large question; it depends a good deal upon the meaning of the word training; speaking very generally, there is no doubt that a man trained to any profession is better than a man who is not trained to it; but if you will allow me to observe, if training to the legal profession implies training to the legal profession of England, I am not at all satisfied that the introduction of judges so trained into the Mofussil would be a benefit to the people generally.

4712. But have English administrators any opportunity of being trained in any other jurisprudential system than that of England?—I believe at Haileybury they used to have lectures on civil law.

4713. Do you think that Englishmen appointed to administer judicial offices in India, have an opportunity of being trained in any other system of jurisprudence but the English system?—I believe not.

4714. Therefore, if you are of opinion that it would be an advantage to have men trained professionally, they must be trained in the English system?—Yes; but I am not sure that a mere training in the English system would be a great improvement of the present administration of justice in India.

4715. You would rather put men upon the bench who have not been trained?—For the present state of things, if you could have a judicial training without bringing with it the peculiar knowledge and prepossessions which the English lawyer acquires in his training; if you could have the training abstracted from all that, I think it would be of use, but I think that if the training is not abstracted from that, you are introducing an element essentially foreign to the country, and therefore I do not think it would be attended with very great benefit to the people.

4716. And you think that English capitalists settling in the interior would feel no more satisfaction under a trained judge than at present?—I have no doubt they would.

4717. A satisfaction founded upon just causes?—The cause would be perfectly just, as far as they are concerned; the man who comes with a legal training and a legal knowledge from England, comes with a knowledge exactly applicable to their condition, and therefore his decisions would, in their opinions, be just, and give them great satisfaction.

4718. And do you think that, under the present system, they would be unjust in the opinion of the natives?—They might be, from this circumstance, that the judge brings with him a body of notions that are essentially foreign to the country to which they are to be applied; the decisions may or may not be just or unjust, according to circumstances.

4719. Is that opinion of yours founded upon experience in Calcutta, where there are English judges, and the natives are suitors?—It is not; but what I allude to can only exist in the first stages of the application of a new law to a country; in the course of time the injustice disappears, because the people accommodate themselves to the new notions, and understand them, and they become law to them; their own dealings are regulated by them; they are therefore no longer opposed to each other, that is, the dealings and the law; that is precisely the case with Calcutta and the other Presidency towns. English law has been

Mr. *N. B. E. Baillie.*

3 June 1858.

been their law for nearly a century; if there was any injustice in the first instance, it has long gone by; we know nothing about it.

4720. Is it not the fact that the natives in Calcutta are just as well satisfied with a decision when they get it in their favour, and as much dissatisfied when it is against them, as Europeans in similar situations?—Unquestionably, and in the Mofussil also.

4721. Then an English judge in Calcutta has no advantage in knowing the country and the language, as he might have if such a judge were placed down in the Mofussil?—I cannot say that. An English judge has two duties to perform: the most important duties of an English judge in the Supreme Court are not the duties comprehended in the application of the law; the most important duties are, in fact, the duties of a jury, that of determining the verdict on matters of fact. I think it is of the greatest importance that the English judges should be acquainted as much as possible with the manners of the people and the language.

4722. With all those disadvantages that the judges in the Supreme Court labour under from not knowing the language, their decisions on the whole give satisfaction to the community?—Yes, I believe it is so.

4723. Mr. *Villiers.*] What you mean is that a judge ought to be fit for his situation?—Unquestionably.

4724. And therefore he should have some knowledge of law, and of the language in which the proceedings of the court are conducted?—Certainly.

4725. And you think that that training may be obtained by practice in India?—I cannot speak with confidence upon that subject now; I believe that, in consequence of the great extension of the uncovenanted service, there are much fewer opportunities (and I regret it very much) for English judges to get that legal training which they had formerly.

4726. You mean by practice?—By practice.

4727. Are any of the judges appointed in the Company's courts who have not had practice?—I cannot answer that question now. Before 1844 they must have had all very large practice before they came into the courts, but I do not know what the practice is now. I know that they have an opportunity of acquiring a very considerable judicial experience in revenue matters; for the revenue is very much judicial in its character in India, and a good revenue officer frequently makes a good judge. I may mention one instance of a gentleman who was judge in the Sudder Dewanny Adawlut: he had been a collector and commissioner, but my impression is that he was never in a judicial situation; he became one of the best judges in the court: there was no man before whom I pleaded with greater confidence in his decision, though he may have made some mistakes at first.

4728. Are the Company's judges in any respect inferior or incompetent for their situations?—My impression was very strong when I was in the country, that the men with whom I had to do, the judges of the Sudder Dewanny Adawlut, were highly competent in the language, and competent generally. I knew some men whose decision I would have preferred upon matters of fact in India to the decision of English lawyers.

4729. According to your opinion, then, European settlers have no reason to complain of the judges?—At that time I should say that they had no reason to complain of the judges whom I knew.

4730. According to your experience the administration of justice was perfect up to 1844; you never knew an incompetent man, or a man who was not learned enough, and did not understand the language?—Amongst those men; I cannot say that I concurred in all their decisions; I am speaking of the Sudder judges.

4731. Had you any experience of the other judges?—I had no personal experience of them; but their judgments came by appeal into the higher court, and then I had experience of their judgments; I do not mean at all to say that they were perfect, very far from it; I think they were many of them very imperfect; but perhaps on the average they were just as good decisions as circumstances admitted.

4732. You never were out of Calcutta?—Very little.

4733. And you are very imperfectly acquainted with the circumstances in this respect under which European settlers would be placed in going into the Mofussil?—I do not think that follows of necessity. A man in Calcutta, placed as I was, has very large opportunities of knowing at second hand a great deal of what is done in the Mofussil; he may be intimately acquainted, as I was, with the indigo planters, a very respectable and excellent body of men generally; he has

also

also other means of acquiring very considerable acquaintance with the provinces beyond Calcutta.

4734. From what experience you had, and from your personal communication with persons resident in the Mofussil, do you state that the police are as bad as they can be?—I believe the native police is very bad.

4735. And that the procedure of the civil courts is as defective as it can be?—I think at present it is very defective; I believe I characterised it fairly when I said that it was a mass of technicalities.

4736. You stated also that there were defects in the mode of recovering the advances which the planter made to the ryot?—I do not think that there is any defect in the law, except this, that the planter might have a summary remedy when he has only the remedy of what is called a regular suit.

4737. The system is so far defective, and the person making advances constantly loses his money?—I believe there has been a very great loss of advances, inasmuch as one witness told you that the outstanding balances of the concerns with which he was connected were a crore of rupees. I know that they are enormous in the case of most indigo factories; that is, the advances which are made and not worked off by the indigo produced.

4738. You say also, that it would be extremely objectionable to make Europeans subject to the native judges?—To the native criminal judges I would not make them subject; my reason is entirely political.

4739. But you know that it is contemplated; you referred to the Black Act?—It was part of the recommendations of the Commissioners here that there should be no distinction, but as part of a system which would have brought the whole under the superintendence of English judges, some of whom must be English lawyers.

4740. I believe the capitalist also experiences, according to your account, great inconvenience from having to make his payments in silver?—Sometimes. There is no doubt that whenever there are large payments to be made in the Mofussil it must be inconvenient.

4741. Looking to what you admit to be the case, that the police is as bad as it can be, that the civil procedure is extremely defective, that the present law of contract is defective, and that there is difficulty in making payments, owing to the currency being exclusively silver, are you astonished that when indigo planters or settlers who have been to India return here, that they do not encourage other people to go out, and allege that there is much to discourage the employment of capital there?—I never heard it stated that they, when they did come home, did discourage people going out to India. If it has been stated here, of course I am ready to believe it; but the whole of my experience has been the other way; I have never known a person deterred from going from this country with a view to be employed in an indigo factory, or a person in Calcutta being deterred from taking a situation when offered to him. I have recommended young men for employment in indigo factories, but never thought of warning them against these difficulties.

4742. *Chairman.*] With such a state of things as that described by Mr. Villiers, would you be surprised if they deterred?—It might be.

4743. Mr. *Villiers.*] Do you admit also the insecurity derived from the uncertainty of his title; that if the property which he holds under lease, or that he has hired for use, is subject to the Government for arrears of revenue, he may have that property taken from him, or rather that his rights in the land may be totally disregarded?—His rights in the land, if he has what is called a putnee or a zemindary in the land, of course he must take, subject to that great inconvenience that attaches to all land, of its having to pay Government revenue.

4744. The inconvenience I allude to is of another kind, where the land is made subject to arrears, his rights having been derived from engagement with the zemindar are disregarded, and the estate is sold; do you admit that that is the case?—Yes, in the case of putnees.

4745. Do you also admit that it is an inconvenience to settlers taking land to be subject to be dispossessed in that way?—Yes; it is more than inconvenience; of course it is of the greatest advantage to him that he should have the putnee secure. I do not wish to take from the indigo planter anything he has, or the power of getting anything he can get, consistently with what is due to the revenue of the country.

4746. What did you mean by saying that it was rather an advantage to a man to buy

Mr. *N. B. E. Baillie.*

3 June 1858.

buy land subject to the Government charge, because he paid less for it; he has a liability attached to it, and therefore he only pays less in proportion?—He hopes to meet his liability of course; it is just the same thing as a man buying a house in London; a man having a certain sum of money to lay out in the purchase of a house; if he purchases a house, subject to an improved ground rent, he gets his house for less, and has enough over of his capital to furnish his house, as it may be.

4747. You said that he paid less because there was a charge for which he was liable, and it was with reference to redeeming that charge that we asked you whether it would not be an advantage to have the charge of the Government redeemed, and you said that it would not be an advantage, because while he was liable he paid less for it?—It requires a less investiture of capital to acquire a power over the productive energies of the soil when you can get those productive energies charged with the Government revenue, because you get them forless.

4748. But your liability to the Government continues?—That does not matter. I meet my liabilities out of my annual proceeds.

4749. We are talking of the advantage of redeeming the tax, and you seemed to think that it was an advantage to a purchaser to take the land subject to the tax?—With reference to the application of capital to the land, I see no advantage in a man getting the land free from the Government revenue; for if he purchased land free from the charge, if he purchased Lakhiraj land, he must pay so much more for it; and it is more for his advantage to pay less and to have the remainder of his capital which would have necessarily been invested in his purchase, if it was not so charged, free for the purposes of his business.

4750. And to be subject to a liability from which he might otherwise be free?—Yes, I illustrated this by the putnee, which an indigo planter prefers to a zemindary, though more heavily charged, because he gets it with less expenditure of capital.

4751. *Chairman.*] You think it would be a better bargain for him to continue to pay it annually?—Yes.

4752. Mr. *Vilhers.*] You have a peculiar view about the absorption of silver that I did not quite understand; you seem to think that though silver appeared to be scarce, it was not because it left the country, but from going into absorption?—I mean that there are larger quantities of silver now necessary under our rule in India for the payment of rent in the first instance from the ryot to the zemindar, and in the second instance for the payment of revenue from the zemindar to the Government; that there is by that means a very large absorption and waste of silver, which has been rendered necessary by the change introduced by our rule. A larger amount of coin is required.

4753. That is not recent?—It has been going on increasing. I believe that in the Western provinces the change is recent.

4754. It was recommended in Lord Cornwallis's time?—Yes.

4755. You know that there is a constant remittance of silver from Europe to India?—Yes.

4756. Is there that constant increase in demand for silver?—It may go into the countries beyond India for anything we know; but I believe it makes a great waste of silver.

4757. You have no other reason for the opinion you expressed that the people do not hoard?—I never hear of any great discoveries of hoarded treasures. There is not much treasure trove, I believe, in India. It is also inconsistent with my ideas of their poverty and their habits, their love of suits in court, investment in Government loans, &c.

4758. Have you ever heard of extreme measures of severity, torture for instance, being resorted to to make people pay?—Not to pay their revenue; there is no such thing, of course, because the revenue is paid in large payments by the zemindars.

4759. You have no particular reason for supposing that the natives do not hoard money, but that you have never heard of a case?—I have no reason the other way; I see them very generally a poor people, and I see no reason for supposing that they hoard. The ryot gets a little coin, which he must retain for some time, until the time arrives for paying his rent; but I do not call that hoarding.

4760. You hold to the opinion that the resources of India could be developed to a much greater extent than they are at present?—I believe they could.

4761. And you believe, if English capital were introduced further into the country, that would be the result?—I should hope so.

4762. If English capital were brought out there and could be employed securely, the resources could be much more extensively developed?—Yes.

4763. And if in exchange for the products of India we could send manufactured goods, we should cease to export so much silver as now?—The truth is, that these are subjects which are a little out of my beat. There is a balance always; I believe such is our connexion with India as always to make a balance of trade necessary.

4764. You have formed the opinion that there is some defect in the mind of the native that prevents his becoming a useful witness; that he has no idea of testimony that does not bear directly upon the fact in issue, or that is not in the nature of a confession; those are the only two classes of testimony that he understands giving?—Yes, that appears to me to be the case, from a consideration of the evidence in a great many cases, and reflection on what I believe to be the source from which his ideas of evidence are derived.

4765. You seem to think that if those who collected the evidence knew more how to establish proofs by circumstance, the evidence would be more trustworthy?—I think so.

4766. But is it not untrustworthy now, owing to some defect in the moral character of the witnesses, because you say owing to the mode in which they give evidence, you have so much that is the result of extortion, or that is perhaps fabricated or forged; if you instruct them in giving evidence as to circumstances from which you are to infer proofs, why should not this be just as false, and why should not there be just as much forgery and perjury as now, since you can invent one thing as well as another?—You may have in all countries a sufficient quantity of bad and depraved witnesses; there is no difficulty in this country, I believe, and certainly none in India, in getting witnesses to any extent to swear anything you like.

4767. Is it some fault in the intelligence of the collector of evidence, or a fault in his moral character, because you speak of the present system as producing forgery and perjury?—I think it is both; the evidence is very different in the Supreme Court from what it is in the Mofussil courts; the evidence in the Supreme Court is got up by a man of principle and knowledge; that is, an attorney, with the aid of counsel sometimes; he therefore knows how to prove facts, and proves them in the proper way, and has scruples of conscience, which would prevent him from proving them in an improper way. The case is quite different from that of a man who does not know how to prove a case from circumstances; the only way he knows is to prove by witnesses to the actual fact, and when he has not such evidence, he gets it by bribing witnesses. I may observe, that there is also a great difference between criminal and civil cases in the Mofussil. In the former, tried before the sessions judge, I have always understood that the evidence against the accused is more trustworthy, which I ascribe to the fact that it is got up under the superintendence of the magistrate.

4768. You think the great defect is in the want of a good subordinate agency to get up cases?—Yes; I think clearly the great defect in the existing system is the want of a good subordinate agency, that being essential to the existing system; not that I approve of the existing system, nor therefore do I think it necessary that there should be that subordinate agency.

4769. You would not think it a blessing to a country to have more attornies than were actually necessary?—It may be a misfortune to a country, but it may be a necessary evil; and unless you change your mode of procedure it is a necessary evil perhaps. But I want to do away with that mode of procedure, and introduce a much simpler one; and under that system you will get over that great difficulty, because you produce the parties face to face, and there is no necessity, to the same extent, for the use of witnesses.

4770. You think it would be satisfactory if you had a more simple system?—Yes.

4771. If the judges had a more equitable jurisdiction, and had the power of calling the parties before them, you think it would be satisfactory?—Yes; and I think that affords the best remedy for what everybody knows to be the fact, that the testimony of the witnesses in the Mofussil courts cannot be relied upon at all. It appears to me that the only remedy is this. At first I thought you should introduce a proper professional agency, but I think it is far better to go to a simple system.

4772. If you got to the simple system, you would admit that it makes the

Mr. *N. B. E. Baillie.*

3 June 1858.

character of the judge of the highest importance?—Under the simple system, he is of more importance than under the present system; he is *dominus litis*.

4773. Could you trust any judge, not a European, to administer the laws with the powers which you propose?—Yes.

4774. Natives?—Natives. The whole procedure in the first instance is now before natives. If you cannot trust them you may shut up your courts of justice entirely, for you have no other means.

4775. If a judge was a European, it would make it essential that he should have a perfect knowledge of the language?—Essential; that I conceive is a matter of the greatest importance in all cases. I have suggested that in some cases the judge might allow the employment of English with reference to English parties, but that he himself in all cases should have a perfect command of the native language and I think any other system would be pernicious.

4776. Are there any native advocates of any ability?—There were some very clever men in the Sudder Adawlut when I was in it; I had to compete with them.

4777. Learned men, well acquainted with the law?—You cannot call them learned. There is no jurisprudence to which they can have the least access, except the Mahomedan. The Mahomedans were some of them learned in their own law. I knew very few vakeels who knew much of Mahomedan law.

4778. But are they clever in their advocacy or in the examination of witnesses?—The examination of witnesses I think, from what I have seen of the record, for I have never seen it *vivâ voce*, was always very imperfect.

4779. Do you think they are capable of improvement if they were submitted to a proper training?—I believe so, but if they had a good system of law and procedure, training in these would be sufficient, in my opinion.

4780. In speaking of the competency of a judge, you would say that a knowledge of, and a perfect acquaintance with the customs and manners of the people, was almost equal to a knowledge of their language?—He is a judge of fact, and a great deal of that must depend upon a knowledge of their customs and manners.

4781. Did you ever see much of the working of the jury system with natives on the jury?—No, I have heard a good deal of it, but always as a failure; I believe the natives were utterly incompetent for the office of jurymen, perhaps from some such imperfect ideas of evidence as I have alluded to; if they disbelieve the direct testimony, and have imperfect notions of the circumstantial, how are they to judge?

4782. A European would not like to submit himself to a court where natives were on the jury?—I should say certainly not; and in all the accounts I have heard of native juries, they seem to me to have been always ready to take the opinion of the judge; to reflect the opinion of the person who is presiding over them.

4783. Mr. *Willoughby.*] Does that remark apply to the Presidency towns as well as to the Mofussil?—No, I was referring to the juries in the Mofussil.

4784. Sir *Erskine Perry.*] The jury system has been much more fully carried out in Calcutta?—Yes.

4785. And it has succeeded, has it not?—I believe it has succeeded.

4786. Mr. *Villiers.*] When did the people first settle India without leave of the Company; was not it in 1834?—Yes, at the extension of the charter in 1834.

4787. Sir *Erskine Perry.*] Was not it the case that any settler in the interior might be removed by an order of the authorities if he went into countries acquired since 1801?—Up to that time.

4788. It is only the other day that that law has been held to be repealed by implication?—I cannot speak to that.

4789. Mr. *Villiers.*] Your reference to settlers has only reference to persons who have come out since that law was altered, till 1844?—Yes.

4790. Sir *Erskine Perry.*] A European was not allowed to reside in the territories except by license, was he?—No.

4791. And all that the Act of 1833 did, was to allow settlers to go into the interior of such settlements as had been acquired up to 1801?—I am not aware of any cases in which there was any practical distinction.

4792. Mr. *Campbell.*] Your experience is exclusively confined to Calcutta?—Yes, my personal experience is; I qualified that to some extent, by saying that I had knowledge from other sources.

4793. A vast

Mr. *N. B. E. Baillie.*

3 June 1858.

4793. A vast deal of the evidence that you have given has borne upon other parts of India than Calcutta; but you have no personal knowledge of the other parts of India beyond Calcutta?—No, I have not direct personal knowledge of anything else.

4794. Would not you suppose, from your legal knowledge of Calcutta and of the native character generally, that the uniformity of evidence deduced from the native upon oath is more to be attributed to bribery, and the corruption that the low native is so open to, than to any system that prevails because; where such uniformity exists suspicion must arise that they have compared notes before they give evidence?—There is no question of it; that is my belief, that the evidence is got up, as it were, and that of course they all speak as they are instructed; and it is very likely they are swayed by the motives which you allude to. But corruption is not a sufficient reason for persisting in a course that they must have long seen to be useless, as no judge seems ever to believe the witnesses; and their conduct appears to me to be inexplicable, except on the supposition of ignorance, or prepossession in favour of a particular course.

4795. Are you of opinion that no system that did not embrace a substitution of the European element in the Mofussil for the omlah would be effective in doing away with this uniformity of evidence obtained by bribery?—The corruption of the omlah might, I think, be got rid of without the introduction of the European element.

4796. You suggested, as an improvement of the present system, that personal examination before the judge of the parties concerned would be a great improvement upon the present system?—A very great improvement upon the present system.

4797. You are possibly aware of the great antipathy that respectable natives have of coming to court at all?—I am aware of that.

4798. Under the new system do you think that difficulty would be got rid of?—The Commissioners tried to get rid of the difficulty by allowing a party, when he did not choose to appear in person, to appear by another person qualified to speak from his knowledge, and to answer every question that could be put to him in the same way as the party could do himself.

4799. Then how do you account for the present feeling of animosity in a respectable native, or the present degradation that a native would consider imposed upon him, in coming to the existing courts?—I cannot account for it in any way connected with the courts themselves. It may be from some peculiarity of the native manners; it may be from something that is not peculiar to the natives at all, but from a general feeling common to all men in a respectable position of life. I believe we have it to some extent in this country; I do not think there is any essential difference betweeen the feeling in India and that of any English gentleman who would rather avoid than otherwise being brought personally into a court of justice.

4800. Then you do not think that the circumstance of a respectable native going to the court and being foiled by false evidence has anything to do with the disinclination of the native to submit his case or to appear in court, as the courts are at present constituted?—I cannot say that I do.

4801. I believe you have stated that you do not think that the law, as at present administered, although bribery is open and common, affects in any way the interests of the settler or planter, or even the respectable native who has property at stake?—I never said that it did not affect them in any way.

4802. In the event of a planter having a false action brought against him for murder, and his presence being required in court, and that presence in court entailing upon him the entire loss of his indigo season, in your opinion would not such an inconvenience, and such a loss resulting from that presence in court, be considered by that planter discouraging to settlement in India; or would it not be destructive of his property?—Of course it would be discouraging, and would be destructive of his property; it might be destructive of his person if he were falsely accused of murder; he might be hanged for it.

4803. Have you never heard of such cases occurring?—I cannot say that I can recollect at this moment any case of the kind; false charges are brought against people. Mr. Dalrymple, in whose statements I have implicit confidence, mentioned a case of the kind.

4804. You talked of the unremunerative nature of indigo planting; your experience does not extend beyond 1847, does it?—Yes.

4805. Your experience of indigo planting was when the Union Bank carried

Mr. *N. B. E. Baillie.*

3 June 1858.

on the factories, instead of the legitimate agents, or indigo growers themselves? —My experience goes much further back than that; to the old agency houses, and down to the time that I left India; and upon that my conviction was formed, that on the whole, taking into consideration all the parties interested in the production of indigo, there was no profit, but it seemed to me an actual loss.

4806. Are you aware that the custom of the agencies advancing for indigo is to make advances upon estimates, without making any personal examination of the properties?—They trust, I believe, to the indigo planter, or the man they make their advances to.

4807. They have no personal knowledge themselves of the details of indigo planting, and they exercise no personal surveillance?—Not in general, I believe.

4808. Since the failure of the Union Bank, perhaps you are aware that there is a closer identity with the planter and the soil than existed before 1847, and you are perhaps aware that the position of the planters at present is very different from what it was when indigo planting was merely conducted as an agency speculation?—I have not heard anything particular on the subject, but I am ready to suppose that very considerable changes have been introduced; I have no knowledge of the present system.

4809. Perhaps you have a knowledge of the price of the staple commodities produced in India, and the cost of those commodities compared with the sale in Calcutta?—No, I have not; I never had any transactions of the kind myself.

4810. You are not aware that in the last four years the price of rice, jute, hemp, and many other such commodities, grown by the natives, has doubled?—I do not know the fact, but I am ready to believe it.

4811. In your legal capacity have you ever been employed by planters in the Mofussil to defend them in suits, when their interest may have been compromised by the existing state of the law?—I had a good many indigo planters clients in the Sudder Adawlut as well as the Supreme Court.

4812. What was your general conclusion as to those cases which came under your own observation as to the working of the law with reference to their properties?—I am happy to say I very generally succeeded in their cases, and therefore the working of the law so far was good; I do not ascribe by any means their success to my advocacy; I believe they were very generally just; in the cases I had for them I had no reason to suppose they were anything but what they ought to be.

4813. I referred to the bearings of the law upon those planters and their properties; does the law exercise a prejudicial influence upon the planters and their properties in the cases that came under your personal observation?—There is no question that the law does exercise a prejudicial effect upon everybody, for there is no sufficient law.

4814. The Hindostanee language is the language that is used in the Sudder Courts?—When I was in the Sudder the whole language latterly became the Hindostanee; that is, the spoken and the written language was Hindostanee; but when I first went into the court the spoken language was Hindostanee, and the written language was Persian.

4815. How did you manage in a case where a Bengalee was the plaintiff?—I had very little to do with the plaintiff personally; I was in the Court of Appeal.

4816. How did the Sudder Court act when a Bengalee was the plaintiff who was as ignorant of Hindostanee as he may have been of English?—He was always represented by a vakeel; a man very seldom attempted to sustain his own cause.

4817. Do you not think that an English vakeel representing him in the English language would be likely to do him as much justice, and would he not have as much confidence in that English vakeel and the English language as he would have in the Hindostanee, which to a Bengalee is unknown?—I cannot speak with regard to a man who knows nothing but Bengalee; I seldom came across a suitor or his representative who did not know Hindostanee; and I have reason to believe there was hardly ever a person in the Sudder Court who did not understand Hindostanee.

4818. Your experience was confined to a very respectable class of constituents; not the million?—Exactly.

4819. The million in Bengal only understand the Bengalee language?—Exactly.

4820. You say that it would be a great improvement upon the old system to have solicitors getting up the cases; do not you think a Bengalee would have

equal

equal confidence in having his suit heard and determined in English as in the Hindostanee, of which he knows nothing?—If he knew the vakeel to be an honest man he would.

4821. Sir *Erskine Perry.*] And, in point of fact, is not that the case now in the Sudder Adawlut?—I mentioned that, in my own practice, I found that at first my native clients preferred my speaking in Hindostanee, but that afterwards, when I had acquired their confidence, they did not much care, provided they succeeded, whether the proceedings were in English or in Hindostanee; but, in point of fact, the proceedings were very seldom in English in those days.

4822. Mr. *Campbell.*] On the subject of bullion, you have no reason to believe that hoarding goes on to any extent?—No.

4823. You gave evidence in reference to the cause of the gigantic failures of 1833; are you aware that the largest and most fruitful source of those failures was the indiscreet loans made to the civil and military servants of the East India Company by those agency houses?—I am perfectly aware of that, and I qualified my statement by saying "in part."

4824. *Chairman.*] You said that within your recollection the magistrates decided satisfactorily in the part of Bengal with which you are acquainted?—I believe that very generally the magistrate is an efficient officer, so far as I could judge.

4825. If evidence has been given to the Committee that of late years the magistrates have been young and inexperienced, you, having left India in 1844, cannot speak for or against that testimony with regard to recent appointments?—No, I cannot.

4826. Mr. *Willoughby.*] With regard to Calcutta, Madras, and Bombay being the chief resort of European settlers, may not that be accounted for by those places being the seats of Government?—Very likely.

4827. And also being the grand entrepôt of the trade with the interior in each case?—In the case of Calcutta particularly.

4828. With regard to the disinclination of natives of rank to appearing in court, does not that reluctance arise from the feelings among natives of high rank, more especially females, that doing so would degrade them?—I think they may have that feeling.

4829. In fact it is difficult to make the people of India undersand that maxim of the English law, that all are equal in the eye of the law?—Yes.

Joseph Gabriel Waller, Esq., called in; and Examined.

4830. *Chairman.*] HOW long did you reside in India, and in what part?—I resided 20 years continuously in India, and I may say that Calcutta was my place of residence; but I have travelled over a great part of India, along the trunk road up to Delhi, and westward through Rajpootana into the native city of Jeypore. I have frequently been into the Mofussil amongst the planters and other settlers there, and I have been in the principal native towns, and have occasionally resided in them for a short period.

4831. Is that the whole of India that you have seen?—Yes, that is the Bengal Presidency and the North Western Provinces. I have also been in the Hill station of Darjeeling.

4832. What was your occupation or profession while in India?—Originally, I was a solicitor of the Supreme Court; subsequently, I was admitted an advocate at the bar of the Sudder Dewanny Adawlut, upon a diploma, and not under the general licence subsequently granted to professional men, barristers and solicitors, to practise by legal right in that court.

4833. When did you return to this country?—In the year 1855.

4834. Have you since you left India kept up your connexion with the Sudder Courts as well as with any of your native friends?—I have done so, and I do so up to this period by practising as a law agent at the Privy Council, which keeps me in constant communication with the pleaders and the advocates of the Sudder Court, and the rajahs and zemindars.

4835. Have you come much in contact with indigo planters, merchants, and landholders, who are Europeans?—Yes, very much so, both in business and in the relations of social and private life, and with all classes of Europeans and Christians generally.

4836. Do you think that India offers inducements and fair prospects of gain and

J. G. Waller, Esq.

3 June 1858.

and advantages for Englishmen to settle in it?—Most certainly it does. India has soils rich, fertile, and so varied as to be suited to every kind of produce; its resources are great, and but partially developed and explored; its people, generally speaking, are patient, enduring, laborious, and evincing both the desire and capacity for improvement. These remarks are no less true now than they were 25 years ago, when used by the then President of the Board, to show that India, under improved circumstances, promised a sure and steady increase of the public revenue. If the condition of the peasantry and labouring classes be improved, India, while yielding a superabundance of all kinds of raw produce and materials, will require tenfold the amount of manufactured goods from this country to what it now consumes. The natives, however, if left to themselves, are not an improving or progressing people; and therefore the Englishman has all the inducement that a rich and fertile country, with an abundance of cheap labour, can offer to skill and capital for settlement, and to enterprise and activity for the application of his talent and his energies.

4837. Is not the climate a serious obstacle to the settlement of Europeans?—I think that the climate offers no serious impediment whatever; and this is reduced to a demonstration from the fact that numbers of gentlemen in the civil and military services of the Honourable Company reside from 20 to 40 years in that country, and return home to enjoy their pensions for a long time. And it is quite notorious that the indigo planters, silk producers, and commercial men residing in the interior parts of the Bengal Presidency, are the most healthy portion of the European community in India. Their numbers are small; but still I have seen those who have been examined before this Committee, and I am personally acquainted with nearly the whole body of planters; and I can state that those who have appeared before you are but fair specimens of what the rest are.

4838. Do you think that the natives would regard with disfavour and jealousy any great increase of European settlers?—The upper classes of the natives, I think, do look with considerable jealousy upon European settlers, regarding them as much superior to themselves, not only in skill, but in energy, perseverance, and steady attention to business. The natives, generally speaking, are dilatory and procrastinating, and greatly deficient in method and regularity in their business habits. Their ceremonial observances, and what is known as family worship, keep the zemindars and the wealthy in the grasp of the brahmin, and prevent their giving much personal attention to business. The great masses, however, of the people, all in fact below the landed and monied gentry, are most favourably disposed to the European community; certainly in Bengal, the inhabitants of which have, I think, more sympathies with and a greater liking for the English than the natives of the Upper Provinces. I ascribe this to the circumstance of their having come much more in contact with them. The Bengalee is not so muscular and athletic as the up-countryman, but he is generally amiable and gentle, clever, quick, and eager to learn and to work under the European master and employer. I have heard remarks made, having been present throughout this inquiry, very disparaging to the Bengalee as contrasted with the up-countryman. I do not wish to draw comparisons between one and the other to their prejudice, but all the experience which I have had of the Bengalee character makes me think that, though his bodily frame is weaker, yet he is, mentally and morally, in no way inferior to the up-countryman.

4839. Do you consider that the settlement of Europeans in India is likely to prove of much advantage to the natives themselves?—I think the greatest blessing to India will be a large accession of independent Englishmen, labouring with and amongst the people of the country in spreading knowledge and civilization, in developing the many and varied resources of the country, and in bringing into full play the talents and capabilities of the people themselves. What is really required in India is the master-mind and the skill, the guiding and directing spirit of the educated, trained, and energetic European; not merely as a Government and salaried official who retires on a handsome pension after his years of service, but of such as will take root in the country, and have heavy interests at stake, and who will furnish work and impart instruction to the labouring and industrial classes. I believe that private enterprise, if not checked, discouraged, and driven from the country by the opposition of Government, will do infinitely more towards the advancement and good, the civilization and enlightenment, of the people of India, than countless despatches, reports and counter-reports, or any number of legislative enactments. The European in India will

will always be helpless without the aid and co-operation of the natives, on whom he must depend for labour and a supply of the very necessaries of life; it is therefore essentially his own interest to assist, advance, protect, and be kind to them. The zemindars and landholders, as a general rule, do little or nothing to improve the condition of the peasantry and working classes; they regard their ryots to be as much their property as the very soil itself, and claim to deal with them as they choose: these, on the other hand, are too poor and powerless, and too ignorant to resist; and hence submit to almost any amount of oppression. Yet their sympathies are naturally with their own countrymen and co-religionists; and were it not that the adventurous Englishman not only treats them more considerately and liberally, but acts as their protector, as well against Government officials as oppressive landlords, he could never obtain their services nor secure their labour.

4840. Under the circumstances which you have mentioned, how do you account for the small number of Englishmen, not in the service of the East India Company, residing in the several provinces and districts of India which are under the British Government?—It is my own firm conviction, from all the experience I have had in India, that the real serious impediment to the settlement of Englishmen in India is to be found in the policy of the system under which our Indian possessions have been hitherto, and unfortunately up to the present day, are still governed. That policy which, giving certain extensive and exclusive privileges to a corporation established for trading purposes, and gradually formed into a governing power, originally shut out the spirit of private enterprise by excluding from the country Englishmen not servants of the Company. Although the extreme severity of this original policy has been somewhat modified and gradually relaxed, its spirit has remained but little changed, and its effects have been to keep the people of this country very ignorant of the resources and great value of India and of the character, condition, and wants of the natives. Hence it is, in my opinion, that the different classes of England do not feel any direct and immediate interest in our Indian possessions. Moreover, it is a matter of notoriety that there has been, and is at the present time, a constant antagonism between the official and non-official Anglo-Indian communities, and that exactly as the adventuresome Englishman, who is called an interloper, with difficulty obtained his admission in the country, so even now he maintains his position in a continuous but unequal struggle with the local Government, which he in turn regards as an obstacle between himself and the Crown and constitution, to which he owns allegiance and looks for protection in his own country. Then again, the departments of administration, police, the judicial system, both civil and criminal, are notoriously so wretchedly inefficient, oppressive and corrupt that they deter the peaceful and industrious from living within their influence or risking their lives and property under their operations. I believe that even the comparatively few gentlemen settled in the interior of the country would willingly withdraw if they could do so without a ruinous sacrifice of property, for little or no heed has been given to their complaints, nor indeed of the natives, while the evils which have been pointed out for many years past are greatly on the increase; the present constitution of the Legislative Council also has made matters worse than they were before, and that body certainly has not the confidence either of Europeans or natives. With the exception of two judges taken from the Supreme Court of Calcutta, it is composed entirely of salaried and Government officials who have been such from the age of 20, who have really nothing at stake in the country, and who are not likely to live under the operation and influence of the laws which they pass, while those who are directly interested in the well-being of the country, both Europeans and natives, are entirely excluded from any voice in the laws by which they are to be ruled and governed. I am equally convinced that the constitution of what is called the Covenanted Civil Service is the very root and origin of the main evils arising out of a deplorably defective magistracy and most inefficient judicial administration both civil and criminal. Under the present system, gentlemen are appointed magistrates and judges without any regard whatever to their qualifications and aptitude in those respects, but merely as a matter of right, by virtue of their being members of a privileged service. These gentlemen are brought up and trained to no particular business or profession, and yet, from early youth, they are placed in authority and power, and entitled to pass from one appointment to another, the duties of which are wholly dissimilar, but the emoluments of which become

J. G. Waller, Esq.

3 June 1858.

become their rights by seniority usually, and sometimes by interest. A collector of revenue, ignorant of all law generally, as well as of the civil portion of the regulations, is usually promoted to a civil and sessions judgeship, having not only original jurisdiction but also appellate authority over those who have been in the judicial department, such as it is, probably for a period of 12 or 15 years. He is ignorant of the ordinary routine of business, and of the very rules of practice in force in the civil courts. It cannot well be otherwise, for he has never studied or practised the profession of law. He has certainly never drawn a plaint nor an answer, and therefore it is that the power of the omlah or native officials is very great; in fact, such a judge does and must depend upon them, as they (I mean the omlah) possess much of the knowledge regarding at least the current duties of his office and the forms to be observed, to which he is a stranger. I fully and deliberately confirm all that I have heard stated before this Committee by Messrs. Freeman, Macnair and Wise, regarding the wretchedly corrupt state of the Company's courts, and also of the difficulty experienced by English magistrates and judges in having to work in a language which is foreign to them and which they but imperfectly understand. I have no doubt also that the exclusive system of the covenanted civil service deters many well educated and generally most professional men from going to India, from the knowledge that even under their own Government they are hopelessly shut out from all those posts of honour and profit in the service of the State to which they are eligible, not only in their own country, but in all the colonies under the Crown. Finally, there can be no doubt that the most neglected condition of the country, in the absence of roads and the means of communication between the principal towns and the producing and manufacturing districts, to the markets for consumption and export, together with the great difficulty experienced in and the tardy methods of travelling, has very materially prevented the settlement of Englishmen in India. There are no roads connecting the principal towns, such as Moorshedabad, Guya, and Patna, with Calcutta itself; and Calcutta is unconnected with the only road that exists in the country for want of a bridge. You cannot go more than 16 miles by road beyond Calcutta; if you want to go further, you must cross by a ferry to the main road; there is no other means of getting to it. Such are some of the reasons which, from 20 years experience, I think deter Englishmen and Europeans generally from going to India for the purpose of settlement and colonization.

4841. What would you enumerate among the principal objections to the settlement of Europeans in India?—I think I have enumerated several; but there is one other which is of such importance that I cannot with justice to the subject omit it. I think that the transfer of the authority of the Government from the corporation which now represents the Crown, by virtue of a trusteeship, is absolutely necessary. If it be the real intention of the English Government to encourage the settlement of Englishmen in India, and to give full scope to private enterprise for the accomplishment of those objects connected with India, which Government alone can never effect, I mean the general education and improvement of the people, and the development of the great resources of that country, Englishmen, I am persuaded, and the history of the past proves it, will not accept the intervening authority of any corporation, as a government, in lieu of the direct authority and power of the Crown, and the fundamental principles and laws of their own constitution. At present you have, in India, a series of antagonisms which works most injuriously for all classes, and completely prevents that union amongst the governing people, which appears to me to be essential for the well being, not only of themselves, but of the millions of people, our subjects, taken under our care and protection, avowedly for their own good and enlightenment, and advancement in civilization. At present, there is an antagonism in the army by the distinction of two services, and a worse antagonism between the Queen's courts and the Company's courts, between the laws administered in the Presidency towns and in the interior; between the covenanted service, who have a monopoly of the well paid appointments, and the upper or educated portion of the uncovenanted service, who think themselves most unjustly excluded from advancement; and finally, between almost every Englishman (I speak of these as facts, not as matters of opinion), not in the service of the Company, and the local government and covenanted service, who not only represent, but carry out the policy of the East India Company, so as to shut out the direct authority of the Crown, the intervention of Parliament, and the salutary and most necessary influence of public opinion in England. I think that the substitution of the

authority

authority and name of the Crown is essentially requisite to prepare the way for those sweeping changes in the Government of India which must follow almost immediately, not only to induce and encourage colonization, but to keep our hold over that immense extent of country. Perhaps it would not be unconnected with the subject for me to state, that I think that this would operate most favourably upon the native mind as bringing the natives in contact with Europeans settling in India. *J. G. Waller*, Esq. 3 June 1858.

4842. Why do you think that it would operate favourably upon the natives?—I have lived among the natives, and have had great experience of them in villages and towns, and I think that they have no particular attachment certainly for the Government or the name of the Company, nor have they any confidence in the professions of the local government, with regard to their non-interference with their prejudices and religion. The resumption proceedings, and the confiscations under those proceedings will I am convinced ever be remembered by them with indignation and bitter feelings, while the laws altering the course of inheritance, and the re-marriage of Hindoo widows are not only regarded by them as a state interference with their religion, but have destroyed every remnant of faith on the part of the natives in the assurances and professions of their present rulers; I believe the change would be very popular with the natives, who will be glad to become the direct subjects of a powerful Sovereign, but then this formal change must be immediately followed by a very extensive improvement in the working of the local Government.

4843. Are there any changes in the local form of Government and administration which appear necessary for the purpose of encouraging English colonization in India?—It appears to me that India is much too large, and its people of too many races and varied habits and usages to be placed under the authority of a single Governor-general residing at Calcutta, and under one Legislative Council, the members of which represent only the official class, and are for the most part ignorant of the feelings, wishes, wants, and prejudicies of the different races spread over such an immense extent of territory. Each Presidency ought I think to have its independent governor, secretaries, and staff, as also its own Legislative Council, the authority of the Governor-general extending over the army, to making war and peace, and settling the terms of treaties, and so forth.

4844. How do you show that this would be conducive to the settlement of Europeans?—I think you cannot disconnect the Europeans and natives. If you legislate simply with the idea of what is suitable to the English, without referring to the native and redressing the grievances of the native, there will be that unhappy antagonism between them that will effectually bar Europeans from going out to India. The Supreme and other local councils are, in my opinion, wholly useless and enormously expensive. The chief secretaries and heads of departments may well supply their place, by being made, as it were, cabinet ministers to aid and assist the Government by their advice and knowledge. The present constitution of the Legislative Council must be wholly changed; there ought, no doubt, to be a certain number of *ex officio* members receiving no other salary than that of their respective substantive appointments; there should also be as many non-official as official members, composed equally of Englishmen and Christians, and of natives who are not Christians. None of those members should be in the service of the Government. The Government of each Presidency should have the power of putting a veto to or suspending the operation of any law passed by the Council pending a reference to the home Government, but not to have the power of making any law whatever without the sanction of the local Legislature.

4845. You suggest the infusion of some representation of European settlers into the Supreme Legislative Council?—It is absolutely necessary, without which Europeans will never be satisfied in India. It will be one perpetual system of warfare with the Government. But I think it equally important that natives as well as non-official Europeans should be introduced into the Council.

4846. You think that the introduction of natives as well as Europeans would be conducive, ultimately, to the settlement of Europeans by bringing about a harmony between the two?—Yes, and unless you have natives in the Legislative Council you will always be ignorant of the wants of the natives, and of their objections to certain laws, or of the proper time for promulgating certain laws affecting them, such as the law to which I have referred, and the law affecting widows. So far as they affect our own interests, we speak favourably of them,

J. G. Waller, Esq.

3 June 1858.

but had we had native gentlemen in the Council, who would have shown you that you were legislating, not for a want but for a sentiment, probably the Legislature would have deferred passing such laws until they were really warranted by a change of social circumstances amongst the native population.

4847. Mr. *Villiers.*] How would you determine the selection of non-officials and natives for appointment to the Legislative Council?—I am not quite prepared to say. My idea is that I should leave it to the Governor of the Presidency in the first instance in both cases.

4848. Mr. *Willoughby.*] Do you recommend that they should be paid or unpaid?—Unpaid; the official members merely to receive the pay of their substantive appointment, and the non-official members to receive nothing.

4849. Do you think that respectable persons of that class would be found to devote their entire time and attention to their legislative duties?—I think the question covers more than is necessary. The members of the Legislative Council do not devote all their entire time and attention, indeed I think they at present devote more than is necessary. They make too many laws; they are too rapid.

4850. You think that people would be found to devote all the time that is necessary?—Yes, superabundantly.

4851. Mr. *Kinnaird.*] Well qualified persons?—Yes, well qualified; I think that the best class of Europeans and natives in India would be found to take the appointment. I can simply say, if it is not presumptuous, that were I in the country, and the appointment were offered to me, I should most willingly become a Member of the Legislative Council, with the desire of doing what is needful and requisite.

4852. *Chairman.*] You have heard a good deal in this room with reference to the introduction of the English language into the courts of law; do you consider that that would be an improvement or otherwise?—I think that it would be a very great improvement. I am able to speak practically, from my experience, and from the knowledge which I have of the condition of the courts with regard to the languages; but I wish distinctly to guard myself by stating that while I make the remark that the gentlemen of the civil service are unable efficiently to discharge their duties by reason of their having to use a foreign language, I do not make that observation in the remotest degree in the sense of a reproach to the gentlemen of that service, but I make it as a reproach to the system; I believe that the gentlemen of the civil service know the native languages better than the Europeans who are not in the service, and that they know the native languages quite as well as any body of men are ever likely to know a foreign language. The native languages are never used by Europeans, except upon absolute compulsion under the law, and in social life, from the necessity of giving orders to your servants. We never think in the native language; we do not read and write in the native language. And here I may speak of those gentlemen of the civil service who have passed their examinations very creditably; some of them are able to read the native languages, when they pass, tolerably well; but if they were examined a year afterwards, you would find that very few of them could read, for the simple reason that they never do read the native language in business. Every man has a reader, as he finds it much easier to have the papers read to him than to wade through them himself. Then the present system of using the native language is very modern; it has been introduced within the last 20 years. There was a regulation passed in 1836, intimating that the language which was then used in the Company's courts would cease to be the official language; and that in 1838, I think it was, the vernacular would be introduced. I have heard civilians admit to me that they found an immense benefit in using one uniform language, that was the Persian language, to that of having a mixture of languages. It is quite as bad as if you expected the best of our Greek, Latin, French, German, or Italian scholars, after they had passed a scholastic examination, and written a theme and some hexameter verses, to transact business in Greek, Latin, French, German, or Italian; and yet there is no doubt that their examination papers would show that they had passed a creditable examination. You have simply to apply the same test to the use of languages which people study in order to pass an examination, so as to have the portals of the service opened to them, and have thereafter the enjoyment of all the offices in that service. Then, looking at the question practically, I was admitted as an advocate in the sudder court, in the year 1843. At that period the sudder court, compared with what it now is, might well be said to have been almost benighted; not from any

fault

fault of the gentlemen who presided over it, but from the error of the system. At that period I was not permitted so much as to use the words "yes" or "no" in English. I had studied the native languages, but when I entered that court to practice, I found that I was as a perfect novice in the use of those languages; that I was constantly confounded; and I had to make translations of my cases before I could appear in the presence of the judges to argue them. The same difficulty I found after 10 years; and the same difficulty I saw was felt by judges who had been 30 and 40 years in the service, to that extent, that when the late Mr. John Colvin was appointed to the sudder court, seeing the difficulties which beset the system of Englishmen having to administer laws and work in a foreign language, he proposed to the Government that they should have a sufficient number of translators allowed the court to enable the pleadings to be translated for the judges, so as to save their time in wading through the pleadings, and translating and listening to disputes about the meaning of passages; the Government sanctioned the measure; and up to the period when I left India the pleadings were translated for the judges. The result of that was, that it opened the way to the use of the English language to a great extent. When I went to that court in 1843, oral pleadings, such as we know at the bar of our courts, were really nominal. The pleaders used to be called upon by the judge after reading through a heap of papers from beginning to end; but so soon as oral pleadings became the rule, that habit ceased, and the work was performed by the gentlemen at the bar, natives, Christians, and such Europeans as were there, and the papers were no longer waded through as formerly. The result was also this, that bribery and corruption were afterwards unknown in the sudder court; but when I went into it, I can speak from my own positive knowledge, that bribery and corruption were the order of the day.

4853. This happy change you attribute partly to the introduction of the English language?—I attribute it to the introduction of the English language in a very great measure, and to the introduction of improved and professional assistance.

4854. You refer to European agency?—Yes. but natives are admitted to be solicitors in the Supreme Court. A native can qualify himself by serving his articles exactly as a European can; and I should be very sorry to advocate anything in the way of professional work for Europeans which I would not do for the natives; if anything, I would help the natives, as they are the weaker of the two.

4855. Mr. *Campbell.*] Within what period has this change occurred?—I commenced to practice in the court as Mr. Baillie left it. It was not till 1844 that I held a brief. I think I once heard Mr. Baillie in court; but I can testify this, that oral pleadings nominally existed.

4856. You heard Mr. Baillie's evidence?—Yes, and Mr. Hawkins'; and I think, nearly every other gentleman who has given evidence before the Committee.

4857. Do you concur with Mr. Baillie on this point?—No. I think his convictions have been directly the opposite of my own. I have no doubt that the expression of his opinion is equally based upon his convictions.

4858. You saw the fruits resulting from the change, and Mr. Baillie did not?—Yes. I have discussed these subjects with gentlemen in the civil service; my own tendencies were, in the first instance, rather to advocate the maintenance and preservation of the native languages based upon those ideas which I have heard advocated by Mr. Hawkins and Mr. Baillie; but I have been converted to the opinion which I have now submitted to the Committee by a gentleman in the civil service.

4859. How do the natives regard the English language, as compared with their own?—Very much as they regard the English rule; they would, in the first instance, be disposed to oppose it. But all my remarks are made upon the assumption that the English rule is to be the rule for India; that it is to be maintained. I do not for a moment desire to enter into abstract theories; but taking facts as we have them (we now have an English Government in India), we never shall do justice until we use the language of the governing power. The Mahommedans did so; and I ought to have explained that the language which prevailed before was the language of the Mahommedans, namely, the Persian.

4860. *Chairman.*] Do you think that the national tendency of the people of India generally would be to accept the language with the rule of the governing power?—Most assuredly. I think that if a three years' notice were given, all those imaginary difficulties would vanish. I heard it stated that the interpreter

J. G. Waller, Esq.

3 June 1858.

would have it in his power to explain as he liked, so as to be more powerful than the judge. The thing is as impossible in the mofussil as in the sudder courts. The judge at present does not and cannot speak consecutively. There may be rare exceptions, and I am bound to say that Mr. Hawkins was an extraordinary exception; he was a great adept at reading an oriental manuscript; I never met anybody equal to him, yet I have known a great number of gentlemen in the civil service. But I put the question to him the other day whether, if he had a Bengalee manuscript before him now, he could use it familiarly; and he said that he thought he could not. No other judge (and I think there were some 15 or 18 judges at various times presiding over the sudder court when I was at the bar) was able to handle a manuscript in the way that Mr. Hawkins could do.

4861. Have you turned your attention to the expediency of introducing as much as possible the Roman character into India, while preserving the language?—That question was very much discussed between some very benevolent gentlemen of the civil service, who saw the necessity of making a change in the system, and wished to make a compromise of it evidently. When I first went out to India in 1835 it was much discussed by Sir Charles Trevelyan, and I rather think that he was one of the advocates for making that sort of compromise, by keeping the native language but using the Roman character.

4862. Sir *Erskine Perry.*] That controversy would not at all apply to written documents, but only to printing?—Just so; but it would be a death-blow to the language; it is an admission that we encounter some extraordinary difficulties, which we propose to get rid of by compelling the natives to sacrifice the facility and expedition with which the native languages can be written in their proper characters. For facility of writing, the Persian character has a vast advantage over the Roman character; so that we should really, if we did an injustice in the matter at all, be doing the natives a most grievous injustice, by compelling them to adopt the Roman character, which has no letters to express a great number of the sounds which would convey an idea of their words at all, and yet agreeing to retain the language for which the Roman character is not at all adapted.

4863. You think that it would be better to introduce the English language?—Entirely; I am firmly convinced of it.

4864. You are not of opinion that it would conduce ultimately to the introduction of the English language, to introduce more of the Roman character, for instance in the printed works in India?—I look upon the question in a much larger view than as it affects the use of the language in the courts of law. You could have no better means of diffusing the use of the English language through the whole country, and thereby assimilating the natives and Europeans to one another. You will never open the literature and learning of the West to the native mind, to produce its humanising and harmonising effects, unless you familiarise them with the English language.

4865. Do not you think that the introduction of the English language is in harmony with the general character of the progress of the ascendancy of this country over another nation?—Yes, most essentially so; and the natives of Bengal have a wonderful aptitude for picking up our language.

4866. Mr. *Villiers.*] Does any case occur to you in history where conquerors have forced their language upon the nations whom they have conquered?—I have given the instance of the Mahomedans, and I may mention likewise the Romans.

4867. It has not continued in either case?—It continued as long as their power continued; but I think that there is that power and vitality in the Roman character, and in the languages of Europe which have the Roman character, that they will necessarily displace those languages which are more complex than the languages that can be brought into use for all purposes in the Roman character.

4868. Sir *Erskine Perry.*] You do not contemplate English ever becoming the language of the millions of Hindostan?—I have not entered into that question.

4869. *Chairman.*] Does the present system of competitive examination secure the best and most able men for the public service in India?—Very far from it, in my opinion, because I think that the competitive examination leaves things exactly as they were, with this difference, that it has taken away the patronage from the East India House of nominating to the civil service; but the service with all its inherent evils is left exactly the same. No man after the age of 23 can aspire to serve the State in India. You do not require a man to be put upon the bench till he is 40, or say 35; but at present, if a youth does not pass a scholastic examination,

examination, covering learning in seven languages, only one of which is useful to him in India, he is shut out, and the country is burdened with the expense of maintaining the civilian till the age of 40, and then he is put on the bench without any previous training. There are seven languages in the scheme for examination, yet not one of the Indian languages; there are the Sanscrit and Arabic, which are dead languages; then there is German, French, Italian, Latin, and Greek. For a vast number of offices filled by the civil servants these languages are useless. It should be understood that the Government of India, in India, is the civil service of India; and if what is stated by those who live under that Government, but are not members of it, be correct, it is clear that what must be radically changed is that system. Either such of us as are opposed to that system, and who are not gentlemen of the service, are stating that which is the fact, or we are wholly mistaken about it. Then it seems to me that what is to be eradicated is the entire system, and not merely to change the door by which people shall be admitted into that same objectionable system; yet nothing beyond this is effected by the present competitive system.

4870. You arrive at the same place by a different gateway?—Yes. The patronage has been taken away from the East India Company, and given to certain examiners; and I think that the gentlemen who framed the rules for examination were never in India; it is obvious that the examination does not meet the evil complained of. The only way of meeting it is by the abolition of an exclusive service altogether, and by allowing men to aspire to serve the State in every post in India just as in this country. The one argument that I have ever heard used against the abolition of the exclusive service is this, that if you do not maintain it you will not get fit men to serve the Government. Where the salaries are, for a zillah judge 3,000*l.*, a sudder judge 5,000*l.*, members of the Councils from 5,000*l.* to 8,000*l.*, of a collector 2,300*l.*, I do not see how there can be any difficulty in getting fit persons to fill those situations. Why not put the thing to the test? Why protect the service by rules? I am convinced that educated lawyers, who are fully equal to the discharge of all the duties of a judge, would willingly go out to India to take the situations of zillah judges at 1,500*l.* a year, and yet the present judges are paid 3,000*l.* a year.

4871. Mr. *Villiers.*] Would they qualify themselves by acquiring a knowledge of the language?—The only knowledge of the language necessary is for colloquial purposes. I think that the English language should be introduced; and I think that all those presiding in the courts should be previously examined colloquially.

4872. You would not appoint the men without some examination?—No other examination beyond their position at the bar is necessary. At present, in this country you do not examine gentlemen for judgeships, but they give you the best test you can have, that is, their position at the bar. It is impossible for a man to be a judge who has never studied the law. I believe that jurisprudence is quite as much a science as engineering; and all men are not born with the gift of discriminating, reasoning, and judging, so as to be fit to preside over their fellow creatures. If a poet is born, I believe we may with equal truth say that a man who is fit for a judge is born with a peculiar idiosyncracy which must be developed and cultivated.

4873. *Chairman.*] You think that education in jurisprudence is essential, and you think, further, that that education is sufficiently given by the position which persons attain at the English bar?—Yes, I think it indispensably necessary; and I wish to put it upon record that I have had the admissions of numbers of gentlemen in the civil service that the attempt to dispense justice in India is a total failure; and I believe that if those gentlemen were free to give their testimony before this Committee, nine out of ten connected with the judicial department would acknowledge that it is a total failure. I was astonished by the observation of Mr. Bailey, that the judges are competent to give satisfaction, and do give satisfaction. The cry is universal that it is not any fault of individuals, not anything approaching to corruption or dishonesty on the part of the judges; but it is the positive want of knowledge on their part of the laws and the duties of a judge that gives such universal dissatisfaction. You may occasionally get a man of a greater grasp of mind and greater powers, who may do more than another; but the system is wrong. I have known a political officer who had never been in a civil court perhaps for 24 hours, who was utterly ignorant of the civil system of India, nominated to a judgeship in the sudder court.

J. G. Waller, Esq. 3 June 1858.

4874. You heard the evidence with regard to the desirableness of the great increase of European magistrates, police inspectors, and superintendents and other professional men for the judicial department. Would not that entail a considerable increase of expenditure if the alteration was carried into effect, as has been proposed?—As regards the police I should observe that it is impossible to exaggerate in becoming language the miserable condition of the police and of the magistracy in the Lower Provinces of Bengal, and I believe it is no better in the rest of India. I believe that the whole thing is most perfectly rotten to its very core.

4875. With reference to the expense, what is your opinion upon that point?—I think that the present outlay would really meet the necessary expense by making those reductions which are necessary in the present enormous pay given to the civil service. I have been told by more than one collector, that from half-an-hour to two hours in the day was amply sufficient for any collector to discharge his duties, and yet they are paid from 19,000 rupees to 23,000 rupees a year, having the advantage of receiving their pay monthly. Now there can be no doubt that to discharge those duties you would get a most efficient and honest man for 600*l.* a year, or 6,000 rupees. It will be observed by any one who will have the interest and curiosity to look back to the different deductions that have been made on a large scale, that it has been followed by a declaration that the reduced appointment shall no longer be held by a covenanted civilian. I observe that Mr. Ricketts, of the civil service, has suggested certain deductions, and the abolition of certain offices as no longer to be the right of the covenanted servants, with a recommendation to reduce the pay of those offices enormously. Yet there will be no difficulty in finding gentlemen to take them; the Government knew this well, and so did Mr. Ricketts; therefore, I say, if there is any truth in the observation that you will not get men to accept those appointments without enormous salaries, why protect the present incumbents of those offices by laws and rules which prevent the matter being put to the test?

Martis, 8° *die Junii*, 1858.

MEMBERS PRESENT.

Sir Erskine Perry.	Mr. Campbell.
Mr. Willoughby.	Mr. Gregson.
Mr. Danby Seymour.	Mr. W. Vansittart.
Mr. Lowe.	Mr. De Vere.
Mr. Kinnaird.	Mr. Villiers.
Mr. J. B. Smith.	

WILLIAM EWART, Esq., IN THE CHAIR.

Joseph Gabriel Waller, Esq., called in; and further Examined.

J. G. Waller, Esq. 8 June 1858.

4876. Mr. *Campbell.*] IS not business much better and more satisfactorily conducted in the sudder than in the zillah and district courts?—Unquestionably it is so; but I ascribe that not to the circumstance of there being judges on the bench in the sudder court who are more familiar with the administration of the law, but to the circumstance of the sudder court being in the metropolis of India, where professional assistance can be had, where the court is under the influence of public opinion, and is very much assisted by the guidance of the public press; the improvements in the sudder court have been progressive; and there is no doubt that court, working in the metropolis, is immeasurably superior to the mofussil courts.

4877. Is it an easy or simple matter, after obtaining a decree in any of the Company's courts, to enforce its execution?—Quite the contrary; the trouble of a litigant may really be said to commence from the day on which he gets his decree.

4878. Do

4878. Do you think that there are any good and valid objections to subjecting Europeans, or Christians generally, to the authority of the Hindoo and Mahomedan in civil and criminal matters?—I think so; we know as a fact that Christians do object to being placed under the authority of Hindoos and Mahomedans; I think that their objections are really well founded; it is not likely, in my opinion, that they will ever willingly submit to be placed under their authority; and I believe that the effect of any attempt to place them under their authority will be to continue the unhappy conflict, which has existed in India as long as I can remember it.

4879. Would you then propose to exclude all natives who are not Christians from civil employment, or from the magisterial and judicial department?—Very far from it; I think that too much cannot be done to encourage the natives by education and example to qualify themselves for every civil department; and I think it is the bounden duty of the English Government to employ them to the utmost possible extent, having a due regard to our position as a conquering people, and having regard also to political causes which may make it necessary to exclude them from high appointments; they may be appointed even judges, but not to have authority over Christians.

4880. Do you not think that the introduction of the English language would be a great advantage?—Very great indeed. I do not look upon the introduction of the English language into the courts and offices of Government with simply the narrow idea that it will be a convenience, and that it will lead to a more satisfactory mode of dispensing justice, but I think it will open western literature and western learning to the people of the East, and lead to an elevation of their moral and social position.

4881. Do you think that Europeans ought to be made subject to the jurisdiction of the Company's courts, presided over by gentlemen of the civil service, or by Christians of the uncovenanted service?—In the present condition of India I think not, but I would let the courts be improved, and then I think that all classes should be made subject to the local jurisdiction; but until a very extensive reform is made in the Company's courts, it would certainly be monstrously unjust to subject Englishmen or Christians to their jurisdiction, and to deprive them of the blessings they enjoy, and which they are capable of giving to themselves by the introduction or establishment of good and proper courts. The Supreme Court was introduced as a protection to them, and as a means of their being able to do justice to Europeans; and I think that there is now no reason why they should be deprived of that benefit, and why they should be subjected to the inefficient tribunals of the Company.

4882. Are the present revenue sale laws such as to deter Englishmen from investing their capital in landed property?—Most certainly; if we bear in mind that a revenue sale destroys all engagements and incumbrances on an estate, it clearly follows that a man in business would be very chary in vesting his capital in the purchase of what are called putnees and talooks in India. I am quite sure that it does so operate on Europeans, and that it does prevent them from purchasing what may be called large farms.

4883. *Chairman.*] What is the difference between a talook and a putnee?—A putnee is never separated from an estate, but a talook may be; talooks sometimes pay the revenue direct to Government.

4884. Are they a sort of manorial right?—No; they have been created, time out of mind, by grants from the zemindars themselves and otherwise.

4885. Mr. *Campbell.*] Would it be, in your opinion, advantageous to allow zemindars and proprietors to redeem the land-tax?—I think it would be a very great advantage; it would be a vast advantage as regards the great landowners and rajahs, for it would ensure to us their fidelity; and that being the case, we should have a sense of security in the country which would enable us as colonizers and settlers to work with a degree of confidence which at present we are unable to feel.

4886. Would doing that to a limited extent extinguish existing debts of the East India Company, do you think?—Yes, no doubt; the debt is not large, and that debt could easily be extinguished; it is a small debt, compared to the wealth of the nation.

4887. Do indigo planters maintain what are called clubmen, for the defence of their property?—Not so; throughout India, taking Calcutta itself, and it is much

J. G. Waller, Esq.

8 June 1858.

the same in Madras and Bombay, I believe every man who has anything valuable to guard maintains a body of up-country police; all the merchants in Calcutta guard merchandise by these sort of clubmen; it is a necessity in Bengal, for the Government yields them no protection; the police of the Government are actually tyrants; instead of being a blessing, they are a curse wherever they are introduced; indigo planters do no more than the rest.

4888. Is there anything in the native character presenting serious difficulties in the way of Englishmen desiring to settle in India?—No; on the contrary, I think that their character is such, that it is rather an invitation to Englishmen than otherwise; I think, that notwithstanding the terrible events which have lately convulsed India and shocked the world, the natives are a mild, docile, and gentle people, capable of being trained to everything that is good. I think that all that is bad in their nature has been developed in them. This, I believe, has arisen from neglect and oppression. I believe that they possess everything good in human nature in common with the rest of mankind, and that all we have to do is to check the evil, and to cultivate and encourage, as far as we can, all their good qualities. I speak from my own experience, and from my knowledge of their character.

4889. Do you think it desirable to introduce in India generally the non-regulation system, and to deal out justice summarily?—By no means; understanding the regulation system and the non-regulation system as I do, I do not look with any horror at what is called the regulation system, as some gentlemen are accustomed to do; I believe that if you attempted to introduce the non-regulation system you would cause a complete revolution. I can well understand a great man of genius like Sir John Lawrence, and others of like experience, knowledge, and will, moulding into order a country newly acquired by conquest; but if you were to attempt to introduce the same system in parts of the country that have not only been conquered a hundred years ago, but have had the blessings of peace, and those advantages which a peaceful period generally brings with it, you would spread very great discontent, and cause a very great amount of mischief.

4890. Is it not of great advantage before a man is elevated to the bench as a civil or sessions judge, to make him pass through a gradation of various offices and duties?—I think it is obvious that it cannot be so; it is not a system which we adopt in any country but India. It is a correct saying that the law is jealous, and requires all a man's time and attention if he wishes to devote himself to it. To make a man a good judge it is of no advantage that you should make him first a political ambassador, then a superintendent of a railway, then an opium and salt agent, and from that elevate him to the bench; that is something like making a man do work as a shoemaker, and then as a tailor, in order to make him a good watchmaker.

4891. Does any antagonism exist between the civil servants and settlers in India?—I think very great.

4892. How do you account for that antagonism?—In this way: that Englishmen cannot forget that they were originally excluded from India, while all the servants of the Company had it handed to them as a monopoly; and although they are now admitted, still what are called the good things in the service are reserved exclusively for those gentlemen who are the fortunate members of a most princely service, who, whether they have work or not, are entitled to receive handsome pay.

4893. Do you not think that in an isolated district, containing, perhaps, a million of native inhabitants, with a single Resident there, subjecting a civil servant to the influence of public opinion, has something to do with that antagonism?—Very much so. I think, without meaning it at all in any offensive sense, that the civilians very much dislike being under the influence of public opinion or of the public press; that is my conviction arising from knowledge and observation.

4894. Have you had considerable experience of indigo planters, and of indigo growing?—Yes; I have been indirectly connected with the indigo business for many years.

4895. Have you heard the evidence of Mr. Baillie on the subject?—Yes.

4896. Do you concur with his evidence as to the unremunerative results of indigo growing?—No; although I think that Mr. Baillie was very correct in representing the mischief that has been caused by people undertaking the business of manufacturing indigo, and of making advances on indigo, without studying

ing and understanding what was requisite; but certainly, at the present time, it is well understood and is remunerative in itself, if we put aside those influences and those evil causes connected with the police and the maladministration of justice which really make the manufacture of indigo much more expensive than it ought to be.

4897. Then you consider that the state of the law, and the state of the police, have operated against the profitable settlement of Europeans in India?—Unquestionably.

4898. What suggestions can you make of a practical nature to remedy the evils you have enumerated?—I think it is absolutely necessary, in the first instance, to put an end to that unhappy and mischievous conflict which has always existed between the official and non-official English community. This can only be done by Parliament giving a defined constitution for securing to all Englishmen those fundamental laws and rights, including the liberty of the English press, which are so much valued in this country. Englishmen will not go out to India and consent to live under the authority of their own Government in a worse condition, as regards liberty, freedom, and laws, than they are accustomed to in this country. You must therefore introduce the body of English law, with such modifications as are necessary to suit the religious habits and social conditions of the natives. The close and exclusive system of the present civil service must be abolished, or there will never be any improvement in the administration. All Englishmen ought to be eligible to every post and appointment, which for present political purposes should be filled by Englishmen only; and there should be no such distinction as that of a covenanted and uncovenanted service. The police must be very greatly remodelled and reformed by the introduction of an extensive European element, such as constables, inspectors, and superintendents, in its constitution, and by a large mixture of the Christian population in its ranks. The magistracy must be unconnected with the police, and left to the performance of those obvious duties which belong to it in this country. Magistrates should be selected from experienced and well-tried professional men of mature years; they should be well paid and increased in numbers, so as to have much smaller jurisdictions. I fully confirm the very worst that has been stated before this Committee, supported by the testimony of Mr. Halliday, Governor of Bengal, regarding the most wretched, cruel and oppressive character of the police, as well as of the utter inefficiency of the magistrates. Then, as regards the judicial system, it would be scarcely possible to devise a scheme better calculated than that which now prevails, not only to give insecurity to life, liberty, character, and property, but to encourage corruption, bribery, perjury, and forgery. Speaking of the sad results of this system, the Marquis of Hastings observed, in a despatch from the Directors to the Bengal Government, dated February 1819, "The present state of landed property in Bengal may be brought under review as connected with the judicial administration, since it appears to have originated more from the practical operations of legal decisions than from the fiscal regulations of this Government. The powers which have been assumed by the auction purchasers have completely destroyed every shadow of a right in the tenants, and reduced a happy and comparatively rich peasantry to the lowest stage of penury and indigence. We seem to have accomplished a revolution in the state of society, which has, by some unexpected fatality, proved detrimental to general morals, and by no means conducive to the convenience of our Government; since the first establishment of the Zillah Courts in 1780, and from the regular organisation of them in 1793, a new progeny has grown up under our hands; the principal features which show themselves in a generation so formed, beneath the shade of our regulations, are the spirit of litigation which our judicial establishment cannot meet, and a morality certainly much deteriorated. If in the system or the practical execution of it we should be found to have relaxed many ties of moral or religious restraint on the conduct of individuals, to have destroyed the influence of former institutions without substituting any check in their place, to have given loose to the most froward passions of human nature and dissolved the wholesome control of public opinion and private censure, we shall be found to acknowledge that our regulations have been productive of a state of things which imperiously calls upon us to provide an immediate remedy for so serious a mischief."

4899. Has that remedy been since provided?—On the contrary, the evils have increased

J. G. Waller, Esq.

8 June 1858.

increased under the system which was then complained of. I think that one point, which is very material with regard to the judicial system, is not to make litigation a source of revenue to the Government. I think that the stamp law has operated most detrimentally; the Government looks to litigation as a source of revenue; I think that the abolition of that, and the introduction of professional judges independent of the Government (for the present judges are anything but independent of the Government), are matters which are absolutely necessary to make the administration of justice what it ought to be.

4900. Mr. *Smith.*] You have stated that the police are very inefficient for the protection of life and property; and that in consequence of that it becomes necessary for persons to keep watchmen to protect themselves?—Yes.

4901. Are you of opinion that if a proper system of police were established, the people would willingly pay for it?—I certainly think so.

4902. And do you think it would be to their advantage to do so?—Most assuredly; I think it would not be difficult to convince them of it, and to show them that it would be a gain to them in a money point of view; for they are at a great expense at present in maintaining this private police.

4903. Have you paid any attention to the tenure of land?—Yes.

4904. Would you suggest that there should be any change in the existing tenure?—Certainly; as regards the sale law, I think that a change is absolutely necessary.

4905. What are the changes that you would suggest, with reference, for instance, to Bengal?—I do not know that the ordinary tenures there are objectionable; I have not thought them so myself, nor have I understood that the system has been found to work disadvantageously.

4906. Do you think that if the Government were disposed to allow the land tax to be redeemed, that would be an advantage to the natives?—Very much so.

4907. What are the advantages which you would anticipate from such a redemption?—It would make them more earnest, I think, in the improvement of their property; and what, connected with this question I think all-important, is, that it would make them favourably disposed towards the English Government, as they would be quite conscious that on a change of Government they would lose the benefit thus acquired.

4908. You think that in that case they would be interested in upholding the English institutions?—They would.

4909. But any change of that nature should be accompanied by a registration, should it not?—Most assuredly.

4910. And a remeasurement of the land?—Yes, on a different principle from that which is pursued at present, because there is so much conflict now in the civil courts; they change their opinions so constantly as to the legal value of a survey, as to make it difficult to determine the boundaries.

4911. Have you ever paid any attention to the debtor laws of Bengal as applied to ryots?—I think that the whole of the laws there are in a very unsatisfactory state on those points generally.

4912. Is it not usual for a son to take upon himself the debts of his father?—That is the law of their religion; but that is not enforced in the civil courts, though really it might be enforced next year. The civil courts vary most wonderfully in their decisions; there is no fixity of purpose with them.

4913. Is it not a very cruel law, and does it not operate very injuriously upon the people?—Not practically, for the law is really a dead letter; that is their religion; their law and their religion go together. By the Hindoo religion a son is bound to pay the debts of his father, but as yet no one has found the means of compelling him to do so; the civil courts have held it to be a religious obligation which the courts are not bound to enforce.

4914. If the son receives no property from his father, is he, notwithstanding that, bound to pay his father's debts?—Yes, out of his own earnings.

4915. Does not that keep him in a constant state of poverty?—No; the fact is that a man never pays a debt; if you get a decree for 10,000*l.* against a man, he never pays you.

4916. But the liability to pay is held in suspense over his head, is it not?—Yes, but he generally finds the means of defeating it; the courts themselves are so incompetent to enforce their own decrees, and so ignorant of the very principles which should operate in giving effect to their decrees, that the law, it is found, is very easily evaded. I could show instances in which a decree has been

for

for 20 years under execution, and has never been enforced, or only partially enforced; and at the end of that time it has been ruled by the highest authorities that the decree ought never to have been passed; that it was illegal, and incapable of execution.

4917. Do you not think, with a view to the benefit of the ryots, that some change in the law is necessary?—So long as you do not touch the law of their religion; wherever their civil position is mixed up with their religious institutions, I think you cannot interfere; you must leave it to the operation of time and the effect of education.

4918. Do you think it would be inexpedient to make any change in that respect?—I think it would be inexpedient to make any change by legislation, as in the case of the remarriage of Hindoo widows, and the alteration of the law of inheritance; I know that those two alterations in the law prevented the very good that was contemplated; it struck at the very root of their religion, and if there had been Hindoos in the Legislative Council who could have pointed out what would be the probable operation of such laws, the probability is that they would never have been passed.

4919. Do I understand you to say that you, being an advocate, could hold no office of any sort in India, however capable you may be of holding it, in consequence of you not being a covenanted servant?—I could hold none but a subordinate office; such an office as would be beneath my social position and fair expectations.

4920. What is the highest office that you could hold?—In the judicial department the highest office that I could hold would be that of an uncovenanted judge, having as much or more work to do than the judge himself; having unlimited jurisdiction, but not receiving anything like the pay, or occupying anything like the position of the covenanted judge, and being incapable of elevation.

4921. What does a covenanted judge receive?—Two thousand five hundred rupees a month, and the uncovenanted only 700 rupees.

4922. When as a barrister you come home to your own country, is there anything to prevent you from taking any office there for which you are capable?—Nothing whatever; I may keep my terms here, and be called to the bar, and then I should be legally as much qualified as any man, so far as my rights are concerned, to be elevated to the bench.

4923. There is nothing here to prevent you, if you are fit for the office, from being Lord Chancellor, while in India you can only occupy a menial appointment?—Yes; a menial appointment for a gentleman of education and position.

4924. That does not offer any great encouragement, then for people to go out to India?—No; I only speak from my own experience as to what I should do, if I were training my own family for India.

4925. You have stated that in your opinion a free English press is a necessary security for the good government of the settlers who go out to India; is it your opinion that it is equally beneficial to the natives?—Most assuredly; the English press has always protected the natives; every measure that the Government has introduced which has been unpopular with the natives, and which has been thought to prejudice them, or to work to their injury, has met with the most decided opposition from the press; and the press, I am bound to say, has advocated the rights of the natives quite as fully as the rights of Englishmen.

4926. Do you think that the Government have anything to apprehend from the discussions incident to a free press in India?—Not in the remotest degree whatever; it is either a fiction or there is a desire to get rid of it.

4927. Do you think that the natives are able to discriminate, when our free press discusses a question affecting them, whether it is doing so for their benefit or not?—Such natives as can and do read the papers, most certainly can do so.

4928. What is your opinion as to a free native press?—I think that the time has not arrived for the introduction of it; we must regard the natives, to a certain extent, as children, and take the position of parents with regard to them, raising and elevating their minds, and preparing them for future liberty.

4929. Would you prohibit the native press altogether?—No; but I would put it under certain restrictions. I speak with hesitation upon this point, certainly; but such are my convictions, and I have thought a good deal upon the subject.

4930. Do you think that, so long as Englishmen going out to India are shut out from offices of honour and profit, it is likely that they will take root in the country?—Not at all; I think they will not take root there; and, more than

J. G. Waller, Esq.

8 June 1858.

that, I think they will not go out in large numbers if they know that they are to be shut out from all appointments.

4931. But is it your opinion that if Englishmen were eligible to every office of the State for which they may be fit, as is the case in all our colonies, that would operate as an inducement to them to go and settle there?—It would be a very great inducement indeed; I can hardly exaggerate the extent of the inducement.

4932. Is it not a part of the nature of an Englishman to expect, wherever he goes, to have some share in the government of the country?—Most assuredly, and it is in consequence of the want of that, that you have a political antagonism in India between the governors and the governed.

4933. And are you of opinion that the admission of Englishmen into the Legislature would not only do away with that antagonism, but would eventuate in great benefit to the country?—Yes, that would be one means; but I think that that is a *sine quâ non*.

4934. Would not the Legislature in that case have the benefit of a much larger amount of experience and information than it has at present?—I think it would be quite as beneficial to the Government as to the governed, but you can hardly do so so long as you have but one Legislative Council; how are you to introduce people resident at Madras into the Legislative Council located in Calcutta?

4935. You would consider it desirable that there should be a Legislative Council for each Presidency?—Yes.

4936. And that Englishmen who are fitted for the appointments should not be excluded from them?—Englishmen and native Christians; I would not limit it to Englishmen.

4937. Are you aware that in the Island of Ceylon the experiment of introducing natives into the Legislative Council has been tried and found to be very beneficial?—No, I was not aware of that.

4938. If it has been found beneficial there, do you think that there would be any danger in trying the experiment in India, with regard to some of the most intelligent natives?—So far from there being any danger in it, it would be, I think, one of the best measures that could be taken for insuring the safety of India.

4939. Do you know as a fact that there are many natives quite sufficiently intelligent to justify their appointment to such an office?—Most assuredly that is the case; there are many of them who are fully qualified in every respect.

4940. Are natives allowed to be pleaders in the courts of law?—They are more than allowed to be pleaders; they have had a monopoly of pleading hitherto in their own hands. The class of people who are pleaders in the courts generally are most incompetent, and unfit for their position.

4941. Are they untrained?—Yes, they are untrained. In the Mofussil courts they are no help to the judge; but, on the contrary, they are great hinderances.

4942. Would it not be an advantage, therefore, not to allow people to be pleaders without undergoing some sort of examination, or going through some test of their qualification to undertake the duty?—Their qualifications should be such as are peculiarly required for performing the duties of a pleader, but no general rules for examination by book would, I think, suffice; their preparation should be similar to that which is necessary in this country for the exercise of any profession or business. They should undergo a sort of apprenticeship, doing practical work; book-learning will never enable them to discharge their duties, any more than a man would know how to make a watch from reading in a book a description of the manner in which it is made.

4943. Are natives allowed to plead in the superior courts?—There is no law excluding them; but they are subject to this hardship, which is as bad as a law: a man must come to England and keep his terms here, and be called to the English bar, and then he may go back and practice in the Supreme Court. They may be admitted as attorneys, and there are natives who are attorneys.

4944. Do you think that there would be any objection to admitting them as pleaders in the Supreme Court?—None, considering how much Mahomedan and Hindoo law is administered in the Supreme Court. It is a hardship that they should be required to be called to the English bar in order to qualify them to practise in India. I think that in Australia a gentleman may be called to the bar and practise in the local courts without first coming to England; and I do not

see

see why the same (I will not say privilege, but right) should not be conferred upon parties in India. *J. G. Waller*, Esq. 8 June 1858.

4945. Would it not be a means of qualifying them for filling judicial situations?—It is the only preparation which you can give them; in fact, the remedies that are required are all of the most simple nature.

4946. Mr. *Kinnaird.*] You have spoken of the antagonism which exists between the governors and the governed; do you refer there chiefly to Calcutta?—No, throughout India; the government of the Company all over India; that government is not willingly accepted in India, and as the direct government of the Crown is denied to India, that antagonism, I am convinced, will ever continue to exist between the Government and the governed.

4947. Do you think that arises practically from the exclusion of any but the covenanted servants?—I think that has a very great influence upon it; and I think, moreover, that the Company have worked as you might expect a corporation to work, not with large and liberal ideas, but, generally speaking, with small ideas, with a view to the maintenance of their privileges and rights. They have acted wisely as regards themselves, but they have acted injudiciously and illiberally towards the country in all respects, as well with regard to the natives as with regard to Europeans.

4948. In your opinion, has the want of competition for public offices a deteriorating effect upon the service itself?—I think so; because if you have an incompetent person in the service, you are bound to maintain him, whether you give him work or no work, and you shut out the possibility of admitting people of merit; your selection is confined to 400 or 500 gentlemen who have passed a scholastic examination at the age of 18 or 20, but you are debarred from selecting from gentlemen who, without expense to the State, have qualified themselves. We, out of the service, should be glad to qualify ourselves at our own expense, with a view to our admission into such offices as we find ourselves best adapted for.

4949. What is the meaning of what is called a bad bargain in the service?—I think that the question almost gives its own answer, when I state that the rules of the service are such as they are. In fact, there is a covenant between the Company and the civilian; and I think it would be important that the form of the bond signed by civilians should be put upon record. By that bond there is a mutual obligation.

4950. Sir *E. Perry.*] A man cannot be turned off?—No, unless he has been guilty of corruption or the like. When once a man has signed the bond, the State is burdened with him, although he may be of no use. You may find that, although he has a good deal of book-learning, although he may write a Latin theme or hexameter verses, yet when he is put to work he may be fit for very little, and yet you must provide for him.

4951. However incompetent he may have proved, he is still eligible for a judgeship, is he not?—He is not only eligible for a judgeship, but the more incompetent he is the more certain is he to be elevated to the judgeship. That is explained by a very zealous partisan of the East India Company, Mr. Campbell; he states in a work which he has published that when a man has been found fit for nothing else, it is determined to shove him on the bench, and make a judge of him. That really is the fact. I am myself able to corroborate Mr. Campbell's testimony in that respect.

4952. Have you known instances of such appointments being made as would corroborate the opinion expressed by Mr. Campbell to which you refer?—I have known too many instances of that kind, but I hope I shall not be required by the Committee to mention them.

4953. Mr. *Campbell.*] In the Sudder?—Yes. I have known men who have never been judges or decided a case at all nominated to the Sudder Bench.

4954. Mr. *Kinnaird.*] And have you ever had brought under your notice any decisions made by the judges which have been remarkable for their absurdity?—A great many. If the Committee will only take the trouble to read the decisions of the Privy Council, they will see that the decisions of the highest court in India are often reversed; and when you introduce professional assistance the judges are embarrassed.

4955. Suppose the experiment were made in every Presidency of associating some of the natives of the upper class in the Legislative Council, would there be any difficulty, in your opinion, in finding natives competent to the post, and still well

J. G. Waller, Esq.

8 June 1858.

well affected to English rule?—I think there would be no difficulty; we have many natives who are very popular with the European community, and I think we should be very happy to see them put into the Legislative Council.

4956. Would not such a course tend, in your opinion, to conciliate the natives, and make them favourable to our government?—Very much so, if you carried it out fully; it would not be enough to put into the Legislative Council a native who merely follows the observances of the Hindoo religion in order to avoid being out-casted; but you should act with good faith and admit into the Legislative Council natives from all parts of the country, who are able men, and respected among their own community.

4957. Are there among the natives many superior men who are scattered about in the Mofussil?—Among the gentry and old families I have come in contact, most assuredly, with natives who are really gentlemen in manners and habits.

4858. And who are not disaffected to our rule?—Certainly not; I am speaking of Bengal. I think those are measures which would go a wonderful way to conciliate and make them well affected towards us.

4959. Should you not think that the present time would be very suitable for the introduction of measures, such as those of which we have been speaking?—As soon as you can put an end to the military insurrection. I think that any measure of the kind, if introduced while the Sepoy army is in force against us, would have a bad rather than a good effect; the moment we have destroyed that army it would be necessary to follow it up by the immediate introduction of reforms; delay, I think, would be fatal.

4960. Do you think that the employment of Christians, either separately as a body or collectively, would have a prejudicial effect on the native mind, so as to endanger the peace of the country?—Quite the contrary; I think that the moment we take the position which as Christian rulers we are entitled, and justly entitled, to take, the natives would not only respect us, but would have greater confidence in us than they have at present, when our professions and our conduct differ from each other as they do. The more pains we take to make professions to the natives that we shall exclude Christianity, the greater is their suspicion that our intention is by underhand means to supplant Hindooism, and to introduce Christianity.

4961. Do you know anything in the native character which, in your opinion, is calculated to deter and discourage the settlement of Englishmen in India?—Very far from it. I know, and I do not say this out of opposition to gentlemen who have spoken to the contrary, that the natives have most admirable qualities about them.

4962. Would the extension of missionary labour operate prejudicially in your opinion, so as to cause apprehension to the Government, or so as to deter commercial and agricultural gentlemen from settling in the country?—By no means; the natives have not the slightest objection to independent and non-official people working according to their convictions, but what they have the greatest objection to is, the interference of those who are connected with the State or the interference of the Legislature with their religious habits, usages, and feelings. I think you are not likely to do much in the way of European settlement or colonization if any effort is made to exclude a body of useful men, such as the missionaries are found to be, under the idea that the natives do not like them.

4963. Have you ever heard of instances of missionaries asking for the assistance of Government on their behalf?—Not at all. I never heard of any violence or opposition offered to missionaries, or of missionaries being unpopular with the natives more than any other class of Europeans.

4964. You would say that they are rather respected than otherwise by the natives?—Yes, and for this reason, that they believe them to be virtuous and good in private life, and that they are honest in their convictions. As a body of men they have rather elevated the English character in India, and as such they are respected.

4965. You are of opinion that if the Government had taken an open and plain course as regards Christianity, it would have had a better effect upon the native mind than the course that has been taken?—Yes; because in that case Government would have been believed; but it never will be believed, when being a Christian Government it professes to discourage Christianity.

4966. There are many Christians, are there not, in the Bengal Presidency who

are

are not Europeans?—A great many; there would be no difficulty in either supplying a police force or in getting up militia regiments for the protection of the principal towns in which there are many Christians.

4967. What is their condition generally?—Very degraded and lamentable. The coloured Christians are a class generally looked on with great contempt, and very little is done to help them.

4968. What do you mean by coloured Christians?—Those who are usually described as Eurasians.

4969. Why are they looked upon with such contempt?—They have been condemned without cause; they are supposed to have all the vices of the Christian as well as of the Hindoo; but such is not the case. I think they are capable of all the good that others are; they are the most useful body of men to the Government in filling subordinate offices. We shall never get the natives to entertain a favourable idea of Christianity if they find that Christians who are not white are degraded amongst Christians who are white.

4970. What has tended to cast this slur upon them?—I suppose it originated in the first instance in the stigma that attached to their birth. The word half-caste is used to imply that they are not generally legitimately born; and that has extended to the whole body of coloured Christians. If a Hindoo, becoming a Christian, adopts European habits and manners, he immediately falls into their position.

4971. Mr. *Lowe.*] Then is it his change of religion that makes him degraded in the eyes of Englishmen?—No, because the Eurasians are born Christians.

4972. What is thought of a Hindoo of full Hindoo blood turning Christian?—Generally speaking, he is not looked on as a very trustworthy person; as to the lower order of natives who become Christians, we do not trust them much.

4973 Mr. *Kinnaird.*] Hitherto the Government have entirely abstained, have they not, from giving any employment to converted natives?—Yes.

4974. Have any grounds been stated for not treating them in the same manner as any other portion of the population?—I do not know; the impression on my mind has always been that the Government are not anxious for the spread of Christianity, but that on the contrary, they would rather prefer that things should remain as they are, because their own existence is thereby apparently secured; most certainly if you introduce a large number of Christians, by bringing a body of settlers from Europe, or if you so educate the natives that they become Christians, the present constitution that prevails in India could not exist for any time; I think that the East India Company are perfectly conscious of that, and it has been with that view, in my opinion, that they have never encouraged Christianity.

4975. Mr. *Lowe.*] Do the Mahommedans and Hindoos agree generally in their views of Christians and Christianity?—No, the Mahommedans, as a class in India, are very bitter against Christians; they have all the vices and all the evil conditions of the Hindoo with those of their own peculiar creed, but they are most hostile and most antagonistic to the English. The Hindoo religion does not admit of increase by proselytism, the Mahommedans work zealously, making as many converts from Hindooism to their own religion as they can, while Christians almost sleep over it.

4976. With regard to those who are Christians, do you consider that they ought to be subjected to the jurisdiction of the native and Company's courts, while Englismen alone are exempt?—I do not; what I have said as to Englishmen applies to all Christians. I can hardly conceive it possible, that while Englishmen in India claim these as rights to themselves, on account of their being Christians, and appreciating free institutions, they should seek to deprive, not only all other Europeans, but all their fellow Christians in India, of those blessings which they themselves so much value.

4977. Do you think that they have equally strong objections to be subject to the Hindoos and Mahommedans?—I do.

4978. Do you consider the Bengalese inferior to the people of Upper India?—Only physically; in all other respects they are equal if not superior.

4979. You seem to think that there should be some censorship over the native press?—Yes.

4980. You think that under proper restrictions the native press should not be entirely suppressed?—I think not.

4981. The tendency of the freedom at present enjoyed has been rather to elevate the natives than otherwise, has it not?—Very much so; I think that the

J. G. Waller, Esq.

8 June 1858.

press is a most powerful instrument for doing good in India. The observations which I have heard made against the English press are, I think, very unmerited; I think that the press in England is far more severe and satirical with regard to those in authority than the free press in India has ever been.

4982. Do you think that the press in India never deals in personal attacks on individuals?—I will not say it never does.

4983. Are not actions for libel frequent in India?—I have not found them so; I cannot call to mind many instances of the kind.

4984. Is not the tone of the English press in India what we should call in opposition to the Government?—Not only the press, but the whole community in India, is so, and the press represents that feeling very strongly.

4985. That is, there is an opposition by parties who have no hope of getting into office, and therefore no responsibility?—It is not only from that cause, but because Englishmen in India are deprived of those institutions and laws which they so much value in England, and because the Government of India is always hostile to the non-official population of India.

4986. Has the Government of India any means of defending itself?—Yes, the press.

4987. How would it defend itself?—In the same way as it would in this country; a defence, as a measure of justice, will always be allowed to an attack made in the press; the press of India was as much in the service of the Government as against it, that is, you had a portion of the free press devoted to the maintenance of the state of things existing in India, and to a justification of Government measures, although at the same time another portion of the free press of India satirised and criticised the measures of the Government.

4988. Does it pay, as a mercantile speculation, to set up a newspaper to defend the Government in India?—I can state that the proprietor of a paper which defended the Government has retired with a handsome fortune, while those who have taken the course of opposing the Government are still struggling; the "Friend of India" was notoriously, when I was in India, supporting the Government measures.

4989. Do you think that the Government of India would do wisely to allow any paper to be understood to be its official organ?—I think so, just to the same extent that is done in this country.

4990. Do you think it advisable that the Government should be so connected with a newspaper, that what is said in that paper should be taken as an admission by Government that it has so said?—I should think not.

4991. I understand you to say that you are against any greater control of the English press than there is in England?—Yes; having lived under the influence of a free press, and having seen the effects of its suppression.

4992. Will you state, if you please, what has been the effect of the suppression of the freedom of the press in India?—I think it has left the Government blinded as to the real state of the country; I think, also, it has led the Government to go on in its errors by not having the truth laid before it.

4993. Do you think that the press of India was doing any harm to the native mind?—Not at all; on the contrary, I think it was doing a great deal of good; it was enlightening and elevating the native mind.

4994. Do you think that the articles which have appeared in the India press with reference to the natives, and the tone which has been taken with regard to them in those articles, is calculated to bring the present disturbances to an end?—Some of those articles, I think, were injudicious. They are partly to be ascribed, I think, to an irascibility at having been deprived of their liberty, and partly to the antagonism, the existence of which is found between Europeans and natives of India. The natives have never asked to have Europeans subject to the Hindoos and Mahomedans; it is only the East India Company that has been perpetually originating that question, and thereby creating strife and contention between Europeans and natives; but if any one conversant with India for the last 25 years will look at the whole course of conduct and policy in India on all subjects in which the interests of the natives have been supposed to be hurt, or prejudicially affected by the acts of the Government, he will find that the free press has ever advocated their interests and taken their part.

4995. Do you consider that the course which was taken by the press before the recent disturbances in India was judicious?—Very much so; and if the Government had acted on the hints which were given them by the press, and had taken warning

warning in time, the storm, I am convinced, would not have burst as it has done, or, at all events, it might have been controlled.

4996. Do you not think that articles appeared in the press calculated to excite the apprehensions and to irritate the resentment of the natives?—Quite the contrary, with the reservation before made.

4997. With regard to Christianity, you have said that the Government was afraid of introducing it; I want to know whether you think it the duty of Government to introduce Christianity?—No; but it ought not to oppose it.

4998. You do not think that the Government ought to be an active agent in introducing Christianity?—No; I think that the Government should be perfectly neutral.

4999. You think that now it is hostile to the introduction of Christianity?—Yes, or it professes to be hostile, though it is not believed by the natives to be hostile; I think that if all classes of coloured Christians were allowed to enlist, and if you were to form police battalions, and militia regiments, they would not be in that degraded position in which they now are.

5000. *Chairman.*] I understand you to say that the natives suspect the Government of not being sincere in the conduct pursued by it, with regard to the introduction of Christianity?—Yes.

5001. And that that suspicion of insincerity introduces a want of respect?—Not only a want of respect, but a perpetual apprehension that the Government means, by underhand agency, to deprive them of their religion; and they look upon the law enabling the Hindoo widows to marry, and the law altering the course of inheritance, to have directly negatived the professions of the Government with regard to their non-interference.

5002. Mr. *Lowe.*] You say that men who can write Latin verses, and who are good scholars, make bad civil servants?—Pardon me; I am very sorry if I have been so misunderstood; I think that a good classical and literary scholar may be, and is, indeed, perhaps the best person to be put upon the bench; but you have a variety of posts in the civil service for which book-learning, in that sense, is not necessary. I find that the course of examination prescribed, and which it is necessary to go through before a man can be admitted into the civil service, makes it desirable that he shall know seven languages; it is very possible that a man having but little aptitude for government or for the bench may pass a creditable examination in German, French, Italian, and other languages; and yet another who knows nothing of them may still be better qualified than he to fill the office of judge, as well as any other under the Government.

5003. Is a knowledge of those seven languages compulsory?—No, not exactly so, but it enables a candidate to get a greater number of marks.

5004. It is not compulsory upon him to take them up?—No; but if he does take them up, and passes, he gets a greater number of marks.

5005. By what test would you ascertain the fitness of civil servants?—No one common test can be applicable to every case; the test which would be good for an accountant, or for a man in the finance department, would not be a test for a man in the judicial department; and the two together may be no tests for the political department or for the post-office. At present the whole world are excluded unless previous to the age of 23 they have been able to pass a scholastic examination, which is one test for everything; but they are never required in after-life to qualify for anything. They never become a part of the people; they are officials from first to last, and as such are entitled to hold every appointment.

5006. Do I understand you to say that a person who has passed a competitive examination is never qualified in after-life for any business whatever?—Not so. What I say is, he never is tested. I said it is no test; you can have no one common test applicable to every case. I would have no exclusive civil service.

5007. But you must have civil servants, must you not?—Yes, but not monopolists, nor with the right of being maintained whether they are fit for their work or not.

5008. If the Government wants a collector for such a place, how would you propose to find him, or by whom would you say he should be appointed?—By the governor of the country, or wherever you put the patronage.

5009. Who is to have the patronage, according to your scheme?—I should take up a great deal of the time of the Committee if I were to go into the scheme fully. There would be an amount of patronage in the hands of the Governor of each Presidency, who should always have a right to remove any person from an

J. G. Waller, Esq.

8 June 1858.

office for which the Governor might consider him not qualified; but he cannot enter into the details of every appointment; the heads of the departments therefore should have the right to nominate to all posts subordinate to their own; in fact, I would follow very nearly the system which is followed in this country. I would have no exclusive civil service. I would allow the heads of every department to make the appointments, leaving it to the Governor-general to interpose his authority by veto.

5010. The patronage then would be in the Governor-general, and in the Governors of the different Presidencies?—Yes, that is my view of it at present.

5011. Suppose the Secretary of State for India, or whatever the minister is called, has a friend who wants to get rid of an incompetent relation, and sends him out to the Governor-general of India, with a recommendation to him to put him into some situation, is there not a risk that he, although incompetent, will be placed in office in India?—I think there is a chance of that, but there is a risk in everything that is human. I think that the check of public opinion and of a free press are the best remedies that can be suggested with a view to the prevention of such an abuse of power. It would be an abandonment of his obvious duty; and I think that if the Governor should be shown to have acted under such a recommendation, with a knowledge of the unfitness of the party, he should be visited with the consequences. In fact, I think that our policy ought to be to govern India in India, and to prepare India for it as rapidly as possible. I would also suggest that the Governor-general should not have the nomination to offices, except as regards the heads of departments; and I think that if we sent out a responsible Governor-general, he would hardly venture to appoint to the head of a department an incompetent person, merely because the Minister of State for India recommended him. I should certainly myself have no apprehension that there would be any extensive abuse of that kind.

5012. Are you aware whether such has ever been the case in the colonies?—I cannot point out any special case of the kind, but I am satisfied that there have been such cases. To suppose that such cases have not occurred would be to ascribe to those who are in power a degree of perfection which we cannot expect to find in anything human. I believe that most men, when they are in power, would be glad to be free from the control of public opinion, and from a free press.

5013. Do you think that there is great risk of the service being jobbed?—I think not. I think the class of gentlemen contemplated as likely to go out to India, with such recommendations, will never go there. They are the branches of the aristocracy, and they will not expatriate themselves; by preserving the monopoly of the civil service you do, to a certain extent, check such an abuse as that, but you exclude all merit; the merit of the world is not at your command. I think that if you had small-cause courts established, and if men who had efficiently discharged their duty at the bar were, on passing a colloquial examination in the native languages, held qualified for the bench, numbers of gentlemen would go out to India.

5014. Mr. *Seymour*.] Do you think it would be possible to introduce some kind of check, such as that of a residence of so many years in India, in order to qualify persons for holding a civil appointment?—It may be so; but I should be very loath to introduce anything in the sense of a protective or exclusive measure. I speak with hesitation upon the subject, because these are questions which go so much into detail. I can point out, and speak of the evils, and state the broad remedies, but as to matters of detail, I speak with hesitation.

5015. You remember the story of Warren Hastings saying that he had 500 young gentlemen sent out from England for him to provide for?—Yes, but what was possible then would not be possible now, so long as you have public opinion. The Marquis of Hastings observed in that very passage which I read just now, that the absence of public opinion was a serious loss.

5016. Do you think that the civil service could be separated and divided from the judicial service?—As long as you did not protect the service by exclusive laws; as long as you did not give them the right, whether competent or incompetent, to remain in the service, drawing their pay; as long as you open it to the whole community who choose to compete, it would be a wise subdivision.

5017. Would you have all judges trained lawyers?—Unquestionably I would; I would keep them solely to their work.

5018. You would select them entirely from the legal profession?—Certainly I would.

5019. And

5019. And probably you would require that they should have practised a certain number of years as barristers?—Yes, as barristers in practice, because you have gentlemen here who take a sort of honorary degree in order to gain a position in society. If persons of that class only were appointed, that would be an abuse which would very soon remedy itself. If a Governor-general were found to abuse the power given to him he would soon be taken to task by a free press.

5020. In order to fill the office of judge properly, ought not a man to have been first an advocate?—I think so; unless he has studied and worked and has acquired knowledge of pleadings and examinations of witnesses by practice, he is never fit for the bench.

5021. And it is only in that way that a man can acquire that knowledge which is necessary for a judge?—It is only in that way. You may apply the same principle to the humblest or to the highest departments of learning.

5022. Have you ever heard any instances of persons who are highly connected going out from this country and receiving high appointments on their arrival in India, over the heads of others?—Such cases must have occurred.

5023. Might not that take place if you did away with the civil service?—It might, occasionally and rarely.

5024. If there were an important and lucrative office open in India, the work of which was easy, would not the son of a gentleman, highly connected in this country, have a better chance of obtaining it than other persons there?—I should strike at the root of the evil at once by having no such appointments. I would have no lucrative appointments with no work.

5025. Is it not the case that where a man has charge of large sums of money you must pay him well to insure his honesty?—I think not; I think he should give security; I would not put temptation in his way.

5026. When you speak of a native press, what do you mean?—A press published in the native language.

5027. Are you not aware that there are many papers published in the English language, the proprietors of which are natives?—Yes; but what I mean in speaking of the native press is a press in the native language; not English papers edited by natives.

5028. Then any English paper edited by a native would be considered an English newspaper?—The proprietors may be natives. I do not think that we ought to do anything to prejudice the natives in that respect.

5029. If any Mussulman or Hindoo turned Christian, you would take him out of the civil jurisdiction of the Mussulmen or Hindoos, and put him under English law and English judges?—Not English judges, because you have plenty of Christian judges who are not English; they have the same jurisdiction and authority, except that the uncovenanted judge, having unlimited original jurisdiction, has only appellate authority over those below him, but a covenanted judge has authority over him also.

5030. You think that independent Europeans would not object to being placed under a native so long as he was a Christian?—I think not; I think that a Christian would not like being placed under a Hindoo or Mahomedan judge.

5031. Would not a Mahomedan have the same objection to be under a Christian judge?—Yes.

5032. Then he would object very much to the doctrines which you lay down?—He would object to a Christian Government *in toto*; he hates Christian Governments.

5033. Is that the case with all Mahomedans?—Yes.

5034. Do you not think that rich Mahomedans who are engaged in commerce look to Government for the security of their property?—That is the case no doubt with many of them; but I speak of them as a class. There are individually many Mahomedans who have appreciated the blessings of our institutions, and who are not so hostile to our rule.

5035. And the more our subjects generally are engaged in commerce, and have the possession of land, the greater in your opinion would be the security of our rule there?—Most assuredly.

5036. From all you have observed, do you not think that self-interest has as much influence in India, and other eastern countries, as it has in England?—Most assuredly.

5037. As a practical fact, where self-interest is concerned, do you think that caste

J. G. Walter, Esq.

8 June 1858.

caste interferes very largely?—No, I know that the Hindoos would be very glad to be relieved from the tyranny of their caste system; they have admitted, over and over again, that if Brahminism could be removed from them they would be very glad, but no man single-handed can fight against it.

5038. Is it not one of those institutions that should be left, in your opinion, gradually to disappear?—Yes; I think it would be cruel, unjust, and impolitic to attempt to wage war against it.

5039. Do you not think that would be the surest way in the end of getting rid of it?—Yes; I think it would be the only way.

5040. Would not any attempt to get rid of it attract great attention, and be likely to excite great antagonism?—That is quite my idea.

5041. You think that by degrees, if left alone, it will disappear?—I do; I am perfectly convinced of it; I have conversed a good deal with Hindoos upon that subject, and it is my firm conviction that it will die out, if left alone; whereas, by direct opposition, you would feed and encourage it.

5042. Have you heard natives say that if we remain quiet, as far as our religion is concerned, its silent progress will be great?—Yes. The Hindoos believe the Christian religion to be a true religion.

5043. Do you think that the Church should be separated from the State in India?—Yes, I do.

5044. Do you think it has been a wise thing to give military honours and salutes to bishops there?—I do not.

5045. Is it a subject of discontent with the people of India that so large a sum as half a million of money is annually spent on our Christian ecclesiastical establishments there?—I really do not think they know it.

5046. But you would not go on extending that?—No, I would not; that is, as a Government I would not do it. I think it is a very unjust application of the public revenues, and it is directly at variance with the assurances and professions of Government.

5047. If the inhabitants of India generally knew that large sums were expended on Christian establishments, would they not have a strong objection to it?—Yes, and they would regard our actions as being perfectly at variance with our professions and promises.

5048. How large do you think our legislative council ought to be?—If you subdivided it in the mode I have suggested, leaving one for each Presidency, I should say there might be 20 members.

5049. Would you have 20 or 100?—I would start with 20.

5050. Do you think you could get the most important men among the English communities to serve without a salary?—Yes, just as easily as you get the most important men in England to serve in Parliament.

5051. Do you think you would get commercial men to serve?—Yes, if you followed the same reasonable course as regards the conduct of business that is pursued in this country. It would not do for them to be meeting in business hours; you must act with good faith in the matter.

5052. You have stated that the collectors received a salary of 2,300*l.* a year, and that you have been informed by collectors that they are not occupied more than two hours a day?—Yes, collectors have assured me that from half-an-hour to two hours a day has sufficed for the performance of all the duties of a collector.

5053. Can you tell me where that is?—That is in the Bengal Presidency; and yet in that province they are paying from 19,000 rupees to 20,000 rupees a year.

5054. In what way has the Government discouraged the propagation of Christianity in India?—By discouraging Christians; they are not allowed to enlist in the native army, and they are excluded from the police.

5055. Do you mean that there are no Christians in our civil service in India, filling Government offices?—Yes; all half-castes are employed, but only in subordinate places.

5056. You seemed to think that there had been a deep-laid scheme to discourage Christianity; do you remember a clause in the Charter of 1833, in which it was said that no man should be prohibited from holding any office on account of his religion and his caste; do you not think that the Black Acts are rather in that spirit, putting them all under the same laws?—No; my argument is, that a native may be put into the highest civil appointments, but it is not necessary to subject Christians to his authority; a Christian, at present, is only one against

ten

ten thousand, and it is galling and bitter to his feeling, which the Hindoos and Mahomedans know perfectly well, to be made subject to them.

5057. Do you say that you would class all Christians with Europeans, and put them under European law?—Yes; I hold that native Christians should have authority over Christians.

5058. The Christians would be under English law?—I have not spoken much upon that subject; my proposition is, that you must extend the best courts all over India; you must improve your courts.

5059. But in a criminal case an Englishman now can only be tried in the Supreme Court?—I have never contended for the maintenance of the existing system.

5060. I have not seen anywhere what the system is which you would recommend?—I have not been asked any questions on the point.

5061. I should like to hear what your views are upon the subject?—I think you should have courts, the character of which should be very analogous to the Supreme Court, established all over India; I think that those who ought to be the judges should be, in point of character and attainments, similar to what the judges of the Supreme Court are; the idea of subjecting people to most wretched courts, simply because a good court is further off, seems to me to be most monstrous; you must improve local courts, and make them fit for the trial of Christians; in introducing the English law it would be necessary to do so guardedly. I think that the substance of the English law should be introduced all over India. I think that the general law of equity, which is the law of truth and justice, should be introduced into India, but you must strike out all admitted evils, from which we are trying to free ourselves.

5062. What do you mean by the law of equity?—There is a sense in India of equity according to every man's mind, but equity, as a science, is that state of perfection to which we have come in dealing with jurisprudence, and which is to be found in the decisions of our most eminent men. I would not have law and equity separated, as they are in this country.

5063. In these courts, which you are to establish over the whole of India, you would have none but Christians and Europeans as judges?—No; on the contrary, a great number of them should be Hindoos and Mahomedans.

5064. In that case, in one court a Christian could be tried, while in another he could not be tried?—You must have Christian judges; where the plaintiff or the defendant in a cause was a Christian, you would go before a tribunal where the judge was a Christian.

5065. But you would have this law of equity established all over India?—Yes.

5066. And you would have the judges indiscriminately taken from Mussulmen, Hindoos, Christians, and Europeans, if they were fitted for the post?—Most assuredly.

5067. But, at the same time, you state that Christians should not, in your opinion, be tried by Mussulmen or Hindoo judges?—I do.

5068. Where there are two neighbouring courts, a Christian or European could be tried in one court and not in another?—Just so; because there would be no district without a Christian judge.

5069. You would exclude from those posts Mussulmen and Hindoos?—I think that the sessions judge should always be a Christian, at all events, for a long time to come; he is so superior at present in education and morals that you cannot dispense with his services, and Englishmen and Christians are entitled to the benefit of them; you do not do an injury to the Hindoo and the Mahomedan, but you do an injury to the Christian, and deprive him of that blessing which he is capable of giving himself, by means of his own institutions.

5070. What did you mean by the expression which you used, that Government had a right to introduce Christianity by reason of being a conquering power?—I meant rather Christian institutions. I do not know to what question you are referring; it is very likely that I used the term in speaking rapidly, but my meaning is, that in whatever the Government does it must be neutral.

5071. With regard to the feeling against native Christians, do you not think that there is a feeling among Europeans against those who are of Asiatic blood, somewhat similar to that which is entertained by Americans towards those who are of African blood?—Probably; there is a great deal of unwarrantable prejudice, no doubt.

J. G. Waller, Esq.

8 June 1858.

5072. But that prejudice largely exists, does it not?—Yes; no man can have been in India for two months without being conscious that all coloured Christians are in a degraded position.

5073. Does not that feeling extend down even to the third and fourth generation, where there is known to be a mixture of Asiatic blood?—Yes.

5074. Mr. *Willoughby*.] I understand you to advocate the extension to Europeans of the jurisdiction of native judges?—Native judges who are Christians.

5075. But not native judges who are not Christians?—No; I say so with all that hesitation which one must feel in recommending a measure which is beset with some difficulty.

5076. In dealing with native Christians, would you subject them to the authority of a native tribunal only?—You must not make any distinction between black and white skins.

5077. Then, in fact, you would make the religion of the parties the ground of selecting the court before which they plead?—No doubt, as regards Christians, but not as regards Mahomedans and Hindoos.

5078. In your answer to Question No. 4839, you say this: "What is really required in India is the master-mind and the skill, the guiding and directing spirit of the educated, trained, and energetic European; not merely as a salaried official who retires on a handsome pension after his years of service, but of such as will take root in the country." What do you mean by the expression, "take root in the country"?—People who will buy property, who will invest their capital, have important interests at stake, and who would be glad to live there from generation to generation.

5079. Do you think, having regard to the wants of India, with which you are intimate, that Europeans can take root in that way and rear up children, so as to augment the European population of India?—Your question is twofold; first, I think and know that Europeans live there from generation to generation; even in the civil service you have them to the third generation. My meaning is that the civilian has nothing at stake beyond his appointment; he does not buy property; he takes no root in this way. The settler invests his money there, he buys property there, and he is determined to remain there, and that his family shall have property there. It does not involve the necessity of his living in India to the end of the chapter, or of educating his children in India. I should always deprecate any attempt in the case of those whose means permit them to educate their children in England, to deny them the blessing; that I regard as no difficulty, but as a great advantage.

5080. Therefore the colonization you speak of is not that kind of colonization which we mean when we talk of colonizing Canada or Australia?—No; but I think that even in Australia the education of the rising generation is largely carried on in this country; the time may come when we shall have institutions in the hills of such a magnitude, and of such fitness, that children may be educated there, and so remain in the country.

5081. To what do you particularly refer when you state that a European settler at Bengal is now obliged to maintain a continual but unequal struggle with the local Government?—First of all, he is dissatisfied with the form of government; that is one great element which in itself creates a perpetual antagonism; the feeling of hostility which they have towards one another creates sometimes an unwarrantable opposition; so also the Government have equally a hostile feeling I think towards the non-official population of India.

5082. In what way is this hostility that you suppose to exist on the part of the Government exhibited?—In their antipathy to the free press for one thing, and in their desire to pass Acts, which civilians, who have been examined before this Committee, have admitted to be unjust and impolitic.

5083. Do you not think, with reference to our position in India, that the policy or impolicy of allowing a free press is a very important and a very difficult question?—No; because it has been tried and found to answer admirably.

5084. Of course a great number of people were opposed to it at first?—And throughout; most gentlemen who are in the civil service do not like the freedom of the press.

5085. You state that under the present system gentlemen are appointed magistrates and judges without regard to their qualifications and aptitude; do you mean that no inquiry and no test of qualification is required in the case of the civil servants of the East India Company?—No; but being once admitted into

into the service, they are not selected to their particular offices on account of any aptitude they have shown for the particular employment to which they are put.

5086. But they are obliged to pass certain examinations, are they not?—Yes; but a civilian examines a civilian, and it is only to a civilian the appointment can be given.

5087. My question is whether a man can enter the civil service without undergoing a certain examination?—Without being required to show his qualification for any particular appointment; there is a test before entering the service; but I would have no exclusive service, because, under the existing system, you burthen yourself with the maintenance of a man before you have ascertained what he is fit for; if you want a collector, you should select a man of the age of 30 or 40, who is fit for the work.

5088. Are not the duties of a collector partly of a judicial character?—They are, and very objectionably so.

5089. Do you consider it a mistake, on the part of many great men who have served in India, that the revenue line is the best for acquiring a knowledge of the manners and customs of the natives of India?—No. I do not say that the revenue line does not give them a knowledge of the customs of the natives, but that knowledge is not what makes a man necessarily fit to be a judge. They are helps, no doubt; but a man may know all that, and yet be very unfit to be a judge.

5090. You observed, when you talked about transferring the Government of India from the East India Company, that it is essentially requisite to prepare the way for those sweeping changes which are to follow; to what did you then allude?—One is the complete abolition of the civil service, and the other the abolition of many offices, and an enormous reduction of the salaries attached to offices; the abolition of the Supreme Council, the protection of a constitution for India, under the guarantee of Parliament, and many others.

5091. Do you contemplate any change in regard to our treatment of the natives with reference to giving them employment, or being tender towards them?—I think we cannot do too much to conciliate them. I think that they ought to be eligible to the highest appointments short of political appointments. I think that our policy, under any form of government, should be to do the utmost we can for them, in order that they may be content to be governed by a people so alien and foreign to them.

5092. Are you correct in saying that the members who are now selected for the Legislative Council of India are ignorant of the wants, wishes, and feelings of the people?—I think they are; I do not mean that they are totally ignorant of them; it would be monstrous to say so of men who have been long in the country; but their official position has been such, that their knowledge is partial. I think that official gentlemen in India, generally, know very little of native feelings.

5093. Are not the members of the Legislative Council selected from among the most distinguished members of society in India?—I think not; I think it is as much a matter of interest as anything else; the pay is 5,000 *l.* a year, and that I think very much influences the appointment.

5094. Still it is a matter of selection?—Yes; I am not disposed to say much about its having been improperly exercised; the evil is in the system itself. I have not a word to say against the civil servants individually.

5095. Would you propose that in future the Legislative Council should consist of a certain number of civil servants, who should be members of the Council *ex officio*, receiving no salary, except such as they receive in respect of their substantive appointments?—At present two judges of the Supreme Court receive pay in respect of their substantive appointments, who are *ex officio* members of the Legislative Council, for which they receive nothing; but when a civilian is appointed he holds no substantive appointment but that, and he gets 5,000 *l.* a year for it.

5096. You mean he is to be a member of the Legislative Council, and to hold some other office; what particular class of office?—I think, as you have judges of the Supreme Court, you might have judges of the Sudder Court.

5097. A hundred and fifty years ago the Councils of India were formed in that manner, were they not?—I am not aware; but then you had no non-official members in it. I should not advocate *ex officio* members only.

5098. Are the duties and responsibilities of an uncovenanted judge the same as

J. G. Waller, Esq.

8 June 1858.

those of a covenanted judge?—Very nearly; the civil judge has appellate authority over the uncovenanted judge, but the uncovenanted judge has unlimited original jurisdiction, and he tries most of the cases.

5099. He has also ministerial duties, has he not?—Yes, but the judge is the superior officer in the district; I would make the judge entirely independent in India.

5100. You have alluded to uncovenanted judges; are there not police magistracies and other law offices open to you?—Very few; I do not mean to say that there is no such thing, but they are so few in number as scarcely to be worth naming; but those are very poorly paid compared with what is paid to those who are appointed from the civil service.

5101. The advocate-general, for instance?—No; he is appointed as I might be appointed, as advocate to a plaintiff or a defendant in a cause. The head magistrate at Calcutta must be a civilian; those who are under him need not be civilians, but the head must be a civilian. You have professional under-magistrates, but you have a non-professional head magistrate.

5102. You are an advocate for the abolition of covenanted service in India, and you think there would be no difficulty in supplying their places by gentlemen who would repair to India for the express purpose?—I am quite convinced of it.

5103. What rule would you establish to insure competency on the part of the gentlemen who would be candidates for the numerous appointments that there are in India?—I would have no one rule which should be applicable to every appointment; I think you should state what are the requirements for each particular department; that is done in this country, and in every country.

5104. Do you think that the circumstances of this country and the circumstances of India can be compared?—Quite so; we err in supposing that we must ignore all those ordinary rules which guide us in human transactions, and that we must imagine something different from those rules which generally influence human actions, in dealing with India.

5105. What are the qualifications that you think would be necessary for a judge?—Just the same as those that are required in this country.

5106. You would have no other qualifications besides those which are required in England?—Yes; I think that in addition to that, he should pass through a colloquial examination in the native languages.

5107. Would you say that it is unnecessary for him to know anything about the natives?—You need not have any rule to examine him on that point; it might be a matter which would influence the party appointing him.

5108. How is the party appointing him to ascertain how far his knowledge extends?—If you have proper courts you will have proper men at the bar; how is it ascertained in this country?

5109. I have the misfortune to differ from you upon that point; I think that the cases are not parallel?—I think they are parallel.

5110. You advocate a Legislative Council for each Presidency?—Yes.

5111. That is, that each Presidency should enact its own laws?—Yes, and act as far as possible, subject to the Imperial authority of this country; I think that nothing should be submitted to the supreme authority at Calcutta; I think that the reference to this country should be direct from each Presidency.

5112. You do not think that the Government should take any direct part in the extension of Christianity in India?—That is my opinion.

5113. And yet you have said that the East India Company have adopted the non-interference system, because an increase of settlers who are Christians would be inimical to their rule?—I did not say the non-interference system, for I think it is rather the interference system; I think that they ought to be neutral.

5114. You have said that the Government, though ostensibly neutral, is believed to be insincere?—I never can believe that the members of the Supreme Government in India are indifferent to Christianity, but they, as members of the State, cannot interfere with it.

5115. You have alluded to the English language having been introduced into the Sudder Court in Calcutta?—I hope I have made myself understood; I do not mean that it has been introduced as the language of the court, but the use of the English language has very much increased there; in one province it has been introduced altogether, and found to work most admirably.

5116. Has not the use of the English language given a monopoly of business

to

to English persons there?—No; the same men who had the lead there before the English language was introduced have the lead now.

5117. Does it not give them an opportunity of making their own terms with their clients?—No; they have no more influence than any man who rises to great eminence in his profession may be supposed to have here; to excuse a native gentleman of the bar from understanding English, would be, I think, an injustice; those who understand English know all that is going on on the bench, and the judges always speak in English to one another.

5118. Are not the fees now payable considerably above the old standard?—Quite the contrary; they are much below the old standard as far as awarding costs to parties is concerned: a barrister may receive what he likes, but there is a limit as to the costs to be awarded to the successful party.

5119. If the system of introducing English were extended, do you not think that the number of native vakeels would be much diminished?—No; because they would be able to read and study the law, and the immense advantage that they would gain by that would be very soon experienced throughout the whole of the country, as well as by the judges on the bench.

5120. Would you recommend the introduction of the English into the Mofussil courts?—Yes. I put that question to Mr. Hawkins, because he was on the bench when I was at the bar; he does not object to the introduction of the English language, I think, but he deprecates its being introduced with hot haste, and I do the same; but unless you make a beginning you will never do it at all.

5121. How would you set about it?—I would issue a notice, in the same way as was done when the Persian language was abolished. You abolished the Persian language by giving a three years' notice; you might make the trial, in the first instance, in some one district, and then you would see how it worked.

5122. In the Sudder Court is not the business frequently delayed while they are making translations?—It may be delayed in this way, that a case may not be taken up when it ought to be; but business gains enormously, for the judge can decide a dozen cases where he could not decide six formerly.

5123. Are the translations generally rendered into good English?—No, not very good, because they are rather faithfully and not idiomatically translated; but they do not proceed on that translation only; the judges are able to understand the language, and gentlemen of the bar are able to correct any error that may be found in the translation.

5124. I believe that you practise before the Privy Council?—I do at present.

5125. Is it not found that the translations which come before the Privy Council on appeals from India are found to be very defective?—No. There are mistakes in spelling; a name is sometimes spelt one way in one passage and in another way in another.

5126. But they are correct in substance?—I do not remember to have heard of any complaint of their inaccuracy; they are often very voluminous, containing statements on subjects wholly unconnected with the matter in dispute.

5127. Have you never heard that agents practising in that court have complained of appeals being delayed from the cause to which I have alluded?—Yes, I have made that complaint myself; I have complained that there is a vast delay in the arrival of translations in this country; but that is the neglect of the local authorities, by whom appeals to the Privy Council are looked upon with great jealousy.

5128. Have you known them to be delayed for more than a year?—Yes; very often years expire from the time of the appeal being lodged before the translation arrives in this country.

5129. If the English language were universally introduced as the language to be used in the courts, it would become the language used in the Supreme Courts in the Presidencies?—Yes.

5130. Have you often heard of judges and barristers of these courts being acquainted with the native languages?—Yes; and causes are taken by the natives themselves at present into those courts. Since the law has thrown open to the profession the right of practising in the Company's courts, many gentlemen of the bar have taken to those courts; and though they speak the native language but poorly, they most of them understand it tolerably well. In fact, any one who has resided for three or four years in India will pretty well understand the substance of ordinary conversation, even if he has been indifferent to improve himself in the native language.

J. G. Waller, Esq.

8 June 1858.

5131. Would you recommend that English should be spoken before the magistrates, and in the collectors' courts also?—Yes. I should be quite indifferent about the collectors' courts; for I think that the collectors should do no more than the work of revenue officers.

5132. If the English language were made the language of our courts of justice, would the effect of that, in your opinion, be to discourage the acquisition of the native language?—Possibly that might be the case. I have not speculated upon that point.

5133. Politically, would that be advantageous with reference to our power in India?—I do not think it would do the slightest harm, except it should be the determination of the English Government never to give independence to India when India is fit to have it; but I hold the opinion that the day will arrive when India will be fit to govern itself.

5134. You state that the Company's judges now are not trained; what do you mean by training the judges; what is the particular deficiency to which you refer?—It is a total deficiency; I do not mean for a moment to cast any individual reproach upon them; my objection is to the system. If you were to select a merchant of repute, or a statesman of repute, and put him on the bench, you might as well ask me to point out what particular objections I have to him as a judge.

5135. Where is that training to be got, the absence of which you lament?—In the same way as training is got for any other profession. The only way in which training is to be got in any profession is by keeping a man to his work from early days, and by making him do the work of his craft or profession.

5136. Sir *Erskine Perry*.] I gather from your evidence that, in your opinion, the best mode of encouraging British settlement in India will be by an improvement in the administration of justice?—That is my opinion.

5137. And you think also that the condition of the natives will be bettered by such improvements?—Most certainly; I entertain no doubt whatever upon that subject. I think you can do nothing to advance the interests of the English without materially advancing the interests of the natives.

5138. Have you heard some opinion cited as to the native judgment on the Queen's system of law as opposed to the Company's system?—Yes, I have.

5139. Have you heard it doubted whether the natives prefer the Queen's system of law to the Company's system of law?—Yes; I have heard it doubted; it is generally objected to by gentlemen in the service; they do not like the introduction of the English system of law.

5140. I am referring to Mr. Hawkins's opinion and Mr. Baillie's, that if the native inhabitants of Calcutta were polled, they would not be favourable to the Queen's system of law?—I feel so certain upon that subject that I have no hesitation in saying, that if in a district you were to have a Company's judge administering the law on the Company's system, and alongside a Queen's judge administering the law under the system prevailing in the Queen's courts, nine natives out of every ten would, within the first six months, go to the court having the Queen's judge administering the law according to the English system, and would totally abandon the Company's court.

5141. You do not, therefore, agree with Mr. Baillie and Mr. Hawkins?—Not at all.

5142. Do you recollect a petition which was presented by Mr. Gregson last year from the inhabitants of Calcutta, signed by Mr. M'Adam Stewart, Mr. Robinson, and others?—Yes; I do remember that.

5143. The petitioners profess to represent a population of half a million of souls, consisting of British subjects, East Indians, Americans, French, Germans, Greeks, Mahomedans, Hindoos, Armenians, Jews, and several other races and creeds?—Yes.

5144. I will read a passage in their petition, and then I will ask you to tell me whether you agree with what they state. They say, "Your petitioners affirm that the result of this system, proved by an experience of upwards of 80 years, has been in a high degree satisfactory; that by reason of the three judges of the said court being trained and experienced lawyers, conversant with the particular law which they have to administer, and of their sitting together to hear all civil cases, their decisions, both in law and in fact, carry with them that weight and authority which is requisite for procuring respect for the bench and the law, and finality in litigation for the suitors; and that in consequence, though the average of the cases brought

brought before them fully equal in importance and difficulty the average of those tried in Westminster Hall, the number of appeals from the decision of the said court carried home bears so small a proportion to the number of cases heard, as practically to admit of their decisions being considered final"; do you believe that that is an opinion generally entertained by the inhabitants of Calcutta?—Yes; and I believe that if you were to remove the power and authority of the Supreme Court from Calcutta and maintain the system of the East India Company, the bulk of European inhabitants would desert Calcutta.

5145. Do you know a society called the "British Indian Association of Calcutta"?—Quite well; I was their agent for a short time in this country; but there is no agent at present. I was the last recognised agent of that body.

5146. Does that association include all the most respectable and intelligent native inhabitants of Calcutta?—Not quite; it includes a very large section of them.

5147. Do you remember a petition which was presented also last year by them, with respect to the administration of justice?—Yes; I have seen most of their petitions.

5148. You are aware, are you not, that the argument used by the East India Company in favour of the Company's judges administering justice is that they are so well acquainted with the native language?—I am aware of that.

5149. I will read to you what this association say in their petition, and then I will ask you whether you think it a correct opinion: "Your petitioners consider it to be a fact long established, notorious and admitted by all (by all at least whose opinions merit attention) without reserve, that the training for office of the judges of the courts established by the East India Company is essentially defective. They, and the class from which they are taken (scarcely selected) are assumed by their masters, and by the advocates of the present system, to have special qualifications, namely, knowledge of the vernacular languages, and familiarity with the usages and habits of thought of the people. This, however, when applied to the whole body, or to any material portion of it, is but an assumption. As a rule, neither of those special (and undoubtedly valuable) qualifications exist in a competent or tolerable degree, much less to an extent to afford any apology for the absence of other most important and vital qualifications for the responsibilities of the judicial office." Do you believe that to be a true opinion, or that the natives of Calcutta are competent to form a judgment upon the matter?—I believe it to be true of the natives of Calcutta, and also of the natives throughout the Bengal Presidency.

5150. Therefore the natives who are best qualified to form an opinion upon the subject do not think that the Company's judges are so qualified?—No; but the error is in the system; I do not believe that any body of Europeans or gentlemen can ever do more with the native language than is now done by civilians; but I say that that is very far from what is wanted; if it were merely a matter of pronunciation, they pronounce it so badly that an interpreter is necessary to explain to the native what the judge has said.

5151. Have you heard a quotation from Lord Macaulay respecting the Supreme Court of Madras, that the court, by its expensive procedure, having ruined everybody, has nothing else to do because there are no natives to bring causes into court?—Yes.

5152. I will read you a sentence from the petition to Parliament of the Madras Native Association: "That your petitioners are able to appreciate the value of an independent Supreme Court from having long lived under its jurisdiction, and they are not prepared even to risk the diminution of the benefits it confers. They have for years, and latterly more especially, remarked the judicious reforms that have been effected in it, whereby proceedings have been simplified, costs lightened, and litigation rendered far more speedy; and those who are compelled to have recourse to law can calculate upon obtaining a decision within the space of a few months, as well as that the quality of the judgment, when delivered, will ensure satisfaction, because it is arrived at upon investigation conducted according to the settled rules of evidence, based upon well-understood principles of jurisprudence. Your petitioners are desirous of seeing the principles of such an administration of justice more and more widely extended, until it embraces all their countrymen in the provinces as well as at the Presidency." Do you think that that is more in accordance with what the natives in India think of that administration than Lord Macaulay's pointed sarcasms?—Most assuredly; I have

J. G. Waller, Esq.

8 June 1858.

come in contact with too many natives not to be able to speak to that very affirmatively.

5153. I will read you one more sentence only from the petition from Bombay. The native inhabitants of Bombay presented a petition last year, in which they say this: "Even supposing that an improved system of training and appointment should be introduced, and the civil servants of the Company no longer be transferred from political and fiscal employments to the highest judicial appointments, of which so many instances have been seen, still the objections to the appointment of civilians to the bench of the highest court are not removed, hardly lessened. These gentlemen have not that one advantage for which no other can be substituted, an education in the legal axioms and method, in the habit of thinking and reasoning which prevail in and about the superior courts of England, and of which your petitioners see the excellence in every judge who takes his seat on the bench of the Supreme Court, whose demeanor and decisions command respect, notwithstanding his ignorance of the habits and language of the people; while the judgments of even the most experienced and intelligent servants of the Company fail to carry the weight which should attach to the decisions of the higher courts of justice." Do you think that that accords with the opinions of the most intelligent natives of India more than it does with the opinion which has been expressed by Mr. Hawkins?—Yes; all educated natives would perfectly corroborate that.

5154. Do you think that the passages which I have read truly represent the opinions of intelligent natives?—All those who have any knowledge of the two systems.

5155. With respect to the local government, are you of opinion that the principle of centralization has been carried too far in India?—Decidedly.

5156. Are you aware that up to 1833 the local government had the power of making what were called regulations or laws?—Yes, I think they had.

5157. Have you heard that, in the opinion of many eminent Indian statesmen, that system was far better for the development of India than the centralization system, referring everything to Calcutta?—Yes, I have. All the attempts at reform have been complete failures; but they have been reforms with the maintenance of the old system.

5158. You think that matters would go on better in India if each Presidency were to govern itself, as it were, and held allegiance to the Home Government of this country?—I do, with those alterations which, in my opinion, are necessary in the constitution of the Legislative Council, and in other departments.

5159. You would leave it to the Supreme Government to check the expenditure of other Parliaments?—Scarcely so.

5160. Would not that course be equally pursued by carrying out the views of Sir James Graham and Sir Charles Wood, namely, making local governments send accounts of their expenditure to this country?—Yes; but even the other is not a remedy, for the Supreme Government has but very limited power as to expenditure.

5161. And now, by the application of steam, the means of communication between the local presidencies and London is as rapid, is it not, as it used to be formerly between the local government and Calcutta?—I should think so, and it might be much shorter by means of the electric wire.

5162. Have you also considered whether the large powers held by the Governor-general are not a great temptation to put those powers into exercise?—Yes; and I think that they ought to be checked and controlled.

5163. The power of entering into war, the annexation of provinces, and other acts which illustrate the nature of a government among the vulgar, are powers which, in your opinion, are very detrimental to good government, are they not?—Yes; I think those powers should be vested in a constitutional government only.

5164. With respect to the system which you have suggested, of throwing open the whole civil service of India, it has been objected that such throwing open of the service would open a great door to jobbing; you do not seem to be deterred by any such considerations?—No; the evil of jobbing would be nothing to the evil which now exists.

5165. I dare say you are aware that in the colonies this jobbing from home has been carried out to a great extent?—I cannot speak to it from my own knowledge. I have made India particularly my study, and have not paid much attention to our colonial possessions.

5166. Are

5166. Are you not aware that in the island of Ceylon a chief secretary has been several times sent out from this country without having any acquaintance whatever with colonial government?—I am not aware of it, but I am willing to assume it, if you state it to be the fact.

5167. Supposing that to be the case in the colonies, would it not be very objectionable to send out a Member of Parliament, who had never attended to Eastern business, to be chief secretary at Calcutta, Madras, or Bombay?—That would not be the case. We require eminent statesmen in India. I would not make a prohibition. There is no doubt that the power might be abused; but an incompetent person should be no more sent than an incompetent person is now sent within the circle of the service.

5168. But if a power existed in the home Government to send out a chief secretary for Calcutta, Bombay, and Madras, would not that power be occasionally used?—I doubt whether it would be attempted a second time, if it was found to work ill.

5169. In order to serve political purposes, might not a minister at home send out a man as a governor or secretary?—I would suggest that there should be other checks to prevent that. The minister for India, I think, should not be a political officer; he should not come in and go out with the ministry; he should not belong to any party in politics at home. I see the fear is that the power will be abused in this way, that parties of particular political opinions at home might make India a great field of patronage. I think there is a very remote apprehension of that; and that it is no reason against removing abuses which at present exist, to say it is possible that other abuses may creep in.

5170. Do you not think that this evil would accrue, that the Governor-general and the different local governors would have numerous applications from dukes and duchesses, lords and ladies, recommending different gentlemen for their patronage?—I think not; it cannot be worse in the case of a single minister of state, than in the case of 24 gentlemen forming the Court of Directors; if you are afraid so much that one minister would do a vast amount of injustice to India, by yielding to the solicitations of his friends at home, the same thing would apply to the 24 gentlemen who are directors of the East India Company; they no doubt would be called upon to supply the wants of their friends in the same way; I cannot suppose that a gentleman in the Court of Directors would refuse to a powerful minister any appointment that he wanted.

5171. Are you not aware that the Court of Directors have no power to appoint to any offices in India?—I am speaking of the civil service.

5172. I was calling your attention to all the patronage in India?—Then I quite misunderstood you; I would not make those appointments dependent on the home Government at all.

5173. I understood you to say that you would entrust to the local Governors of India the appointment to offices throughout the whole service?—The heads of departments; and then I should put all appointments within those departments under that head, with a veto to the Governor-general; this is only a scheme, and therefore I speak of it with deference and hesitation; I do not think there would be any difficulty in framing a scheme that would effect the object in view; I think that to a mind that sees the difficulty, a remedy would soon suggest itself; I should state that I have answered all the previous questions under the supposition that each appointment was to be within the gift of the home Government.

5174. I am taking your own view; I am supposing that the patronage in India is to be distributed by local authorities, and that they are to have the power of taking whatever servants they think fit; and I then ask you whether, under those circumstances, there is not great danger of the Governors being beset by applications made to them by great people in this country to give such appointments to the scions of noble houses?—I do not think there would be any great danger of that; but there would be some danger of it, and I think that the proper check would be public opinion and a free press, and supervision by Parliament; I think we must have a very zealous and close supervision by Parliament for some time to come, whatever system is given to India.

5175. I dare say you are aware that the Court of Directors have no power of appointing to offices in India?—To some they have; that is to say, the Supreme Government are acted upon by influence in the appointments they make as much as a powerful minister is acted upon by his friends at home; it is human nature: they do no better and no worse than others would do.

J. G. Waller, Esq.

8 June 1858.

5176. Is it not the fact that the Governor-General and Governors are really the supreme arbiters of patronage in India?—No, I think not. I think that the secretary is the real man who has influence; he is the practical arbiter; I should be wrong in saying that he is not.

5177. In fact, the Court of Directors not only do not communicate, but have no power of communicating with the Governor-General as to how he shall exercise his patronage?—No legal power.

5178. Are you of opinion that the Court of Directors, either directly or indirectly, write to the Governor-General or Governor with a view to influence them?—I dare say that gentlemen who are in the Court of Directors are in private correspondence with the Governor-General. The Court of Directors as a body are, of course, in correspondence with him.

5179. But not with regard to appointments to offices?—No.

5180. Are you aware that the Act 33 Geo. 3, in fact, imposes a limit upon the abuses of patronage?—Yes.

5181. By the 33 Geo. 3, c. 52, the local governments are precluded from giving appointments exceeding 500 *l.* a year in value to any one who shall not have resided for three years in the country?—Yes.

5182. Would there be any difficulty, supposing your system to be carried out?—I think not.

5183. And if these restrictions have had the effect of preventing jobbing to some extent in India, you see no difficulty in extending them?—No.

5184. Suppose the Governor to be appointed to Bombay, and that the year he goes out he receives a letter from some great personage in this country, asking him to appoint the Honourable Mr. ——— to a certain appointment, would not a clause in the Act, preventing his giving such an office to a man who had not resided three years in the country, prevent him from having the power to comply with the wish so expressed?—With a little addition; not merely that he had been resident in the country, but engaged in some business or profession.

5185. You could so word it as to prevent its evasion?—Yes.

5186. And if there were other restrictions, such as that the party should have passed an examination in the native language, that would operate, would it not, as another check?—Yes. I think that the scheme itself is perfectly sound, and that the details merely require consideration.

5187. Would not the restrictions I point out prevent jobbing?—Much more so than the present system.

5188. But the present system is very much lauded, is it not, as contra-distinguished from the colonial system in preventing jobbing; are you aware that these restrictions do not extend to colonial government, and that therefore jobbing is allowed to a great extent by law?—I am not aware of it; but if you state it to be the fact, I do not doubt it.

5189. Mr. *Willoughby.*] How does your opinion that the estimates might be sent home from India to this country, instead of from the subordinate Governments to the Government of India, tally with your previous opinion that India ought to be governed in India?—I think it would. I think that, with certain reservations for purposes of imperial policy, India must be governed in India as soon as you can qualify it for government, which is not the case at present.

5190. Would you oblige the Governor-General or the local Government to send over to this country estimates for public works?—No, I think that the Government of each Presidency should exercise its own discretion in regard to public works.

5191. Sir *Erskine Perry.*] You think they should do what they choose within the estimate?—Yes, I think that is very desirable.

5192. Mr. *Willoughby.*] When you speak of judicial training, do you mean training in English law and practice?—I refer to the general system of jurisprudence, which is recognised by the whole civilised world.

5193. You would not adopt the present English law with reference to the transfer of land?—No, I think it would be most objectionable to make an attempt to introduce that. I would say, strip the law of all those evils which are avowed and admitted as evils, and which we are trying to get rid of, and then introduce the principle.

5194. Would there not be some danger in the case of a judge who had been fully trained in the English law, bringing in that law in cases in which it was not strictly applicable?—I think not, generally speaking; every intelligent man is sensitive

sensitive of those evils which it is desirable to get rid of. The greatest reformers of the law have been those who have been trained to the law.

5195. But do you not think that they might be overburdened with law not required by the state of society in India?—No; at present there is no law that governs India, and it is a fearful state of society. The good of the people will never be insured unless you have a complete system of law for the country.

5196. Among such a multitude of judges what certainty would there be that they would all apply the same quantity of English law?—I would specify what should be included, and then they would all have to go upon the same basis. If there is any fear of disparity of judgments, or of the judgment of one court clashing with that of another, there should be an appeal court in each Presidency.

5197. With reference to the distinction between law and equity, where they differ, which would you select?—I would not separate law and equity; I think that the separation in England is a misfortune. I think they should be united, as they are in America.

5198. Would it be easy to do so?—Perfectly easy; I do not hesitate to state that that is my firm conviction.

5199. Do you concur in the evidence of Mr. Hawkins and Mr. Baillie, that with a good system of procedure and a system of substantive law, the training now would be sufficient?—No; you cannot train a man in a particular procedure only; you must have a man with a judicial turn of mind, as you must have a man with a musical ear to qualify him to execute music.

5200. Mr. *Vansittart*.] You have been in the Hill station of Darjeeling?—Yes.

5201. What are its capabilities for English colonists and settlers?—Its capabilities are very great, and it invites colonization to such an extent, that even the labouring classes may settle there. I think that the resources of the hills are boundless for the purposes of colonization. In the plains we can only have what I understand by the word "settlement."

5202. Would their children's children live and thrive in Darjeeling?—I think so; but that is rather a question for medical men than for me.

5203. You do not think that after a generation or two they would degenerate?—Not in the hills.

5204. In your answer to Question No. 4857, you say, "I think that the climate offers no serious impediment whatever to the settlement of Europeans;" are the Committee to understand from this that colonization is practicable in the plains of Bengal?—No; I used the word "settlement," that I intended to cover the whole of India: Europeans may settle there, although they may not colonize; that is, you cannot introduce labourers into the plains of India; but if you have 500 Europeans settled in Bengal now, as far as climate is concerned, there is no reason why you should not have 5,000.

5205. Do you not think that the climate of Australia, Canada, and our other colonies, offer far superior advantages and attractions to the English settler than the arid plains of India?—No doubt.

5206. Do you not think that an enterprising European would turn his money much quicker in Australia than in India?—It is my conviction that he would not.

5207. Could any investment, for instance, in pasture land for grazing and for the sale of sheep and oxen (as I believe is done very extensively in Australia) ever pay the European settled in the plains of Bengal?—Not that particular branch of business.

5208. In point of fact, there are no extensive and rich tracts of pasture ground to be found in India, are there?—I know of none.

5209. You say you have associated with all classes of Europeans, Christians, Greeks and Armenians?—Yes, I have come in contact with them.

5210. Did you hear Mr. Mackenzie's evidence?—Yes.

5211. Do you agree with him in opinion that if the new system of police is introduced, and native Christians are employed, it would be necessary to send out 200,000 European soldiers, as the natives would be so exasperated at that measure?—I heard that stated with extreme astonishment; my convictions are completely the other way. I believe that it is the surest way of making the natives not only respect us, but that it is the surest way of securing the stability of our rule.

5212. What is the amount, on a rough guess or calculation, of the native Christians in Lower Bengal?—I could not say. I should say that in Calcutta itself there

TAKEN BEFORE THEM.

Ordered, by The House of Commons, *to be Printed,*
12 *July* 1858.

Martis, 16° *die Martii*, 1858.

Ordered, That a Select Committee be appointed to inquire into the Progress and Prospects, and the best Means to be adopted for the Promotion of European Colonization and Settlement in India, especially in the Hill Districts and Healthier Climates of that Country; as well as for the Extension of our Commerce with Central Asia.

Lunæ, 22° *die Martii*, 1858.

Committee nominated of—

Mr. William Ewart.
Mr. Baillie.
Mr. Campbell.
Mr. Gregson.
Mr. Kinnaird.
Mr. Knight.
Mr. Lowe.
Mr. Lygon.
Mr. Mangles.
Sir Erskine Perry.
Mr. Seymour.
Mr. John Benjamin Smith.
Mr. William Vansittart.
Mr. Villiers.
Mr. Willoughby.

Ordered, That the Committee have power to send for Persons, Papers, and Records.

Ordered, That Five be the Quorum of the Committee.

Jovis, 25° *die Martii*, 1858.

Ordered, That the Committee do consist of Sixteen Members.

Ordered, That Mr. De Vere be added to the Committee.

Jovis, 6° *die Maii*, 1858.

Ordered, That the following Petitions be referred to the Committee, viz.:—From Landed Proprietors, Indigo Planters, Merchants, and Traders in Calcutta and the Lower Provinces of Bengal;—and, Indigo Planters' Association in Bengal;—and, British Subjects resident in Calcutta and the Mofussil Districts of the Residency of Fort William, in Bengal.

Ordered, That the Committee have power to Report the Minutes of Evidence taken before them, from time to time, to The House.

MINUTES OF EVIDENCE.

Jovis, 10° *die Junii*, 1858.

MEMBERS PRESENT.

Mr. Campbell.	Mr. W. Vansittart.
Mr. Kinnaird.	Mr. Villiers.
Mr. Knight.	Mr. Willoughby.
Sir Erskine Perry.	Mr. De Vere.
Mr. Danby Seymour.	Mr. Gregson.
Mr. J. B. Smith.	

WILLIAM EWART, Esq., in the Chair.

Captain *John Ouchterlony*, called in; and Examined.

Captain *J. Ouchterlony.*

10 June 1858.

5240. *Chairman.*] HOW long have you been in India?—I have been in India, on and off, since 1834, 24 years, but I have visited England during that time.

5241. When did you leave it?—I left it in March last year.

5242. In what capacity were you there?—I was in the corps of Engineers at Madras.

5243. What was your employment?—Latterly I was a district engineer, which combines a civil and military engineer's duty, having charge of a particular district, and of all public buildings, whether civil, ecclesiastical, or military.

5244. Was that your whole occupation in Madras?—No; I held many other appointments. I was employed for nine years on the grand trigonometrical survey. I was out in China for three years. I have been all over the East, to Bombay, Bengal, China, Singapore, Malacca, Ceylon, the Cape of Good Hope, and Aden; but I was chiefly in Madras.

5245. What parts of Madras?—In many parts of the south, and also in the north, as far as Kurnoul.

5246. Were you ever in the north-eastern parts?—Not beyond the Guntoor district.

5247. Have you any practical acquaintance with any of the hill districts of India?—Yes, I have had several years' experience of various tracts of land elevated considerably above the level of the sea in Southern India, as the Neilgherries and Koondahs in Coimbatore, Wynaad in Malabar, and Coorg, Shevanoys, Coillamulleys, &c. in Salem, the southern part of Mysore, and the ceded districts, which comprise the Ramandroog hill station near Bellary; also, but with more limited opportunity of exploration, the Pulney hills in Madura, and the uplands and mountain chains of Travancore, the Baramahl, the north of Coimbatore, &c.

5248. Are any of these hills totally unexplored?—Yes.

5249. Will you point them out on the map, if you please?—These which I am now pointing out have not been surveyed properly on a detailed scale, but they are sufficiently well known.

5250. What do you consider a proper height above the level of the sea for a European settlement in the hills?—It varies very much; if the hills are situated near the sea, you can have a very pleasant climate at about 4,000 feet above the level of the sea; but if it is far into the interior, we consider that 6,000 feet gives a fair European climate.

5251. Have you any great rainfall in those parts?—There are very heavy rains in a portion of the Wynaad during the monsoon, but not on those hills called the

Captain *J. Ouchterlony.*

10 June 1858.

Neilgherries. On the western portion the rains are heavy, but otherwise they are not heavy or excessive. The quantity of rain that falls is not very great; it has been very much exaggerated.

5252. Do you consider the tracts to which you have referred adapted for colonization by Europeans, as well as the provinces which lie adjacent to them?—I consider all the hill districts named eminently adapted, in a greater or less degree, for colonization; and my impression is clear, that although Europeans could not perform much manual labour in the low country, they may nevertheless, if of naturally robust constitution and of abstemious or temperate habits, superintend and even initiate agricultural operations on estates whether of cotton, cereals, indigo, sugar, hemp, &c., without loss of health or deterioration of their personal vigour, provided they had within a reasonable accessible distance a hill station to resort to occasionally to recruit their strength and to locate their children in for the advantages of climate, education, and European association. Even when deprived of the advantage of a *sanitarium*, I have not observed that Europeans at the present time employed in Southern India, or superintendents of estates on low levels, suffer from the heat of the climate, provided temperance is observed. In Ceylon I have noticed Europeans in charge of cinnamon, cocoa-nut, sugar, and other plantations near the sea level, who have been resident many years enjoying apparently excellent health; and in the Spanish colony of Manilla I have encountered Spaniards and other Europeans who superintended the haciendas or farms attached to the numerous convents in the Philippines, who appeared in perfect health and vigour, though half their lives had been devoted to their occupation in the tropics, without once resorting to Europe or to a hill climate. I have never visited Java or Sumatra, but I have been informed by Dutch officers who have been stationed in those islands, that the same remarks would apply to the numerous European colonists who reside there; many of the Dutch officers have told me that they have a large population of Europeans.

5253. In any of those climates have you known successive generations of the same family?—No.

5254. Are you of opinion that the families of European colonists could thrive or exist on the plains in India?—I think, speaking generally, that they could not; and that even if children were reared to maturity, their constitutions would be enfeebled, and their "Saxon energy" impaired, and I believe that their progeny resulting from the intermarriages of colonists would be found deteriorated in all English or European attributes; but I believe that this difficulty in the way of the measure of colonization for India, would be entirely removed by connecting the trunk lines of railway by branches to the hill stations, where for the most part advantages in regard to climate, education, and training could be commanded equal, and in many respects greatly superior to those enjoyed by the class from which agricultural emigrants would generally be furnished in this country. If such means of communication were established, Europeans might carry on their farms or estates in the low country at great distances from the hills, each particular range of which would thus form as it were a centre of colonization, and a sure refuge against the only enemy which, humanly speaking settlers would have to dread in the land of their adoption; as an exception, however, to the (assumed) general law or axiom that Europeans must infallibly deteriorate in their second generation in India; I may instance the case of a family with which I am acquainted, the head of which (now an uncovenanted servant of the Madras Government,), was born of European parents in India, as was also his wife. Neither of them has ever visited Europe, yet their children who may be called of the third generation, are healthy, vigorous and decidedly above mediocrity in intellectual capacity.

5255. Are all the hill stations you have named equally accessible and advantageous in the respect alluded to by you?—No; there is a gradation to be observed in the scale of their utility as places of refuge, or European resort. The most important and valuable in southern India is, in all respects, the Neilgherries, whose advantages are fully set forth in a memoir published in 1848 by the Government of Madras in connexion with a survey executed by me by order of the Honourable Court of Directors, both of which documents I beg permission to lay before the Committee. Whether considered in regard to climate, to richness of soil, cheapness and abundance of the necessaries of life, to its position, political as well as commercial, intersected as the tract almost is by a main line of rail from the east to the western coast of India, and brought, or shortly I hope to be brought, within a few hours journey of a magnificent port and harbour on the latter (Cochin),

(Cochin), it is beyond mere speculation to say, since experience of many years warrants the assertion, that it stands unrivalled in the entire range of Southern and Central India in its attractions to the capitalist, and seeking a profitable investment of his principal, to the emigrant in search of a soil, which he may till with his own hands at the outset, and eventually by superintendence, alone maintain himself and his family in comparative comfort and affluence, but certainly first in importance to the Government desiring to locate masses of European troops in a position where, while available to be moved at the shortest notice upon any point menaced by hostility, whether along the coast or in the heart of the British territory, their health and efficiency could be preserved, while their condition socially and morally would be in every way ameliorated. The agricultural resources of the Neilgherries are so fully set forth in the memoir laid before the Committee, as well as the particulars of the markets open to their produce, the prices of labour, cost of materials, of articles of food, &c., that it is unnecessary to take up the time of the Committee by recapitulating them; but I may mention, that since the statement in question was compiled, the experiment of a tea plantation with plants brought direct from China has been tried, and the result has been so far most successful, leading to the expectation that along the lower steppes or ranges of the Neilgherries, above the level which marks the limit of successful coffee cultivation, there (probably 4,500 feet), and below the average level of frost (6,000 to 7,000 feet) this most important cultivation may be introduced with every prospect of advantage.

5256. When was that plantation begun?—Two years ago; Mr. Fortune sent the plants from China to be tried.

5257. Mr. *Willoughby.*] Was that a private speculation?—Yes.

5258. *Chairman.*] Do you think that there would be a great demand for tea in that part of India if it could be successfully grown there?—Yes, there would be no doubt an immense demand for it. I may also state that one great drawback to the future promise of the Neilgherries which I adverted to in the memoir, namely, the probability of want of fuel, has been obviated by the discovery of peat very generally distributed over the entire range of the hill tract, and the supply of which promises to be so constant, that it is now sold from the bog side at the rate of half a rupee, or 1*s.* per cart load of 1,000 lbs., or less than 2*s.* 6*d.* per ton in the chief settlement called Ootacamund. It is used now to a great extent, and is found to be an immense advantage; an Irishman found it out in the bogs, and the poor man has never been rewarded for it. When the Madras Railway is completed it will be very easy to get to this magnificent hill station, where the climate is infinitely superior to anything we have in England.

5259. Has there been a great increase of the population in the district to which you are now referring?—Yes, there has been a very great increase.

5260. To what cause do you attribute that increase?—To the arrival of an European regiment which has been stationed there, and the increased facilities for settlement.

5261. What has been the increase of Europeans and natives there?—

	In 1848:	In 1856:
Europeans and East Indians - - -	496	1,200
Native immigrants from the plains - -	8,887	55,000
Totals - - -	9,383	56,200

I should say that every acre of these hills is available for farms and for residence. The districts which the Neilgherries would more especially benefit in respect to the sanitarium it offers for the resort of European colonists employed in superintending estates or manufactories, &c., in the "low country," are Mysore, the Barahmahl, Coimbatore, Malabar, and Canara; but when the Madras Railway is completed as far as the foot of the Neilgherries, it will be almost as easy of resort to the same class located in Salem, Madras, North and South Arcot, Trichinopoly, Tanjore, and the provinces adjacent, through which single line branches to the trunk line can, with economy and rapidity, be constructed. The fertility of most of these districts is great, and under a European system of cultivation and superintendence it is reasonable to conclude that their produce would be very shortly doubled. In the article of cotton alone, I feel convinced that a wonderful change would be wrought if European or American planters aided by capital, and strengthened by a thorough practical acquaintance with the proper system of cotton culture, could be induced by a favourable alteration in the present law

Captain *J. Ouchterlony.*

10 June 1858.

regarding the tenure of land, and by the creation of facilities of access to a hill sanitarium, to take up extensive tracts of land for the purpose in Coimbatore, Trichinopoly, and Salem, which are all, fortunately, cotton producing districts. Experience has proved that cotton of excellent quality can be grown in all these provinces (as well as in Madura and Tinnevelley, which belong, however, to the sanitary circle of the "Pulneys," and are not, therefore, treated of at present); provided the land in which the cotton trees are planted is properly cultivated, and irrigation provided for in the event of the failure of the periodical rains. But this is utterly neglected by the native cultivators, who plough their cotton field with a wooden plough, which merely scratches the surface, put in the plants in rows without any manure whatever, though the soil is generally the poorest on their farms, and leave them for three or four years to the mercies of the seasons. I must remark that I consider deep subsoil ploughing a very difficult if not altogether impracticable operation in India, both on account of the want of docile draught animals of sufficient strength to drag a heavy plough, and by the inability of the native ploughmen to hold down and direct such an implement properly impelled through the soil. No European could, in the plains, bear the fatigue of holding the plough-stilths for any length of time, and hence no resource remains but to trench the soil to the proper depth by manual labour, or, as it would be called in this country, by spade husbandry. The expense of this process per acre can be calculated from the data given in the Neilgherry Memoir alluded to, and may be put down as so much capital invested in the soil, since it would not, in my opinion, be found necessary to repeat the trenching for many years, the native or other light plough sufficing to turn the loosened soil, and expose a fresh surface to the action of the atmosphere, when the land required replanting. The Government sent me out grain to try on the hills, and that is the system I pursued, which answered very well. For manure, until the planter could organise his farming operations towards the production of cattle manure heaps, he should, I think, have recourse to guano, which, it is to be hoped, could be imported at a very low cost on the western coast from the Persian Gulf (where the discovery of guano deposits on the Kooria Mooria Islands has recently attracted attention), and be transmitted with economy and facility along the line of the railway. But the Committee will readily admit that in no country would the production of cattle manure promise to be so easy as within the tropics, where, through the heat of the atmosphere, fermentation of vegetable and decomposition of animal matter set in in a few hours. This branch of agriculture, however, is totally and entirely neglected by the native husbandmen of India; and it is fully time that a better system should be introduced and taught, if not insisted on, whenever the Government or European settlers are the lords of the soil and the natives their tenants, bound by the terms of their lease not only to pay a due tax or rent, but to maintain unimpaired the value and fertility of the soil they stipulate to till. The difficulty, however, in enforcing such a clause in a lease would be found in the fact that the native tenant or ryot is almost invariably in so impoverished a condition, that he cannot afford to keep up a farming establishment of sufficient strength, especially as regards cattle, to admit of the due production of manure, or of those requirements which are considered in this country indispensable to the proper cultivation of the commonest arable land.

5262. Will you state to the Committee what products of the soil would best promise to yield a profit to European cultivators on the Neilgherries?—The most highly remunerative is, I believe, coffee, for the cultivation of which extensive forest tracts offer around the western and southern slopes. At present I conceive some difficulty might be experienced in regard to labour if many plantations were opened simultaneously in close proximity, as the labourers have to be brought from Mysore, Canara, &c., none being on the spot, owing to the existence of extensive forests all around. I believe that the quantity of coffee, even now, although it is only a novel introduction on the hills, amounts to 600 tons a year, which would be worth, in this country, about 48,000 *l.*

5263. What kind of coffee is it?—The most beautiful coffee known in the London market; it bears now the name of the Neilgherry coffee.

5264. What proportion of it comes here?—The greater portion of it comes to London and to Liverpool; it is quite well known now, so much so that I believe, in the grocers' shops in some of the provinces, it is marked in their windows as Neilgherry coffee.

5265. Is it superior to Mocha?—I do not know that it is superior, but it is equal to some descriptions of it, at any rate. Tea, as I have already remarked,

seems

seems to promise well, but its success has not yet been quite fully established. The other articles are potatoes, wheat, barley (for malting), hops, grasses for hay, dairy produce for the consumption of many thousand troops and settlers, and cattle and pigs for salting for export to the seaport towns. Plantations of trees of quick growth, as the acacia lophanta, imported from Australia, would yield a large return in five years, when the trees would be fit to cut down and sell as firewood; it is one of the gum-tree tribe.

5266. What is it useful for?—For firewood and for building purposes; it is of such rapid growth that in five years it becomes an immense tree, and then, when it is cut down, it grows up again to the same size in five years more.

5267. How many feet will those trees grow in a year?—From 8 to 10 feet.

5268. Has it been tried in this country at all?—No; it is a native of Australia. The produce of orchard fruit trees will also become very valuable when the railway is completed across the Peninsula; when also, and scarcely before, will the resources of these invaluable hills be fully and really developed. I may mention that beer also has been made there; some of that beer we issued to different regiments, and there was not one regiment that did not report favourably of it; the men were made to pay for the beer, so that they might grumble if there was any cause of complaint; but there was not a single report adverse to it, except the report of two surgeons of the 51st regiment, which I considered to be in its favour; they said they never would recognise the introduction of such strong beer.

5269. Can hops be cultivated there?—Yes; the Court of Directors sent me out the hops, and I put them in the ground; but having to leave my residence on duty, on my return I found that as they were nothing but roots the natives had thrown them away into the manure heap.

5270. You have no doubt that they would grow there?—No; but you must choose a particular situation for them.

5271. Is there more than one brewery on the hills?—No; there is only one. My idea was to give a cheap beer, in order that it might be used in preference to arrack; the men there drink an immense quantity of arrack, which is very prejudicial to them; and I have no doubt that if, instead of arrack, they could get good beer, their health would be much better preserved; the Court of Directors were favourable to the scheme at first, but latterly it fell to the ground; I do not know from what cause.

5272. Mr. *Willoughby.*] At what price was the Neilgherry beer issued, as compared with the price charged for beer sent from England?—The beer that was brewed there was, I found, invariably preferred to the ordinary beer imported; the cost of it was about ninepence a gallon.

5273. Mr. *Smith.*] What would it have cost if it had been imported from England?—We pay on those hills, on an average, about 12 *s.* or 14 *s.* for a dozen quart bottles; the chief expense is in bringing it from the low country, whereas we could produce it on the hills themselves; I employed sugar in making this beer; the barley was so poor that we added sugar, which comes to the same thing, using a certain quantity of malt to give it a due flavour. Government sent me out a quantity of barley, and I put it into some ground of my own, and cultivated it by spade husbandry, and sent it to the Court, who sent me a report from some man in Mark-lane, who said that it had only deteriorated one per cent.; of course our mode of culture was unfavourable to it, and one would not have been surprised if the difference had been five or ten per cent.

5274. Mr. *Villiers.*] Do you say that the men liked the beer which you brewed?—Yes; I had no one report against it. Colonel Milner, of the 94th, said he wished to have sent down to his regiment 200 casks of the beer, of which we had sent a sample, because the men had requested that the porter from England might be stopped, and that they might have the Neilgherry beer in preference.

5275. The Pulneys of which you have spoken are south of the Neilgherries, are they not?—Yes.

5276. And there is in the Neilgherries good soil, independent of the rocky eminences which you find in other parts of India?—Yes; there is comparatively little rock.

5277. There is fertile soil capable of being cultivated by Europeans?—Yes; there is in some parts cultivable soil 15 feet thick, before you come to a substratum.

5278. Mr. *Vansittart.*] Is most of it now in a state of cultivation?—No; the

Captain *J. Ouchterlony.*

10 June 1858.

greater part of it is waste; there are about 200,000 acres on the Neilgherries alone perfectly waste, but which I believe to be well adapted for farming. The Pulneys are not throughout quite so lofty as the Neilgherries; but their climate is delightful, and for several years Europeans (chiefly servants of the Government) have resorted to them to recruit their health. They offer a considerable extent of undulating table land for cultivation, and when a railway is completed, opening up the southern provinces, and passing near the base of the Pulneys, Europeans superintending or farming cotton, sugar, and other estates in Tinnevelly, Madura, &c. will be able to locate their families in comfort and safety in them, and resort to them themselves when oppressed by the heat of the low country. The Shevaroys and Coilamulleys are situated in the province of Salem, and offer a healthy and cool place of resort to planters and superintendents cultivating in the plains in their vicinity. They are more limited in geographical extent than the Pulneys, and their maximum altitude does not exceed 4,500 feet above the sea level; but the climate is temperate and delightful, peculiarly favourable for young children; and many a shattered constitution has been renovated by a few months' residence on these hills. Coffee is extensively cultivated on them. The resources of the Coilamulleys remain yet to be developed, owing to an apprehension entertained as to the prevalence of fever on them at certain seasons. I know that a Roman-catholic clergyman who lived there many years believed the report of the prevalence of fever there to be unfounded; he was entirely alone there. The Government authorities were all very kind to him, and did their best to make him comfortable. He resided there as a missionary. The Barahmahl and northern part of Coimbatore comprise a hilly undulating tract of country not very well known by Europeans, but offering, as far as casual observation enabled me to judge, a fine and very extensive field for European enterprise. Unfortunately, when I had extended the triangulation of the southern series into this tract, for the purpose of embracing it in my detailed survey by order of the Supreme Government, the local Government of Madras interfered, and claimed my services for the Revenue department, and as no competent officer could at the time be found to take my place, the survey was arrested, the establishment broken up, and all the instruments and material sent to the nearest arsenal. This was in 1853. The opportunity was thus lost, and the tract in question remains unsurveyed and neglected to this day. The Travancore hill districts are but very imperfectly known, owing to the country being under the administration of a native sovereign, influenced by a British resident or minister; and I believe they have not been traversed by more than three or four Europeans now in India. From what I have seen of them from their base, and from the accounts I have received from parties who have visited them, I cannot but think that they must possess very great and valuable resources as to climate and agricultural capabilities; while a glance at the map will show how extensive the range is. Much of it is unsurveyed, and such portion as is entered on the public maps of the country is known to be very incorrect. I think it is of the greatest importance that Government should appoint competent officers, as as soon as they can be found, to complete the survey and to frame a memoir or report, comprising all the details which bear upon the important question of the adaptability of this valuable mountain tract to the purposes of European colonization and settlement. The magnificent teak forests existing on the Travancore hills would prove an invaluable acquisition to this country for naval purposes, especially for the supply of what must shortly become the eastern Portsmouth Dockyard, Bombay; also the port of Cochin, which is admirably adapted for building gunboats, so useful in China, Burmah, and the Straits. There is a great opening here for settlers; the trade has increased from a few thousand pounds, eight or nine years ago, to 500,000 *l.* in exports alone last year. It ought to have been the terminus of the Madras Railway, instead of Beypoor. At present it is reported that the most ruthless system, or want of system, prevails in the administration of these beautiful forests, trees being cut down without any reference to their age or position, and not a single seedling being put in to replace them. I may mention that in the Neilgherries, some time ago, I wished a particularly broad plank for a lintel; I got hold of some of the natives, and having explained to them what I wanted, they brought me a most beautiful cedar plank, and gave it to me for some ridiculous sum, two or three shillings. It was very roughly cut, evidently not by a saw, and I asked them what implement they had used; they said they had selected the biggest tree they could find, and cut the tree down, and then chopped away the two sides till they got to the middle,

from

from which they got the plank. They had cut down and destroyed a superb tree to procure me that one plank.

5279. Mr. *Willoughby.*] On whose ground did the tree grow?—It grew on the public ground. The Government are very strict now in their orders; since that time conservators have been appointed of all the Company's forests.

5280. When did this of which you have just spoken occur?—In 1846 or 1847. Since that time conservators have been appointed of all the Company's forests, who have a most difficult task to perform, and who perform it well. I may mention, that in the year 1838 I was sent for by the Admiralty to give them some information about the teak forests. I gave them all the information I could, and they asked me if I would go out and execute for them a contract. The Court of Directors were extremely kind, and gave me up my time in order to enable me to do this. Unfortunately the negotiation, which was with some great house in the City, the name of which I forget, broke off on a question of price; and thus was lost an opportunity, which we never had afterwards, of opening out those forests, and of systematising the production of teak from them; that was in 1838, 20 years ago. I went to my duty, and the matter ended.

5281. Where were these forests?—I am speaking of the part which lies under the Travancore country, which is the great teak-producing territory.

5282. Mr. *Villiers.*] Are there any facilities for bringing that timber to market?—Not that I am aware of.

5283. Would it be brought here, if there were facilities for it, at a cheap rate?—No doubt; there is no part of India that we know so little of as Travancore, although it lies in the heart of the country. The Mysore country, including Coorg, offers unquestionably a wide and most inviting field for British enterprise, skill and capital, or I should say it would offer inducements to investment were the regulations as to tenure of land modified, and were a more popular element introduced into the form and system of government. Already numerous Europeans have settled on sugar and coffee estates, and extensive sugar factories have been established, all, as far as I can ascertain, doing well; but even these examples of success will, it is to be feared, fail to induce wealthy capitalists to embark in the extensive undertakings so much required to develop the resources of this fine territory, until a better title than is now granted for jungle lands brought under cultivation is conceded, and until immunity from arbitrary taxation hereafter is secured to the colonist; there is a sugar work doing an excellent business at Astagram in Mysore; they used to supply the troops on the Neilgherries with most beautiful refined sugar at a cheap rate, but at first they could not induce the natives to work, because they were employing bones for the purpose of refining the sugar, which was contrary to their caste. The products of Mysore are so numerous that there is scarcely an article in the Indian export list which may not be included in the catalogue; but those which would chiefly claim the attention of the European agriculturist are, coffee, sugar, wheat, oil, seeds, hemp, cattle of a remarkably fine breed, cotton, and I may add tea, for I cannot but think that the plant might be successfully cultivated in many of the more hilly tracts of the great Mysore table land, and of Coorg. The climate is during eight or nine months of the year very agreeable to a European, and as the Neilgherries lie within easy distance, as well as the Bababouden and other elevated hill tracts, there seems no reason why European emigrants should not thrive well in these regions, and maintain themselves and their families in health and affluence; there are already many pensioners from the Royal army, who prefer remaining in these rather elevated regions like Mysore, instead of coming to England and starving on their poor pensions. The average of the southern part of Mysore is nearly 3,000 feet above the level of the sea; it is a sufficiently cold climate during some parts of the year.

5284. Mr. *Vansittart.*] Could European children live there, do you think?—In Mysore they could live. I should think that, at certain times of the year, they ought to be removed.

5285. Do these pensioners marry native women?—A few of them marry native women, but they chiefly marry East Indians. With a few administrative modifications, such as have been indicated, and a railroad intersecting the Mysore table land, and bringing it into communication with a good shipping port for its produce, like Cochin, it seems not too much to predict that it would become one of the most popular districts in India for emigration and permanent settlement.

5286. *Chairman.*] Is there any port on that eastern coast to which a railway might extend?—We have no sheltered port on that coast.

Captain *J. Ouchterlony.*

10 June 1858.

5287. Is Coringa a good port?—Yes; that is susceptible of improvement, but Madras is not.

5288. Vessels of what burthen could lie with safety in that port, or enter it with safety?—I do not know it practically; but I believe vessels of 600 or 700 tons.

5289. There is no really good port till you get to Coringa?—There is no place except the Armogum shoal; that is a shoal which comes up within eight feet of the surface; a very dangerous shoal. Admiral Sir Henry Blackwood, lay in the "Castor," or some frigate anchored inside the Armogum during the north-east monsoon many years ago, and reported to Government that he had done so in safety, and in comparatively smooth water. He recommended the formation of a harbour there, and the transfer of the commercial port from Madras to the adjacent coast. Reports were sent in, and there were counter reports, and in the end nothing was done. Sir Henry Blackwood made a most able report upon the subject.

5290. Was that report made 50 years ago?—Yes, fully I should think; I speak from recollection only.

5291. Mr. *Willoughby.*] Was there any estimate made for the works?—Yes; by Colonel De Haviland: it was a tremendous estimate.

5292. Have you any idea of the amount?—No; it was something that we should consider in India very large; not what you would consider so here.

5293. *Chairman.*] Does the rainfall diminish as you extend eastward from the western coast in the hill districts?—It does very decidedly; that is why we chose Jacatalla for the position of the barracks; the climate of the Neilgherries is most magnificent; in fact, you have half a dozen climates there; there are four distinct English settlements there, every one of which has a different climate; if a man comes up with a particular disease, he is sent to a climate which is suitable to him; if a man comes there with a liver complaint, he is able to get just that sort of climate which suits him, and which produces an action on the skin; it is the greatest blessing to us that we have this district of the Neilgherries; it has never been half appreciated.

5294. At different seasons persons might migrate from one part to another?—Yes, with the greatest ease.

5295. Do you consider the Neilgherries well adapted for the purposes of a great military depôt?—Unquestionably; and I not only think that the mass of the European force detailed for the protection of all Southern India should be located on these hills, together with such military establishments as are not hampered with material, but that it would be eminently for the advantage of the State that the seat of Government should be established there, as also all civil departments and offices, which may be termed offices of deliberation, record, and accounts. I would support this view by the argument, that in a congenial and bracing climate like that of the Neilgherries the mental and physical energies of the European would be developed to the utmost, and not only would a more vigorous spirit be infused into his course of action, but the absolute amount of work performed would unquestionably far exceed what could be accomplished in an enervating and oppressive climate like that of Madras. No better or higher authority could be quoted in favour of the measure than that of Lord Dalhousie and his secretariat, who carried on all the duties of the Government of India during 1855 while residing on the Neilgherries, and who, by means of the electric telegraph, which his Lordship caused to be established to connect them with the main lines of India, conveyed his orders to and received reports from all parts of the empire with as much facility and celerity as though his seat of government had been in Calcutta. Before two years have elapsed, the Madras Trunk Railway ought to have been brought to the foot of the Neilgherries, and extended to the west coast; this would bring Madras within 12 hours' distance of the hill seat of government, which might be reduced to 10 if a branch were carried to the summit.

5296. Would such an undertaking be practicable?—Such is my opinion; and I submitted a project on the subject in 1851 to a body in Madras, called the "Board of Revenue," composed of civil servants, who, assisted by one European officer, sat in deliberation and judgment upon all schemes relating to the public works of the country. No notice was taken whatever of the project, and in 1856, hearing that Government had sanctioned, or were about to sanction, an outlay of 300,000 rupees upon a common cart road to the summit of the Neilgherries, I addressed Government direct upon the subject, imploring that before such an expenditure should be resolved upon for a line of old-fashioned cart road 50 miles

in

Captain *J. Ouchterlony.*

10 June 1858.

in length, my scheme for an incline of railway by a direct route of 10 miles should receive consideration. This apparently had the effect of stopping the road scheme, and I was directed to submit my estimates in detail, with traffic statements, plans, &c. This I did in November 1856; but I never received any reply to the letter which accompanied these documents, nor have I any idea at this present time what decision was come to upon the subject. I advert to it, however, because it has an important bearing on the view I take of the advantages to be derived from establishing the seat of Government, and the chief civil and military departments of state, upon the Neilgherries. The departments I allude to are, first, The entire secretariat of Government; second, Council; third, Board of Revenue; fourth, Board of Revenue or Department of Public Works; fifth, Offices of Audit, Civil and Military, the Commander-in-Chief; sixth, the Adjutant-general's Department; seventh, Quartermaster's Department; eighth, Judge Advocate-general's Department. The Artillery Instruction Depôt for officers and recruits. Infantry Instructive Depôt for officers and recruits, and Sappers and Miners, and the Engineering establishment of instruction. I would take, for examples of the efficacy of the proposed change, the case of young recruits arriving at Madras for the artillery or infantry. If they have to join their depôts at Madras itself, they at once enter upon a train of instruction and duty which the novel and oppressive climate renders most irksome and unbearable. The ennui of their life, confined as they are within the walls of their barracks between eight or nine a. m. and five or six p. m., with only drill in the morning and evening, to chequer the monotony of their existence, soon induces habits of intemperance, and the regimental records would show what premature loss of life, or of constitution, is the result. But if their depôts were on the hills, how different would be the history of the recruit. His drill and training carried on, as in England, in the middle of the day in a bracing and exhilirating climate, agreeable and congenial occupation, either in gardening, cricket, foot-ball, or other English amusements, and athletic exercises; he would, at the expiration of his term of instruction, be a far more able-bodied man than when he first landed, while his mind would be toned to receive better impressions of the service and duty he had undertaken than any he could have gleaned in the tap-room of the canteen, or in the camp suttler's hut. It is not too much to say, that by this mode of operation, disembarking the recruits, and fresh unacclimatized troops at Cochin, whence in a few hours they could be conveyed (the railway having been completed) to the summit of the hills, hundreds of young lives would be annually preserved to the public service; a result which, apart from the consideration of humanity, would exhibit an absolute saving to the State, calculating that each recruit, as he lands in India, is worth to the public 100 *l.*, of a sum which would go far to repay the interest of any amount expended upon buildings erected to furnish the necessary shelter and accommodation. Upon the same principle I would argue that it must be manifestly for the interest of the State that all instruction and training, whether of European officers or men, which involve out of doors employment, should, if possible, be carried on in a climate where the health of its servants can be preserved, and where much more work can be got out of them than in a locality where the temperature engenders lassitude, and predisposes to illness, if any undue exertion, though restricted to the few hours of the day when the sun's rays are not oppressive, is made. Therefore, I would have the training for the artillery, for engineering duties, and for other professional employment, all pursued on the Neilgherries instead of, as now, near the town of Madras. I will make a remark here as to the enormously expensive establishment which we have at Chatham. We have now a body of 40 young officers there, a great portion of whose time, in my opinion (and I say so without intending to give the least offence), is altogether wasted; they learn there much that they never get rid of, and acquire habits which, if not idle, are at least prejudicial to the pursuit of that practical knowledge which should be imparted. In my opinion, if a young man goes out to India direct from the military college, and sees that the way to win distinction and wealth is to cultivate his mind, and if you say to him, "We will give you a fine hill climate, and put you in the way of learning practically all that it is essential you should know to fit you for a successful career in India," he would, with the field of that career immediately before him, learn more in six months than he would acquire during 18 months spent in the morally enervating atmosphere of Chatham.

The men we had on the Neilgherries (the 74th Highlanders) were fresh from England, and we never had a sick man; sickness was unknown among those

Captain *J. Ouchterlony.*

10 June 1858.

men; they were able to drill at any time in the day; pieces of garden-ground were given to them, and they were the happiest set of men I ever saw; the engineer had large working parties of these men, and gave them two shillings a day; they became most useful servants of the State as well as trained soldiers; they are now building their own barracks.

5297-8. Mr. *Willoughby.*] Then the system you recommend has been already commenced at the Neilgherries by locating regiments there?—Yes; but they have been moved down on account of the disturbances; we never train artillery recruits in this country at all; their practice is all taught to them in India; they are now taught near Madras, at a place where the climate is most oppressive; surely it would be much better that they should be trained in a situation where they can be out the whole day, where it is a pleasure to them instead of a punishment, which it is while they are in the abominable place they occupy. Pursuing the consideration of the advantages offered by these hills for the location of masses of European soldiery, I would submit that there is no district in India which can boast so many. Supplies of all kinds are procurable from the surrounding districts to an almost unlimited extent, and, when the railway is completed, at an exceedingly moderate cost; this we have proved with the 74th Highlanders; the greater the demand was for supplies, the more rapidly the natives seemed to bring them in; and as the men would not require, in so good a climate, the number of native servants to attend upon them which are indispensable in the plains (and I may mention that every man there is allowed a servant; the men do not even clean a firelock themselves), while they would be able by the work of their own hands to produce their own vegetables out of plots of ground which it would be wise to allot to each regiment, to brew their own beer, make their own bread, and even pursue their respective trades in meeting regimental requirements, there can be no doubt that a battalion of European infantry or artillery would cost the State less in the aggregate while stationed on the Neilgherries than when cantoned in the low country. I am prepared to show from official reports, and not merely from a book of my own, that in that situation the expenses of a regiment would be infinitely less, while the saving of life would be enormous. The absolute pecuniary saving to Government, by the economy of the valuable lives of these brave and patient men, which a residence on the hills would induce, is too obvious to need comment. A glance at the map will show how admirably the Neilgherries are placed to serve as a great depôt station, whence should issue forth bodies of European troops to suppress any insurrectionary movements, or take part in wars likely to be waged in coming years, to preserve the integrity of our Eastern empire; and how they may with perfect safety, when the various lines of railway in progress and projected are completed, be made to supersede all stations in the Madras Presidency where local causes for apprehension do not absolutely present themselves, and where the climate is unfavourable to the European constitution. With the exception of a wing at Madras, to garrison Fort St. George, a battalion at Bangalore, and one at Secundrabad, I would have no European troops anywhere but on the Neilgherries, abolishing the stations of Trichinopoly, Bellary, Cannanore, and Masulipatam, and for guards over the arsenals and public property; since it will be seen by the map that, assuming the railway lines to be in operation, all of these districts could be overawed by the presence of a detachment arriving in health and vigour from the hills within a few hours of the receipt of a requisition for its services by electric telegraph. Before quitting this subject, I would beg leave to suggest the importance of establishing a school on the Neilgherries for the education of the children of the European troops serving in the Madras Presidency, similar in plan and principle to those in operation, and I believe with the greatest success, on the Himalayahs and at Mount Aboo, in Bombay.

5299. Sir *Erskine Perry.*] Would you suggest that the Government should take part in that?—Yes; the mortality amongst young children nurtured in low-country barracks is fearful; and I believe I am within bounds in stating that scarcely one child in four reaches maturity. The late charitable and excellent Sir Henry Lawrence wished to establish a school on the Neilgherries, and offered the same assistance towards its endowment as he had rendered with so much liberality to those in the north of India; but a difficulty was raised by a section of the Protestant party, regarding the powers to be conceded to Roman-catholic priests, in the matter of spiritual instruction to the children of Catholic soldiers, so numerous in the regiments serving in India; and the benevolent scheme fell to the ground. Sir Henry Lawrence said he would not continue his excellent offer to us, if there was this squabbling and difference.

5300. Mr. *Willoughby.*] Who were the objecting parties?—Not the Government; the present Commander-in-Chief behaved most nobly to us.

5301. Who was the Commander-in-Chief then?—Sir Patrick Grant; he took our side. I think it is a great grievance and hardship upon the poor soldiers that this scheme should have fallen to the ground. I think it ought now to be revived by Government, both for the sake of humanity, and for the important political object of training up a fine body of young men, either for the service of the State, or for the initiation of the natives into a knowledge of those trades and callings which might be taught and practised as well on the Neilgherries as in London; and also for the education and preservation of a class of young women whose present prospects it is painful to reflect upon, but who, if carefully trained, might be made to subserve an important object in the question of European colonization, presenting a class of educated and comparatively accomplished females, from which wives might be selected, and so save many a settler a plunge into a slough of vice from which recovery is difficult and rare. The community of Madras would subscribe liberally towards the establishment of this school, provided perfect religious freedom and equality were secured to all sects of Christians entertained within its walls.

5302. Did the Government subscribe to this school?—No; they refrained from doing so until they saw the principles on which the community were disposed to act. The Commander-in-Chief, as the head of the army, entered into correspondence with the Committee, and said that before recording his sentiments upon the subject for the use of the Government, he would give his sanction to their addressing an official circular to all regiments and corps in the army, with a view to eliciting from them their opinions and feelings on this great question of religious toleration; that was how the matter stood when I left; I have no doubt that the whole of the army responded to his views.

5303. *Chairman.*] Will you state to the Committee the advantages you anticipate to India from European colonization?—It would, I think, in the first place, supply the great desideratum of capital to be spread abroad through the country, and expended upon the improvement of the soil. At present such capital as there is in India is hoarded up by native bankers for usurious traffic, or amassed by the native princes and zemindars, only to be lavished in the pursuit of sensual pleasure, or in the celebration of the disgusting ceremonies and mummeries of paganism. No one dreams of spending any money on his land, and a native who would allot a large sum to bedizen his wife, or a hideous idol with costly jewels and ornaments, would grudge a few shillings to repair a road through his own farm, even though it were to save his own carts from the risk of upsetting. The impetus which such appropriation of capital would give to trade, and to the production of articles of commerce and consumption throughout the country, cannot fail to be most beneficial; and perhaps there is no item in the list of exports which will benefit so immediately from the change as the important one of cotton; next, as regards the improvement which must soon result through the same means as regards labour, which at the present time it must be confessed stands at a very low ebb. The cause is no doubt the wretchedly abject and impoverished state in which the labouring class are kept by the small amount of wages they receive, and the consequent miserable and scanty description of their daily food, rice and water. For it is an error to suppose that the mass of the working class in India adopt this spare diet from prejudice or choice. On the contrary, wherever a more liberal or regular system of payments for labour prevails, a corresponding improvement becomes soon manifest in the condition of the coolies, arising from the more nutritious character of the food which they allow themselves, as soon as they find their circumstances and prospects permanently improved. And I may remark, that in Southern India at least, it is only the Brahmins and very highest castes who abstain from animal food. Many of the inferior castes, and all the lower orders, eat meat whenever they can get it; and it is only from the extreme rarity of their opportunities of indulging in the luxury that their spare gaunt aspect is presented. During the war in China, in 1841 and 1842, while the Bengal sepoys and other high caste natives were suffering from fever and dysentery, and all but unfit for service, owing to their perseverance in their rice diet, the men of my corps, the Madras Sappers and Miners, mostly low caste sepoys, continued in the most robust health, even through the rigorous winters experienced in the north of China, because they gladly eat the rations of meat which were served out to them, wore leather shoes, and eschewed all servile caste prejudices; we never had a death during all the

Captain *J. Ouchterlony.*

10 June 1858.

time we were at Chusan, even when we had the water frozen in our rooms. The more liberal and regular wages which would be paid to the coolies and artisans by European colonists would soon have the effect of enabling them to feed and clothe not only themselves better, but their wives and children, and thus tend not only to improve the existing class of labourers, but to nurture in their children a race far superior in promise. This is not mere speculation, because evidence of the presumption being well founded is observable wherever extensive estates have been opened (with success) under European superintendence in India (of course I speak of Southern India); and I may instance one case especially which came under my own personal observation. In 1845 I discovered in the course of my survey of the Neilgherries a splendid tract of forest land in the Malabar district, which from its ascertained altitude by the barometer, from the circumstance of wild coffee growing abundantly in all the more open spots, as also the nilla plant, and from other indications, I judged to be well adapted for coffee cultivation; and I reported to that effect to the authorities at Madras. At the time of my survey the tract was utterly uninhabited save by a few roving tribes of jungle men; tigers' footprints were traced round my encampment in the morning, dogs were carried off if they strayed a few yards into the jungle, and fires had to be kept continually burning to frighten away the elephants which roamed freely through the forest. Parties from Ceylon and elsewhere came to visit the land of promise, allotments were taken, several large estates were opened, and the result has been that on visiting the spot in 1856, I found a perfect colony where I had left a wilderness; the forest cleared for miles, excellent roads opened out in all directions, extensive villages formed, with their bazaars, and well-conducted schools, and inhabited by an apparently thriving and healthy class of men and women; shops established for the sale of all sorts of supplies; and so completely had the denizens of the forest been extirpated or driven back into their wilds, that one of the European superintendents told me that though he had been on the spot more than a year, he had not yet heard a solitary trumpet-note of an elephant; and that though sheep often strayed for days away into the forest patches, they were almost invariably recovered, tigers being now apparently unknown.

5304. Mr. *Willoughby.*] What was the population there?—About 2,000 or 3,000.

5305. *Chairman.*] Was this state of things brought about by Europeans?—Yes.

5306. Who were induced to settle there with a view to the cultivation of coffee?—Yes.

5307. From whom did they obtain their allotments?—One party obtained his land through the assistance of the Collector of Malabar; other persons had theirs from natives, and various other people; the Government do not claim the land. I have mentioned this to show what effects are produced by European colonization. I may add, that another result attending this instance of the application of European capital and energy to the development of the resources of India, has been the awakening the minds of the natives dwelling in the tracts which border on the one I refer to, to a perception of the value of the particular branch of industrial agriculture to which they have been devoted; and it is now seen that to almost every villager's cottage in the neighbourhood is attached a patch of coffee trees, the produce of which, of course, forms a very important addition to his chapter of yearly ways and means; a coffee tree is a valuable thing to an unfortunate native. The whole of this part (*referring to the Map*) is an immense jungle; and there used to be a notice stuck up in the public bungalow, warning people not to sleep there, the place being so deadly on account of fever; but the moment the jungle was cleared away, it was found that the malaria and fever disappeared. The country here is very undulating, which is favourable for the cultivation of coffee; you cannot grow coffee in this climate on a dead level; now, around these villages, and extending far towards the coast of Malabar, lie extensive tracts of dense and reputedly unhealthy jungle, clothing slopes of land the fertility of which cannot be doubted, after inspection of the luxuriant vegetation which springs spontaneously from its surface. When you traverse these unhealthy places you find that the growth of vegetation there is something wonderful; their tillage would afford employment for hundreds of European colonists, a large share of unemployed capital, and thousands of half-starved Indian coolies; but the stream of colonization will be slow in reaching their limits, and in spreading beyond them the benefits both to the country and to its population, which I have indicated in the instance quoted, unless a greater degree of encouragement and aid can be extended to those who are willing and able to be foremost in clearing a channel for its flow. At the same time I must in candour state my opinion, that the chief difficulty

difficulty which the newly arrived colonists will have to encounter is as regards labour; for whatever may be the case in Upper India, I should certainly say that Southern India is decidedly a thinly peopled country, and I attribute it to the causes I have adverted to, namely, want of stamina in the parents, engendered by meagre and unnutritious food; any question, therefore, I would submit, which bears upon remedial measures addressed to this portion of the general subject has an important signification which cannot be too freely admitted.

5308. Sir *Erskine Perry.*] Is not all the labour in Ceylon imported from Malabar?—Yes, but people from Madras would, if they could, put a stop to it altogether; they are doing the utmost they can to stop the flow of labour to Ceylon; we cannot spare those men.

5309. If the same amount of labour arises in this district, of which you have been speaking, would they not have the same facilities that the others now have?—You know what the natives are there; they are in the habit of crossing the sea, as their fathers and brothers have done before them.

5310. Mr. *Campbell.*] Would not the result of the establishment of successful colonists there, such as you indicate, be to increase the native population, and check emigration to Ceylon?—That would be a remedy for it. Another important benefit which I anticipate as a result from the introduction into India of European colonists, is the establishment of an improved system of agriculture among the farmers or ryots of the provinces; or rather, I should say, the introduction of a system, for at present there is none. The preparation and application of manures to the soil are, as I have already remarked in reference to the subject of cotton culture, utterly and entirely neglected by the natives of the low country; but I have observed that those who have followed the footsteps of the Europeans to the hills, and have remained there to settle on their small plots of ground, imitate the example set them in this respect by their employers, and appear to be perfectly alive to the importance of restoring to the soil in one form what they have taken out of it in another. On these Neilgherries hills every man who takes a piece of land from the Government gets a lot of coolies about him, and every native who once comes there almost invariably remains; they will take land and cultivate potatoes, and take care of their manure. Artificial manures ought, I think, to be extensively employed in India, on tracts where, owing to the scantiness of the population, cattle manure may be scarce; and as land yields in abundance in particular localities, most of the salts which form the bases of the best manures artificially prepared in this country, such as muriate of ammonia, nitrate and muriate of potash, and soda, &c., such a manufacture would, no doubt, answer well, if the locality were judiciously chosen, and if the natives were previously instructed in the use of the compound. The use of crushed bones as a manure is entirely unknown to the Indian ryot, and they are of course never collected for this purpose, though in the vicinity of large towns and of European continents they are procurable in abundance.

5311. Mr. *Willoughby.*] Does not that arise from prejudice?—They would be afraid that they might be using the bones of some animal that is interdicted. I would here beg leave to remark that there is one very profitable employment of capital, which I think would soon engage the attention of European capitalists, after dependable reports of the existing state of things in India by the early emigrants had reached them. I allude to factories for spinning yarn from the raw cotton, for which the temperature of the country and the delicate touch or manipulation of the natives are particularly well adapted, and which would be found to yield a wonderful return if established in localities where the supply of the raw material could be depended upon, and where labour should be plentiful. Several of these factories, called "filatures," have been for many years established at the French settlement of Pondicherry, and in cases where their details have been properly organised by practical men, the profit yielded is stated at no less than 30 per cent. on the capital invested.

5312. Mr. *Smith.*] Per annum?—Yes, per annum. Such is the demand for the yarn manufactured, that it is sold for ready cash almost as soon as it is taken off the mules, the purchasers being the native weavers of the French colony; and from what I observed I should say that if three times the amount spun could have been produced, it would have found ready purchasers.

5313. Is this the result of private enterprise?—Yes. They are all French. Similar factories might be established in the cotton districts of Coimbatore, Salem, and Trichinopoly, in the circle of the Neilgherry and Shevaroy Sanitaria, or in Tinnevelly and Madura, in the Pulney circle, with a certainty of success;

Captain *J. Ouchterlony.*

10 June 1858.

as, if the native demand for the yarn produced did not keep pace with the rate of manufacture, which is very unlikely, the China market would absorb all their surplus stock a hundred fold. It is an unaccountable fact, that, although the French have had for many years three or four of these "filatures" in operation in their small colony, not one has yet been established on British soil in the Southern States; at least, not to my knowledge. I believe, however, that English merchants held and perhaps still hold shares in some of the French filatures. It would be superfluous to enlarge upon the effect which the establishment of such works, employing 1,000 hands each daily, counting among them all but the very youngest children of a family, disseminating weekly a large sum of money among the poorer class in the form of wages, and daily absorbing almost unlimited quantities of the staple of the district, must have upon the welfare of the population and upon the trade of the province it might be located in.

5314. *Chairman.*] You have alluded to the importance of a survey; will you explain, if you please, what you mean?—I would illustrate my view by referring to the survey of the Neilgherries Hills; I say with submission that that was a useful survey, because it not only furnished a topographical delineation of the district, but it gave a variety of statistics which were most important: the population returns and resources of the district, the prices, the prospects for people who might be desirous to settle there, the value and tenure of land, the condition of the people, and various other matters, which are all fully and faithfully set forth; and I would contend that such surveys ought to rank somewhat high in the estimation of Government, and I do contend (although it may appear presumptuous in me to say so) that they do not occupy that position in the estimation of the Government that they deserve. When I was extending my survey, after completing the Neilgherries Hills, by order of the Court of Directors, and also with the support of the Bengal Government, I had reason to suppose that it would prove a most valuable one, but my survey was arrested in this way: the Government of Madras wrote to the Government of Bengal and said, "We have a number of irrigation works in progress in Madras; here is an officer who ought to have experience in such works, and who is engaged in the less important duty of surveying, and therefore we demand him back." All surveys are under the control of the Bengal Government; the Madras Government has nothing to do with them, and therefore the moment you are appointed to a trigonometrical survey, you cease to be under the orders of the Madras Government, and receive all your directions from the surveyor-general, who is a Bengal officer.

5315. Do you think that such a system of surveys as you pursued in the Neilgherries Hills, if adopted generally, would be of great advantage in inducing and encouraging the settlement of Europeans?—Yes, for we ought to know all the good together with the bad; we should have surveys which should enter into all those particulars I have enumerated, which is not the case with surveys in general.

5316. You mean that the surveys should be of such a character as to have a practical object?—Yes, as well as being of a scientific character. I was receiving 350 rupees or 35 *l.* a month for my survey, and for the duty upon which I was then put of revenue engineer officer I received exactly double, or 700 rupees a month; but I did my utmost to be permitted to go on with the other, which was the more congenial duty, at the lesser salary. I made strenuous endeavours to be permitted to be attached to that branch for which I considered I was best fitted, but it was all in vain, and although the Governor of Madras (then Sir Henry Pottinger) expressed his regret, he was compelled to carry out the wishes of the Government.

5317. Mr. *Vansittart.*] Is the head of the trigonometrical survey a Bengal, Madras, or a Bombay officer?—A Bengal officer.

5318. Sir *Erskine Perry.*] Is it not the fact, that the first thing that settlers in Ceylon demand from the Government, is a survey by an engineer officer?—No; but by a professional surveyor.

5319. That is the first demand they make upon the Government?—Yes, before they take up land; but I believe they have to pay a small sum per acre for that survey.

5320. Mr. *Campbell.*] Then you would suggest, by way of making a trigonometrical survey practically useful, that a subsidiary survey, embracing all those statistical details to which you have referred, should be made as a first step towards colonization?—As a first step towards colonization. In fact, I think that greater encouragement should be given to surveys. I should mention, however, that the Government would probably meet that, and very fairly, by saying

saying that they have not officers enough to perform such a duty; that an engineer officer cannot be spared for such a purpose from his more pressing duties; that they have not officers enough. They said, in my case, "We should be very happy to let you have Captain Ouchterlony's services, but we require him ourselves, to discharge duties which bear upon the revenue."

5321. The Committee have had evidence before them in favour of the establishment of a school of civil engineers; have you considered that question at all?—I think it would be a very useful and valuable thing: if introduced, it should be with modifications. I think that the Government should get the best talent available for the public service, whether covenanted or uncovenanted.

5322. Mr. *Willoughby.*] Are you not aware that a number of civil engineers have been lately sent out to India?—Yes, I believe such to be the fact.

5323. Mr. *Villiers.*] Is that by Government?—Yes.

5324. For purposes connected with revenue?—For all purposes; they are uncovenanted civil engineers.

5325. Sir *Erskine Perry.*] The importance of the question depends upon this, does it not, that it involves the question of a covenanted or open service?—To a certain extent it does; it affects the prospects of the corps of engineers very seriously, but I consider it is for the public good. I have been in the service 26 years this month of June, and have served and been wounded, and I am only a captain still; while contemporaries of mine in the Royal Engineers, who have never been on active service, are now full colonels. I think we have been hardly used. The value of our services is now discovered, when it is too late to help us; but at the same time it is not for us to stand in the way of what we consider to be a public improvement.

5326. *Chairman.*] Can you give the Committee any information regarding the mineral resources of India?—Yes; I had an opportunity of investigating the metalliferous deposits of Southern India some years ago, under favourable circumstances, having been employed to re-open some old copper and lead mines in the districts of Nellore, Perddapah, and the Northern Provinces. I made a report to Government, which must be in the India House, but its only value at the present time would be in serving to warn emigrants, or capitalists, against embarking in a scheme which I consider to be delusive. I acted upon that occasion upon printed reports sent in, and printed by the Government, by men who had preceded me, one of whom had reported that there was copper to be found all over the district, and that ore of the most valuable description would reward the efforts of a miner. I took out a Cornish miner with me, and spent the whole of my furlough here, in the mines in Cornwall, in order to qualify myself. I selected a good man in Cornwall, and took him out with me; and on my getting there, the conclusion to which I came was that the person who had made the report either did not understand the question, or that he had grossly misled the Government by his florid style of writing. I only mention this to show that all reports which are made must be taken *cum grano.* It would take up too much of the Committee's time to enter into the particulars of this question, but I may state briefly that the result which my actual mining operations and subsequent pretty extensive surface explorations led me to arrive at was, that, speaking of Southern India generally, although indications of metalliferous deposits are widely diffused, nature has not succeeded in eliminating or segregating them from the mass or rocky crust, in such a form or abundance as is necessary to render mining operations undertaken for their development remunerative or reasonably promising. In the district to which I allude, you would be surprised perhaps by finding, in a morning's ride, a magnificent lump of the richest copper ore, an ore producing 74 per cent. of pure oxide of copper, and of course that would lead you naturally to the conclusion that the district would prove invaluable; but on further investigation I found that that copper ore was, as it were, distributed sparingly through the mass of rock, and you would only find it here and there, as you would find a very few plums in a very poor pudding. I found that you never could get on a true vein or lode, and that any mining operations there would be utterly ruinous; you might suddenly come on a bunch of copper, and then go on for fathoms and fathoms, and find nothing. From this general definition I would except iron and diamonds; the former exists in great abundance over all the tracts which I have enumerated, especially Salem, Trichinopoly, North Coimbatore, Malabar, Canara, Travancore, &c., and excellent iron is manufactured from the ore, by the natives, who produce by a wonderfully simple process the most ductile wrought iron in one process from the raw mineral: cast iron being entirely unknown as a manufacture or product of India, and hence the absence in all our wars in India of native

Captain *J. Ouchterlony.*

10 June 1858.

cast shot or shell. It is a most extraordinary secret; the natives get a quantity of pulverised iron ore, which they put in a small crucible, mixing with it a few leaves of a particular plant, and then they close over the top of the crucible and work day and night with the bellows; they then go home to their houses, and the next morning they come and open their little furnace and break the pot to pieces, and out of it there comes a lump of metallic stuff; they then press it with a stone and beat it with a hammer, and the result is a beautiful piece of ductile iron thus produced in one process from the ore.

5327. Mr. *Smith.*] That ore must be very rich, must it not?—Yes; we do not know what the process is by which they produce this effect; the native himself does not know how he does it; what he produces ought to be simply a piece of cast iron, but instead of that it is ductile wrought iron.

5328. Is the plant known, the leaves of which they use?—Yes, but there is no particular property that can be assigned to it.

5329. For many years past they have tried iron works, have they not, in the Madras Presidency?—Yes, and they have all failed; a company has been in existence nearly 25 years, with enormous privileges and exclusive rights of mining and fuel over vast districts, but failure has, I believe, up to the present time attended their operations; this company has the exclusive privilege not only of mining for iron ore, but of getting fuel; nobody else has the privilege of cutting fuel in those forests; the whole of this part to which I am now pointing (*referring to the map*) is under the exclusive control of one company, which has been for 25 years in operation, and yet they have not sent home, I believe, a hundred tons of malleable iron.

5330. It is a monopoly?—Yes. The Government took at the time they conferred this monopoly upon them a paternal care to exclude the natives from the operation of it, and any native can continue to manufacture iron in his little furnace as before; but no other Europeans besides the Company could establish an iron manufacturing concern in that district; the East India Company have been great sufferers by this Company.

5331. Do you know what the duration of the privilege is?—I do not know.

5332. Mr. *Campbell.*] By whom was the company founded?—By servants of the Government.

5332*. Those exclusive privileges, then, were conferred on a company consisting chiefly of persons in the service of the Government?—Yes. I should state that as soon as the Government became aware of this fact, they issued an order which made it compulsory on all their servants to have nothing to do with the management of the company, and they were only allowed to remain attached to the company as lenders of money to it; every one of the civilians became liable for the debts of the company, and some became terribly involved.

5333. But the original grant was obtained by servants of the Government?—Anybody might have participated; the reason why it happened to fall into the hands of so many civilians was that a Mr. Sullivan knew the value of these iron deposits, and he it was who brought the matter forward; their failure, however, must be owing to bad administration, there can scarcely be a doubt, since at this present time we use for the public works annually large quantities of native-made wrought iron of excellent quality; and it is well known that no native perseveres in a trade which is not remunerative. Surely a field which is remunerative to natives, ought to be remunerative to Europeans if they work it properly. The real cause of the misfortunes of the company was, that they started off upon a number of tangents and principles foreign to their legitimate object; amongst other things, they got an idea that there was an immense quantity of chromate of iron in their grant, and they let their iron works remain quiet, their machinery rusting, and their artizans devouring their substance, while they explored and spent large sums of money upon a tract which a regular geological engineer would have told them was not a fit and legitimate field for mining, there being no regular bed or deposit of chromate of iron. The prevailing iron ore is the black magnetic, like that which is obtained in Sweden and Norway; it is very rich and pure, most frequently containing 70 to 80 per cent. of metal, and scarcely a particle of sulphur; but in spite of this it is difficult to reduce in blast furnaces, owing to its being obtained for the most part in a semi-pulverised state. My impression is that when freights are low, it would pay well, after railway transit is available, if shipped to England in the state of ore as ballast or dead weight, and employed to mix with the poor ores of our coal and ironstone districts, to render them better worth smelting in the same way as at present the rich Chili

and

Captain *J. Ouchterlony.*

10 June 1858.

and Australian copper ores are run down with the poor Cornish minerals; which in their silicated condition serve as a good flux to the poorer ores; that is practised at Swansea, and I believe that this would answer in the same way; my impression also is that if small factories were established over the country with a tilt hammer and small rolling mill, to work down the native blooms of iron into marketable form, a very good return might be derived, Europeans of course managing the factories; I brought some of this ore home with me many years ago, and took it to Sheffield, where I had a good deal of conversation with the steel converters about it; they were very anxious to get it, and some of the people there who make razors said to me, "We know this iron which you produce very well, and we can tell you all about it; some time ago a gentleman named Heath" (who was the main spring of this company), "came down here and told us that he was the representative of a company which had the exclusive monopoly for making iron superior to that which we had been accustomed to get from Messrs. Sykes, who had the monoply of the iron which we obtained from them; he told us that as we disliked the monopoly under which we laboured, as regarded Messrs. Sykes, he would afford us the opportunity of getting rid of it, and that he would engage to supply us with this iron if we would give up Sykes and Company; we one and all said that we would, for that Messrs. Sykes were constantly disappointing us and keeping half our men out of employ;" they said that they then called upon Mr. Heath to enter into a contract, binding himself penally to supply them with 100 or 200 tons of this iron, but that the moment that was mentioned Mr. Heath indignantly rejected the proposition, and repudiated the idea of being bound by any contract, and therefore the whole thing was given up, because Mr. Heath would not enter into any contract to supply them with a given quantity per annum; the fact was, that he knew he could not do it; the Sheffield people are perfectly well aware of the value of this iron, and they would take it in preference to that which they are in the habit of using, if they could get it.

5334. What distance are these iron fields from the coast?—They are close to the coast; there are iron deposits all about here (*referring to the map*).

5335. Is that iron almost inexhaustible?—I believe the quantity is enormous; indeed iron is spread all over India more or less; it is magnetic iron ore, like that which is found in Sweden; Russia also produces it; there is hœmatites also, but that is very sparingly distributed.

5336. *Chairman.*] Have you coal there to smelt it?—No, we have no coal; we have never discovered even any indication of it.

5337. All the fuel that is used is vegetable fuel?—Yes; which is very abundant there.

5338. Have you any flux near at hand for the iron?—Yes, we have every flux that is necessary, we have limestone in abundance.

5339. Where is that?—All over the country; the whole of the brown formation shown on the map is limestone.

5340. We have been told by a former witness that the kunker is not available as a flux for iron?—It is used there, I belive, for the purpose; it contains a good deal of clay, but that is useful for some, it would not do for other kinds of ironstone.

5341. Is it more generally used for the purpose of road making?—Yes; if there is any ingredient in the kunker which is injurious in the manufacture of iron, science will find out a remedy for it.

5342. Have you any statement to make with regard to the discovery of diamonds?—Yes; some of the most celebrated diamonds known in Europe, the great Pitt diamond, and several of those in the possession of the Court of Russia, were all obtained from this district (*referring to the map*): it appears to have been a large lake formerly, or inland sea, and the bed of the lake or sea is as perfectly defined as this table; it was evidently closed in at some ancient time by a spur of hills, which have been broken through by some convulsion of nature, and the water has poured away, leaving the bed dry; and it is in that bed that the diamond matrix is found. The natives have mined this place extensively for thousands of years, they say. First of all a native takes a portion of land, and then he mines down; all the debris that he brings out he spreads on the ground about the mouth of the shaft; he goes down till he gets through the diamond bed, and gets to the bare ground beneath the rock, and then he ceases his operations; he never dreams of driving galleries along, but makes a sort of well; the consequence is that the whole of the surface is covered over with heaps of

Captain *J. Onchterlony.*

10 June 1858.

rubbish to such an extent that at least one-half or two-thirds of this rich diamond matrix is covered with debris and unexplored; and my opinion in 1839 was and now is, reasoning by analogy, that there are as many valuable diamonds now to be got there as, if we are to believe history, were got in ancient days.

5343. Sir *Erskine Perry.*] It is a kind of sand, is it not?—No, it is a hardened conglomerate; you may call the matrix a rock.

5344. *Chairman.*] It appears, does it not, as if the water had filtered away, and left this as the residuum?—Yes. The diamonds are not got by washing the soil, as in Brazil, and other parts of India, but they are got out of the rock, which requires to be broken, and when it is broken they come out like the eye of a human subject.

5345. Sir *Erskine Perry.*] In what year were you there?—In 1839 and 1840.

5346. Is it not the fact that the finding of large and valuable diamonds has been very rare of late years?—There are no explorations going on in the district I am speaking of; it was considered unhealthy; and when a place gets that name no European will go near it.

5347. The mines were worked by natives, were they not?—Yes, the place I speak of I believe to be the real Golconda; they call the mines in Hyderabad Golconda, but I believe that this place is the real Golconda.

5348. *Chairman.*] That was a place where diamonds were rather manufactured, was it not?—Not according to their traditions; the natives say that everything of priceless value must have come from Golconda.

5349. I gather from your evidence that you consider that an important branch of mining?—Yes; I think it opens a most wonderful field.

5350. The great object now is to explore this district horizontally?—Yes, by galleries.

5351. Do you think that European capital employed in that direction would be the most beneficial means of exploring it?—Yes; but there is this to be considered, that there is no hill district at present within a feasible distance of this diamond tract, therefore no European could keep his health there long; it is a very hot place, and until it is traversed by railways people would not go there.

5352. But as population increases, and if railways are carried in that direction, you think it probable that European capital will be employed in working those mines?—Yes.

5353. Sir *Erskine Perry.*] Is it not the fact that all the more valuable diamonds of commerce have come from India?—Yes.

5354. And there is no part of the East except India that produces diamonds of fine water?—Java and Sumatra produce beautiful diamonds.

5355. *Chairman.*] Have you any further observations to make with regard to the mineral productions of the district of which you have been speaking?—I may mention that gold is obtained by washing to the westward of the Neilgherries; it attracted the attention of the Court of Directors many years ago; I found that about 30 or 40 years since they sent out an officer thoroughly to investigate the subject of gold which was supposed to exist in Malabar, and that the result was unfavourable; they then employed an officer named Nicholson, I think, who carried out his explorations to the best of his ability; but the result was, that the quantity of gold which was found was not sufficient to pay the expense of the operation; on going down some of these roads (*referring to the plan*) I have often been struck with the immense excavations that there are there; there are large quantities of quartz rock thrown up; the presumption was, that gold existed in these hills.

5356. Have they what they call the auriferous quartz that they have in Australia?—I cannot say.

5357. Sir *Erskine Perry.*] Is it not supposed that gold was at one time exported from India largely?—Yes.

5358. It is reported that the gold came from Ophir?—Yes; some people say it is in Ceylon.

5359. *Chairman.*] In your opinion, will the making of railways and other means of communication develope the resources of these gold districts at all?—They must, more or less; they will not have an immediate effect on the tract I speak of.

5360. Mr. *Willoughby.*] Were there regular discovered gold districts in India?—Yes; but the Court of Directors came to the conclusion that it would not pay to work them.

5361. Did you see the ancient diggings?—Yes, I saw the diggings, but I did not see any gold in them; it was the same description of quartz as that which I am told exists in Australia.

5362. *Chairman.*] Have any geologists made a report in favour of the existence of gold to any extent in India?—I do not think so. There is a geological survey proceeding in India, but I never came in contact with any of the officers employed upon it.

5363. You do not speak from your own personal observation as to the existence of gold in this district?—I never saw gold there, but I have seen the quartz which is supposed to have been excavated by the ancient people.

5364. Sir *Erskine Perry.*] Its existence there depends upon the traditions of the people?—Yes; but you know how true those traditions are. On these very Neilgherry hills there exist a number of very extraordinary cairns, which, when opened, are found to contain small urns, in which are found the calcined bones of human beings. On opening one of them, as gentlemen will sometimes do for their amusement, we found it to contain some beautiful large blocks of quartz, in which we found lead ore and copper pyrites, a description of copper ore which I had never seen before in the low country. That was reported to the Government, and the Government directed me to pursue my investigations with regard to it; but all we could find was a channel of quartz, leading right down into the low country; and in this place (*referring to the map*), which the natives said was an old gold-digging district, I tried to discover gold, but never could find a trace of it.

5365. *Chairman.*] Can you give the Committee any information about the state of the public roads in India?—I can do so as regards the roads of Southern India; and I beg leave to preface my statement by a remark as to what I conceive to be the misapprehension which exists in this country regarding their general condition. It is undoubtedly true that the cross or district roads, which act as feeders to the great trunk lines, are, generally speaking, bad; but it is a misapprehension to suppose that the main trunk roads are to be included in the same category. I can assure the Committee that some of those lines would well bear a comparison with the turnpike roads of this country, and that, considering the difficulties which have to be surmounted, whether as regards labour, climate, materials, or administration, they may be referred to with pride by the authorities who executed them. In past years the public money was grudged for road purposes; but this has not been the case of late years, and grants are now liberally voted for their maintenance and extension. Not to distract the attention of the Committee, I will avoid enumerating the trunk roads in order of numbers, and will refer to them according to locality of terminus. First, there is a trunk road (No. 687) commencing at Madras, passing through Vellore and Ongole, and ending at the frontier of the Nizam's dominions, whence, however, it is continued on to Hyderabad under the Nizam's authority. This road is in many parts excellent, but in others it is liable to breaches by the coming down of the numerous streams which intersect it, and which rise with such rapidity that a bridge is carried away before any measures can be adopted to relieve the arches from undue pressure. A traveller leaving Madras overnight sometimes finds his conveyance halted in the morning on the edge of a roaring rapid, foaming over what was the roadway the evening before, and the consequence is abuse of those who constructed the bridge and organised the road. But this censure is frequently very unjust, for the influence of a stream which rises often 14 feet within as many hours cannot always be controlled, or even duly estimated till experience, always more or less costly, is gained by misfortune. There is another trunk road (No. 1), from Madras to Bangalore, passing by Arcot, Vellore, and Vaniembuddy. This road is an excellent one, and the traffic on it is immense; hence the cost of repairing this line is very great. When the railway is completed, it will run parallel to it throughout its length, and will, of course to a certain extent, supersede it. Thirdly, another great trunk line (No. 8) leads from Madras to Trichinopoly, and I can speak most highly of it, both as to its trace and formation, and as to the condition it was in when I last travelled on it. Good metal is abundant along this line, and the repairs, though costly, are not so onerous as on the preceding line. Fourthly, a trunk road (No. 13) also leads from Madras direct to Cuddapah, and another (Nos. 10 and 11) leads off from No. 1, near Arcot, to the same place (Cuddapah) by Chittoor; the country over which these lines pass is unfavourable, and when the projected

Captain *J. Ouchterlony.*

10 June 1858.

Cuddapah and Bellary Railway is completed, it will only be necessary to keep these roads up as second class lines or feeders. Sixthly, another line (No. 12) leads off from No. 11, forming a communication between Madras and Bellary. The same remarks apply, in a degree, to this road. Seventhly, an important line (No. 8) next comes to be noticed, forming a communication between Madras on the east coast, and Ponany, the great cotton port, on the west. This is a most valuable line, but it is not quite so complete, or in such high organization as some of the preceding lines. Its commercial utility is also somewhat circumscribed by the inaccessibility of one of its termini, Ponany, during the south-west monsoon, to sea-going vessels. Eighthly, from No. 8, a branch trunk leads off near Vicravoudy to Cornbacorum. This was not completed when I last saw it, and I confess I did not consider the traffic worth the expense of a trunk road over such an unfavourable line of country as was presented. Ninthly, Nos. 2 and 3 trunk roads lead from Mangalore on the west coast into Mysore, by Mercara and Munzerabad respectively. These are highly important lines, and great pains are taken to keep them in good order. Tenthly, No. 4 is an excellently traced and executed round from Cannanore on the west coast into the heart of Mysore, by Perombaddy to Honsoor, where it joins a fine district road (to all intents and purposes a trunk road), leading from Bangalore to the Neilgherries. Some bridges were required on this line to render it complete, and continued and extensive repairs are needed to keep it open. Until a recent period (1855), all the trunk roads were under the exclusive superintendence of one department, styled the "Road Department," with one responsible officer at its head, receiving his orders from, and making his reports direct to Government. He had a most efficient staff of subordinates, commissioned and non-commissed, native and European, under his orders, and it seemed to me, so far as I enjoyed opportunities of forming a judgment, that the whole machine worked harmoniously and efficiently. I do not mean to contend that road making *per se* involves any special scientific attainment, but at the same time I have always considered it a great advantage to a department of such paramount importance as that of the roads, that it should be under the exclusive control of a functionary who should be able to concentrate his entire attention upon it, and thus become conversant with its details in every point of bearing, whether physical, financial or scientific. Thus circumstanced, an intelligent and active superintendent, such as the late department in question had invariably boasted, was always in a position efficiently to meet an emergency; to avert an impending danger, or to hurry through some important portion of work by concentrating labour upon a point, while at the same time being intimately acquainted with the qualifications of his subordinates, he commanded the very best opportunities for benefiting the public service by bringing forward the able and deserving, and getting rid of the idle and inefficient. In an evil hour, evil at least as I deem it, this excellent department was abolished, and the trunk roads are now parcelled out in charge of the several district engineer officers through whose limits they run, who have to keep them in order, and report upon them not direct to Government, but through the chief of the department of public works. This arrangement might be unobjectionable if things were in a more advanced state in the provinces, but as past neglect of public works has created a demand upon the time of engineer officers, which absorbs their every minute, it is quite impossible that they can give that share of their attention to the trunk roads which their paramount importance demands, and the consequence is, that they suffer neglect and fall into disrepair. In the district which I had lately charge of, and which comprised between 4,000 and 5,000 square miles, I can testify with regret that this was the case; and on one section of a trunk line, which being situated in a remote part, I was never able to visit; the charge of the work fell entirely into the hands of a European subordinate, who became intemperate and inefficient; wasted or misappropriated the public money, and Government were finally compelled to grant a considerable sum specially to bring the road, a very important one, into trafficable order. Yet this unfortunate man had, apparently, worked honestly and well under the road department, and brought a good character from it.

5366. Mr. *Willoughby.*] The change as to having a distinct department for the roads was adopted of late years, was it not, after much discussion, and a great deal of consideration by the authorities?—I never heard anything about it.

5367. *Chairman.*] With regard to the district roads, which are the feeders to these great trunk roads, in what state are they?—They are in a very good state, considering

considering the circumstances which exist. There are many parts, I confess, where they have scarcely any roads at all; but we have done wonders within the last few years. Captain *J. Ouchterlony.* 10 June 1858.

5368. Are there any roads that are kept up by local authorities, or by those who are resident near them?—Only by those who have plantations.

5369. Are they all kept up by Government?—Yes; the natives have a dislike to spend money upon roads, under any circumstances whatever.

Martis, 15° *die Junii,* 1858.

MEMBERS PRESENT.

Mr. Gregson.	Mr. Kinnaird.

WILLIAM EWART, Esq., IN THE CHAIR.

Captain *John Ouchterlony,* called in; and further Examined.

5370. *Chairman.*] WILL you give the Committee any information you possess regarding the canals of Southern India?—The canals of Southern India are divided into two classes, one class consisting of canals for the purpose of irrigation, and the other of navigable canals, or canals for the purpose of traffic; the canals for the purpose of irrigation have an important bearing upon the question of colonization, because it is by their extension and increase that a higher development of the resources of the country, at a comparatively trifling cost, may be looked for. A few remarks may perhaps be not out of place here, to explain the nature of these important hydraulic works. Of course, in every river there is a certain fall in the bed, which is more considerable where the country is hilly than it is in low champaign tracts; suppose, therefore, that we have a river with a fall of 10 feet in a mile, it is clear that if a canal be led off from any point on the bank of that river, we shall, after we have proceeded a mile into the country which the canal traverses, have the water flowing 10 feet above the level of the river at the same distance down its course. Or supposing that a fall, say of one foot per mile, is given to the canal, we should, if we prolonged it, gain a level for the water of nine feet for one mile, 18 feet for two miles, 27 feet for three miles, and so on. When points have been attained whence tracts of cultivable land can be flooded or irrigated by the canal stream, the water is let off over the fields by sluices, and the system of irrigation proceeds. As, however, the period of time during which the rivers of Southern India are in flood is limited to a few months, after which the level of their waters falls considerably, it becomes necessary to construct dams, called anicuts, across their beds below the mouths of the canals, by means of which the level of the water is maintained and the period of irrigation protracted. These canals also serve another important purpose, in enabling us to garner up the flood waters of the rivers which would otherwise escape, as indeed they do now to a much greater extent than is desirable, into reservoirs called "tanks," which are established along the line of a canal wherever a favourable locality offers for throwing a dam or embankment across a shallow valley, and so forming a reservoir in the upper part. It is by the extension of similar works of irrigation that we shall be enabled to improve the condition of the country, both by augmenting the revenue, and improving the condition of the people; and it may almost be said that the extent to which the system may be carried, and the cultivation of tracts of land now lying waste brought about, is unlimited. At the present time there are, no doubt, a great number of Captain *J. Ouchterlony.* 15 June 1858.

Captain *J. Ouchterlony.*

15 June 1858.

these tanks in various parts of the country in a state of decay and ruin, and which it would be for the interest of the Government to restore. We have, however, now in Southern India a vast extent of irrigation canals in operation, the maintenance of which involves a considerable outlay; and though I must admit, in past years there has been testified a great want of vigour in pushing them on, still more has been done in this respect than seems generally understood in this country.

5371. Can you give the Committee any notion of the aggregate length of them?—No, I have no returns to refer to; but the aggregate length must be positively enormous. The river Godavery alone has many hundred miles of channel connected with it; and the river Cauvery has also innumerable channels led off it from all points after its descent from the hilly, upland country of Mysore, into the more level lands of Salem, Coimbatore, &c. This river subserves a most important purpose in supporting the cultivation of the rich tracts of land dependent upon it; and it constitutes one great source of the national wealth, both as regards the Government and the ryots.

5372. Are these ancient works?—In the upper part of the Cauvery the canals are ancient works, but as we descend its course the greater part of the works on the lower levels are found to have been constructed under the auspices of the present Government. On the Upper Cauvery, however, there are still many works, constructed by former princes of the country, which are now in decay, and it is much to be regretted that they should be suffered to continue in that state. I may allude to one which the records show must once have served a most important purpose in regard to irrigation. It is called the Nerinjepett Anicut (*the Witness indicated the site on the map*); and from the river above it great channels were led on either side of the river, irrigating lands to a great extent in Salem and also in Coimbatore. The lines of these canals are still traceable, and the debris of the dam, consisting of blocks of quarried granite of prodigious size, lie scattered about the bed of the river, testifying to the vast resources, whether of labour or capital, which must have been brought into operation to complete this once magnificent work. Its site has been visited by almost every engineer officer of experience, who has served under the Madras Government, and many projects for its restoration have been submitted, but up to the present time no step has been taken to carry any one of them out. I would particularly desire to draw the attention of the Committee to this work, because it has for many years past excited great interest and attention amongst us in India, and we have considered it extremely hard, after all the pains bestowed upon the consideration of the subject, and the preparation of the estimates, that the Home Government should never have entered into the question, and adopted one or other of the projects which were submitted to them. The scheme which I myself ventured to lay before the Government appeared (of course in my own estimation), to be a feasible one, and to involve no incommensurate outlay. It was simply to restore the broken parts of the dam by brickwork, employing the scattered stones only as auxiliaries, for it seemed hopeless to attempt to raise, with any regard to due economy, the enormous blocks which had formerly constituted the body of the work, and which had been cramped together with large bars of iron, though now lying in confusion over the bed of the river, as if they had been shattered and rent asunder by some mighty work, with its canals, were restored, a vast extent of land now lying waste could be brought into cultivation, the revenues would be very greatly increased, and a far higher development of the natural resources of the country would be exhibited. I may also mention that when I was employed in preparing my project to lay before Government, the manager of the East India Iron Company, told me that if I could get sanction from Government to rebuild this anicut, he would at once erect iron works for the smelting of the ore which abounds there; the effect of this would have been to give a vast amount of employment to the population of the district, to have cleared away the jungle which abounds there, and which is now dreadfully infested by tigers and other wild beasts, and to have given a means of access to this undeveloped country, not only to natives who would have been glad to cultivate the lands cleared by the iron company's charcoal burners, but to European settlers and commercial agents. A very magnificient work now claims notice, called the Coleroon Anicut, constructed under the auspices of the present Government, and productive of incalculable benefit not only to the revenue, but to the people of the adjacent provinces,

Captain *J. Ouchterlony.*

15 June 1858.

provinces, particularly Tanjore. I particularly wish to point out to the Committee that it is by the extension of such works, by constructing dams across our rivers, and leading off their waters to irrigate tracts of lands at present unwatered during the season of drought, that the welfare of the people can be the most readily promoted, the revenue most materially and economically augmented, and the entire aspect of the country brightened and revived. There is scarcely a river on which more of these dams might not be constructed with advantage, and channels led from their banks, without unduly interfering with the resources of those existing lower down the stream. In the upper part of the Cauvery there are many old channels to be seen, for the extension of which many projects have been laid before Government, but little or nothing has been done, at least as far as my experience as engineer of the district enables me to say. The reason for refusal to carry out costly schemes of this nature was always understood or assumed to be that there was not sufficient surplus revenue to devote to them; a position which appeared to us, older and more practical servants of the State, injudicious. To us it seemed that it would have been far more to the advantage of the country that money should have been borrowed for the purpose of carrying out such works, works of a character promising to make their returns so considerable, that in the course of a few years the entire expenditure incurred on them might be account realisable; but if the period of repayment were to be more protracted, it seemed to us unfair that the current revenues of the country (the current capital as it were) should be laid out on works of irrigation, the full beneficial effects of which could not be experienced by the present generation; who ought therefore to be taxed only for the interest on the outlay involved by their construction, and for the cost of maintenance, while the burthen of repayment of the invested capital should rest on a succeeding and more fortunate one. It seemed and seems but reasonable that the surplus revenue remaining, after the annual current expenses of the State have been defrayed, should be laid out on works of absolute and general improvement, such as roads and canals, by means of which alone the natives could extend the trade of the country, bring produce from the interior to profitable markets, and develope, step by step, the rich resources of the empire. Reverting to the subject of the River Cauvery, I beg to remark that, as we approach its mouth or mouths, on the more level country, the system of anicut irrigation adverted to becomes less applicable. Here, however, it is often painful to witness, during the freshes, the escape and waste into the sea of enormous volumes of fresh and invaluable water which, if garnered up, might irrigate vast tracts of neglected land, and spread fertility and prosperity far around. I do not, of course, mean to say that all the water which rolls down such a river could be saved; this would be impossible; but it is undoubtedly true that a large amount in this and all the rivers of Southern India that might be hoarded for irrigation purposes is suffered to run wastefully into the ocean; and I think it is very much for the interests of the State and of the people that this question should be seriously and thoroughly looked into. I may point out many other rivers, great and small (*refers to map*), which occupy highly important positions in regard to irrigation, but it would take up too much time to go through them *seriatim*. At the same time I desire to state, that although unquestionably much in regard to their due employment and development as means of improvement that should have been done has been left undone, a far greater amount of work has been performed in this respect than seems generally understood or admitted in this country.

5373. Do you suppose that the formation of these works would be undertaken by private capitalists?—Yes; I should say there could be no more legitimate mode of constructing them than by means of private companies.

5374. Mr. *Mangles.*] Do you suppose there is any country in the world in which a great deal is not left undone which ought to be done?—No, I imagine not. Having thus obtained the attention of the Committee to canals for the purpose of irrigation, I would desire to refer to the other class, canals of communication or navigable canals, commencing with those on the western coast. Here the extensive backwaters which occur present an easy and economical means of establishing lines of traffic through the districts, lines which, from the nature of the country, it would be difficult and expensive to establish by land (*the Witness referred to the map*). Canals are cut to connect these backwaters, and thus it will be seen that from a point considerably south, as far as Buddagherry to the northward, an excellent artery for commerce, and one of very eco-

Captain *J. Ouchterlony.*

15 June 1858.

nomical application, is supplied. I cannot, however, say that it is in the available or navigable condition which it ought to boast, as much remains to be done in the way of deepening and embanking before it can be pronounced freefrom obstructions throughout all seasons of the year. Before I quitted the district last year, I sent in several projects for the extension of these canals, or rather for the perfecting of them, as a line of transit throughout that portion of Western India; and I had every reason to suppose they were favourably received and that they would have been carried out but for the financial difficulties which afterwards intervened. Attention should, however, be kept upon the subject, and as soon as possible a large sum of money should be devoted to the purpose indicated; for at present the water in the cuts or canals is so shallow that boats drawing only two feet of water get aground, and require much labour to be floated again. There is already a vast trade flowing down to Cochin which is increasing monthly, and which would be vastly augmented if more certain means of transit existed. The system of water communication I have described ceases when we arrive at the more hilly part of the coast (*referring to the map*), and here it becomes necessary to resort to roads. The roads along the western coast are not, generally speaking, in a good state, and it is preferable to carry native produce, if to any distance, by coasting vessels, though at considerable inconvenience and expense in unloading, loading, boat-hire, &c. It will hence become a question whether it would not be better to prolong the communication from the terminus of the canal, by means of a cheap railway, rather than to expend money upon a common cart-road. This bears, however, upon a very important question, which I adverted to on a former occasion, connected with the selection of Beypoor instead of Cochin for the terminus of the Madras Railway, a selection which I have always strongly condemned, and which I am gratified to learn is now considered reprehensible by the home authorities of the railway company. It is not yet too late to convert the line to Beypoor into a branch, and to make that to Cochin the main trunk; and I think the subject should be taken into consideration with as little delay as possible. I will now proceed to give a brief description of a very important work now in progress, the Coast, or Coromandel Coast Canal. I speak of this work with some reluctance, because it is one which I ventured to oppose when my opinion as to its advisability was, in common with other engineers, asked. I fully admitted that for local purposes, such as the supply of Madras with firewood, salt, and other cheap commodities, it had its importance; but I objected that at a time when money was withheld for the improvement of our roads and for works of more general and decided utility, a very large sum should be devoted to an undertaking the beneficial results of which could not but be matter of speculation, and which, under any circumstances, must always have the natural and most economical highway of the sea on the one side, and a tolerably good cart-road on the other, to compete with it throughout its entire length. I was also unable to perceive the advantage of providing at a great cost means of transit to Madras for goods from ports in the south, such as Negapatam (*referring to the map*), Tranquebar, Cuddalore, &c., which presented quite as many advantages for the shipment or landing of merchandise as the metropolitan port, all having in common an open roadstead for vessels to lie in. I also considered that as many considerable rivers crossed the proposed line of this canal (*referring to the map*), rivers which, rising many feet in a few hours, came down with great velocity and in great volume, and hence would be likely to disturb the traffic, both by the current produced and by the sand deposited on the bed of the canal, it would be difficult and most expensive to maintain the line as one of constant and practical communication. I believe, however, my doubt as to the advantage of providing a means of transit to induce a man who had 1,000 tons of sugar, or other produce, ready for shipment at Porto Novo or Cuddalore (*referring to the map*), where he could put it on board a vessel with perfect ease, to bring it all the way up to Madras at a certain cost, and great risk of damage and loss in loading and unloading—was met by the argument, that in seasons of famine it would be possible by its means to bring grain for the supply of the suffering district from others which had abundance, with a certainty as to time which neither the sea nor road could ensure. I confess I did not consider this argument *ab extremis* of sufficient force to countervail all the opposing reasons; and however vexatious it was to see a large sum, raised, as it were, by a levy upon other more urgent and popular works, spent upon a scheme the main object of which appeared to be to centralise all the trade of the eastern country in a port which, as I have already remarked, boasted no local advantages over those possessed by almost all the other east

coast

Captain *J. Ouchterlony.*

15 June 1858.

coast ports, there was no remedy, for the work was sanctioned, and is now in progress. All the objections I have urged were no doubt satisfactorily over-ruled when the project was laid before the Home Government; and therefore it may seem rather presumptuous in me to revert to them and to adhere to my opinion, that although at some future period of financial prosperity it might with possible propriety have been undertaken, it should not have been allowed to absorb a vast sum of money which an opposite state of things rendered it impossible to spare out of the Exchequer, except at the expenses of other and more important public undertakings. I may remark that to the French Government the canal will be very valuable, for it will greatly benefit Pondicherry by increasing its sea-borne trade; but this will be an evil for Madras, as the trade that flows to Pondicherry cannot fail to be that which would otherwise reach the British port. Already Pondicherry is a favourite place of resort to traders; there appears to be a greater degree of commercial freedom there, if I may use the expression; and a great number of highly respectable native merchants, as well as Europeans, reside there, and carry on a flourishing trade.

5375. You alluded on a former occasion to one of the harbours of Southern India; will you give the Committee a description of those with which you are acquainted?—The most important harbour in the south is Cochin (*the Witness referred to the map*), regarding which I may mention what I learned from a leading merchant of the place, Mr. Oughterson, that some years ago, I do not exactly remember the number, but I think it was eight, the total of exports did not exceed about 50,000*l.*; while in the year ending 1st January 1857, the exports from Cochin amounted in value to 500,000*l.*, yet I am sorry to say I do not believe 500,000 farthings have been laid out on the improvement of the port, although, in my humble opinion, it possesses wonderful resources for the promotion of commerce. The country in which Cochin is situated belongs to the Travancore Government, and our territory there consists merely of the piece of land on which the town is built; I believe, however, that more land could easily be obtained by treaty with the rajah. The harbour of Cochin deserves very considerable attention, and the commercial community are urgent that improvements should be attempted, most merchants engaged in trade in this part considering that a very great mistake has been made in preferring Beypoor as a coast terminus for the railway to Cochin. When I was engineer in charge of the district, a year ago, I was called upon by Government to draw up a report upon the harbour of Beypoor, before doing which I consulted all the parties whom I conceived to be best acquainted with the subject, such as the European merchants, maritime and coasting traders, and natives of the place. They all agreed with me that it would be impossible by any reasonably economical or practicable means, to effect such an improvement as should secure deeper water than eight feet on the bar, which impeded the entrance into the estuary called the harbour of Beypoor. It would take up too much of the time of the Committee to enter into an explanation of the local causes which operated to create this impression, but I cannot refrain from mentioning my gratification at reading in an Indian newspaper yesterday that my view of the question had been confirmed by a report made by the present consulting engineer for railways, to the effect that the limit he considered assignable to the capacity of the harbour of Beypoor was what would be due to nine feet water on the bar, which, it was hoped, by constructing groins or jetties, would be attained.

5376. You consider Cochin a more desirable harbour?—Decidedly; for it has 14 feet of water on the bar now, admitting of vessels of 600 and 700 tons burthen going over it, to lie for loading in a secure and land-locked estuary (I may mention that a fine vessel of 1,400 tons burthen was built in Cochin, and launched in 1855 or 1856, and safely towed out to the open anchorage over the bar). By a few simple works I would direct the full strength of the stream, which runs here at a steady rate of two miles an hour almost entirely through the dry season, upon this "bar" or sand bank, and by the aid of an appliance to agitate the sand continually I anticipated that the loose sand of the bank would be caught by the inland or freshwater stream, and distributed forward clear of the site of the bank, and that the water over the bar would thus become permanently deepened. At Beypoor similar favourable circumstances are not presented; at Cochin there is no single river but a lagoon or estuary, fed by numerous freshwater streams; and the consequence is, that in the driest season there is still always a current setting out through the mouth seaward. But at Beypoor

Captain *J. Ouchterlony.*

15 June 1858.

we have an opposition of the action of nature's operations, which works unfavourably towards the end desired, that of permanently deepening the embouchure of the river. The river there, as in other ports of the west coast, is full only during the height of the south-west monsoon, having its rise in the hills which, being near the coast, catch the rain-laden clouds blown inland from the ocean. As the river approaches its mouth in full volume, it is met by the surge and swell of the sea, setting in and breaking upon the western coast with a force and fury which only those who have witnessed it during a south-west monsoon can estimate. The result of the impact of the two bodies of water is that the velocity of the river stream is comparatively neutralised; the fresh water has difficulty of escape, and spreads out inland near the mouth, forming the back-waters or estuaries so common on the coast; while the sand and silt brought down by the river, and also that thrown up by the ceaseless beat of the ocean waves, becomes deposited near the spot where the two forces become neutralised, and a bank or "bar" is formed. If the action of the river current could be prolonged in duration beyond that of the sea-swell, it might be brought to bear no doubt beneficially upon the bar; but this is unfortunately not the case, for when the south-west monsoon subsides the rains cease, the feeders of the river dry up, and the velocity of the current becomes trifling.

5377. Mr. *Smith.*] Could a railway be made to Cochin?—Easily. Land would be required for the purpose; but the Travancore State would, no doubt, willingly concede all that is required, as the authorities have evinced a great desire to have the Madras Railway brought to Cochin; and the mercantile community there, a very important body, are urgent for the measure.

5378. Mr. *Vansittart.*] The harbour of Cochin would be more convenient than Madras for the purpose of landing and embarking troops, would it not?—Yes; except during the south-west monsoon. Cochin is much nearer the Neilgherries; and if my idea of establishing a great military depôt there is carried out, Cochin will be in every respect the best port for debarkation. The next ports deserving notice are Tuticorin, Negapatam, and Cuddalore; at this latter a small estuary or harbour exists, and considerable interest attaches to it, owing to the East India Company having here, I believe, established their first trading factory in India. Here I may mention that I have a grievance. In 1853 I protested against the execution of certain works called works of improvement, projected by another engineer, and the then Governor-General, Lord Dalhousie, supported my views; my objections, however, were overruled, and though I was spared the pain of constructing myself works which I disapproved of, they were carried out by another officer, and completed. The project proved a total failure, and about 60,000 rupees were thus absolutely wasted, at a time when money was urgently needed for the repair of the roads, and other works of improvement. Cuddalore offers great facilities for the export trade of this portion of the country (*refers to map*), but as a harbour, it cannot be considered of any great importance, as vessels drawing, if I remember rightly, more than eight feet, cannot cross the bar; but there is a good roadstead, and ships can lie off the port and receive their cargoes with as much facility as at Madras, or even greater, because cargo boats can be laden in the harbour in smooth water, and carried out to the anchorage clear of the surf. The port of Madras is too well known to need description here; the chief improvement it stands in need of is the construction of a pier or jetty, a measure which has often been under the consideration of the Home Government, but hitherto, owing to financial difficulties or other reasons, it has not been carried out. At one time, a private company was formed for the purpose, but it was dissolved without effecting its object, though I do not now remember what the cause was; difficulty in raising the capital, I believe. We now proceed northward, to Masulipatam and Coringa; at the latter place Government have carried on considerable works to improve the port, and I believe with great success; but as I am not practically acquainted with the locality, I cannot describe them.

5379. *Chairman.*] You alluded, in your reply to a previous question, to the importance of the rivers of Southern India in a revenue and commercial point of view; will you state whether you consider that the utmost is done to develope their resources for the benefit of the people and of the state?—I must say I do not consider the utmost has been done; I consider the present system of administration a defective one.

5380. In what respect defective?—Because it brings into hostile operation interests which ought not to be conflicting. There ought, in my opinion, to be one

one officer in charge of each important river, and of all the works of irrigation and conservation constructed upon it. I would particularly allude to the Cauvery. Here one officer has charge of a district which embraces a portion of the right bank, while another officer superintends the country bounded by the opposite or left bank. The stream happens to take an unfavourable set upon the left bank, and to divert it a groyne or jetty is thrown out at the point assailed. This soon produces a set against the opposite bank, assailing perhaps a point near the head of one of the irrigation canals which I have described, and threatening its stability. The people holding the land on that side immediately come to their engineer and complain of the conduct of the enemy, and demand that their operation should be counteracted. A groyne is then thrown out on their side and a like effect produced, thus constituting the natives of the opposite districts absolute enemies, as though they were French opposed to Russians, entailing much needless expense to Government and much injury to the river itself, both by the undue wear of its banks and by the formation of shoals and banks in its bed, by which its course becomes impeded and contorted. I suggested long ago to Government, or the ruling Board, that one officer should be put in absolute charge of the river in question, the Cauvery, to remedy this evil by having all the public works on it under his exclusive control, but my recommendation was not attended to. Possibly the reason was that we had not enough of engineers, which I consider has ever been one of our greatest deficiencies in India.

5381. Have you enough engineers now?—By no means. We have not one-third the number we could find abundant employment for, and whose salaries would be repaid a hundred-fold out of the profits arising from works which they would be able to construct.

5382. Are any tolls levied by Government on the roads and canals of Southern India?—No; and I consider it a great boast that we have not; that all our roads and canals are free. The question as to the propriety or advisability of levying tolls according to the system obtaining in Ceylon was raised a short time back, and my opinion was asked, in common with other engineer officers. I protested against the imposition of tolls on roads, arguing that we owed good roads as a great debt due to the people of India; and that until that debt had been discharged by restoring decayed lines and putting existing ones into a thorough state of efficiency, we ought not to impose a tax or impost upon their use.

5383. Have you any European contractors who undertake the construction of public works in India?—No, and I consider that this involves a very fine opening for men of skill and small capital emigrating from this country. I think such a class would be found of the greatest use to Government; and my opinion was, long ago, that we should be far more advanced if we had had proper contractors to undertake the construction of works sanctioned by Government, instead of fettering the engineer officers with the engrossing cares and responsibilities of superintending them. If we could depend upon a contractor for the execution of our works, we, the engineers, could devote ourselves much more to the consideration of important projects for the improvement of the country and for the development of its vast resources.

5384. Why do not British contractors go out there?—Because there has been no encouragement given to them, if not a decided feeling of hostility displayed in past years. I remember that the question was mooted many years ago, and that many experienced men negatived it at Madras.

5385. Do you mean that Government negatived the employment of European contractors?—I do not know that it was the Government; I think it was chiefly on the part of members of what was called the Board.

5386. Mr. *Willoughby.*] Have Europeans ever offered to take contracts for the construction of public works?—I cannot speak as to that having been the case; but I remember there was a great question as to inviting them.

5387. Mr. *Mangles.*] They have come on the railway line, have they not?—Yes; but that is a different branch altogether; I allude to Government or public works.

5388. *Chairman.*] I understand you to say that there is a great want of civil engineers in India?—Most decidedly; of military engineers we have, perhaps, a sufficient number, but we want an increase of engineers for civil duties. At present the difficulty in the way of employing civil engineers fresh from England is, that being unaccustomed to the climate they could not bear the constant exposure to the sun and weather, nor withstand the tendency to disease

Captain *J. Ouchterlony.*

15 June 1858.

engendered in the feverish spots which engineers have to visit in the discharge of their duty. I think that men of mature age, and with the experience which would make them suitable for Government employ, would soon break down in India; I am therefore of opinion that, looking to the backward state of works of improvement at the present time, it would be better for the interests of the state to increase largely their corps of disciplined engineers, so as to leave the more experienced of the officers less fettered by minor duties which could be undertaken by juniors, and hence more available for investigating scientific and important projects connected with the advancement of the commerce and prosperity of the country.

5389. You mentioned that good beer might be manufactured on the Neilgherries for the supply of the troops and European settlers; can you inform the Committee whether any step was taken by Government to carry out your views?—I wrote a report on the subject, I think in 1848 or 1849, by order of the Madras Government, after the success of the experiment had been proved by the reports sent in to the Commander-in-Chief by the 15th Hussars, 51st Regiment, 94th Regiment, and others; and I accompanied it with a complete specification of all that would be required from England to enable me to establish a Government brewery on the hills. These documents were sent home to the Court of Directors with, I was given to understand, the strong support of the Madras Government. A reply was at length received from the Court, to the effect that they "would reply to the despatch (about the brewery) in a separate letter." But that separate letter never came, and from that day to this I have never heard a word more upon the subject. A private party has now taken up the speculation, and looking naturally only to his own profits, he, I believe, uses ingredients, such as gentian instead of hops, which impart a deleterious quality to the beer, which is however largely purchased by the troops; and I have been given to understand that the officers complain that its use injuriously affects their men, whereas the beer which I brewed for the Government experiment was pronounced by competent judges of all positions in life to be wholesome and excellent; and my object in desiring to see the scheme carried out upon a commensurate scale was that Government should be in a position to manufacture for the European soldiery a description of beer which, whilst it should be nourishing and wholesome, should be so cheap that it would be within the means of all ordinarily prudent men to satisfy with it the natural craving they have in a tropical climate for liquids, and induce them to forego the use of that most potent and deleterious of all distilled spirits, native arrack. It is well known that to arrack dram-drinking may be attributed the loss or ruin of one-half the fine young men who annually drop away from the strength of the army in India.

5390. Mr. *Willoughby.*] What was the date of the report to which you refer?—I cannot exactly remember; it may have been 1849 or even 1850. The date of the Neilgherry Report, in which the subject of beer is referred to, is 1848. For an opinion as to the quality of the beer, I might refer to a Member of this House, the Earl of Gifford, who was on the Neilgherries, and who tasted the beer brewed in my experimental brewery, and pronounced it as good as some of the best ale served in the common hall at Christchurch.

5391. Mr. *Smith.*] Did you ever try the experiment of growing hops?—I did, as I think I mentioned in my evidence the other day. The Court of Directors sent me out the hop-sets, and the locality for planting them was approved of by an accomplished agriculturist, who had been sent out by the East India Company to superintend the Government gardens at Ootacamund. The plants sprouted and grew; but, as I have before stated, they were dug up and thrown away during my absence. General Aitchison, of the Royal army, who was well versed in agricultural matters, saw them in my garden, and considered the experiment so far successful.

5392. Mr. *Gregson.*] But the hops never came to maturity?—No, they did not, for the reasons I have mentioned; but the experiment, so far as it went, was considered by all who saw the hops growing, successful.

5393. *Chairman.*] Can you give the Committee an estimate of the cost of the manufacture of beer on the Neilgherries?—The cost was 28½ rupees, or 2*l.* 17*s.* per cask, on the Neilgherries; and 37 rupees, or 3*l.* 14*s.*, if delivered at Bangalore, a station 200 miles off.

5394. A cask of how many gallons?—Sixty-six gallons. The beer could thus have

have been issued to the troops on the hills at a cost of little more than 10*d.* per gallon, and at Bangalore of 15*d.* per gallon.

5395. Would would be the relative difference between the price of your beer and English beer?—The price of bottled English ale on the Neilgherries is about 14*s.* per dozen quarts, say 2½ gallons; but beer in the cask would, I think, only cost about 3*s.* per gallon. If this is correct, 3½ gallons of the Neilgherry beer could be purchased for the cost of one gallon of English beer. Government are, however, now sending up to the hills large quantities of English porter, which is issued to the troops at the lowest possible rate; I do not, however, know what that rate is.

5396. You mentioned, in your former evidence, that a considerable increase had taken place in the immigrant population of the Neilgherries of late years; can you state what that increase has been?—In 1848, when my census was taken, after the survey, there were—

1848:

Europeans and East Indians - - - - - - -	496
Hindoo, Mussulmaun and Pariah immigrants from the plains	8,887
TOTAL (exclusive of the aboriginal hill tribes) - - -	9,383

In 1856, when I had to make up returns with reference to my project for carrying a branch of the railway to the summit of the hills, it appeared that the population was as follows:

1856:

Europeans snd East Indians (including 400 men of the 74th Highlanders) - - - - - - - - -	1,500
Hindoos, Mussulmauns, and Pariahs from the plains - -	55,000
TOTAL - - -	56,500

5397. Mr. *Willoughby.*] Do these numbers include the aboriginal races?—No; exclusive of them.

5398. *Chairman.*] These are all emigrants?—Yes.

5399. Where do they come from?—From the provinces surrounding the Neilgherries, Coimbatore, Malabar, Canara, Mysore, &c. I may add, that in making my last estimate of their numbers, I was assisted by the chief native Government authority, who was better acquainted with the subject than I was, and he considered my estimate too low.

5400. You have a map of the Neilgherries, have you not?—I have (*producing it*); it is one published by Government, reduced from my survey of 1847; it exhibits all the features of the hill districts, the localities of settlements, villages, &c.

5401. Are you acquainted with the resources of the valley of the Nerbudda and the provinces adjacent?—Not personally; but I remember, as long ago as 1840, seeing in Calcutta some beautiful Nerbudda coal, and experimented upon it in conjunction with Dr. M'Clelland and other scientific men; the report which was made upon it was, that it was of a most superior description. I have a letter here which contains much valuable information regarding the resources of the Nerbudda valley. (*The Witness handed in the letter referred to, dated Jubulpore, 3 May* 1858.) *Vide* Appendix.

5402. What was the description and quality of the coal alluded to?—It was a description of coal peculiarly favourable for steam purposes, what is usually called good steam-coal; it was very superior to any coal raised in the vicinity of Calcutta (Burdwan) or imported from the eastward. The difficulty which I always understood there was in bringing the Nerbudda coal to market lay in the existence of rapids in the upper part of the river, which rendered its navigation impossible; but if that could be obviated by the construction of a railway or canal, so as to escape the rapids and bring the coal basin into connexion with a navigable part of the river, it is believed that the coal could be delivered at the mouth of the Nerbudda at a comparatively insignificant rate.

5403. Is there not a railway coming very near to that deposit of coal?—I believe

Captain *J. Ouchterlony.*

15 June 1858.

I believe the Bombay line will pass near it; but I was not aware that it was to traverse the valley of the Nerbudda. The coal requires a means of direct transit to the coast, and not upwards; at least not so much.

5404. I think you have said that Pondicherry is much more favourably circumstanced with a view to the development of the commercial resources of the country than Madras?—All I can say is, that that is my impression, gleaned from a residence on the spot during some months. The police regulations there were very good, and the natives were of a better class; and it appeared to me that between the European residents and natives at Pondicherry there was a better understanding than there was in other towns.

5405. Can you assign any cause for that?—The only cause that I can assign for it is that, as it appeared to me, the Pondicherry government displayed more amenity both towards the Europeans and towards the natives than our Government did: that is a mere impression of my own.

5406. Do you mean that it is a less exclusive government?—Yes, I think all the Government functionaries were more accessible than ours; there was less of hauteur and pride, if I may employ the term. The Pondicherry functionaries are very much worse paid than ours, but I do not know whether to assign that as a reason.

5407. What was the state of the police in the part of Southern India in which you have been?—We have two distinct forces; the one the municipal police, the other the rural or Mofussil police. The condition of the former at Madras was most excellent. I imagine it would bear a comparison with the police of any colony under British rule; its efficiency was, I believe, entirely due to Mr. E. F. Elliot, whose reputation as a police administrator places him far beyond my praise. The Mofussil police is generally bad; I may go further, and say it is excessively bad. Many reasons might be assigned for this; one is, I think, that the system on which it is recruited is very defective; it is a system of favour and patronage, and not of merit or efficiency for the public service. I imagine that scarcely one peon gets into the rural police without paying a fee or douceur to one or many of the native subordinates who have influence in their appointments. Mere boys may be often seen with a belt or badge on them; and if inquiry is made, it is found he represents his father or brother, or some relative who is too infirm to perform service. Like all other institutions in India, however, this is improving; and I have been given to understand that orders have been sent to organise a rural or Mofussil force of police upon an entirely new and elaborate basis. I am not informed as to what this is, but I certainly think that it will not be really useful or trustworthy unless the European element is introduced into it in the form of a small section of Europeans to each native battalion, or, as it were, a cohort of Europeans to each brigade of police.

5408. You agree, then, in the opinion which has been expressed by other witnesses, that the introduction of European superintendents into the police force would be attended with benefit?—I do; but I would also have a body of at least 50 men to every battalion, to serve as a sort of body guard at each civil station, to be in immediate charge of the treasury, the arms, ammunition, gaol, and other public buildings and State property. At present, at least in many stations that I am acquainted with, there is no nucleus of force nor stronghold to fall back upon, in case a calamity similar to that which has recently fallen upon India should again overtake us. This reflection leads me to propose, that wherever it is practicable the "Cutcherry compound," as we call it, or the inclosure of ground round the collector's house of public business, should be inclosed by a simple loopholed wall, with a small banquette behind it, and the single entrance closed by a flanked gate. By a very simple arrangement of such buildings as it would be advisable to bring within this inclosure, as the treasury, court-house, barrack for Europeans, store, and perhaps the church, viz. by disposing them in the angles of a square, and connecting them by walls carried out at some distance down their length and breadth, a certain portion of each would project so as to give a flanking fire to sweep the faces of the inclosure; and as brickwork only costs about 2½*d.* per cubic foot, it will be seen that this scheme would involve little expense. Even if it did so, it will be admitted that the security afforded to the European community, and the protection to public property assured by the arrangement, which provides a place of sure refuge in case of an alarm, would amply counterbalance any cost in reason. Where the public buildings have been so completely destroyed, that an entire renewal becomes necessary, I think it would be well

that

Captain *J. Ouchterlony.*

15 June 1858.

that some such system be acted on, and that a standard plan be arranged for general adoption and guidance. It would really constitute every Cutcherry compound a sort of fortress, in which also it would be well to keep in store two small field howitzers with ammunition, the European part of the force being trained to serve and work them.

5409. How would you raise the European part of the force?—I would select them from amongst the most steady and well-conducted men of the European regiments serving in India, giving them superior pay and advantages in regard to barrack accommodation and to pension, which I would fix at a considerably higher rate than for the line. I would also, after the lapse of a certain term of service, give the pensioned men a small grant of land on the hills, a privilege which is highly prized by European soldiers, and I would aid them in cultivating and settling on it, by which means they would be retained in the country, and would be available at any juncture to quell revolt or repel invasion.

5410. Have you had much experience in the administration of justice in the south of India?—I have often attended the proceedings in the native courts.

5411. Have you formed any opinion as to the mode in which justice is administered there?—I have fallen into the popular opinion, that it is very defective.

5412. In what respect?—In the deficiency of judicial knowledge. I think that we ought to have a more highly judicially educated class of civilians; I think that we ought not to have the two classes, the judicial and the revenue, mixed up together as they are now.

5412*. Do you think that the administrators of justice are not sufficiently judicially educated?—I think they are not sufficiently judicially practised or educated; and that the revenue and judicial branches of the service should be kept distinct, *ab initio.*

5413. Have you had opportunities of observation with regard to land tenures or transfers?—To a certain extent. In the districts with which I am chiefly acquainted the tenure is what is called "on puttah." A puttahdah is really little other than a yearly tenant at will, his lease or puttah being renewable each year, when the collector or his representative goes round the district to "settle" the revenue, or as it is called "on jummabundy," when, on the tahsildar representing that a ryot has well and duly paid his "kist," he receives a paper stamped with the collector's name, in virtue of which he continues in the tenancy of his land until the next "jummabundy," and so on. This arrangement is perfectly satisfactory to the natives, because the Government have always kept good faith with them, and they look upon it, therefore, as a secure holding; but where Europeans can only secure the land on the same terms, they do not consider it so satisfactory, as they could not mortgage or securely transfer, or with any confidence erect buildings or otherwise lay out money on land so held. It is certainly a discouragement to Europeans that they can only obtain land on other terms than those of tenancy at will; and I imagine the only satisfactory way of settling the question, and of inducing European capitalists to invest money in the soil, would be to let settlers have land in fee-simple.

5414. Do you mean to say that the tenure is a tenancy at will?—Yes; it amounts in fact to that; we hold our lands, except those in the cantonments, in the same way. A fee is given to a native puttahdar to transfer his puttah to an European settler, who then continues to pay quit-rent annually on it. The burghers, the largest aboriginal tribe on the Neilgherries, hold their land by puttah tenure. You will observe the statement with regard to puttah (or putteeum) in my work on the Neilgherries. That was only a report of mine to Government, and as they published it, and not me, it may, I think, be assumed as correct, as otherwise it would have been altered. *Vide* Appendix.

5415. Mr. *Gregson.*] With regard to the canals which you have recommended, would they, in your opinion, be eligible undertakings for the employment of private capital?—No doubt they would, if Government would permit a toll to be put upon them; though, in some cases, the eligibility would be greater than in others. It would vary very much, according to the locality, for in some parts the habits of the natives are opposed to canal traffic, and also their personal interests. The poorest ryot, if unable to keep a pair of bullocks for his own use, clubs with some other man of his village, and they keep a pair between them. When the time for ploughing comes they use the yoke for their land alternately, and when the sowing, or planting, as it may be, is completed, they have no

Captain *J. Ouchterlony.*

15 June 1858.

farming work for their bullocks to do. They then start upon a small trading expedition, carrying produce from their own to some neighbouring district for sale, and bringing back any articles which they can retail at a small profit. Their object of course is to make their bullocks support themselves, and yield some profit to the owners, however small; and hence, though they travelled the whole distance parallel to the line of a canal and over the worst of roads at the slowest pace, it would suit their purpose better than to pay 2 *d.* or 3 *d.* for the transport of their goods by the canal; to a certain extent this is an obstacle to the success of canals.

5416. But the toll would be very moderate, would it not?—There was no toll specified. On the question referred to me regarding tolls, I submitted that it appeared to me we had no right to tax the natives for the use of roads until we had put them into good order, and made them really fit for the traffic of the country.

5417. Is there a large profit from the toll on the irrigation canals?—I have been replying to the preceding questions as if you were referring to navigable canals. As regards irrigation canals, I have to state that Government levy no impost for the use of the water; yet from the taxes raised on the lands which they irrigate our chief revenue is derived, and any failure in the supply of these channels would seriously jeopardise it.

5418. The proprietors of a canal (if constructed by private enterprise) would then charge the parties who used the water so much per cubic foot, would they not?—Yes; I conclude they would charge them upon the same principle as a water-rate here would be levied upon.

5419. *Chairman.*] Is not that the system now pursued in the south of France and Italy?—It is, I believe, in Italy.

5420. And they are very lucrative undertakings in the hands of companies and other persons there, are they not?—Yes, that appears to be the case, at least as far as I observed, in Northern Italy.

5421. Mr. *Gregson.*] And in your opinion would this system, if introduced in India, be very profitable to the Government, or to the parties introducing it?—To both; and to the people, particularly, it would be extremely beneficial.

5422. You have spoken of the tenure of land, and you say you would recommend land to be held in fee-simple?—Decidedly, in the case of European emigrants.

5423. Can you give any opinion as to the possibility of engrafting the zemindaree system, existing in Bengal, upon the ryot system existing in Madras?—I think it is too late to introduce that system in some parts of the south, where, from long practice, they have become habituated to a different order of things, but I have no doubt that its introduction into some districts would be found very beneficial. There is a Mr. Fischer, who is a settler in the province of Salem, who holds a zemindaree, and who administers the affairs of his holding with such vigour and judgment that his influence is widely felt. The state of his roads, of his villages, of the town of Salem, which the collector with great judgment confides in certain respects to his care, and of his ryots, reflects the greatest credit upon his management; and I remember a gentleman, an agent of the house of Baring, Brothers, who travelled through the district some few years since, expressing to me his admiration of Mr. Fischer's system. I remark this without wishing to draw any invidious comparison between the places he controlled, and those under the surveillance of the Government authorities.

5424. I understood you to say that the zemindars, and great nobles of the country, were all destroyed?—No; I do not say they are all destroyed.

5425. Can you suggest any system which would have the effect of restoring them; any different system that you would desire to put into operation?—That is a question which is attended with very great difficulties. There are tracts where large zemindaries have fallen into partial ruin, and here it would, I think, be very advisable to introduce European zemindars.

5426. Are there any European zemindars?—I have mentioned Mr. Fischer as one. There are others in the south, and some near Madras.

5427. Mr. *Mangles.*] Arbuthnot & Co.?—Yes; and I believe all give great satisfaction. Wherever these European zemindars are established, the natives are far more prosperous than in districts where they are under the control of the native authority, the tahsildar.

5428. Mr. *De Vere.*] You say that, although Europeans could not perform much

much manual labour in the low country, they may nevertheless, if they are naturally of a robust constitution and of abstemious or temperate habits, superintend and even initiate agricultural operations, provided they had within reasonably accessible distance a hill station to resort to occasionally to recruit their strength. Now questions have been asked you with reference to colonization generally; do you mean to confine your observation, as to the suitableness of the climate for purposes of colonization, to those colonists who may happen to be robust and abstemious?—Very much so. I think that a person who is not of abstemious habits cannot expect to keep his health or to live long in India. Intemperance is almost certain premature death, except in rare cases.

5429. Taking the mass of colonists to be according to the general run of mankind, do you believe that they could exist in the places which you have indicated in your answers?—I mean to say that a man must not be given to great indulgence in spirituous liquors; I do not mean to say that a man must refrain altogether. A man who may be described as rather a drunkard will never get on in India.

5430. It is not necessary that he should be a teetotaller?—No. I should take the class of planters in Ceylon as an example of my meaning, now that they have somewhat refined or sifted off the worst particles of the mass. Many planters in Ceylon formerly were good-for-nothing fellows; but now, I believe, they are an excellent class of men.

5431. Then you qualify the opinion you have expressed that European colonists may superintend and even initiate agricultural operations in the plains of Bengal to the condition that they shall be robust and abstemious?—Perhaps temperate would be a more correct word to use than abstemious. I should by no means qualify it to the extent of saying that they must absolutely abstain from all alcoholic liquors.

5432. With regard to their families, you seem to think that they could not be brought up in this country unless they had a direct means of communication with the hill districts?—I think that no parent who had any regard for his children would attempt to bring them up to maturity in the plains of India.

5433. Do you think that such a communication with the hill districts would be compatible with the life of a colonist in the plains by means of a system of branch railways?—Yes, I think so, referring to those hills with which I am acquainted.

5434. Have you considered the number of branch railways that would be necessary for that purpose, the loss of time to the colonist in going to and from the scene of his operations, and also the expense?—The time would be nothing, and the branches would be very small.

5435. Is it part of your scheme that the private residences of those colonists should be upon hill stations, and that they should go to and from their work every day?—Not at all. I should not say that it would be necessary; but I think there ought to be an asylum, or schools, or some means by which children could be nurtured and educated. It would be in the power of every ordinary colonist to keep a house there; but there would soon be many people established in the hill country who would take care of and nurture the children of the colonists. There would be men in charge of boys' schools, and ladies in charge of girls' schools; but the cost of building is comparatively very small there, and emigrants would find no difficulty in a short time, after they had saved a little money, in building a small house on the hills. Living on the hills is very cheap; and comforts are within the reach of an ordinary emigrant, which a man of the same class could not enjoy in this country.

5436. You have spoken of a tea plantation as being a successful private speculation?—Yes.

5437. When you speak of it as a sucessful speculation, do you mean botanical or commercial success?—I ought to say strictly, botanical. It appeared to me on my return to the hill district, after an absence of some time in the low country, that the tea had arrived at a most healthy condition, considering the time that had elapsed since it was planted.

5438. Can you speak at all with reference to the commercial success of the enterprise?—No, I cannot; because the tree had not advanced to such a size as to admit of the leaf being picked; but judging from what I have seen of tea plantations in China, I should say the Coonoor tea trees gave abundant promise.

Captain *J. Ouchterlony.*

15 June 1858.

5439. Do you know of any causes that would prevent its commercial success?—None whatever. There would be an immense demand for tea in that neighbourhood; the demand for the troops alone would be very great.

5440. There has been, so far as you know, no anticipation of any difficulty which has prevented experiments from being tried; and you are not aware of any difficulty that is likely to occur to prevent its success?—Nothing but the difficulty of transit perhaps.

5441. Then you do not see anything in the institutions of the country of a nature to prohibit or prevent the success of such enterprises when they are judiciously undertaken?—Nothing but what I have remarked with reference to the tenure of land, &c.

5442. Were the persons who tried these experiments aware of this obstacle, with regard to the tenure of land at the time they made these experiments?—One was an officer of the army and the other a gentleman who had formerly been employed in the maritime service of the agency house of Dent & Co. I cannot say whether they took that matter into their consideration; there is always on our part a feeling of the good faith of the Government. I have held land on the hills, and never doubted that my tenure was as good as I cared to have it although I was told by a lawyer that such a tenure was really good for nothing.

5443. Then a sense of the good faith of the Government goes far to correct any evil that may result from the defective nature of the tenure of land?—I can only speak as to myself and others who were servants of the Company; whether we are to be taken as fair examples, with reference to the opinions entertained by the whole mass of the European population, I cannot say. I have always personally found the best faith kept by my employers; and I have no reason to suppose that my fellow-soldiers differ from me in opinion.

5444. You seem to have considered that this difficulty, arising from the defective tenure of land, would operate against the cultivation of cotton?—Most decidedly; because I do not think it would answer for any European to embark in it, unless he were possessed of a large estate, to admit of his arranging his resources as to manure and so forth, on a proper European scale and system. If he could get only small holdings of land, I do not think that the speculation could be successfully carried out; you must be able to carry out your plans of improvement as to roads, canals, &c. within your own estate, otherwise I do not think a colonist would be warranted in risking his capital in such an undertaking, or in districts where the development of the resources depends on the energy and honesty of the native authorities.

5445. You state that already numerous emigrants have settled on sugar and coffee estates, and that extensive sugar factories have been established in India, and that they are, as far as you can ascertain, doing well?—Yes; as far as I have been able to ascertain.

5446. Why should the defective nature of the land tenure operate against cotton plantations, if it does not operate against coffee, sugar and tea plantations?—First, as regards coffee. A great number of the coffee planters in the districts with which I am acquainted, having obtained their land from natives who held possession of it under old treaties with the Government, considered that they hold it from absolute right; but that is now called in question; for the collector of the province of which I was engineer last year informed me that he intended to tax certain lands of which a brother of mine had become proprietor under the title adverted to. He said he considered that he had a right to levy a tax on cultivated land that was within the limits of his district. The right was of course repudiated, and it was considered very unsatisfactory, after large sums of money had been expended there for many years, giving employment and a habitation to a large population, and greatly improving the aspect of the country and the condition of the people, that he should be suddenly turned round upon, and told that although they had never given him the smallest assistance in regard to roads, police, &c., they now intend to tax his land and participate in his profits.

5447. Was this threatened tax a tax to which other estates in the neighbourhood were liable, and where an exemption was claimed as to these particular lands?—Where there are grants from Government you pay a certain rent. But these lands were not obtained in that way. They were purchased from a native, with the assistance of the late Mr. Conolly, who fully recognised the title of the natives to the land. On a new collector coming into the district, he asserted the right of taxation as I have described.

5448. The

5448. The disturbance of title then, of which you complain in these cases, was a threat to withdraw exemption from a particular tax?— No; it was only the threat of a taxation which was considered arbitrary and unjust.

5449. But it was a tax imposed upon other estates in the neighbourhood, and from which tax the lands held under this particular tenure claimed exemption?— If a person goes to Government and demands a certain extent of land, knowing what the rent charge upon it is, he cannot complain of its imposition afterwards; but when you enter into a transaction with a totally distinct party, it seems rather hard that after the lapse of many years, and after you have incurred a great outlay upon the land, the Government should come down upon you for a tax. I have heard from a gentleman in London, who has several estates in Southern India, that the chief authority of Mysore has informed him that he intends to tax the produce of the plantations; a tax of so much for a certain weight of coffee; and the settlers look upon that as a very great hardship, since their produce also pays export duty when shipped.

5450. You have spoken of the difficulty of getting natives to undertake the labour of holding the stilts of the subsoil plough, and you say that that is a great difficulty in the way of the due cultivation of the deeper and river lands?—I mentioned that it was a great difficulty in the way of the economical cultivation of deep lands. I have an estimate here of the quantity that a native can do with the spade: he can turn the soil with it to a certain depth nearly as economically, I dare say, as it can be done with the plough. I did not consider that an obstacle at all to the cultivation of the land.

Vide Appendix.

5451. You proposed to get over that difficulty by substituting subsoil spade husbandry; do you think that subsoil spade husbandry requires less strength than the operation of using the plough?—Yes; the natives use a sort of hoe, which is admirably adapted to their strength, and is in their hands a very powerful instrument; it removes a large quantity of soil each time it cuts, and it is particularly well adapted to the strength and capacity of the natives. I have practised the system myself; I subsoiled by spade husbandry a piece of ground on which the barley sent out to me by Government was sown.

5452. If you had to subsoil largely on the Neilgherries, the difficulty of procuring labour, which you have alluded to in other parts of your evidence, in those districts which are surrounded by forests, would become, would it not, an important element of consideration?—Yes; but the statement which I have already made regarding the increase of the labouring population from 1848 to 1856 will show how soon that might be remedied. In India we have a great deal of labour constantly floating in the market, since, as soon as the natives have sown their seed, they have no agricultural employment until harvest time. There are not a sufficient number of public works in progress to employ them, and they roam about in gangs in search of work. These tribes, whenever they find Europeans settled on estates, come and work for them until their harvest time arrives, when they leave them and return to their villages, but often come back to the plantations, and remain for the rest of the year. This system requires to be better developed and organised, for I have often found the natives turn a deaf ear to a recommendation to proceed in particular directions to discover labour.

5453. You have made some very valuable suggestions with regard to establishing schools and military depôts on the Neilgherries; supposing, however, your suggestion of quartering the military largely on the hills were not to be adopted, would you then be in favour of a system which would, in the first instance, increase and promote the marriages of soldiers, even to an extent much beyond that which is sanctioned by the present regulations; and in the second place, would you remove the offspring of those marriages at a very early age, compulsorily from the care of their parents, in order to have them educated as children of the State, because that suggestion has been made here by a former witness?—I consider this a very important subject; and I should be sorry to pronounce a hasty opinion upon it. Contemplating that the husbands should remain in the plains, I should say, as a military man, that there is a great objection to undue encouragement of marriage among soldiers; and with regard to the subject of getting up a population to be educated on the hills, by these means, I should say that it opens a very long vista, as regards prospect of success. I would prefer proceeding more rapidly in pursuing the principle of colonization, doubtless making use of the offspring of soldiers, but not encouraging an over amount of marriage. I do not

Captain *J. Ouchterlony.*

15 June 1858.

not see that the end would justify such a means, unless it were intended to mass the troops on the Neilgherries permanently, and so render their life happy and comfortable by comparison with what it is in the low country. I consider that the life which they there lead is a wretched one; I know nothing so sad as the condition of British soldiers in some parts of the low country in India, because they are utterly without congenial employment or resource; the most intelligent men having no field for the employment of their mental faculties, or manual acquirements, and being consequently often driven to the worst habits. Their officers regret it, but cannot help them; the well disposed are confined to a place where association with the worst class of men is unavoidable; they have no reading-rooms, or places of that kind to resort to, except in the canteen provided by Government, and taking the system as a whole it is necessarily a very demoralizing one.

5454. Would it not add to that demoralized state of life if the men were relieved from all responsibility with regard to the care of their children, and if they were taken away from them by force, and there ceased to be an obligation upon them to perform the duties of parents?—I hope not; I think that the better disposed would look forward to purchasing a small holding of land, on retiring from the army, and bringing up their families to enjoy comforts in the hill stations, which they can never dream of enjoying here. In England, with their small pensions, they must look forward to a life of toil; whereas, a man with a certain, though small amount of pension, can in India live with the greatest comfort. I must say, looking to the present class of soldiers who enter the army, I should not fear that the removal of their children temporarily from them, would lead to their giving way to license and disorder. I have a very great respect for the poor fellows, who go out to serve in India; I think they exhibit great patience and endurance under the most severe and unnecessary trials.

5455. Your suggestion of military schools, then, is to be taken in combination with a suggestion of large military depôts in the same place?—Not exactly. I mean it partly as a humane means of saving the lives of children who are dying hourly in stations in Southern India.

5456. You have suggested the possibility of establishing those "filatures" at Madras?—Not only at Madras, but wherever cotton is grown.

5457. Has it ever struck you that by establishing those manufactories on the Neilgherries you might assist the schools, and render more available for social purposes schools such as you have suggested?—I am afraid not; I am afraid that native labour, being so cheap, you could not afford to pay a European child (who would do little more work than a native child, if so much) a high rate of wages. A native child will work for a coin so small, that you can scarcely name it, something equivalent to a halfpenny a day; and it would be impossible to give that sum to the child of a European.

5458. You have detailed some circumstances under which a very charitable design for the establishment of a school was rendered nugatory; if schools were to be instituted on such principles as would provide for the religious education of persons of different Christian persuasions in their own faith, would such schools, in your opinion, be objected to by any religious section, so as to prevent their establishment?—No doubt; the very section that opposed Sir Henry Lawrence's scheme before would be most hostile to anything which savoured so much of freedom and liberality in religious culture as that.

5459. What section do you allude to?—They call it the "religious party" in our part of India; people whose ideas are more evangelical than those of the mass.

5460. What is the principle upon which they would wish to have the schools conducted?—They did not altogether object to the introduction of Roman-catholic instruction, or to the attendance of Roman-catholic children there, but insisted that all the children should, either twice in the day or a certain number of times in the day, read the Scriptures in common. That was objected to on the part of the Catholics, and it was an objection which in their view was paramount; no Catholic would come to an institution where he was compelled to attend to certain forms of our religion; and although it was perfectly unobjectionable in principle, it operated practically to the prejudice of the poor children, whom it was particularly desired to succour and protect.

5461. You

Captain *J. Ouchterlony.*

15 June 1858.

5461. You have spoken of European colonization in India; will you, if you please, define what you mean by that?—I think I described this in the evidence which I gave on the first day of my examination. I mean the introduction into India of a mass of Europeans of vigour and enterprise, and of well-governed habits, who will by their example, industry, and capital aid in developing to their utmost the resources of the country.

5462. Do you mean that they should continue there and have hereditary succession from father to son; or that they should come there for the mere purpose of directing the outlay of a particular amount of capital, and then retreating from the country as soon as they have made their fortunes; should you consider that colonization in the true sense of the word?—I think not; but I think that although many might retire with fortunes which they had amassed there, an equal number would remain and colonize. The facilities for reaching this country now are far greater than they were when I first went to India, when a visit to England was a difficult and costly undertaking. Most settlers in India can now readily visit England, and I consider a residence on those beautiful hills (Neilgherries) so superior in point of climate and economy to anything I can enjoy in this country, that I would rather reside there and occasionally visit England, than reside in England, and occasionally visit India and the hills. There are many military officers of high rank and civilians who are now settled on the Neilgherries.

5463. When you speak of colonization in India as being practical and beneficial, do you use the term in the same sense as that in which you would use it if you were speaking of Australia and Canada?—The circumstances are so different that I can scarcely think that a point to which the Committee would wish my evidence to be directed.

5464. Mr. *Campbell.*] Do you not think that the system of colonizing India by persons not of the lower or labouring order of the population of this country, is more calculated to preserve that empire and dominion which we hold over the people of India, than if India were adapted to colonization in the sense in which Australia and Canada are?—I do; I think a better feeling would result from the permanent establishment in the country of colonists of such a class, and that it would lead to our being more respected by the people of India. I speak particularly with reference to the district of which I have already spoken, Salem, where a European zemindar is now established. I think that his ryots and the people depending upon him would behave with great fidelity and loyalty if a demand were made upon them to aid him.

5465. Mr. *De Vere.*] During the 24 years you have lived in India have you met with many capitalists who have informed you that they have been prevented from employing their capital in industrial pursuits by any circumstances connected with the social system of society in India, or by any defects in the mode of administering the affairs of that country?—I have not met with such men myself; but then I must remark that capitalists are very rare in my part of India. I have heard that said, however, by mercantile men, whose sources of information are far greater than any I could boast of.

5466. There is a large amount of native capital in India, is there not?—It is believed so. There is a large amount of capital no doubt absorbed in the provinces of India. I know myself that large amounts are expended in the very settlement to which I have referred, viz. Ootecamund, on the Neilgherry Hills; the payments are all made in silver, which disappears, and can never be traced again; whether it is carried away and hidden, or converted into ornaments, I do not know; at all events, it disappears from circulation.

5467. You have described the tenure by which the ryots hold their land from the Government in Southern India; have you also said that the Government treat them with perfect good faith?—So far as I know.

5468. Is there not on the part of the ryots an entire confidence in the continuance of that system of good faith?—As far as I am aware there is; but there is dissatisfaction as to taxes. I may illustrate it by referring to Pondicherry, where I have stood on the banks of a stream dividing English land from French, settling some dispute about rights of water from the channel which all used in common. Yet the land on which I have stood, though the soil has been identically the same as that on the opposite side, I have found to be taxed so excessively that I am within bounds when I say that the assessment on our, the British, land was fully double what it was on the French. I need not add that this causes great dissatisfaction.

Captain *J. Ouchterlony.*

15 June 1858.

5469. But where perfect confidence exists on one side, and perfect good faith on the other, it would appear that there can be nothing in the imperfection of the tenure to prevent the outlay of capital?—I do not exactly know what you mean by outlay of capital; if you are speaking now of the natives, it is vain to talk of their capital; we never find that they have any; they do not appear to have any means whatever; they are scarcely ever able to keep a sufficient number of cattle, or otherwise to carry out properly the tillage of their fields.

5470. Mr. *Mangles.*] You have spoken of the number of tanks that are in ruins in the southern parts of India; are those tanks very old?—Many of them are of very old date; many of those in Salem, which I myself had to repair, were evidently very ancient.

5471. Did we find them in most cases?—I should say we did.

5472. Is it not the fact that a native prince, if he begins a work such as a tank, or anything of that kind, and dies before it is finished, his successor will not finish it?—That would depend entirely upon his means; many of them would not have the means of finishing the work.

5473. Is there a disposition on the part of the heir of a man of wealth to finish his father's work?—It is an extraordinary fact that in Southern India, a native would rather build a choultry, or native place of resort, with any spare money that he happens to have, than repair a work of agriculture.

5474. But these tanks must have been made by native princes in former days, must they not?—Yes; I conclude so.

5475. Many of them are of great age, are they not?—Yes, many of them are of vast age.

5476. Have you not often heard it stated that a work begun by a native prince, if left unfinished by him, is never finished by his successor?—I cannot say that I have heard that as an axiom.

5477. You spoke of a pier being established at Madras; are you aware that an iron screw pier has been actually sanctioned?—I was not aware of it, but I am much gratified to hear it now; but unfortunately it will cost double what it could have been erected for if sanctioned 12 years ago, as the price of iron has increased so much.

5478. You have spoken of the ryot tenure in Madras; are you confident in your belief that it is an annual tax?—So far as the districts with which I am acquainted, Coimbatore and Salem, are concerned. Every year the collector issues a new paper or puttah for the next year.

5479. Does he change the rate?—No; but very often remissions are made.

5480. If he does not change the rate, what is the object of issuing a new one every year?—I do not know; but it is a custom, and a very unfortunate custom, because advantage is taken of it by the collector's native subordinates to extort bribes and presents from the ryots.

5481. But the fact is that the tenure is permanent, is it not?—So far as Government is concerned, they have always acted with perfect good faith; but I presume that the Government have at any time the power to resume their puttah or lease at will.

5482. You say that the agriculturists have no capital; are you aware that in Coimbatore many of the ryots have very large tanks?—A few; but I am not aware of many; there are some in the south.

5483. Coimbatore is one of the most flourishing districts in Southern India, is it not?—In some parts it is, but not in all.

5484. Have they not in some parts accumulated large tenures?—I am not aware of it.

5485. Do you think it desirable that colonists should cultivate cotton themselves?—I think it is desirable that they should direct labour for such a purpose.

5486. You do not think that they should buy it from the ryots?—I think not, because the attempt seems ever crowned with disappointment. There used to be a considerable establishment for cotton at Coimbatore, erected by the East India Company, who constructed a large mill for the cleaning or "ginning" of cotton, and for other processes connected with the encouragement of the agricultural section of the cotton trade; but eventually the Government ordered it to be broken up, and the mill was sold; it was purchased by a Mr. Campbell, who came from Bombay; he is now dead; but I remember his complaining to me that he had been seriously deceived by the anticipations which had been held out to him

in

in regard to cotton being purchasable in Coimbatore; he said there were no roads along which the natives could bring it, and that he could find no natives who would contract to bring it to him; an Indian native will never deliver the quantity contracted for, but he will always reserve and carry on a small balance or debt, a system which is destructive of confidence between the settler and the native, and which interferes very much with commerce.

5487. Mr. *Vansittart.*] I think I understood you to say that you have resided principally in the Madras Presidency?—Yes.

5488. Do you think the settlement of Europeans, with the view to the colonization, perfectly practicable in all the hill ranges of the Madras Presidency?—In all those to which I have particularly alluded.

5489. You do not think that their children's children would deteriorate?—That is a matter of opinion; I do not consider myself competent to form a judgment on so abstruse a point, nor indeed any one else; my impression is, that as long as proper care is taken to remove children while young to a hill station, and as long as all association with the natives is totally prohibited, there will be no material deterioration.

5490. Are you not of opinion that Australia, Canada, and other colonies offer far superior advantages to the English settler than those hills?—I have always understood so.

5491. Do you not think that the European settler would turn his money much quicker in Australia than in India?—That would depend very much upon the pursuit he selected; I do not see why very large fortunes should not be made in India, especially in coffee, and also cotton; there is a magnificent opening in that branch for men of enterprise and skill, and I think a very large fortune might be realised in that way, as well as by many other means.

5492. In answer to Question No. 5278, you stated that there are about 200,000 acres on the Neilgherries alone perfectly waste, but which you believe are well adapted for farming: do you think an investment laid out there for pasture land for the grazing, and the subsequent sale of sheep and oxen (as I believe is done very extensively in Australia), would pay a European settler?—I doubt very much whether it would, except in some localities; because we are liable there to heavy rains during certain portions of the year, and to dry weather at others, and this is found to be unfavourable with regard to certain descriptions of pasture grass; we have extremely good introduced pasturage, but it does not stand throughout the year. Such a speculation would not answer, unless connected with a proper farm, because at a certain time of the year the grass would dry off, and unless you had made hay to store, and had provided for the growth of mangel wurzel and turnips, which grow well on the hills, your flocks would perish, or have to be driven down to the low country in search of pasturage. The scheme was projected many years ago in connexion with one for feeding cattle and pigs, to be salted and sold to the shipping at all the Indian ports; but, like many others connected with the Neilgherries, it fell to the ground in consequence of a want of support and consideration in high quarters.

5493. In point of fact, for about six months in the year all cultivation of the land would be entirely stopped, would it not, owing to the excessive heat and the heavy rains?—No; we have vast stores of water on the Neilgherry Hills applicable to irrigation.

5494. You have been a good deal in Coimbatore, have you not?—Yes.

5495. Are you well acquainted with the Mysore country?—Not very well; I only know the southern part of it.

5496. That principality, like the Nizam's, is under the control of a native prince, is it not, with whom we have contracted a subsidiary treaty?—I understood that that treaty had lapsed now, and that the country had come under the absolute control of the British Commissioner.

5497. Mr. Thornton in his work on India speaks most highly of the resources of Mysore and of its fine climate, the country being a table-land considerably elevated; do you think that the Rajah of Mysore would be disposed to encourage a company of enterprising European gentlemen, if they wished to found a factory there?—The Rajah has not the power to do anything; it is the Indian Government who regulate the tenure of land there. The Commissioner gives away land in many cases to Europeans; he has the supreme control, under higher authority, of the kingdom of Mysore; nobody ever interferes with him.

5498. The Shevaroy Hills do not occupy a very important length, do they?—

Captain *J. Ouchterlony.*

15 June 1858.

No; it is resorted to more for the purpose of health than anything else. The extent of the Shevaroy Hills is very insignificant: they are chiefly used as a sanitarium.

5499. From your evidence, I gather that the Madras Presidency presents greater facilities and advantages for the settlement and colonization of Europeans than the other Presidencies of Bengal and Bombay?—That I do not pretend to be a judge of; Bombay I believe presents very few hill tracts, but Bengal has many.

5500. To encourage colonization and settlement of Europeans on these hills, would it not be desirable to enact a special law for the land tenures?—I should think that would be a very wise and satisfactory measure.

5501. Can you give the Committee an idea of the nature of the law you would recommend?—I would recommend that land should be given to them in fee-simple, as it is given in Ceylon; the system operates most beneficially there; the Government have been great gainers by it, and the country has been vastly benefited; sources of commerce which were unknown there before are now yielding vast returns.

5502. Adverting to your answer to Question No. 5329, with reference to that iron and copper company in the Coimbatore district, would not their failure prove that iron and other minerals do not exist as much as you appear to think?—It was merely as to the copper ore that I spoke on a former occasion; I think that the cause of the iron company's want of success was bad management rather than any failure in the resources of the vast tracts of country of which they had the monopoly; the ore is abundant on all sides.

5503. You say that that company has been in existence nearly twenty-five years; is it not in debt, and has it ever paid a dividend?—Yes, their heaviest debt being a debt to the East India Company. It has never I believe paid a dividend.

5504. Mr. *Mangles.*] Is it not the fact that a part of the debt was remitted, in order to start the new company?—Yes, I believe so.

5505. Mr. *Vansittart.*] Is not the population generally of the Madras Presidency very poor?—Yes.

5506. Poorer than that of Bengal and Bombay?—I do not know.

5507. Do you attribute their poverty to the absence of the zemindaree system?—That may be one of the causes; but I should say that it proceeded more from the hand-to-mouth way in which they live, owing to the want of sufficient employment. These people can get no profit but what results from the tillage of their small holdings, which are not sufficient to properly feed and clothe men with their families in India.

5508. Have you travelled on the Madras Railway?—Only experimentally. I travelled upon it in 1855 with the engineer, when he was experimenting upon the line.

5509. Why do the natives avail themselves so little of it?—I was not aware that such was the case.

5510. Is it not a fact that the receipts are already falling off in that part that is open, namely, from Madras to Arcot and Nellore, and that the natives prefer carrying their merchandise on bullocks and hackeries on the high road, which runs alongside of the railway?—I should not argue from that that they failed to appreciate the value of the railway. The circumstances are peculiar: there were no arrangements made when the line was first opened for a short distance to expedite the traffic onwards from the obscure village which chanced to become the temporary terminus, because any money expended upon stores or appliances there would have been wasted as soon as the rail proceeded further on; and though the Government caused good cart roads to be at once opened out from the village in question to the main trunk line to Bangalore, Salem, &c., a good deal of confusion ensued, and goods were often left exposed to the weather and became injured before carts could be procured to carry them onwards. A native having contracted with a party to convey his goods to a certain place, and having consigned them to his charge, will, if he hears that they have been turned out on the side of a road, get so disgusted that he will resort to the old system of carriage by the cart road the whole way; but this will be obviated when the line has reached a more important terminus; and all obstructions will no doubt cease as the railway proceeds, station by station, along its defined route.

5511. The Committee have been told by some gentlemen that owing to the ignorance of the civilians in the Bengal Presidency, and the consequent mal-

administration

administration of justice, great and serious obstacles exist against colonization on the part of Europeans: do those remarks hold good with reference to the Madras civilians?—You have put to me a question which I feel considerable diffidence in answering; my personal opinion of the civilians is that they are, taking them in the generality, as excellent a body of men as any sent forth by this country to any of its dependencies. That they have defects is not to be denied, and I consider their chief one to be a want of knowledge of law and of the administration of justice; but I must say, I think, that instead of uttering the sweeping condemnation of them which has been heard here, it would be more just and reasonable to consider the circumstances under which their service has so long existed, and to refrain from visiting upon them the faults and evils of a system, confessedly bad, which did not originate with them. I have heard it stated, very much to my surprise, that the work of a collector in Bengal could be done in two hours by any competent person; I can only say, this would be a most incorrect assertion, if made in reference to Madras, and I may add, that I do not know a harder worked or more efficient set of men in the service, than the Company's revenue servants in that Presidency. I cannot say the same of the judicial authorities, for I cannot speak as to the amount of duty they have to perform. My own avocations brought me more in co-operation with collectors, and to their merits I can testify with confidence.

5512. In the Calcutta Englishman, May 3d, 1858, under the head of European colonization of India, it is stated, "One of the bugbears of our Legislature is climate. There are many parts of India where an unseasoned Englishman may enjoy as good health as at home. One writer tells us, that when they attempt to work, can the natives beat them in cheapness. This only proves that certain occupations cannot be successfully pursued, but surely others can. We know one instance of a European who came to India with little more than the clothes on his back, who has made a moderate fortune in the hardest of out-door labour on a farm"; now do you agree with this statement?—I should think it was impossible, if the farm was situate in the low country.

5513. Do you think that a profit is only to be obtained on the hills?—I consider it a physical impossibility that a European of the class you speak of could toil on a low country farm; I do not mean to deny the possibility of it, but I doubt it extremely, judging from my own experience.

5514. Mr. *Villiers.*] If I understand you rightly, you are of opinion that under the present circumstances in which we possess those territories in Southern India, it would be advisable and practicable for English capitalists to go out there and seek profit by developing the resources of the country?—Yes, I think so, unquestionably. There are many impediments that would require to be removed, but I think that there is an ample and wide field for enterprise even under the present system.

5515. Did I understand you to say that the southern part of India is thinly populated?—That is a question as to which I feel scarcely justified in pronouncing a strong opinion; but I should say, as far as my knowledge goes, that it is a thinly peopled country.

5516. But labour is cheap there?—Labour is absurdly cheap.

5517. Mr. *Seymour.*] I understand you rather to differ from the evidence given by General Tremenhere as to the benefit of training soldiers' children in the Neilgherries?—I have not had the opportunity, unfortunately, of hearing or reading that officer's evidence.

5518. Should you not think it desirable that European children, if they cannot leave India, should be removed into the more elevated districts?—Yes, that has long been my decided opinion; but I was asked the question whether, even if hill stations could not be made accessible to European soldiers, I would recommend countenancing increased marriages for the sake of providing children for the hill stations; I would not do anything which would militate against the system of bringing up children on the hills, but I would not, at the same time, recommend any measure likely to increase the present number of marriages of soldiers, who are liable at any moment to be called on to serve against the enemy.

5519. Do you think it desirable that greater educational means should be afforded to the people with a view to prepare them for an increased number of European settlers?—I think we have already had proof of that in the success of the University established by Government at Madras, and in the schools which

Captain *J. Ouchterlony.*

15 June 1858.

are now spreading over the country. The working of all these schools has been found to be very successful, and the natives very gladly avail themselves of their advantages, and send their children to them.

5520. Did you know anything of the Government of the Rajah of Mysore?—No; that is a Government which has been in abeyance for a long time.

5521. Mr. *Campbell.*] I gather from your evidence that colonization or settlement is practicable and desirable in most parts of India where easy railway access to the hills exists, and that the climate and productiveness of the Neilgherries admirably and peculiarly adapt them to Europeans of skill and enterprise?—Yes, eminently so.

5522. How do you account for that settlement existing in its present limited form, and what have been the impediments which have stood in its way?—The impediments have not been one only, but they have been numerous; many small causes have existed which have worked into one great whole. I consider that one absolute impediment is the discouragement given to European settlers by the Government functionaries. There is a sort of cold shade thrown over European adventurers in India, which cannot fail to have a discouraging effect upon them. The natives being most extreme sycophants, naturally follow the example of their superiors; and hence, if they find a European settler or a commercial agent who comes into their district anxious to purchase their produce and to carry on trade within their limits, and observe that the high civil functionaries of the district treat him with coldness or hauteur, they will immediately take their cue from their superiors, and will annoy the settler in many minor negative ways, which to be appreciated must be experienced or witnessed. In the case of a European, whose circumstances are unknown, the tahsildar or chief native authority of each district would, I conceive, be disposed to do little or nothing to assist him, and he would even suffer his people to treat him almost with contumely; but if the collector of the district were of a sudden to invite the unknown to dinner, in all probability the very next morning the tahsildar would be found at the steps of the stranger's bungalow, humbly praying to be allowed to pay his respects, and offering him his best services. I think that all the authorities out in India should not only be requested, but should be enjoined to extend something of their countenance and consideration to settlers of good character who appear in their districts under fair auspices, and whose object and pursuit are unquestionable.

5523. What remedy would you apply generally to the difficulties that have existed?—That would be one remedy; the cause to which I have adverted is only one out of many. Various other remedies might be applied; the chief would be an improvement in the police and judicial system of the country. All Europeans when they come to India desire to be placed under the same system of laws which prevails in the Presidency towns, viz., that of Her Majesty's courts of judicature. They object to the system of law as administered by the Company's civilians; and it is not to be denied that there is a general outcry upon this subject, and that the outcry is so universal that it cannot be listened to but with respect.

5524. If the European element were introduced, and were found to be efficient, would that give encouragement to those who are in the uncovenanted service?—No doubt it would. We have at the present time uncovenanted assistants in the Engineer branch, but I cannot say that any great encouragement has been held out to them; they cannot arrive at a high position in that branch. I am not aware whether in the civil service we have any who are so situated; I should say generally we have not; and I think that greater encouragement should be given to deserving men.

5525. Have any instances come under your notice in which positive discouragement has been shown to any able uncovenanted English servants in the Madras Presidency?—Instances have, I believe, occurred, but they have been rare, and would be scarcely worth recording as regards the object which the Committee have in view.

5526. But can you not mention any instance?—I could mention a case within my own knowledge, but I do not know that it would be interesting to the Committee.

5527. On the contrary, the Committee would much wish to hear it?—I have a reluctance about relating it, both because the individual to whom it refers is a relative of my own, and because I have been induced recently to lay the case before the Court of Directors, by whom I doubt not justice, or what I deem justice, will eventually be done.

Captain J. Ouchterlony. 15 June 1858.

5528. Proceed with the case?—The case to which I allude was that of a gentleman who, having been a practitioner or advocate at the bar of the Sudder Court, was appointed to preside over a court called a "Principal Sudder Ameen's Court," on the Neilgherries, which had recently been instituted, I believe, in pursuance of an opinion by Lord Dalhousie. The salary fixed was, first, 800 rupees a month; but this was first reduced to 500, and afterwards he was ordered to be removed altogether, after a correspondence with which I need not trouble the Committee.

5529. You can give us more particulars?—The uncovenanted servant was removed, to make room for a young covenanted Civilian, whose pay is 1,400 rupees a month, nearly double what the uncovenanted first received, and almost treble what the court first ordered him to be reduced to as a sufficient salary. The uncovenanted servant is to be allowed the option of taking the court which the young Civilian vacates in the low country, its designation being changed to a principal sudder ameen's court, on a salary of 500 rupees; but as the office of a principal sudder ameen is never filled by persons who occupy a position in the better class of society in India, the option alluded to is of course tantamount to dismissal from public employment.

5530. Mr. *Willoughby.*] He was, in fact, a connexion of your own?—As I have said, he was a connexion of my own. I wish to be allowed to state my impression that this was a decision come to, perhaps, without proper information, for I think the home authorities have often passed censures where proper grounds had not been given them. The decision on this case excited much animadversion, because of the circumstances under which the degraded functionary had been selected for the post by Lord Harris, the Governor of Madras. He was a leading advocate at the Sudder bar, a Justice of the Peace, Chairman of the Madras Chamber of Commerce, Governor of the University, and he had also been a magistrate for a year and upwards on the bench at Madras, receiving 1,000 rupees a month; and when he left Madras to take up his special post, he received the honour of a public entertainment, at which were present the members of Government, the judges of Her Majesty's and of the Company's Supreme Courts of Judicature, and all the members of the clerical, legal, and military professions, together with the heads of all departments of the State and the mercantile community of the place. Besides all this, having been one of the leading pleaders at the bar where provincial law was practised, and hence of proved competence, his removal was looked upon with great dissatisfaction, as involving great hardship and grave discouragement to the uncovenanted service.

5531. Mr. *Villiers.*] What authorities do you consider to have acted on imperfect information?—The home authorities; at first the order came out directing the reduction of his salary, but the Madras Government considered it so extraordinary, that they delayed acting upon it till a further reference had been made to the Court, and the case thus came home a second time. A few months after another order came out to this effect: "Very well; we admit that there is much to do in the court, and that the European community is very large; so retain the Court; but turn out the uncovenanted man; he can only be a Principal Sudder Ameen, and put in his place a covenanted servant." At present the facts stand thus, that justice is now administered by a young man who, I believe, was not out of the nursery when the uncovenanted servant first came to India, at a cost to the public nearly double what it was before; a young Judge at 1,400, displacing one of mature age and experience, who was admitted on all sides to have performed the duties well for 800.

5532. Why do you suppose that all this was not perfectly well known to the authorities here, and that they did not wish to favour some particular person?—Because I was told at the India House that the case had not been "properly brought before the Court."

5533. Mr. *Willoughby.*] Was it not doubted whether the person who had been appointed was eligible or not, he being an uncovenanted servant?—No, I think not. I believe criminals have been executed under his decree; fines, imprisonments, stripes, and hard labour have been inflicted by his order; judgments on civil cases have been put in force; and a heavy responsibility will lie with Government if all this proves to have been illegally done.

5534. Mr. *Mangles.*] Are you not aware that the orders to which you refer were issued with reference to the predecessor of the party in question, although they fell upon him?—I have heard so; but that cannot alter the position of his case; it

Captain *J. Ouchterlony.*

15 June 1858.

it must be viewed and judged upon its own merits, and according to the decision confirmed as it were against him. The public, who are concerned in it, can only view it in this light: they say, "We had justice well administered by an able man, coming direct from the bar of a high Court, where it is supposed only able men can successfully plead; a man versed in native and mofussil law, selected by the local Government for his ability and fitness for the post; the entire community of the Presidency acclaim his appointment; he proceeds to the sphere of his new duties; the numerous cases brought into his court for adjudication give proof of the popularity of its administration, when suddenly, without any demerit on his part being discovered or alleged, he is removed and degraded to an inferior position, while his place is ordered to be filled by a covenanted civil servant, not on the same salary of 800, but with a stipend of 1,400 rupees a month."

5535. Mr. *Campbell.*] Recurring again to the subject of colonization, are you of opinion that European troops may, with great economy of life, and with great efficiency and advantage to the State, be quartered in the Neilgherries hills?—Undoubtedly.

5536. Would it not be possible to combine colonization on the hills generally with military colonization, giving free grants of land, thus materially reducing the cost of a European army, and increasing the resources of the country?—I think that such a scheme deserves very serious consideration, and that it promises to produce very favourable results.

5537. Would you recommend the concentration of all European schools in India on the hills, removing children from the demoralising influence of the barrack-room, and from the liability to that amount of mortality to which children in the plains are exposed?—Yes; and I consider this to be a matter of paramount importance. It is most important as a question of humanity, and it would subserve also a great political purpose.

5538. Do you think that the male portion of those children would grow up to be valuable auxiliaries to commerce and enterprise, that in many instances they would become valuable servants to the Government, and that the female portion of them might make comfortable and respectable alliances?—I think so. I made some remarks upon that subject in my former evidence.

5539. Do you not think that the young men brought up at those schools, if the manufacturers of this country at Manchester, Birmingham, Sheffield, Glasgow, and other places had them home at 17 or 18 years of age, with the knowledge they have of the manners, customs, and language of the people, would, after being trained at their wholesale manufactories in this country, make admirable agents for the purpose of pushing the commerce and productions of this country into India?—They would become most important agents in furthering commerce if you could get over the minor difficulties in the way of prosecuting such a good system. They are the very class of men we should desire to have.

5540. If travellers in this country be necessary for the sale of goods manufactured here, are they not equally necessary in India, and are not most of our commodities unknown in India?—Except to a small extent, through a class of men called boxwallahs or hawkers, who are very different from the commercial travellers of this country. The persons to whom I allude are men who go about selling goods from place to place.

5541. Would not travellers going from this country, with the knowledge and experience of what this country can manufacture, displace many of the crude manufactures of the country with great benefit and economy to the people of India?—No doubt.

5542. Would not the holding out such prospects with regard to many employments in which the children of soldiers in India might beneficially engage popularise the service in India, and materially aid the efforts of the recruiting serjeant in this country?—I should think it would very materially, because the poor prospects of the British soldier in India make men disinclined to enter the service, except in periods of excitement like the present.

5543. You have shown us that you yourself have made beer on the hills of equal quality with that brought from this country, at a saving of about 300 per cent.?—It amounts to that, I have no doubt.

5544. You are aware, are you not, that the East India Company expend a large sum annually in reducing the cost of English export beer for the use of the soldiers in India?—Yes, I know they expend a large sum in that way.

5545. And a great proportion of that sum might be saved to the East India Company

Captain *J. Ouchterlony.*

15 June 1858.

Company if local breweries existed in India?—If they existed, and if they were carried on successfully.

5546. Would it not be possible, with a concentration of European force on the hills, to establish regimental breweries and gardens there, for growing potatoes, and so on; and would not that be calculated, in your opinion, to add to the health and efficiency of the soldiers on the hills?—It would not only add to their efficiency, but it would tend very much to the improvement of their moral condition. Europeans, who naturally suffer from great exhaustion in the climate of India, must be driven to some liquid, and if they could, at a low price, obtain good and wholesome beer; it would soon induce them to give up the use of the most deleterious spirit that ever was fabricated, arrack.

5547. You are of opinion, are you not, that employment has a beneficial effect upon the health of Europeans residing on the hills?—No doubt; we have had evidence of that in the employment of the men in building their barracks.

5548. With regard to the European force which you would withdraw from the plains to the hills, what police organization, to take their place, would you propose establishing?—The crude proposal which I should make would be to form police battalions or brigades for each collectorate, with a nucleus, or, as I think I described them, a cohort, of Europeans, of 50 to 1,000 natives; I would draw those Europeans from all the regiments serving in India. I should say, trust no more to a native army in the mass, but add to each European regiment a certain number of natives, exactly upon the same principle as that upon which, in China, we add to Her Majesty's Artillery a body of men called gun lascars, who clean guns, and do a variety of other things, and who, in a European regiment, would relieve the men of many of those camp and barrack duties which press heavily on soldiers in the low countries, while it would be unnecessary to arm the natives further than by giving them a sabre, as is the case in the Artillery. In that way the natives would be brought in large numbers into employment, and they would greatly assist the Europeans, while there would be no longer reason to dread them, as they would not only not be armed, but would not be in sufficient force to effect any mischief. In suggesting this, I am but echoing what I have read in an excellent pamphlet, entitled, "India, its Government, Misgovernment, and Future," in which this question is most ably and practically discussed.

5549. Will not the establishment of railways operate to an almost incalculable extent in furthering the progress of commerce in India, and in promoting the manufacturing and other interests of this country?—I think so, unquestionably. I think that every resource of the country will be developed and increased in a tenfold degree as soon as the system of railways now in progress comes into operation. It is not from the working of isolated portions that we can form a judgment of their efficacy, for we shall not experience their full benefit until every particular artery is fully developed.

5550. Looking to the identity of interests which commercial pursuits and those of agriculture must engender between the mother country and India, is it not desirable, even contemplating state expenditure for that purpose, to encourage to the utmost the settlement of Europeans in India, in the advancement of our own interests and those of the natives, as well as with a view to the protection and maintenance of our rule by natural rather than by artificial means?—Unquestionably such must, I think, be the result of colonization: and I believe a better illustration cannot be quoted in support of the view that identity of interests must result betwean Europeans and natives from pursuits of commerce and agriculture embarked in in common, than in referring to what occurred during the late revolt in a part of Bengal called Tirhoot, where a great number of Europeans were located, attracted to it by the richness of its products; and it is on record that when the 12th Irregular Cavalry broke out into mutiny, and attempted to plunder the property of the planters, the native ryots of the neighbourhood, although the residents had quitted the neighbouring station of Mozuffurpore, banded themselves together and repulsed the mutineers, repelling the assault they had made on the property of their employers or fellow planters.

5551. What is your opinion as to the introduction of English generally into the revenue and judicial courts?—I am very strongly in favour of it; I speak as an interpreter. I passed the civilian's test examination in 1835, and I have therefore some right to advance an opinion upon the subject. I have been surprised to hear the statements that have been made before this Committee as to the amount of intelligence displayed by judges and others in this respect. I can

Captain *J. Ouchterlony.*

15 June 1858.

most conscientiously say, that although I have often stood on trials as a sworn interpreter, I have frequently been obliged to have recourse to a native to interpret to me in proper comprehensible language what has been said by a witness of the lower class.

5552. In your opinion would that difficulty be got rid of, and would the administration of the law be better conducted if the English language were adopted?—Yes, and for this reason; there are no people in the world so extremely apt at acquiring languages as the natives of India; they will learn English in much less time than it takes us to learn their language, and therefore they will become the most useful interpreters of the two, if that language is employed in which they have the greatest confidence.

5553. An honourable Member who lately examined you, put a question to you as to the good faith observed in dealing with settlers by the representatives of the East India Company with reference to grants of land bestowed upon them; are you aware of the grants of land that were given to the servants of the East India Company in the Deyrah Doon some years ago?—No, I have not heard of them.

5554. Do you know that after the parties had incurred large expenses they were obliged by a regulation of the court to give up those grants of land?—No, I am not aware of it.

5555. Mr. *Willoughby.*] You are an advocate, you say, for the introduction of the English language into the courts; are you of opinion that the administration of justice, in a foreign language, would be satisfactory to the natives of India?—I am.

5556. Interpreters would be necessary, of course?—Yes.

5557. With reference to the evidence we have received as to the proverbial dishonesty of the natives, how could you ensure trustworthy interpreters?—I think there would be no difficulty. The native language would not be entirely banished from our courts. The Company's civil servants would, and ought to know the language sufficiently well, to enable them to check any delinquency on the part of the sworn interpreters of their courts. I would not allow a judicial uncovenanted or covenanted servant to forego the study of the native languages, a knowledge of which would, I conceive, be as necessary a qualification after the English should have become the court language as now when it is excluded, for the reason I have mentioned: for example, I should consider myself a sufficient check in a court; I should know the language sufficiently well to be able to discern whether a man was faithfully interpreting the evidence of a witness or not.

5558. *Chairman.*] You would retain the judge's knowledge of the native language, but would give him power to conduct the inquiry in English?—Yes.

5559. Mr. *Willoughby.*] Have you any idea of the average fall of rain in the hill districts of which you have spoken?—The total fall of rain at Ootacamund is about 75 inches, taking the average of several years; and at Kotergherry it is only about 60 inches.

5560. Is not the fact of its being necessary for colonists of the description to which you have referred to resort to a hill station, in order to recruit their strength, fatal to the idea of colonization in India by men of moderate means?—I do not consider it to be so; I did not mean, in what I stated, to convey the idea that colonization depended exclusively on the possibility of a resort to the hills. If you go on further with my former evidence you will, I think, find that I said I had seen many European emigrants in Manilla, China, and other states, who appeared to live very well in the plains without resorting to a hill climate.

5561. Do you not think that "colonization" and "colonists" are terms which, in the general sense in which we use them, are inapplicable to India?—They are inapplicable as circumstances at present stand, because there are many obstacles in the way of colonization of which we are urging the removal.

5562. Are there not climactic causes which prevent the extension of colonization in India?—You cannot go into any colony without meeting with some obstacles.

5563. Are there any existing obstacles in the way of Europeans now who are engaged in the agricultural operations of cotton, cereals, sugar, hemp, &c.?—A better tenure of land, I think, is wanted.

5564. You object to the present tenure of land, and are of opinion that it would be better to give the fee-simple to European colonists?—Yes.

5565. How

5565. How would you set about that?—By selling land to colonists, as in Ceylon. You cannot I admit do away with the puttah tenure, unless with the free will and consent of the puttahdars; but in the case of the gentleman whom I have mentioned as residing at Salem (Mr. Fischer), the natives, I am sorry to confess the fact, would rather, I believe, hold their puttahs under him than under the Government.

Captain *J. Ouchterlony*

15 June 1858.

5566. But that is a transaction between the colonists and the inhabitants of the country, and not between the colonists and the Government?—The lands interlace. A village settlement is very peculiar; there are many conflicting interests involved; but I think it cannot be said to be impossible for the Government to hand over all the lands of a village to a European colonist.

5567. I quite agree with you that, if practicable, the best mode of encouraging Europeans to become colonists is to give them the land in fee-simple; the only question is, how is it to be done?—We should try to overcome difficulties, and I believe that the difficulty suggested might be overcome.

5568. You must leave it optional with the ryots, must you not?—Yes; but I think where they had confidence in the European settler, they would accept that option. I do not think that the Government could do it of themselves. The tahsildar must, of course, have the authority of Government before he could hand over to the European settlers any villages over which he has jurisdiction.

5569. Is it not the fact that the right of occupancy is such that, provided a man pays the rent that is due for a certain plot of land, he cannot be justly ousted from the possession of that land?—I have always understood that the Government possess the power to do it, but I never knew an instance in which that power was exercised prejudicially to the interests of a native or a European.

5570. Do not the Government now pay a quit-rent to the todars for what land they take for public purposes on the Neilgherries?—A nominal quit-rent. I am not aware, however, whether it is actually paid or not at this moment; if it is, it should be put a stop to. If you will read a short passage in the work to which I have already referred you will, I think, agree, that where a population of not more than 400 claims to have jurisdiction over 250,000 acres, such a claim is too absurd to be supported for a moment. The people who make that claim are an annoyance to all the settlers; they claim the land on the ground of immemorial occupation; and when the Government first took notice of these hills, and began to send people up them, these men came forward, and claimed tribute.

Vide Appendix.

5571. But they nevertheless were the original occupiers of the land, and we were the intruders?—But they did nothing with the hill lands. I contended, in my report to Government, that if they had developed the resources of the hills, or cultivated the land, the Government might have conceded to them certain rights. These men are a migratory tribe, and wherever they choose to establish their miserable little mud huts, they claim a lordly right over the soil. They do no work, will not even sell the produce of their herds, and, in fact, are an incumbrance to the soil. Yet, I believe it is true that the Government actually paid tribute to this indolent and contemptible tribe.

5572. Is not that a remarkable instance to show the justice and equity of the proceedings of the British Government in India with respect to existing rights?—It never was received as such.

5573. Is it not a proof of the care and tenderness shown by the authorities in India towards existing rights?—As far as my opinion goes, it is not a proof of it; it was an affectation of justice.

5574. You disagree with the principle, do you?—Yes, in that case.

5575. Do you not think that one of the reasons why colonists do not proceed to India is, that Canada, Australia, and other parts of the world, where land may be obtained in fee-simple and at a small price offer superior attractions?—I should not altogether conform to that opinon. I consider that one reason why there is not a larger amount of emigration to India is that the country is not known. There are but few independent men who travel there, or who take pains to inform the people of the advantages it offers; and, as I have mentioned before, I do not think that the Government has been sufficiently careful to collect that amount of statistical information which we ought to possess.

5576. At present there is no prohibition on the part of the Government, is there?—None, except so far as the difficulty in relation to the tenure of land may be deemed a prohibition.

Captain *J. Ouchterlony.*

15 June 1858.

5577. In the course of your experience have you observed any hostility on the part of the Government to the settlement of Europeans in India?—I must qualify my reply by referring to an answer which I gave to a question put to me a short time ago with regard to the discouragement which I consider is given to Europeans in India, in which I said that a cold shade was thrown over them. It does not amount to hostility.

Martis, 22° die Junii, 1858.

MEMBERS PRESENT.

Mr. Willoughby.	Mr. Mangles.
Mr. Lowe.	Mr. William Vansittart.
Mr. J. B. Smith.	Mr. Villiers.
Mr. Danby Seymour.	Sir Erskine Perry.
Mr. Gregson.	Mr. Kinnaird.
Mr. De Vere.	

WILLIAM EWART, Esq., IN THE CHAIR.

Alpin Grant Fowler, Esq., called in; and Examined.

A. G. Fowler, Esq.

22 June 1858.

5578. *Chairman.*] IN what part of India have you lived?—Principally on the Neilgherries, about 24 miles from Ootacamund.

5579. In what other parts of India have you been?—I have been in Ceylon; but I have been in no other parts of India except the province of Malabar.

5580. How long were you in that part of India?—I was there from 1844 to 1851.

5581. In what year did you leave India?—The beginning of 1852.

5582. Did you live in the Neilgherries?—Yes; within 24 miles of the cantonment of Ootacamund.

5583. Had you any property there?—Yes; I had a coffee plantation.

5584. What is the most favourable elevation for the growth of coffee?—I should say from about 2,500 to 4,000 feet above the level of the sea.

5585. What is your opinion with regard to the climate of the Neilgherries?—I think it is the finest in the world.

5586. Do you think that it is suitable for the residence of Europeans?—Decidedly.

5587. Have you had any experience of the continuation of the race of Europeans?—I have not.

5588. Are you aware whether any European families have resided on the Neilgherries long enough to continue for three generations?—I am not.

5589. But are you aware that the climate is perfectly healthy and suitable to a European constitution?—Yes; I think it is perfectly healthy.

5590. Have you ever been in any other tropical climate?—Yes; I have been in British Guiana, in the West Indies.

5591. What comparison would you draw between the two climates?—I can draw no comparison whatever; the one is a tropical, the other a European climate.

5592. What comparison would you draw between the climate of British Guiana and that of the plains of India?—The plains of India are decidedly hotter than any part of the West Indies that I have been in.

5593. What was your object in residing in India?—Principally the cultivation of tropical productions.

5594. Your occupations, I believe, were entirely devoted to agriculture?—Yes, entirely.

5595. Did you turn your attention, as an agriculturist, to many districts of India, in search of land?—I did not. I merely passed through the districts of Coimbatore

Coimbatore and Malabar, to the Neilgherries; and I was so well satisfied with the climate of the Neilgherries, that I settled there.

5596. You landed at Cochin, I believe?—I landed at Cochin.

5597. Did you examine the soils along the coast?—I did.

5598. The district of Coimbatore?—Yes.

5599. Have you reason to think that those districts are favourable for the investment of European capital?—Decidedly not.

5600. For what reason?—The land is not sufficiently fertile.

5601. With what view did you go to the Neilgherries Hills?—For the cultivation of coffee.

5602. Did you occupy a large extent of land there?—I commenced with a very small quantity of land, only about a hundred acres, and then extended it to three hundred, and now there are six or seven hundred acres.

5603. What is the tenure of land in the Neilgherries?—None whatever; at least I have no tenure of land.

5604. Is your land, then, rent free?—Yes.

5605. Do you pay nothing to the Government?—Nothing whatever.

5606. How did you come by the land?—It was purchased by a gentleman in Madras, from the Rajah of Nellumboor.

5607. Do you hold it in fee simple?—No; there is no tenure whatever.

5608. You pay nothing whatever for your land?—Nothing whatever; but we are threatened with a land tax; though that has never been enforced.

5609. You have never paid the land tax?—No; never.

5610. Mr. *Gregson.*] Are you threatened by the Government with the land tax?—By the collector of the Government.

5611. *Chairman.*] Has the Rajah of Nellumboor given up his right?—Yes; whatever rights he had he has given up to the gentleman to whom I have referred.

5612. You say you have been threatened; have you been threatened by the East India Government or by whom?—By the collector of the country.

5613. Mr. *Smith.*] The collector of the Company?—The collector of the Company.

5614. *Chairman.*] And you have refused to pay?—We have refused, there was no tax on coffee cultivation when I was there.

5615. Are any other occupiers of land in the Neilgherries exempted as you are from land tax?—No planters paid land tax, when I was in that country.

5616. Were there many planters there at that time?—Very few; the thing was only then being established.

5617. Have they increased in number?—Very much, the numbers gradually increased. When they found I was successful, the plantations were extended very much indeed.

5618. Did they find it a profitable cultivation?—It was not profitable at the commencement, but that was because the gentlemen who commenced it knew nothing about it.

5619. But when they became acquainted with the art of cultivating coffee, did they find it profitable?—I can only speak from my own experience.

5620. May I ask whether you have found it profitable yourself?—Very much so.

5621. Perhaps you would have no objection to state to what extent it has been profitable to you?—A hundred per cent.

5622. Do you think that British settlers, going there and understanding thoroughly the cultivation of coffee, might make a large profit approximating to yours?—Decidedly so.

5623. You have no doubt of that?—No.

5624. Do you consider the non-payment of the land tax a great loss to the Government?—No, I do not.

5625. Why not?—We expended a very large sum in the cultivation of that country. We pay an export duty, and not only that, but we expend large sums in payment to the labourers.

5626. What were these lands formerly which you have used for the purpose of the cultivation of coffee?—They were all forest lands, and paid no revenue to Government; they merely harboured wild animals, such as elephants, tigers, and so on; there were some deer.

5627. Then although the Government derive no land tax from your land, they still levy upon you an export duty?—Yes.

 5628. What

A. G. Fowler, Esq.

22 June 1858.

5628. What is that export duty?—I think it is about three per cent.

5629. Do you consider that a grievance at all?—No.

5630. You, I suppose, expend a considerable sum in labour, do you not?—Yes, there are from 60,000 to 70,000 rupees a year expended upon those estates.

5631. What labourers do you employ?—They are principally small farmers and coolies.

5632. Have you, or have you not, any difficulty in conveying your produce to the shipping port?—Very great difficulty indeed.

5633. Will you describe, if you please, wherein your difficulty consists?—This season, there were upwards of 330 tons of coffee upon these three estates.

5634. Those three estates being yours?—No, there is only one of them in which I am interested. I put them all into cultivation, but one of them only is mine.

5635. You had the management of the others?—Yes. By the last accounts, I have heard that there is not more than one-third carried down to the coast, or that can be carried down this season.

5636. Why not?—In consequence of the want of cart roads chiefly.

5637. Sir *Erskine Perry.*] Where do you ship from?—From Beypore.

5638. *Chairman.*] How many days' journey is it from your estate to the coast?—I should think four or five days, that is by bullocks.

5639. Has a road ever been opened in that direction?—Yes, I understood it was opened by a former rajah of the country.

5640. It is not a good road now, I understand you to say?—No, it is a very bad road.

5641. Has it been allowed to become worse?—Yes, since I first knew it.

5642. Who are the persons who ought to keep the road in repair?—Government, I suppose.

5643. Have you ever made any representation upon the subject to the Government?—I have mentioned to the collector of Malabar that the road was in a very bad state.

5644. Has any notice been taken of your complaint?—The collector said he was anxious to do all he could in the matter, but that really he had no funds to do it.

5645. Has not Government ordered the road to be surveyed?—Yes.

5646. Have they issued any orders for a short and advantageous road to be made for the purposes of commerce down to the coast?—I know the road was surveyed some time ago, and I believe that they have every inclination to make the road, and to give every facility in their power.

5647. Do you mean a road from Ootacamund?—Yes; in fact, a good road all the way along there; It is the only route by which a direct cart-road can be made to the coast, at a moderate expense.

5648. If the road was a good road, how long ought it to take to go to the coast, do you think?—From Ootacamund it is only about 72 miles; and from the estate I do not think it is more than 50 miles.

5649. How long do you think it would take, with a good road, to perform the journey?—With a good road it would take four or five days.

5650. How long does it take at present with a bad road?—Sometimes three weeks; but that road is now impassable.

5651. Is that the only road?—We have others; that is, we have bullock tracks, not roads; and now very often the bullocks take three weeks going with one load of coffee to the coast.

5652. Whether the bullocks take this road, or go along the tracks, they are sometimes as much as three weeks on the journey?—By the direct route, they generally take about 10 or 12 days; but you cannot get them to go that way, the road is so bad.

5653. Is there any prospect of a railway being made up to the Neilgherries from the coast?—No, I think not.

5654. Would it be a great advantage to the country if such a railway were made?—No doubt it would.

5655. Are you interested in any other property in India?—Yes; in Coorg.

5656. Sir *Erskine Perry.*] Have you any land in Coorg?—Yes, I have some land there.

5657. How did you get your land there?—I sent out instructions to my superintendent to go up to that part of the country, and select some land which he did, and made a very bad selection.

5658. How

5658. How did he get the land?—He applied to the Commissioner of Coorg.

5659. *Chairman.*] You pay a land tax for that land, I presume?—No; we pay no land tax for it.

5660. Not in Coorg?—No; we pay no land tax, but there is a duty of four annas per maund upon coffee, the produce of Coorg.

5661. Then there is a greater duty levied on Coorg-produced coffee than there is on Neilgherries-produced coffee?—Yes; we pay four annas per maund on the one, and nothing on the other.

5662. I understood you to say that you paid three per cent. duty on the export coffee from the Neilgherries?—On exportation from the country.

5663. What is the nature of this duty?—The duty is upon coffee grown in that part.

5664. Do you mean there are persons who inspect the growth of coffee and levy a duty on the produce of the land?—I do not know; I know I have paid it.

5665. Mr. *Willoughby.*] Did you get the land for nothing?—Yes.

5666. Who gave it to you?—The Government; that is, the Commissioner.

5667. Sir *Erskine Perry.*] The duty is equal to a farthing a pound, is it not?—In Mysore they levy the duty on the native cultivators, and that has deterred many from entering into it there; there was no tax in Coorg when I commenced there; it has been imposed since.

5668. *Chairman.*] When the cultivation is improved does the tax increase?—The more coffee produced, the greater the tax.

5669. Mr. *Willoughby.*] The tax produces a larger revenue, but the rate of the tax does not increase, does it?—No.

5670. *Chairman.*] All coffee pays the export duty, does it not?—Yes; upon exportation.

5671. Did you ever attempt to have any land in any other parts of India?—No.

5672. Did you ever try in Malabar?—No.

5673. Were any proposals for cultivating estates in Malabar ever made to you?—No.

5674. In Mysore?—I would have cultivated land in Mysore in preference to Coorg, but this tax that was levied upon coffee deterred me from doing so.

5675. I thought you said you paid the tax for the Coorg-produced coffee?—Yes, I paid the tax for the Coorg-produced coffee.

5676. Is the tax greater in Mysore?—No, it is the same tax.

5677. Sir *Erskine Perry.*] Where is the coffee land in Mysore?—I cannot say; I have never been in Mysore.

5678. Is not Mysore generally a plateau?—Yes.

5679. With no forest or jungle?—Very little, I believe.

5680. What makes you think there is much land available in this district for coffee, which requires rather a moist climate, where tree vegetation flourishes, does it not?—For European cultivation it requires the densest forests.

5681. That is not the character of the Mysore country generally, is it?—I believe not; but the cultivation by the natives of the country can be carried on there as it is carried on in Ceylon.

5682. Ceylon is a very moist country, as you know?—It is moist, no doubt.

5683. There is very little coffee grown in Mysore now, is there not?—It is grown principally by natives; but the native cultivation may be very much extended.

5684. But it is a matter of speculation at present, is it not, whether Mysore is adapted to coffee cultivation or not?—We may form some judgment from what takes place in Ceylon.

5685. Is it not the fact that those parts of Ceylon which are available for the cultivation of coffee are places where jungle formerly grew?—That is so with regard to the coffee cultivated by Europeans.

5686. Are you not aware that the moisture which falls in Mysore is much less than in Ceylon, where they have two monsoons?—It is; but Mysore gets the benefit of both monsoons.

5687. *Chairman.*] What was it that attracted you particularly to Coorg?—I understood that there was a very excellent road from the coast to all Madras, and I heard also that there were dense forests there.

5688. Was there any other reason that induced you to go to Coorg?—There was

A. G. Fowler, Esq.

22 June 1858.

was no tax there; but what principally attracted me, was the roads and the dense forests.

5689. Has any tax been levied or has any notice been issued for levying a tax since that time in Coorg?—I have paid it myself.

5690. But has a notice been issued?—A notice has been issued.

5691. A notice that a tax would be levied?—Yes.

5692. At first you paid no tax, if I understand you?—There was no coffee produced at first. We were permitted to cultivate the land, and I trusted that no tax would be imposed; it was afterwards levied. Many planters followed me; and I understand a great part of the forest land is now taken up for coffee.

5693. Mr. *Willoughby.*] Were you given to understand that the tax would be levied when you first took the land?—I did not enter into particulars; the person who searched the country took it for granted that, as there was no tax in Malabar, there would be none in Coorg.

5694. Mr. *Vansittart.*] What is the size of the Coorg province?—It is very small.

5695. Sir *Erskine Perry.*] Are you aware that in Ceylon the Government sell the land cut and out?—Yes, they do; I purchased land there myself.

5696. At a very small price?—I paid a guinea an acre for it; a very small price.

5697. *Chairman.*] Do you think that the power of holding land in fee simple would induce many more settlers to go into that part of India where you live?—Yes.

5698. Sir *Erskine Perry.*] Is labour available in that district of the Neilgherries and Coorg which is available for the cultivation of coffee?—It is not available to any great extent.

5699. What is the rate of wages that you pay?—Four rupees a month for men, two rupees and a half for women; from four to five rupees, in fact; it has increased since I left.

5700. What is paid in Ceylon?—In Ceylon, probably about 15 *s.* or 16 *s.*

5701. That is about double?—Yes.

5702. These labourers, to whom you pay 16 *s.* in Ceylon, are all natives of India, are they not?—Yes.

5703. They emigrate from the Malabar country into Ceylon?—Not from Malabar exactly; from the east.

5704. They call them all Malabars, do they not?—Yes, they do; but they generally come from the eastern coast.

5705. But they are still natives of India, are they not?—Yes.

5706. It is like the Irish emigration into this country at the time of the harvest, is it not?—Yes.

5707. Do you think that the hilly forest country, where you have been cultivating coffee, is equally well suited to the growth of coffee as most of the land in Ceylon?—I have not myself examined those countries much. I saw this land, and was well satisfied with its general appearance, and was contented with the locality of it.

5708. What is your average crop per acre?—The average has been 10 cwt. an acre since the estate came into bearing.

5709. And what price does your Indian coffee fetch?—Last year our coffee was sold to arrive for 85 *s.* a hundred-weight.

5710. Then the gross produce of an acre is 850 *s.*?—That was the average last year; one year it may be less, and another more.

5711. It has been stated, I think, before the Cotton Committee, that the produce of an acre of good cotton-growing land is only six rupees and a half, or 13 *s.*?—Was that cultivated by Europeans?

5712. No, by natives?—That makes a good deal of difference.

5713. Do you think an acre of land producing 10 cwt. of coffee would afford great attractions to Europeans to settle there if the land were sold out and out?—Yes.

5714. And do you think that the whole of that country could compete advantageously with Ceylon in producing coffee?—I have seen so little of the country, that I cannot say.

5715. Is there not this great advantage in favour of India, that labour is only halfthe price there that it is in Ceylon?—It was the fact of labour and food being so much cheaper in India that forced me to leave Ceylon; I had begun to cultivate in

in Ceylon, but labour there was the dearest and the worst I had ever known in any part of the world.

5716. I suppose the inference you would draw from your experience is, that the best course for the Government would be to take all this waste jungle, and let it at a low price to anybody who would come there with capital and cultivate it?—Yes, if they were to sell the forest land under certain restrictions, that certainly would be a great advantage.

5717. Mr. *Smith.*] Is the coffee of the Neilgherries equal to the Ceylon coffee in quality?—Yes, the price it fetches shows that; I have stated that it was sold for 85 *s.* last year.

5718. *Chairman.*] Yours was originally waste land, was it not?—It was waste forest land.

5719. Is there much waste forest land that may be cultivated with equal profit to others there?—I am not in a position to judge, for I have not examined the country; but I should say that there is a large quantity of good forest land all along these ghauts.

5720. Is there much of that land that can be profitably cultivated that is now uncultivated?—There is.

5721. Do you know of other land in those parts of India in which you have been, which are adapted to the cultivation of sugar and coffee?—No; that part of the country is not adapted to the cultivation of those productions.

5722. What is the state of the police in the neighbourhood of the Neilgherries Hills and Coorg?—I really cannot say.

5723. You have no complaints to make with reference to the police?—No; I never was before a magistrate.

5724. The police then, I apprehend, must be very good, or else the people must be very peaceful?—I never came in contact with the police.

5725. Are the people of a peaceful character?—Those I have had to deal with are, decidedly.

5726. Are they easily managed by Europeans?—They are easily managed with a little tact; I found them a quiet simple people.

5727. What has been your experience with regard to the administration of justice in that part of the country?—I have had no experience.

5728. You fortunately have had no lawsuits?—No; I never was before a court in India. I never had a complaint made against me, nor did I ever make a complaint against anybody.

5729. You think that the resources of the country are considerable, do you?—Very considerable.

5730. I understood you, in a former part of your evidence, to say that there has been a considerable increase in the number of European settlers?—Yes; since I commenced the coffee cultivation, the number of European settlers has increased very much.

5731. And do you think it will continue to increase?—Yes; I hear constantly of persons wishing to purchase land there.

5732. Mr. *Mangles.*] People are not deterred from going there by the bad state of the police or of the courts of justice?—I received every courtesy from the collector; the late Mr. Conolly was the collector there, and he evinced every disposition to render all the assistance he could.

5733. Then there was no opposition to the settlement of Europeans?—Certainly not; I never met with opposition, and never heard of any; in fact I received every encouragement from the collector of Malabar, and courtesy from all the officials in the country.

5734. *Chairman.*] You think, no doubt, from what you have stated, that one great means of developing the resources and increasing the prosperity of India, would be the settlement there of independent Englishmen as agriculturists and merchants?—Such is my opinion; I mean as planters, as is the case of the West Indian colonists; not non-cultivating purchasers of land.

5735. Do you think, judging from your own experience, that a person versed in the cultivation of coffee in the West Indies, might invest his capital very profitably in that part of India in which you have been?—Yes.

5736. Mr. *Smith.*] I understand you to say that the land on which you cultivated coffee was covered with timber; is that the fact?—Yes.

5737. It is a considerable expense, is it not, to clear away the timber?—No; the expense is not very great, comparatively.

A. G. Fowler, Esq.

22 June 1858.

5738. Sir *Erskine Perry.*] How long does it take for a stump to rot down?—In six years there is not a stump to be seen.

5739. Mr. *Smith.*] What kind of timber is it?—There are all kinds of timber, but it is not good timber; it is not hard wood; it is cinnamon, and soft woods.

5740. Did you find the condition of the people improved by the employment that you gave them?—Very much; those that I had upon the estate improved in every way.

5741. Did you find that not only their physical, but their moral condition also, improved?—Yes.

5742. Were they peaceable?—Very much so; when I first commenced the cultivation of that estate, I had a great deal of trouble with the people; we did not understand each other; they were very jealous, probably, of my taking advantage of them, and I was very jealous of their taking advantage of me; but before I left I had not the slightest trouble, and everything went on very well. I never made an advance, which I consider to be the curse of India; I never placed myself in the position of being in debt with them, and never allowed them to be in debt to me.

5743. You found that you gained their confidence by dealing fairly with them?—Yes.

5744. And then everything went on smoothly?—Yes; I never was in any part of the world where I had less trouble with labourers.

5745. Do you think that a settlement such as yours is not only a great advantage to the country, but that the Government also derive very great advantage from it?—There is no doubt of it.

5746. The advantage which they derive is the tax which they get upon the coffee; but they also get a tax, do they not, upon the additional consumption by the people?—You may draw that inference.

5747. Do you find that the people who are employed by you use a larger quantity of British manufactures than they did formerly?—I never inquired into that matter.

5748. Sir *Erskine Perry.*] Where did you live in the Neilgherries; did you live on your estate?—Yes; I lived principally on my estate.

5749. How far is that from Ootacamund?—Twenty-four miles.

5750. Ootacamund was your principal town, was it not?—Yes.

5751. Where was your nearest magistrate?—At Ootacamund.

5752. About how many coffee planters are there in that district?—I think that when I left there were a few; they had commenced before me, and had made entire failures. They failed as much as the Ceylon planters did at first, from want of skill and practical experience. I went over those estates, and said, "You have all made a mistake; depend upon it this will not pay you. There is land opposite to you; why not go there?" All those estates had been unproductive.

5753. How many coffee planters do you think there are at present in that district; do you think there are 20, or 30, or not so many?—I should think there would be 20, but I really cannot say how many there are.

5754. Do you know what the exports of coffee are from that country?—No, I do not; they are not very great.

5755. Have you been yourself in Coorg?—I have not.

5756. Do you know whether the Coorg land ryots or landholders are willing to give up their land?—It appears that a great part of the lands in Coorg are held by the natives on a lease from Government, for the sake of cardamoms.

5757. That is a plant which grows wild in the jungle, is it not?—Yes.

5758. And are those the best cardamoms known in commerce?—There are no cardamoms cultivated.

5759. The cultivated cardamom is not equal to that which grows wild in the forest?—No. They pay a certain tax to Government for being permitted to collect these cardamoms; they take the forest lands at so much a year on lease. The Commissioner being anxious, very likely, to have Europeans settle there, and to extend the cultivation of that country, permitted them to purchase the right of the natives to these cardamom lands, upon their paying to Government the same tax for a certain number of years that the natives had paid for the right to take the cardamoms.

5760. Then the effect of Europeans going into that country would be, probably, to deprive the natives of their rights over the land, would it not?—They have

have no other right to these lands than that derived from their leasing them from Government for a certain number of years, and paying a certain sum for permission to collect the cardamoms.

5761. Have you not understood from your agents that the valleys in Coorg are very rich, and that the soil is extremely fertile?—That was what induced me to send out a party in search of land at first. I had understood that from a gentleman who had been engaged there, and wished me to settle in that country. He was an engineer in the Honourable Company's service. He said that such lands were, and that there was a good road. He recommended me to see if it would not answer for the cultivation of coffee, and said he would be very glad to give me every assistance in his power. I could not go myself at that time, and was never able to go afterwards.

5762. What quantity of land have you in Coorg now?—Only a small patch, about 250 or 300 acres.

5763. And you found no difficulty in getting that land?—The Commissioner, I believe, was very anxious that Europeans should go and settle in that country. At all events, they have settled there since, and the whole country is being taken up.

5764. Do you know anything of a plant called the "clay root," a tuber, I believe; we heard from a former witness, who was examined before the Cotton Committee, that in that part of India there is a right of digging for clay roots?—I suppose they mean wild yams, or potatoes; they grow there, and the natives dig them, and any person may do so.

5765. Do you know the term "clay root"?—No, I do not.

5766. I gather from you that you do not want anything to make your plantation succeed better than it does, except making a few more roads?—Roads direct to the sea; and I should consider that if the land were held in fee simple, that would induce planters to settle there.

5767. You think there should be an absolute sale of the land, in fee simple, at a low price?—Yes; I would place it in the same position as Ceylon with regard to those lands that are not occupied.

5768. In that case, I suppose, if this land got into the hands of capitalists, whether European or native absolutely, the landowners would have no objection, at their own expense, to levy a rate among themselves to make the roads, as they do in Ceylon and in this country?—I do not know; the labourers are very poor.

5769. I am not talking of labourers, but of capitalists, who can grow 10 cwt. of coffee to the acre; would not capitalists of that kind, if they bought land in fee simple, submit to a rate for making roads?—I have not a doubt of it.

5770. Have you any opinion as to whether European children thrive in the Neilgherries?—Yes.

5771. Do you find the children, on the whole, thrive?—Yes; they thrive very well.

5772. Up to what age were you able to keep them there?—I have been in that country altogether only seven years, and I think the eldest of my children is about five years of age.

5773. Do you think you might keep them there as well as you could in this country?—Yes, so far as the climate is concerned.

5774. *Chairman.*] Have you other objections?—Yes, I have other objections, but not objections to the climate.

5775. Mr. *Kinnaird.*] I understand you to say, that as far as you are individually concerned, you find no inconvenience from the want of an efficient police?—None whatever.

5776. You never heard of any complaints of the want of an efficient police?—I never heard of any complaints upon that subject, because I personally never interfered, and never had any cause to do so; but it is very likely the police are very bad, and I have no doubt they are.

5777. Do you say, then, that you have heard complaints of the police, and that you believe them to be in a very inefficient state?—I cannot say so from my personal experience.

5778. *Chairman.*] What is the general character of the police in that part of the country?—I have had no personal experience of the matter; I never came in contact with them in any way.

5779. Sir *Erskine Perry.*] Are there any police?—There are police there, certainly.

A. G. Fowler, Esq.

22 June 1858.

5780. Mr. *Kinnaird.*] Are there any means of education for the poor natives?—Upon the hills?

5781. Yes?—I do not know; I had a school myself upon the estate.

5782. Kept entirely at your own expense?—Entirely at my own expense.

5783. Have any other planters to your knowledge established schools for their own people?—I am not aware that they have.

5784. Do you think that the Government did all that it could for the people, and would you consider it a good and paternal Government?—I cannot say; I never interfered in those matters; I never looked into the subject, and never took any interest in it whatever. I found the country people behaved very well, and was perfectly satisfied.

5785. Mr. *Lowe.*] You say they have threatened you with a land assessment?—The late Mr. Conolly, the collector in Malabar, asked my opinion about it.

5786. Did he ask you whether you would like to pay any rent or not?—No; he said that, of course, the land belonged to the Government, and that it was considered that every person ought to pay a certain amount of tax, and he asked my opinion about it. I said, that so far as I was personally concerned, I had no objection to it. I asked, "What will it be?" he said, "Probably about a rupee an acre." I said, "Very well;" but, "So soon as you impose that tax, rest assured you will stop all settlement."

5787. What did he say to that?—I said, "Those who have already commenced have been losers; no person has succeeded in this except myself." "Oh!" he replied, "it would be very hard that Government should suffer from the ignorance of other parties." "Well," I said, "I suppose, by and by, they will come to understand the thing better, and no doubt they may pay the tax, if persisted in;" he did not levy the tax.

5788. Had your land in the Neilgherries ever been the property of the English Government?—I cannot say.

5789. I thought you bought it?—From the Rajah.

5790. Did he pay a rent to the Company for it?—He paid nothing to the Company. I suppose he paid some one. Whatever right he had he purchased from the Government.

5791. *Chairman.*] It was uncultivated land originally?—A perfect forest.

5792. Mr. *Lowe.*] The Government does not levy any tax on uncultivated land does it?—No, except for the cardamoms, I believe.

5793. Did the collector tell you on what calculation the idea of putting a rupee an acre on the land was founded?—No; he said nothing further than that he considered it just, as the land belonged to the Government that persons who cultivated it should pay a tax.

5794. Then as long as the owner of land leaves his land uncultivated he pays nothing, but as soon as he begins to improve it the Government makes a demand upon him; is that it?—I do not know; I have no particular knowledge upon the subject. I only tell you about the land I have cultivated.

5795. Mr. *Willoughby.*] To whom does the land on the Neilgherries belong. Is it not claimed by the aboriginal races on the hills?—I never inquired into that.

5796. Are you not aware that Government pay a rent to the Toader tribe for the land they occupy now on the Neilgherries?—I have heard that the Government has purchased some of the land from the Toaders; and I have heard also that the Toaders have paid a certain tax to Government upon their buffaloes.

5797. You stated you obtained your land at Coorg for nothing; could other parties obtain land for nothing also?—Yes, land that was not under any cultivation, or yielding any tax to Government.

5798. I presume the tax you allude to on cardamoms is levied on the ground of the land on which the cardamoms grow belonging to the Government?—Yes.

5799. Do the Neilgherries produce a sufficient quantity of necessaries of life to support the population on the Neilgherries, or are they brought from the plains?—Rice and other things are brought from the plains; everything indeed except potatoes and small quantities of grain, which are the only products of the Neilgherries now.

5800. What is the produce of coffee in the Neilgherries as compared with the produce in Ceylon?—It is considered in Ceylon that an estate yielding 10 cwt. an acre on the average of three years, is a first-class estate.

5801. And what does it produce on the Neilgherries?—Our estate has given on an average, since its commencement, about 10 cwt. per acre, and of course, therefore, I consider it as a first-class estate.

5802. Do you consider yours as good as the Ceylon coffee?—It is better in some instances.

5803. But the facilities for export are not so great from the Neilgherries?—No; the direct roads to the coast are very bad; so much so that they are impassable for pack bullocks at certain seasons of the year.

5804. You state that one of the means you would recommend for the encouragement of European settlers (I do not know whether you spoke generally or merely with reference to the Neilgherries), would be the giving the land in fee simple?—In all parts of India, where land could be procured by Englishmen in fee-simple, they would be attracted in preference to any other place.

5805. Does that refer to the Neilgherries or to the plains of India?—To all the land throughout the whole country.

5806. Unfortunately in India there are in most of the places persons who have a possessory right in the land already; how would you deal with them; that is, there is a right of occupancy belonging to the natives?—In the Neilgherries you may rest assured that if proper facilities are given to European settlers, there will be a rush of European capital there that will be quite astonishing.

5807. Sir *Erskine Perry*.] The country you speak of as available for European enterprise is a complete jungle or forest country, without population?—Yes.

5808. That country has no villages, but for the most part it is nothing but forests; is not that so?—Yes.

5809. Therefore the case to which Mr. Willoughby alluded of the villagers having rights over the jungle does not apply to the country you speak of?—No; there may be some parts of the country where those rights exist, but you can always get over them by paying for them.

5810. But in the cultivated parts of India where there are villages there is often a jungly tract, is there not, which is not cultivated, but over which the natives have a right of cutting wood, and so on?—Yes.

5811. That state of things does not exist in the jungly, wild, countries near the Neilgherries?—No; the people may have some right there; but now that the planters have gone to that country and wish to settle, that land will no doubt rise in value.

5812. *Chairman*.] Do you think it would be good policy for the Government to sell out and out the uncultivated land?—Yes.

5813. In order that it may be turned into cultivation?—Yes.

5814. You think that would be good policy?—Very good policy under certain conditions.

5815. It would encourage the settlement of Europeans?—Yes.

5816. And be no detriment to the Government?—No, for they yield no revenue to the Government now; in fact, they are an injury to the country; they harbour wild animals of every description.

5817. Mr. *Willoughby*.] Then the fee simple is to be obtained from two parties, first from the Government, and then from the ryot, who has the right of occupancy, and the settler must make his own arrangements with the ryot?—Yes, Government is the principal party in these transactions.

5818. But under the Government, there is generally speaking a ryot who has the right of occupancy, and the settler must make his own arrangement with him?—Yes; I have known parties wishing to purchase a tract of land upon the hills, and some person has started up and said, "That land belongs to me," and then you arrange with that man, give him a few hundred rupees, and get his land. In that case, wherever the lands are suitable for Europeans, I should certainly say let the European make his own arrangement with the native, and purchase the native's right to the land, and the right of the Government to the land; but those soils which are suited for European occupation, as far as I have seen, are really not under cultivation by the natives. The lands of India are worn-out soils. It is fruitless to expect large returns of sugar and a fine quality of cotton from land already exhausted; you cannot have it.

5819. Is it not the case to some extent, that there are jungly and hilly tracts of land that appertain to certain villages, and to the ryots of those villages, and that if you attempt to take possession of them, claimants immediately start up and say, "This is my land"?—Yes. But if you ask me what part of India I

A. G. Fowler, Esq.

22 June 1858.

should select for the cultivation of cotton or sugar, I should reply, "Those soils which have never been tilled; and those lands are not occupied, such as the Sunderbunds of Bengal."

5820. Do you think there would be any difficulty in obtaining a grant in the Sunderbunds?—I am not aware.

5821. Have you experienced any opposition on the part of the Government or local authorities in carrying out your enterprises?—Quite the reverse.

5822. A cordial good will and understanding has existed between you?—Yes.

5823. And you have no reason to suppose that your own case is exceptional?—I never heard a complaint in that respect.

5824. There is no objection to an Englishman proceeding to that settlement, and settling if he likes?—None that I know of.

5825. Mr. *Vansittart.*] I suppose there is rather a large European community in Coorg, is there not?—I believe not. Since I commenced, many have followed.

5826. I understood you to say that in consequence of the generosity of the Madras Government, several Europeans have obtained land in Coorg, is not that so?—Yes.

5827. Then I suppose there is rather a large European community there?—They are just commencing there.

5828. In consequence of that generosity of the Madras Government, I presume there is no land left to be given away in Coorg, is there?—I cannot say; I should think there is.

5829. With the exception of coffee, do you cultivate any other plant?—No.

5830. I gather from your evidence that everything is comfortable and prosperous in Coorg; the Government generous, the police good, justice well administered, the people very peaceable, and roads only wanted; is that so?—I cannot say as to Coorg, for I never have been there; but there is a good road.

5831. I understood you to say that you had every facility afforded you?—Yes. I cannot give evidence upon the subject of the administration of justice, for I never was before a magistrate there; you are assuming more than I said.

5832. I understood you to say that the inhabitants were very peaceable, and that justice was very well administered?—You will find I never said so.

5833. *Chairman.*] What you stated, I think, was, that as far as your personal experience went, you had nothing to complain of?—I had nothing to complain of in Malabar.

5834. And that, I suppose, may be reasonably attributed to your own good management and conduct, and to the peaceable character of the inhabitants?—Possibly so.

5835. Mr. *De Vere.*] I think you have said that the lands throughout India are worn out, as regards the soil?—The soils throughout India cultivated by natives are worn out.

5836. To what part of India do you mean that observation to apply?—I should say it applied to all parts of India, though I can only speak positively of the part in which I have been.

5837. To what part of India do you wish your observation to apply?—I would apply my observation with regard to the land being worn in India to the small quantity of return they have; for instance, of cotton.

5838. You misunderstand my question: I want to know to what part of India you wish your observation to apply?—To the district of Malabar.

5839. And to no other part?—To no other part.

5840. You do not apply it to the soil about the Neilgherries, do you; you do not mean to say that the soil in the Neilgherries is a worn-out soil?—The soils on the elevated portions of the Neilgherries Hills are not naturally fertile; they are not what you call good virgin soils. It is only those soils that are either in dense forests or on the banks of large rivers that are really fertile in India.

5841. How would you describe the cultivable soil on the Neilgherries Hills; what is the quality of that soil?—I do not know whether I have sufficient geological knowledge to enable me to supply you with the information you require. The soils on the Neilgherries Hills are formed from the decomposition of gneiss, granite, and laterite.

5842. Is it true that the cultivable soil in the Neilgherries Hills is of very great depth, and capable of being subsoiled to a great extent?—Some part of it is; other parts are not.

5843. What proportion?—I cannot say.

5844. In

5844. In the elevated parts of the hills, perhaps, 6,000 or 7,000 feet high, is there very good soil?—The valleys, for instance, and many other parts, no doubt, are pretty fair for European cultivation. I know a tract of land of 100 or 200 acres of very deep, black soil; but the best soils are at a lower elevation, and these are the parts generally cultivated by the natives. A very small portion of the Neilgherries Hills is cultivated by natives. The soil appeared to me to be very good; but it was in a fearful state for want of proper tillage, and perfectly worn out.

5845. With regard to those soils which you describe as worn out, have they been worn out, do you think, by injudicious cultivation?—By continual cultivation.

5846. How could those soils be renovated?—By manuring.

5847. Could they be renovated by deep ploughing and subsoiling?—Not without manuring; they require to be highly manured; they have been continually cultivated. I do not think that any depth of subsoiling, ploughing, or draining, would be of permanent advantage to those soils; to a certain extent it would improve them, no doubt, but it would not renovate them.

5848. Do you happen to have read Captain Ouchterlony's evidence with regard to the depth of the soil in the Neilgherries?—No, I have not read it; I heard him give his evidence the first day. Parts of the land only are fit for the plough.

5849. But it is your opinion, that a large portion of the cultivable soil upon the Neilgherries Hills is not of a nature to be improved by subsoiling, or deep ploughing?—The lower plateau is. I consider that by deep ploughing and subsoiling, the land would be very much improved; but the land to make it what it ought to be requires to be highly manured, and put under tillage.

5850. With regard to land never cultivated, but still covered by forests, what is the nature and quality of that soil?—That soil is good; it is virgin soil.

5851. Do you suppose that the lands which you describe as worn out are lands that were originally covered by forests?—They may have been so.

5852. Mr. *Seymour*.] What does it cost you to plant an acre of land with coffee?—I planted this land, and brought it into bearing, for 16 *l*. an acre.

5853. Was that land cleared?—I cleared it; I felled the forest.

5854. Was there large timber upon it?—Very large; such timber as you find in those tropical countries.

5855. Do you know the estate belonging to Professor Owen?—Yes.

5856. Were the trees as large on those estates of yours?—The trees there are of a different description from the trees on my estate. I know that estate well.

5857. Which part of the Neilgherries is your estate upon?—Near Nediwuttum.

5858. Do you think there is much more land there where coffee might be planted?—No. But I think there is much land in different parts of India where coffee might be planted.

5859. Do you know Wynaad?—Yes.

5860. Is the land on the Neilgherries better adapted for coffee than the land there?—The land I have cultivated myself is the best I have seen in India.

5861. Mr. *Willoughby*.] Are these hills healthy, in your opinion?—Yes, as healthy as any of these tropical countries are for Europeans.

5862. Mr. *Seymour*.] Do you hold your land under the Nellumboor Rajah?—No; we purchased his right.

5863. Do you think it a good thing for the Company to sell their land, as the Nellumboor Rajah has done?—Yes, and for the purchaser also.

5864. There is no more land of the Nellumboor Rajah's to be got, I suppose, now?—I do not know.

5865. Yours was not part of the large purchase which Mr. Ouchterlony made some years ago?—The same.

5866. At what rate per acre did you purchase?—I do not know. The land was discovered by Captain Ouchterlony, in the course of his survey.

5867. Was the price very moderate?—Moderate; the Rajah did not know its value.

5868. If the Company were to sell their land, like the Nellumboor Rajah, do you not think the number of settlers would be enormously increased?—Yes, they would prefer holding the land in fee-simple; many were deterred from passing from Ceylon to India by the tenure of the land.

5869. Do you think the tenure which the Company offers in those countries is a satisfactory one?—No; I could not sell my property there.

A. G. Fowler, Esq.

22 June 1858.

5870. Do you not think that the country has lost enormously by the Company's persisting in their system with regard to the tenure of land?—I have not sufficient experience to enable me to answer that question; but I do not think they have suffered enormously.

5871. But it has been necessary, has it not?—I cannot give an opinion.

5872. It has prevented European skill, and capital, and enterprise from settling down there?—Yes, it may to some extent.

5873. And it is considered that that is very necessary to develope the resources of India?—Yes; but what has prevented capital from being invested in India has been the actual want of skill and of experience in developing the resources of the country.

5874. Do you not think that Europeans would bring it there if they were allowed to come?—They would no doubt bring it there, but unless you can show that persons will be successful they will not go.

5875. *Chairman.*] Would not skill and experience be more likely to go there under a fee-simple system than under a land-tax system?—Certainly, because a man having purchased the fee-simple of his land would persist.

5876. Mr. *Seymour.*] Are you aware that the Company have always said that they wish to engage European skill and enterprise?—I have always understood that they wished to do so.

5877. If they really mean what they say, do you not think that they ought to alter the tenure of the land?—Yes; I know that in my own case my land would sell for a greater price if I held it in fee-simple.

5878. Are you aware what the tenure was which the Company offered on the Sheveroy hills?—No.

5879. Do you not think that a tenure of a rupee an acre for 20 years, and then a liability to have any assessment that the Company choose put upon the land, is enough to deter the Europeans from settling in that country?—Land on those terms would not be worth holding; a planter going to India does not look to making 10 or 12 per cent., nothing pays in those tropical climates under 25 per cent.; I would not invest capital in India, nor cultivate land there with the prospect of a smaller return.

5880. Do you not think that the better terms that are offered in Ceylon accounts for a greater amount of British capital and enterprise being settled there?—There is no doubt of it.

5881. You are not acquainted with the culture of cotton, are you?—I am to a certain extent; I have seen it cultivated; I have been engaged in the cultivation of sugar canes and coffee in the West Indies, and know more or less of all of them.

5882. *Chairman.*] You say that in a great many parts of India the soil is exhausted, and that there is a great want of manure?—Yes.

5883. Would not the most likely means of bringing manure there be the introduction of European capital?—Yes.

5884. Is it likely that the inhabitants themselves will do any good, in the way of manuring their land, without the introduction of European settlers and European capital?—Those people will not cultivate the soil scientifically and properly, unless they are aware of the advantages to be derived from it, and those advantages would be shown by persons who go there and cultivate the soil on the same principle that it is cultivated in other British colonies.

5885. Do you think that if a favourable land tenure were offered to them, they would be likely to go there?—I have no doubt of it.

5886. Sir *Erskine Perry.*] Are you aware of the opinion which has been expressed by one or two coffee planters, that after all, the native system of cultivating coffee is that which is the best adapted to the country?—I am aware what some American coffee planters have said, but I must say I do not think that those gentlemen have a sufficient amount of scientific knowledge of the subject; they are merely practical men. You want, not only practical, but scientific men; science and practice must go hand in hand when you commence anything fresh in India.

5887. Do you know the road from Coimbatore up to the Neilgherries?—Yes.

5888. Do you remember a very rich part that there is at the bottom of the hill?—Yes.

5889. Cultivated on each side of the road?—Yes.

A. G. Fowler, Esq.

22 June 1858.

5890. Did you ever go inside that belt of cultivation?—No.

5891. You are not aware that just beyond the road on each side it is all desert for a considerable distance, and that it is only the land on the two sides near the road that is cultivated?—No.

5892. You never asked any particulars as to the cultivation of the land down there?—No.

5893. Did you ever hear the inhabitants of the villages in that district say that they were obliged to leave their land uncultivated because the assessment was so high?—No, I never did.

5894. Mr. *Vansittart.*] I understood you to say in the early part of your evidence, in reply to a question put to you, I believe by the Chairman, that you found no fault with the civilians, the police, the collectors, and the administrators of justice; and that every facility was afforded by the officials of the Government?—No; what I said was, that so far as I was myself personally concerned, I received the greatest courtesy from the officials of the Government; that the collectors, and all those who were connected with the Government, gave me every encouragement, and that I was never before a court of justice.

William Balston, Esq., called in; and Examined.

W. Balston, Esq.

5895. *Chairman.*] HOW long were you in India?—Seven years.

5896. In what capacity?—I went out as a contractor, and commenced the works of the Great Indian Peninsula Railway; I remained four years in the Konkan, during which time I went through Guzerat to see the cotton cultivation there; I was two seasons in Scinde, to see the system of irrigation practised there, and I returned home in 1856.

5897. Those are the only parts of India that you have seen?—Yes.

5898. Do you consider the climate of India any obstruction to a more general settlement of Europeans there?—I think that the climate, as it affects the health of the European, is no obstruction to his settling in India as he settles in other places, as at the Cape, or in Australia; that is, generally, to improve his circumstances, and return home again. But as it affects the productive power of the land, it is the first and greatest of all obstacles to any extensive settlement, because, in consequence of the poverty of the land, India affords so little profitable employment to men of small capital, or of none, such as usually go abroad in search of fortune. The produce of land in India is very little more than 10 *s.* an acre, taking it all through; there are very few spots that produce 20 *s.* an acre. Drought, which prevails throughout India every year, from five months in Bengal to 12 months in Scinde, prevents the land from producing enough to support any cultivator, except the Hindoo or Mussulman, who lives on less than 2 *d.* a day. Under these circumstances, I think that no capitalist could employ labour to a profit, as the cost of production would be more than the value of the produce. I have some figures here, from a book of Mr. Alexander Mackay's, who was a commissioner to India from the Manchester Chamber of Commerce, to which perhaps the Committee will allow me to refer. The most fertile province of Western India, if not of all India, is Guzerat. Although the area of this province is only one per cent. of the area of all India, its export of cotton in 1850 amounted to 56 per cent. of the whole export from India. The gross exports were 10 per cent. of the gross exports of all India; of which 10 per cent. about eight-tenths consisted of the produce of the province. The area of cultivated land amounts to 29·6 per cent. of the whole area, whilst that of the whole Presidency of Bombay amounts to only 16 per cent. As it has open sea communication with Bombay, at a cost of from 4 *s.* to 8 *s.* per ton, or one-eighth of a farthing per pound, the value of produce is nearly the same in Guzerat as at Bombay. In this province the value of the cotton crop, on an average of years, is 16 *s.* 9 *d.* per acre, of which the cultivator pays to Government 8 *s.* 9 *d.* per acre, or 52 per cent. in land tax, receiving for himself 8 *s.* per acre as the cost of cultivation.

5899. Mr. *Seymour.*] Are these figures your own, or Mr. Mackay's?—Mr. Mackay's.

5900. Mr. *Smith.*] But are they confirmed by your own observation?—Yes; as the average holding of a cultivator with a family of five persons is 15 acres, this return gives an income of something less than a penny a day per head for the working days of the year as the wages of the whole family; if any European were to attempt to cultivate the soil in Guzerat he would have to pay threepence a day

W. Balston, Esq.

22 June 1858.

for labour, and in addition to that fourpence for superintendence, making the whole cost of labour sevenpence a head, and with that cost a European would not be able to compete with a native.

5901. *Chairman.*] A native can cultivate the land more cheaply than a European can?—Yes, under existing circumstances a native can do it much more cheaply than a European, and as long as the land produces so little as it does a European can do nothing with it.

5902. What is the average acreage value of the produce of land in the most favoured districts of India?—Guzerat is the most favoured district; the want of a road is no obstruction to communication there, for the produce is conveyed to Surat from Bombay at from four to eight shillings per ton.

5903. By sea?—By sea; therefore the want of communication with a sea-port is no obstruction; the land tax amounts to 52 per cent. of the produce; but if the land were given free, the cultivation income would be increased to only twopence per day for the working days of the year; even with land rent free no European paying the wages of labour could cultivate it to a profit.

5904. Does not the high cost of inland carriage operate to reduce greatly the value of produce in the interior, both in Central India and the North-west Provinces?—Very greatly, especially on products of a low value; in the South Mahratta country, Mr. Mackay gives 10 *s.* 9 *d.* per acre as the value of the cotton crop, of which Government takes 2 *s.* 9 *d.* as land-tax; the land produces, according to him, 66 pounds of clean cotton to the acre; the value he gives is 1·95 *d.* per pound against 2·777 *d.* per pound in Bombay, the difference in value amounting to 7 *l.* 14 *s.* 6 *d.* per ton, which represents the cost of carriage and incidental expenses to Bombay; according to other competent authorities the average produce of cotton in the Deccan is considerably less than that given by Mr. Mackay. Mr. Crawford, in his evidence before the Cotton Committee of 1848, gives 40 lbs. per acre as the produce in the Sholopore collectorate, and that evidence is confirmed by Mr. Vary, the late superintendent of cotton experiments in the South Mahratta country, in a letter addressed to myself at the Cotton Mart of Khamgaum, which is little more than half way from Bombay to Nagpore, which last place is the extreme distance whence cotton is brought to Bombay; the average price of cotton from 1839 to 1847 was 1·62 *d.* per pound against 2·77 *d.* per pound at Bombay, being a difference of 10 *l.* 5 *s.* per ton, or 42 per cent. of its value at Bombay, which sum represents the costs and charges of carriage.

5905. Mr. *Willoughby.*] Is there not a railway under construction in that part of the country now?—There is a railway going near to Khamgaum; if it has traffic enough to pay the working expenses it will reduce the cost of carriage to one-half its present amount, and it may have the effect of reducing the incidental expense arising from the employment of middlemen. At Hoosungabad, in the upper valley of the Narbudda, wheat sells at from 4 *s.* 6 *d.* to 5 *s.* 6 *d.* per quarter, or less than one-fourth of its value at Bombay; oil seeds sell proportionably low. Captain Reynolds, in his evidence before Mr. Bright's Committee, in answer to Question No. 4769, stated that he had seen grain selling at Hingola, in the Upper Godavery, at 2 *s.* 8 *d.* per quarter.

5906. Was that because it could not be transported to places where it was required?—There is no export. It appears from official returns that the total gross value of the whole of the cultivated land in the Madras Presidency is only 5 *s.* 4½ *d.* per acre, irrigated land only excepted. The land tax is 2 *s.* 1 *d.* per acre, and as this represent 40 per cent. of the produce, it follows that the value of produce is 5 *s.* 4 ½ *d* per acre.

5907. Sir *Erskine Perry.*] That is taking all the cultivated land?—Yes; taking all the cultivated land which pays land tax.

5908. Where did you get that information?—From a return made by the Order of the House on the 8th and 10th May 1854. These low prices reduce the acreage value of crops in Central India to less than half their value in Guzerat. This is the condition of land in the Bombay Presidency, and, judging from the price of labour, the amount of land tax paid to Government, and the exports and imports of other parts of India, the Western Presidency appears to be much more fertile than either of the others. Per head of the population, it pays nearly three times as much land tax as Bengal and the Punjab, and 50 per cent. more than the North Western Provinces and the Madras Presidency; labour is worth about 50 per cent. more than in Bengal or Madras; and, although Bombay is the sea-port for only one-fourth part of India, and has less facility of communication with the

the interior than Bengal, its exports and imports amount to forty per cent. nearly (above thirty-nine per cent. in 1853), of the total exports and imports of all India. I am aware that under the perpetual settlement of Bengal the land tax amounts, in some cases, to only a very small part of the produce. When a large quantity of labour is employed in producing a valuable crop, such as sugar or indigo, the greater part of the labour so employed escapes taxation under this settlement, which is not the case in other parts of India; these valuable crops, however, occupy less than two per cent. of the whole area of Bengal, and except to this extent, do not affect the general rule, that the Government tax amounts to from one-fifth to two-fifths of the produce. Notwithstanding that Bengal and the North Western Provinces have river communication with the sea-ports by way of the Indus and the Ganges, the general products of these countries have no exportable value except in the immediate neighbourhood of the ports, because of the great difficulty and consequent high cost of navigating those rivers.

5909. What is the cause of the high cost of carriage on the Ganges and Indus?—At present the carrying boat has to contend, not only against the circuitous course of the river, but also the circuitous course of the channel within the river formed by the shoals, with no other power of propulsion than that of manual labour, with a little occasional assistance from the wind; and the consequence is, that the boat is from 90 to 114 days passing from Kurrachee to Moultan, and nearly double this time in going from Calcutta to Delhi; it occupies the least time during the high flood of the river in July, August and September, when the traffic is small; and the longest time in the winter season, when the want of transport is the greatest. Time is saved by the use of steam, but the cost is not reduced, steam power being about 150 per cent. dearer in India than it is in this country; the cause of which is the high cost of skilled labour there.

5910. Mr. *Willoughby.*] Have not steamers been introduced both on the Indus and on the Ganges?—Yes; I have been in them on the Indus.

5911. Therefore the remarks you have been making refer to sailing boats only?—Yes, native craft.

5912. *Chairman.*] What are the charges for goods and passengers by Government steamers on the Indus?—The charge for carriage by Government steamers on the Indus is 7 *l.* per ton for goods, and 20 *l.* for first-class passengers going up from Kurrachee to Moultan, a distance of 500 miles in a direct line, or double that distance in the course of the river, and one-third of those rates down; these charges, however, do not represent the actual cost, inasmuch as the steam flotilla is worked at a loss by the Government. Mr. Frere, the Commissioner in Scinde, in writing to Mr. Hardy Wells, the railway engineer, on the 14th October 1853, says, "I have reason to believe that the establishment of a railway to Kotree would effect a saving of at least 75,000 rupees a year in the expenses of the Government steam flotilla." This railway to Kotree is proposed to save the navigation between Kurrachee and Kotree, which is about one-fourth of the whole distance traversed by the flotilla; the number of passengers by these steamers for two years ending the 30th April 1853 was, 90 first-class passengers, 87 second-class, 113 third-class, 356 fourth-class, and 62 children.

5913. That would be the saving effected, per ton, in the transmission of goods by steamers, as compared with the old system of transmitting them by boat?—They cost by steamer a little more than by the river boat; but, generally speaking, the steamer is preferred, if available, because of the extra speed. The difference is not very great. The cost of conveyance by river boats, without steam, for the distance of 1,400 miles, is nine guineas per ton, and by Government steamers 13 guineas.

5914. Is there a large traffic by these steamers?—No, very little.

5915. Mr. *Willoughby.*] You have been confining your evidence lately to the Indus, have you not?—Yes.

5916. Do you know anything of the Ganges?—I know but little of it; I have never been down it; but I have seen plans of it frequently, and have heard descriptions of it.

5917. But you know the Indus?—Yes, I know it; half way down it.

5918. Have you been as far as Mooltan?—No; I have only been on the lower part of the river.

5919. *Chairman.*] Will you state shortly what are the points which you wish to establish before the Committee, with reference to the settlement of Europeans in India?—I wish to establish that Europeans cannot find profitable employment

W. Balston, Esq.

22 June 1858.

in India, more especially Europeans with small capital, in the present condition of the land in India. They must have water; that is the first condition of the successful cultivation of land in India, and water is not at present obtainable; but with land yielding good crops, the European of small capital could cultivate land more profitably in India than elsewhere.

5920. Does this cost of carriage prevent exports from the Punjab and the North-west by way of the Indus?—There were none previous to the Russian war; but the high prices caused by the war created an export trade in oil seeds from the Punjab. In ordinary times the cost of carriage prevents any export. To bring grain and oil seeds from the interior there must be either war prices or canal carriage.

5921. Can you compare the cost of carriage on the Mississippi with the cost of carriage on the Indus?—From a very large part of the North-west of India, the cost of conveying cotton to a seaport would amount to from 10 *l.* to 15 *l.* per ton; in America, on the Mississippi, cotton is brought a distance of 1,000 miles for 20 *s.* a ton; from what I have seen of the enormous waste of power in working the traffic on the Indus (and the Ganges and Jumna are no better than the Indus), I believe, that by means of a canal with a towing-path, the speed of working traffic might be increased tenfold, and in case of emergency twentyfold, and the cost of carriage and incidental expenses reduced to about one-fortieth part of their present cost; a canal would bring the cultivator in immediate contact with the merchant of the seaport, and the present cost of middlemen would be abolished. If there came any demand for great speed, steamboats might be used.

5922. How do you account for the extreme cheapness with which goods might be conveyed on canals in India, compared with the rate at which they are conveyed on canals in America?—Goods might be carried on a large canal in India at one-tenth of the cost of conveying them on the Mississippi, because the kind of labour of which river carriage is the product, namely, that of cattle boat builders and navigators, is less than a tenth part of its cost in America. A canal in India, which would be a large artificial river with a towing path, would be the most direct and the best of all navigations; the capital expended would be covered by the profits arising from irrigation; the canal itself, for purposes of navigation, would be free of all cost, and the only cost of carriage would be the cost of draught, which would amount to 4 *s.* 6 *d.* for drawing a boat of 64 tons 32 miles, which is equal to 2 *s.* 11 *d.* per ton for a distance of 1,400 miles.

5923. Mr. *Willoughby.*] To what canals are you referring, as being 1,400 miles long?—A canal that has to be made; I believe that there is no canal of the kind of which I am speaking, with a towing-path, in India.

5924. Where would you propose to construct this canal?—I do not know.

5925. It is only hypothetical?—I merely put this down as a hypothetical distance.

5926. Mr. *Smith.*] You propose that the canals should be canals to be used for the purpose of navigation, as well as for the purpose of irrigation?—Yes; you cannot make a good canal for the purpose of irrigation, without making it a canal adapted to navigation; an efficient work of irrigation in India, must be one which would take the water from the higher levels of the river, and lead it towards the sea-port; and such a canal would be the best navigable canal possible. As it takes 10 tons of Indian produce to pay for one ton of imported commodities, the great bulk of the traffic would flow from the interior to the seaboard, which traffic would be assisted by the current.

5927. You conceive that it would be an advantage to combine irrigation with navigation in India?—It would be no doubt a very great advantage. You cannot construct a good irrigating canal, without making it a good navigable canal also. But it is possible to make a good navigable channel that would be almost useless for irrigation. The great object is to get water above the surface of the country.

5928. Are there any canals in India at present, which combine the two objects of irrigation and navigation?—So far as I am informed and believe, and I have paid great attention to the subject, there is no canal in India that is good either for the purpose of navigation or of irrigation; there is a great deal of canal work in different parts of India, but all the canals are grossly defective in most respects.

5929. What do you say of the Ganges Canal?—It has cost much too small a sum of money to be a good canal.

5930. Is it a navigable canal?—It is navigated; where you have a stream of water,

water, although it is only a large ditch, you may navigate it, but it is more expensive to push a vessel along with bamboos, or to track it, than to propel it by means of cattle draught.

5931. *Chairman.*] Does the present high cost of carriage fall heavily on articles of general consumption in India?—Very heavily on those articles of general consumption in India such as rice and salt, which are produced in abundance near the seaboard, but with rare exceptions very scantily in the interior. The difference in the price of salt between Calcutta and Benares amounts to 100 per cent.

5932. Mr. *Smith.*] What is the distance?—Five hundred miles. Rice, which sells at a seaport at 2 *s.* a bushel, is quoted at an average of 5 *s.* 1 *d.* per bushel in the Punjab, the Trans-Indus, and the Cis-Sutlej territories; the distance of these states would be from 800 to 1,200 miles from a seaport.

5933. Would there be much gain in speed on large canals as compared with the present river navigation?—Yes, I have so stated.

5934. Is it practicable to improve the navigation of the Ganges or the Indus?—It is not practicable. The only suggestion that I have ever heard made with reference to that subject was, to store a large quantity of water in the North-Western Provinces, and throw it into the Ganges in the dry season. I think that if large quantities of water were stored, which could only be done at a very great expense, it would be much too valuable for purposes of irrigation to be thrown away upon the channel of the Ganges; and if it were so used, it would only have a temporary effect; it would improve the navigation for a short time only.

5935. You have said that the first great cause of the poverty of crops is the peculiarity of the climate; in what way does the climate operate to prevent the production of valuable crops?—I believe that the first great cause of the poverty of crops is drought, as is shown by the rain gauge which I have here, from which it appears that at Bombay there is no fall of rain for seven months, and only an inch and a quarter in the eighth month; and for the remaining four months 74·83 inches. At Calcutta and Madras the rain continues for a longer time, but the fall is less than one inch a month for five months, which in a tropical climate is almost nothing; with such a fall of rain it would be impossible to produce a good crop of sugar or cotton without artificial irrigation.

5936. Can you inform the Committee to what extent land is now irrigated in India, and by what means?—Irrigation is at present used to only a very small extent, and by very imperfect means, and is rarely employed in Western India, except in Scinde, in consequence of its expense and inefficiency, except for the production of fruit, garden-stuff, and sugar-cane for home consumption, for which purpose the water is raised from canals, tanks, and wells. The quantity of land thus irrigated in the country under the Bombay Government amounts to only two per cent. of the cultivated land, except in Scinde, where the whole cultivation, amounting to 2·4 per cent. of the whole area, is irrigated from canals during the high flood of the Indus. In the Madras Presidency the land is irrigated to the extent of three per cent. of the whole area, partly from canals, but principally from tanks, which are very numerous there. In the North-Western Provinces, the quantity irrigated, or estimated to be irrigated when the Ganges Canal is completed, amounts to eight per cent. of the whole area.

5937. Sir *Erskine Perry.*] Where do these figures come from?—From a memorandum published by the East India Company, and from a return to the House of Commons, upon the motion of Mr. Hume.

5938. Is it not the fact that in every field in Guzerat there is a well?—There are numerous wells; but the total area of land irrigated is only two per cent. of the cultivation.

5939. Mr. *Willoughby.*] During a season of what you call drought, or the last summer season, when everything is burnt up, do you think that the ordinary cultivation of land could be carried on successfully in India?—I think it could be carried on there much more successfully than it could in any other country in the world, if proper means were taken.

5940. *Chairman.*] There is a combination of heat and moisture there, is there not, which produces those extraordinary effects which are observable in the South of France, Italy, and Spain?—Yes.

5941. Sir *Erskine Perry.*] At what period of the year is the inundation from the Indus?—The water enters the canals sometimes in April, sometimes in May, and sometimes not till June.

5942. That is really the hottest time of the year, is it not?—Yes. In the

W. Balston, Esq.

22 June 1858.

Punjab there are water channels, as in Scinde, to irrigate during the high flood of the river, and there is a canal in the course of construction; the quantity of land irrigated is not stated. Of the irrigation in Bengal I know nothing, except from the complaints of planters of its expense and inefficiency. The greater number of these works are of native construction, and are all, I believe, without exception, either of native design or according to native design, and are grossly defective both in design and workmanship. In all there appears a total absence of engineering science in designing and mechanical skill in executing them; the consequences are scanty crops arising from insufficient supplies of water and an enormous waste of labour in keeping the works in repair and in lifting the water to the higher levels of the country; of the whole quantity of land irrigated, but a very small quantity is supplied with water throughout the year, and free from the cost of lifting. Generally the water has to be lifted from tanks, rivers, wells, or canals by various instruments, such as the Persian wheel, the basket, the wooden shoot, the leather bag, and others, which varies from 5 *s.* to 5 *l.* an acre, and upwards, according to the height of lift, the length of time the land requires irrigating, and the kind of crop to be produced. The largest expense would be incurred in lifting water from wells for a crop of sugar in a rainless country; with hired labour it would cost 8 *l.* 10 *s.* 6 *d.* an acre. The most extensive irrigating canals that I have seen receive their supplies of water from the Indus, but these canals are so defective in construction that with the river flowing through them all the year, they supply water to the land only sometimes four months, sometimes three months, and sometimes not more than two months during the year. In 1855 the Kardars, or native revenue officers, complained to me that much of the land had only one month's supply, and this in the rainless country of Scinde. Extensive canals might, I think, be constructed to give water free of all cost of lifting, which now varies from 5 *s.* to 5 *l.* per acre, at from 2 *s.* to 4 *s.* throughout the country, in any quantity that might be requisite.

5943. And that you think might be done by the application of European science and European capital?—Yes, a large capital would be required for that purpose.

5944. It could not possibly be done by native labour, I suppose?—No; the natives could not provide either skill or capital.

5945. The result would be an infinitely cheaper supply of water?—Yes; and cultivators in India would produce as good crops as cultivators in any other country, and at less than one-fifth of the cost at the place of growth of sugar or other valuable products grown by slave labour.

5946. Is irrigated land generally subject to the great cost of lifting the water to which you have referred?—I believe so generally, with but little exception. Colonel Cotton states that the cost of lifting water for sugar-cane in the Madras Presidency is from 2 *l.* to 3 *l.* per acre, and in another place he states, that the lift from tanks is from 5 feet to 15 feet. The lift from the Indus or the Ganges in the dry season would be from 20 to 40 feet. Should the value of labour increase, which would be the natural consequence of any improvement in agriculture in a country where so many labourers are landowners, from a penny halfpenny to sixpence a day, the cost of lifting would be increased from 3 *l.* to 12 *l.* per acre.

5947. Is the Government tax on irrigated land heavy?—Besides the high cost of water, the high charge from irrigated land on account of Government, is an obstruction to any extensive wet cultivation; the charge on account of land-tax for sugar land, varies, according to Mr. Prideaux, who was examined before the Sugar Committee of 1848, from 18 *s.* to 48 *s.* per acre. The Madras Irrigation Company, of whom Captain Doira and Colonel Atwell Lake, both of them Madras engineers, are directors, state that much of the land yields 3 *l.* an acre to Government; if it yielded 3 *l.* an acre to the cultivator, he would be soon transformed from a miserable half-starved beast of burthen to an independent capitalist farmer. It does not appear whether the cultivator spoken of, who pays Government 3 *l.* an acre, is or is not subject to any cost in lifting the water; but in Western India cultivators are, or have been, charged upwards of 5 *l.* an acre for irrigated land which is subject to this cost.

5948. Mr. *Willoughby.*] Five pounds an acre?—Yes.

5649. Where?—In Western India, near Poonah.

5950. *Chairman.*] Is the irrigation efficient; were the crops that were produced by it good?—No; the great objection to the irrigation is that they cannot at any cost obtain a good supply of water; watering land in a tropical country with a jar a bucket,

a bucket, or basket, is almost as ineffectual as it would be to water an English garden in the summer with a tablespoon.

5951. Is it practicable to improve the value of land so as to make it worth cultivating by capitalists?—To make land worth cultivating by capitalists, it should be supplied with an unlimited supply of water throughout the year, and as much as possible free from the cost of lifting, and with canal communication to a seaport, which advantages would give a rent value to land of upwards of two pounds per acre, and would cost from two to four shillings per acre according to the nature of the ground, and the facilities for constructing the works, allowing a return of 10 per cent. on the capital expended. This return of from two shillings to four shillings an acre, would leave the canal for navigation free of all cost. For two shillings to four shillings an acre, in addition to the land tax, which ought not to exceed three shillings an acre, the cultivator would get land worth upwards of 2 *l.* an acre.

5952. Sir *Erskine Perry.*] Of what part of India are you now speaking?—It applies to all India, but more particularly to the plains of Hindoostan, which are as level as a bowling-green.

5953. I understood you to say that you had not been in those parts of India?—No; but I have seen sections of the country, and I can say confidently that canals might be constructed there at a cost of not more than 5,000 *l.* a mile.

5954. Do you think that practically they could be constructed in Western India?—Quite easily; because they require much less skilled labour than railway works.

5955. Is it not the fact that rivers with which you are conversant run in beds 50 and 60 feet deep?—Some of them do.

5956. Would those rivers be available for the canals for the purpose of irrigation?—The bed of the river itself should not be used for the purpose.

5957. How are you to draw water for canals from rivers of that kind, so as to irrigate the adjacent soil?—The river at Jubbulpore is 1,200 feet above the sea; if the levels towards the sea-coast are favourable for a canal, the water may be taken through the canal without reference to the level of the present bed of the river.

5958. Mr. *Willoughby.*] By what route?—By the best route that could be selected.

5959. Sir *Erskine Perry.*] Is it not the fact that that is a most rough and mountainous country?—I have not followed the levels from the western coast up to Jubbulpore; but I have from Nagpore down to the mouth of the Godavery, which levels are very favourable. What amount of lockage, if any, it would require to go from Jubbulpore to the western coast, I am not prepared to say.

5960. Is it not the case, that those gentlemen who have investigated the country for the purpose of applying canals to irrigation in Western India, have been unanimously of opinion that the state of the country is not suitable for canals, on account of the depth of the rivers?—I do not know that any man of practical experience has surveyed the country at all. No practical man could object on account of the depth of the rivers.

5961. But is not that the general opinion entertained by men most competent to form an opinion upon such a subject?—I never heard an opinion expressed upon that subject from any person competent, in my judgment, to form an opinion.

5962. *Chairman.*] On what do you base your opinion?—I am speaking of the cost. I should not anticipate that there would be any great difficulty in it. It is more a question as to the quantity of lockage that would be required.

5963. Sir *Erskine Perry.*] You say that without having surveyed the country?—Yes, I feel confident that it is a mere question of lockage.

5964. Mr. *Willoughby.* Would not the cost of maintenance be very heavy, considering the violence of the monsoon and of the torrents?—The canal would be safe from the effects of torrents. The quantity of water in the canal would be regulated by sluices at the head of it, and by overfalls to carry off waste water. The cost of maintenance would be small. The kind of labour required for the purpose of cleaning the canal is the cheapest kind of labour in India; it is about one-fourth of what is paid in England.

5965. Would not the banks be liable to be washed away in the monsoon?—No, they would not be in any way affected by the monsoon.

5966. *Chairman.*] Why would it be the cheapest kind of labour in India?—Because it is unskilled labour, which is the cheapest kind of labour in India. It

W. Balston, Esq.

22 June 1858.

would be mere digging and carrying the earth away in a basket a distance of a few yards.

5967. What is the effect of irrigation on the cotton plant in India?—The effect of irrigation on the cotton plant, is to raise it from a small stunted plant, producing 50 or 60 pounds of clean cotton per acre, to a large perrenial plant, producing 400 or 500 pounds of cotton to the acre, quite equal in quality to anything produced in America, and worth 150 per cent. more than the present native field-grown cotton.

5968. Is that which you now state based on your own observation?—Yes, I have seen it in the Island of Bombay; I have seen the plant there growing about eight feet high; a perennial plant with 300 bolls upon it.

5969. Sir *Erskine Perry.*] That is where there is water?— Yes.

5970. In a garden?—Yes; with irrigation you can produce as good a crop of cotton in India as you can anywhere else, and without it you cannot.

5971. Do you think that a garden experiment is sufficient to enable you to form a correct judgment upon such a subject?—Yes, the garden cultivation which I saw was merely watering the plant; it appears to me that the idea of watering the plants in a field never occurred to anybody.

5972. Mr. *Willoughby.*] Have you been in the Guzerat in the harvest season?—Yes.

5973. Is not a portion of the land there irrigated?—No, I never saw cotton irrigated there; there are no sufficient means of irrigating fields.

5974. That probably is because other products are more profitable to the grower?—Irrigation is too expensive at present for the general cultivation of cotton, and it is scarcely ever applied to anything except garden stuff and the sugar cane.

5975. And wheat, plantain, fruits, chillies, pepper, and things of that sort?—Yes, except wheat, these things are treated as garden stuff.

5976. Do you not think that irrigation is applied to those articles, because they are more profitable to the grower than cotton would be?—Yes, no doubt.

5977. You would not expect a farmer to apply irrigation to cotton, if he could gain more by applying it to something else?—If he has no other means of irrigation than he has at present, he will apply it in the first instance to the necessaries of life, such as vegetables and the sugar cane, as cannot be produced without it.

5978. Have you not seen large tracts of wheat under irrigation?—I never saw any tracts of wheat under irrigation, except where the land was inundated. Wheat is grown on land that has been inundated from rivers, and it would grow anywhere if you could flood your land. I saw no wheat myself in Guzerat.

5979. Your personal observation only applies to a very small part of Guzerat?—No; but that part produces as much cotton per acre as any other part, and of as good quality.

5980. *Chairman.*] How do you know that it produces as much?—From the returns which have been made.

5981. What is the present cost of "Surats," or Indian cotton, delivered at Bombay?—The present cost of Indian cotton at Bombay may be taken at 3 *d.* per pound, including the cost of cultivation, Government rent, carriage, and all incidental expenses. If the cotton comes from Guzerat, the cost may be thus divided: Government rent, 1 ½ *d.*; cultivator, 1 *d.*; carriage and incidental expenses, – ½ *d.*; making in all 3 *d.* If it comes from Oomrawuttee, it is thus divided: carriage and incidental expenses, 1 ½ *d.*; cultivator, 1 *d.*; Government, – ½ *d.* In either case the cultivator gets only 33 per cent. of the produce as the cost of cultivation.

5982. Mr. *Willoughby.*] Where do you get that fact from?—This is from a close consideration of the subject, and a reference to all the authorities I could find. The remaining 66 per cent. is swallowed up by Government, by carriers, and middlemen.

5983. *Chairman.*] Did you get this information in Guzerat yourself?—Yes; I know that it is strictly correct as to Guzerat. Fluctuation in price at Bombay affects greatly the profits or losses of the middlemen, but have no effect on Government rent, and but very little on the cultivator's return.

5984. What do suppose would be the cost, if there were extensive and efficient irrigation?—With canals for irrigation and navigation, the Indian cultivator would be enabled to produce a bale of cotton of 400 pounds from an acre of land, and deliver it at a seaport, from any part of India, at the cost of 2 *l.* 8 *s.* 6 *d.*, as

per

per detailed estimate; which bale of cotton would be worth 10 *l.*, and the seed 18 *s.*, leaving a profit of 8 *l.* 9 *s.* 6 *d.* per acre. Irrigation improves the quality of cotton, and brings it up to the standard of the American cotton. Water never fails to lengthen the staple of cotton in India.

5985. Mr. *Villiers.*] Do you think it would come into competition with cotton coming from America?—Yes; it will drive American cotton out of the market entirely when it comes from India in sufficient quantity.

5986. Mr. *Willoughby.*] These details which you have given us presuppose the difficulty and expense of constructing the canals which you advocate, whatever they may be, to have been overcome, do they not?—Yes, I am not aware there is any difficulty in it at all, except the difficulty of getting money.

5987. Do you think it possible to get a line through the ghaut. Is it not almost beyond engineering skill?—I should be very slow indeed to attempt to make a canal there.

5988. But you must do it, must you not, in order to get to the sea?—No; you may go north without that.

5989. But that would not embrace the whole of the cotton of India?—It is impossible to take a canal from any one seaport to every part of India.

5990. How would you manage from Bombay?—That is worse situated than any other part of India; there would be great difficulty in going down the ghaut. Any way it would be expensive, but the canal could better expense than any other work.

5991. Mr. *Villiers.*] You have spoken of the present cost of Indian cotton delivered at Bombay, and I think you said you had some details?—Yes; land rent per acre, 3 *s.*; water rent, 2 *s.*; present cost of cultivation doubled, 16 *s.*; packing and carrying to a seaport, 4 *s.*; 10 loads of manure, 10 *s.*; and ginning, 13 *s.* 6 *d.*, making in all, 2 *l.* 8 *s.* 6 *d.*; then the value of 400 lbs. of cotton at 6 *d.*, 10 *l.*; and six hundredweight of seed at 3 *s.*, 18 *s.*; making in all, 10 *l.* 18 *s.*

5992. Mr. *Gregson.*] You spoke of 9 *l.* just now?—It would be 10 *l.* 18 *s.* altogether, and deducting the 2 *l.* 8 *s.* 6 *d.*, it would be 8 *l.* 9 *s.* 6 *d.* per acre; the value of it at the port would be 10 *l.* at the present price of cotton.

5993. Against 2 *l.* 8 *s.* 6 *d.* the cost?—Yes.

5994. Mr. *Willoughby.*] Where is the cotton to be grown?—The cotton plant is not fastidious about soil.

5995. In that calculation of yours, where would the cotton be grown?—I have already said that by canal you might convey a bale of cotton a thousand miles for less than 2 *s.*

5996. Do you think you could easily get other engineers to support your opinion?—Yes; I think that any engineer in Great George-street would support it.

5997. Sir *E. Perry.*] Is it not the universal impression in India that some soils are good for the growth of cotton, and that some are not?—Yes; that is a fact, but it is a fact also that it grows in almost every village in India.

5998. Is it not the staple product of the Deccan?—There is a great deal grown in the Deccan.

5999. Mr. *Villiers.*] You have no practical acquaintance with the growth of cotton yourself, have you?—I have watched the cultivation of it.

6000. *Chairman.*] Upon what ground do you say that irrigation is a necessary expedient for the successful growing of cotton?—Because irrigation increases the produce from 60 or 70 pounds to 400 pounds an acre.

6001. And is the staple greatly improved by it?—Yes.

6002. Could you convert it from a short into a long staple by irrigation?—Yes, irrigation never fails to do that.

6003. Sir *Erskine Perry.*] Is there any plant that has produced the quantity you speak of, except a cultivated plant in a garden?—Dr. Wight, who paid great attention to cotton cultivation in Southern India, states that, on one occasion, he had 100 acres of noble looking plants, promising a crop of 1,000 pounds of seed cotton to the acre, but, in consequence of a sudden failure of moisture, thousands and tens of thousands of the bolls never opened. I have a letter here from Mr. George Vary, late superintendent of cotton experiments in the South Mahratta country, in which it is said, "The cotton plant as at present cultivated is an annual; the seed is sown towards the end of the monsoon, when the ground is full of moisture; the bush seldom exceeds three feet and a half in height, and 40 pounds per acre of cleaned cotton is considered a fair crop. After the cotton is collected the bushes are pulled up and burnt, as they all die during the hot weather

W. Balston, Esq.

22 June 1858.

from want of moisture. By irrigating cotton, you will be able to retain the same bushes for several years. I have seen a bush, nine years old, producing three crops yearly of fine cotton. You will therefore get two or three crops yearly instead of one, and instead of 40 pounds per acre you will get from 200 pounds to 300 pounds yearly; and the quality of irrigated cotton is 150 per cent. better than field-cultivated cotton, which is easily accounted for. In the non-irrigating system, the hot weather suddenly sets in, the bush, from the want of moisture, becomes suddenly dried up and stunted, and this renders the cotton short and crisp. The samples of cotton which I have seen grown in gardens, or where there was plenty of moisture, is as fine, long, and silky, as any in the world; and there is no doubt, if it can be produced in large quantities, it would be preferred to American or any other."

6004. You have never practically ascertained whether cotton would pay the expense of irrigation?—No, not in India. Sir John Lawrence reports a produce of 384 pounds of clean cotton to the acre, from irrigated land in the North-western Provinces, as stated by Dr. Royle.

6005. Mr. *Willoughby.*] Is not the cotton plant very much affected by the cold weather. Have you never seen (as I have) whole plains of cotton presenting the appearance of a fire having passed over them?—I think not, but I think that the plant would recover if it had suffered from anything of that kind.

6006. *Chairman.*] Do we not hear complaints constantly from America that the cotton crop has suffered from frost?—Yes.

6007. Mr. *Villiers.*] Do you know anything of the cotton in America?—Yes; it has been grown extensively in India.

6008. And do you know the price?—Yes.

6009. And the circumstances under which it has been brought into this market?—Yes.

6010. And have you considered the difficulty we should have in competing with cotton coming from America?—Yes.

6011. Do you suppose it would be possible for us ever to bring Indian cotton into competition with that grown in America?—I think that the first three or four large canals that were made in India would drive the American cotton entirely out of the market: forcing it out by two prices: that would arise simply from the cheapness of labour in India.

6012. Are there any irrigating canals in America?—None.

6013. Would there be any difficulty in collecting the cotton crop in India?—No, not much difficulty.

6014. The labour of collecting it is considerable, is it not?—The present cost of cultivation is only 8 *s.* an acre, and for crops more highly cultivated it would not exceed 16 *s.* for labour and seed.

6015. You think there would be no difficulty in getting a continuous supply of labour for the purpose?—None whatever. There is an unlimited supply of labour.

6016. *Chairman.*] Do you suppose that the low cost of production in India would influence prices at Liverpool without a much larger production in India than at present?—I do not suppose that. I believe that cotton quite equal to the average of American might be delivered at a seaport from any part of India at a cost of 1 ½ *d.* per pound. This low cost of production, however, would not much affect prices in Liverpool till Indian cotton is produced in sufficient quantity to displace the American. So long as the American, which costs 6 *d.* per pound at a seaport can be sold at Liverpool at a profit, so long will the Indian cotton sell at a proportionate price, whatever the cost of production might be. To reduce prices in Liverpool 2,000,000 bales in excess of the present supply are wanted from India, or will be in a few years. To produce this quantity by the present method of cultivation would require an extra 42,000,000 of acres of land, allowing a crop of cotton from it once in three years, and an extra 4,000,000 or 5,000,000 of labourers. With this extra quantity of land and labour, 2,000,000 of bales might be produced; but the quality, as regards staple, would not be improved, and the cost of production would remain the same as at present, except only to the limited extent to which the cost of carriage may be hereafter reduced by the construction of roads or railroads.

6017. Mr. *Gregson.*] Is this your opinion?—Yes.

6018. Are you speaking there of a special locality, or are you speaking generally?—I am speaking of all India. I think that the mode of obtaining a large supply

supply of cotton from India would be to encourage irrigation in preference to making railways, or constructing other works. *W. Balston*, Esq.

22 June 1858.

6019. *Chairman.*] Does not a low price for cotton in England necessarily enable the English manufacturer to compete more successfully with the native manufacturer?—The lower the price of raw material at home, the greater the power of the machinery of Lancashire to compete with the manufacturers of Asia. To the Indian cultivator, who is also a manufacturer, the price of cotton is a penny per pound without reference to its value in England, and the cost of spinning it into 20*s.* twist 10*d.* per lb., making it a total cost of 11*d.* per lb. for the yarn; the cost of producing the same yarn in Lacashire would be 5½ *d.* for the cotton, and 1½ *d.* for spinning; together 7 *d.*, giving the manufacturers a margin of 4 *d.* per lb. to cover the cost of export. If cotton could be had at 3 *d.* per lb. in Lancahire, the cost of the yarn would be reduced to 4½ *d.*, giving a margin of 6½ per lb., which would enable the English manufacturer to compete with the Eastern manufacturer to a much greater extent than at present. Although the cultivators of India will continue to manufacture their own clothes so long as they have nothing else to do for a great part of the year, yet there are 60 millions of people in India, besides foreigners, who buy manufactured goods where they can buy them cheapest.

Jovis, 24° *die Junii*, 1858.

MEMBERS PRESENT:

Mr. Campbell.	M. Danby Seymour.
Mr. Gregson.	Mr. William Vansittart.
Mr. Kinnaird.	Mr. Villiers.
Mr. Lowe.	Mr. Willoughby.
Mr. Mangles.	Mr. De Vere.
Sir Erskine Perry.	

WILLIAM EWART, Esq., IN THE CHAIR.

John Warden, Esq., called in; and Examined.

6020. *Chairman.*] HOW long were you in India?—I was upwards of 33 years in the service, including absence. *J. Warden*, Esq.

24 June 1858.

6021. When did you leave India?—In September 1854.

6022. In what parts of India have you been?—I was employed in the provinces south of Bombay. In the territories of the Peshwah, called the Deccan, and the Southern Mahratta country, which stretches down to the Toongbuddra river.

6023. Are these all the parts of India in which you have been?—I have been from the Taptee down to the Toongbuddra, the southern point of the Bombay Presidency; during the greatest part of my service, I resided in the Deccan.

6024. In what capacity were you in India?—When I left India I was senior Member of the Council, Chief Judge of the Sudder Court, and President of the Board of Education, in which last capacity I had the honour of succeeding an honourable and learned Member of this Committee.

6025. Previously to that, what capacity did you fill?—When I first went to India, I was employed for five or six years under the Commissioner in the Deccan; which appointment was similar to that of Sir John Lawrence in the Punjab; on the abolition of the Commission I was transferred to the secretary's office at Bombay, and travelled with Mr. Elphinstone through the Deccan.

6026. The commissionership in the Deccan was abolished long ago, was it not?—Yes; Mr. Chaplin was the last, and Mr. Elphinstone was the first. I was for some time employed in the South Mahratta country as an assistant to Mr. Thackeray, of the Madras Civil Service, who was called principal collector and political agent, in which capacity he had the whole administration of the country under him; he was one of the most distinguished members of the Madras Civil Service.

J. Warden, Esq.

24 June 1858.

6027. Have you ever turned your attention to the obstacles which exist with reference to the settlement of Europeans in that part of India in which you have been?—I have.

6028. What is your opinion as to the climate of Bombay?—In those parts in which I have been employed, I should say that the climate is sufficiently good for Europeans to colonise; that is, for overseers, capitalists, and bailiffs; of course, for manual labour, it is out of the question for two reasons; first, the climate is not such as to admit of Englishmen performing labour; and secondly, the wages of labour are about fourfold less than they are in this country.

6029. When you speak of residence, you mean, of course, residence for a term of years; you do not contemplate the continuance of the race of Europeans in that part of the country?—I should imagine that the race of Europeans could be continued if the children were brought up on the hills, in which there would be no difficulty.

6030. On what hills?—In the Deccan there are some hills called Mahableshwur on the Western Ghauts; in one part of them you can reside all the year round, but in the other part you cannot. The monsoon is so heavy there that no Europeans could live there for three months; but leaving the immediate edge of the hills, there is a climate where Europeans could live all the year round.

6031. Is that on the eastern side?—Yes; the monsoon being broken by the Western Ghauts.

6032. Can you state what is the difference of the fall of rain on each side?—Yes.

6033. Are you clearly of opinion that Europeans could reside to the eastward of those hills?—Yes.

6034. Do you think that a medical man would confirm that opinion?—Yes; I believe that the subject has been tested by medical men at Bombay.

6035. Have you ever noticed the state of health of our soldiers who have been located in that part of India?—I passed a great many years at Poonah, where there is a large military cantonment of cavalry and foot, and I should say that the soldiers look as healthy there as they do at a review in Hyde Park; I could see no difference; they appeared to be remarkably healthy, and the exposure to the sun did not seem to have done them any harm.

6036. Those soldiers, I presume, had resided in the healthy district?—Yes; I am speaking entirely with reference to that part of India which is very healthy; the soldiers' wives do not look so healthy as the soldiers themselves, but that is partly accounted for by the miserable huts that the women have to live in. I think that accounts for the unhealthy appearance of the women and children.

6037. Do you think it practicable to have depôts for the soldiers and asylums for their children on the more healthy parts of the Mahableshwur Hills?—I should think so.

6038. Are you of opinion, that in that situation the soldiers could be safely stationed, and their children brought up?—Yes; Sir John Malcolm originally intended it as a sanatarium for European Troops, and the first year he was there some invalid European soldiers were sent up; they got better while they were there, but the approach of the monsoon obliged him to send them back to the plain, and it was found that their improvement was not permanent; the idea was soon given up, and it was not until some years afterwards that was observed.

6039. Sir *Erskine Perry*.] Have you not heard of there being a fall of rain to the eastward there of something like 280 inches in the course of four months?—Yes; and I may mention as an example of the extent of damp, that if you wash your clothes there, you must send them down to the plain to be dried; there are in the Deccan, hill-forts which are nearly as salubrious as the Mahableshwur Hills, and nearly as cool.

6040. Are they subject to the same degree of damp?—No, they are not.

6041. Those are more in the interior, are they not?—Yes.

6042. *Chairman*.] Has any inquiry been made by the Government as to the sanataria of Bombay, and as to what places could with advantage be made stations for the military, and where there could be asylums established for the education of the children of soldiers?—I do not know that the Government ever turned their attention particularly to the education of the children of soldiers on the hills.

6043. But

6043. But have inquiries been made as to situations suitable for those purposes?—I imagine that the inquiries were made with reference to the soldiers, and not with reference to their children.

6044. Have inquiries been made as to what places are healthy and suitable as depôts for soldiers?—Yes; in the north of Guzerat there is a place called Aboo, which is a well-known place; then between Poonah and Bombay there is a hill called Materan, to the foot of which the railway goes, and the electric telegraph is carried to the top of it.

6045. Is it not the fact that recently more of these sanataria have been discovered than were known formerly?—Yes.

6046. And are they gradually exploring and finding out the most healthy spots for the purpose of European residence?—Yes; when I went to India, the Mahableshwur Hills were almost unknown.

6047. Can you give the Committee any idea of the cost of labour in that part to the European capitalist?—You may get an agricultural labourer for about four rupees or eight shillings a month.

6048. Sir *Erskine Perry.*] Or less than that perhaps?—Yes.

6049. *Chairman.*] On what security do you consider the English power rests in India?—I think that our security in India rests, on what has been called the government of opinion, which the Duke of Wellington on one occasion defined as the opinion of our power and our justice; that is truly what is meant by the government of opinion in India, on which our empire rests.

6050. With regard to our power; has that opinion been shaken in India, do you imagine?—Yes; I think that it was first shaken after the Affghan disasters, when the natives for the first time discovered that they could demolish a European regiment, and thrust back an army as they, in fact, did. The opinion of our justice, I think, was at its height when I went to India, and when Lord Hastings was Governor-general, with Lord Metcalfe as his chief secretary. There was Sir John Malcolm there, the greatest friend the natives ever had, who was watching their rights and usages in the centre of India; there was Sir Thomas Monro, at Madras; and there was Mr. Elphinstone, at Bombay. I consider that with such functionaries as those at the head of the Presidencies, there never was any fear of our being unjust or ungenerous to the natives.

6051. Do you think that the natives now have not that high opinion of our justice that they formerly had?—When I speak of justice, I would combine it with generosity. I think that during the last 15 years their opinion of our generosity towards them has very much diminished. I think that the measures which have been taken by the Government with respect to them have shaken their faith very much in the generosity of the British Government.

6052. What is the system of law that is in force in Bombay; what is the basis of our law there?—The Mofussul territories are administered under what is called the Elphinstone Code, which is a code formed by a committee of gentlemen during Mr. Elphinstone's administration, and which was revised word for word by himself; I have sat by his side as he has been revising these regulations. That code was extremely simple and clear, and answered all practical purposes, but it was latterly encumbered with a number of supplementary regulations which deformed its beauty.

6053. It was based on regulations?—All the great principles of it were based, I imagine, on the principles which prevail in this country.

6054. Sir *Erskine Perry.*] And they were also based, were they not, on the regulations existing in Bengal?—They may have been so; but I am not aware of the fact.

6055. *Chairman.*] On what law, does the judge rest the decision of cases?—I have here a section of the regulations in which that is mentioned, and if I may be permitted to do so, I will read it; it is the 26th section of the fourth Regulation of 1827: "The rule to be observed in the trial of suits shall be Acts of Parliament and regulations of Government applicable to the case; in the absence of such acts and regulations, the usage of the country in which the suit arose; if none such appears, the law of the defendant, and in the absence of specific law and usages, justice, equity, and good conscience alone."

6056. Sir *Erskine Perry.*] Do you know that that corresponds with a similar regulation at Calcutta?—I do not.

6057. *Chairman.*] I believe you were formerly connected with what may be called the Enam Commission in that part of the country?—Having been

J. Warden, Esq.

24 June 1858.

employed under the commissioner in the Deccan, in the original settlement of the country, I became more or less aware of the principles on which the settlement of the country was originally made, and I have observed some changes that have taken place since that time; when Mr. Elphinstone took charge of the administration of the country, he issued a proclamation to the people, declaring the principles on which the country would be settled.

6058. In what year was that?—In February 1818, I think; I have not seen that proclamation for many years, but I believe it is before the House, and I think it promised that private rights should be treated with generosity.

6059. Sir *Erskine Perry*.] You know Mr. James Grant Duff's history of the Mahrattas do you not?—Yes.

6060. I will read a passage from that work, it is in page 488 of the third volume: "The progress of the settlement went forward as rapidly as the conquest. After the first instructions were in train, the next object was to obtain full information respecting individuals, that their claims to consideration might be fully understood. Inquiries were also circulated by the commissioner to his agents, and by them to their subordinate agents, on the usages and laws of the country, in which all the intelligent part of the community were called upon for their opinions. A mass of valuable information was thus speedily collected; and, from the judicious nature of the queries, so far from alarming the inhabitants, an inconvenience to which such interrogatories are particularly liable in India, these, on the contrary, being committed to men who knew the natives, tended to gain their confidence, and were in this respect useful to the new government. To keep down insurrection; to settle claims and rewards consequent upon such a revolution; to make some provision for all who suffered; and to better the condition of those whom the voice of the community pointed out as fit objects of bounty, were a part of the duties which devolved upon the Commissioner:" Is that an accurate account of that proclamation?—Yes; I was one of those employed in putting those queries to the natives, and in getting the information which was afterwards digested by a gentleman in the Civil Service of the name of Steele, and published under the authority of Government. I am sorry to say, that it has no more dignified appellation in the country than "Steele's Book;" but it is a most useful work.

6061. *Chairman*.] Proceed, if you please, with what you consider to be the policy or impolicy of the Enam Commission?—I think that the Enam Commission has not attracted all the notice that it should have done in this country.

6062. Can you assign any obstacle to European settlement connected with the Enam Commission?—I go back to the time when Mr. Elphinstone completed the settlement of the country. If I had wished at that time to carry my capital to India for the purpose of growing cotton, and superintending its cultivation by the natives, and cleaning and exporting it, and so on, what I should have done, with my present knowledge of the country, would have been to have sought out a person who had an enam village; because I know that an enamdar, in that part of India, is a person who may be considered to have a proprietary right in the land. I should have gone to him and asked him to mortgage his village to me, or as much of it as I wanted; that would have given me a much better title than I could so obtain in England, because in India a son is responsible for his father's debts. That would have given me the village, if not in perpetuity, at all events, until he was able to pay the money I had advanced to him. The title-deeds of an enamdar are much more copious than any title-deeds in this country; they give a man the land, the trees, the water, the treasure on the surface, and the treasure below; in fact, language is exhausted in its attempt to convey to him the proprietary right in the soil; at this time there was no fear that these Enamdars would be treated otherwise than with generosity; it is true that there was a regulation by which they were unable to sue the Company for enams in the courts of justice, but Mr. Elphinstone was at the helm, and as long as he was there they were safe; as far as I remember, the rule was, that any man who had *official* possession of an enam, that is, whose enam was found recorded in the Peshwah's records, and also *actual* possession, got his enam confirmed to him; if on the other hand it was found that he had not *official* or *actual* possession, then his enam was taken away from him; this was the state of affairs at that time; some time afterwards it was discovered that 10 or 12 villages which, according to the Peshwah's records, should have been resumed, had not been so resumed; according to the records they were in a

state

state of resumption when we took the country; I am speaking now altogether from memory; it was discovered that a memorandum which had been sent from the Commissioner's office to resume these lands had never been carried into effect; I received a letter upon the subject from a gentleman employed in the survey there, and these villages were, I believe, taken possession of by the British Government, and I consider rightly and justly so; this, as I believe, was the foundation of the Enam Commission; but the Enam Commission went a great deal further; it disturbed Mr. Elphinstone's settlement, and not only so, but it deprived the Peshwah's subjects of their rights in respect to their lands, which the subjects of other parts of the Bombay Presidency had; I do not think that the Enam Commission, as I have said before, has received all the attention that it ought to have received in this country as an obstacle to colonization; it was, I believe, first mentioned in that very remarkable speech of Mr. Disraeli's, last session, a speech in which, so far as I know, he hit all the blots of the Bombay administration. I do not speak of other parts of India. It was also mentioned by Mr. Layard, in his speech at St. James's Hall, and an honourable Member of this Committee, the Member for Devonport, moved last Session for some returns with respect to it, of which I obtained a copy, and that led to my putting together some notes for my own satisfaction, and for the information of those who took an interest in the subject.

6063. If you were going as a British settler to undertake the cultivation of cotton in the Peshwah's dominions, of which you speak, what sort of estate would you try to get?—I should seek enam land.

6064. Would you find any obstruction, as a British settler, to having the proprietorship of that enam land?—With my knowledge of the Enam Commission, I should.

6065. Mr. *Willoughby.*] Does not the Enam Commission confirm as well as resume titles?—Yes, it does; as I have stated, having seen a copy of the return which Sir Erskine Perry obtained from the House, I wrote some notes for the benefit of those who felt interested in the matter, showing how I think the Enam Commission bears upon the landowners, and would, therefore, form an obstruction to colonization by Europeans, and with the permission of the Committee, I will read these notes.

6066. *Chairman.*] Be so kind as to do so?—The alienated land in Western India is, for the most part, situated in that country which formed a portion of the kingdom of the Peshwah, whose adopted son, Nana Sahib, has acquired such notoriety. The Peshwah abdicated in favour of the British Government in A.D. 1818, when Mr. Elphinstone issued a proclamation promising an equitable adjustment of private claims. For nine years afterwards the country was administered by a Commissioner, as Scinde and the Punjaub have since been; in 1826, this provisional form of government ceased; and that form generally prevailing in the provinces of the British Government was substituted; some modifications of the general system were however made, the most important of which, as affecting the rights of the people, was that provision of the Regulations by which it was enacted, that claims against the Government on account of enams should not be cognisable by the courts of justice. By this enactment, those who had been the Peshwah's subjects were deprived of the privilege enjoyed by other British subjects of suing the Government for the recovery of enams; first, before the revenue authorities, with special appeals to the Sudder Court, and to Her Majesty in Council; it being provided that the revenue authorities should conduct the inquiry in the same way, and under the same rules as the general regulations prescribe for the trial of civil suits in the Zillah Court.

6067. Under what authority was that law passed?—It is contained in the 42d section of the 17th Regulation of 1827; Regulation 6 of 1830, and Regulation 6 of 1833.

6068. Then the original law was passed under the administration of Mr. Elphinstone?—Yes, it was. Under the Regulations cited, a title to an enam is tested in the courts as follows: Enjoyment for 30 years is a sufficient title to exemption from the payment of public revenue, and such enjoyment, for 12 years only, antecedent to the date when the territory in which the land is situated came into the possession of the British Government, is equivalent to enjoyment for 30 years. As already observed, the Peshwah's subjects were excluded from the courts of justice administering this law for the adjustment of questions of

J. Warden, Esq.

24 June 1858.

title to land, and however strong a claim on the Government a man may have considered he possessed, he had no means of enforcing it; this was of less importance so long as Mr. Mountstuart Elphinstone governed Western India, because he dealt generously by all claimants, and was intimately acquainted with the history and people of the Deccan; but that this exclusion was more or less a hardship is shown by the case against the East India Company for the recovery of the village of Rawluj, situated without the Deccan, where the courts of justice were open to claimants to enams, in which the claimant obtained a final judgment in his favour before Her Majesty in Council. It was to have been expected that the East India Company, when they did proceed to the adjudication of titles to land in the Deccan, would have done so before the lapse of time had established prescriptive titles, and that they would have granted to the people of that country the same advantages which the regulations had secured to other British subjects. But they did not take any steps in the matter till A.D. 1852, thirty-five years after the abdication of the Peshwah, and when many prescriptive titles had been established under the regulations by the efflux of time alone; and when they did act, they passed a law of a most rigid and unjust character, excluding the Peshwah's former subjects from the advantages possessed by other British subjects. Instead of simply extending to the Deccan the laws in force elsewhere, they re-enacted the provisions of a rescinded law, (rescinded because "found inconvenient in practice,") by which sixty instead of thirty years' enjoyment was required to constitute a prescriptive title, and added the still more stringent clause, that these sixty years must be sixty years before the introduction of the British Government, and consequently ninety-five years before the institution of the suit.

6069. Do you mean, that a British settler, in purchasing land of the character you describe, would have to derive from the person who sold it to him a 95 years' title?—Certainly he would; and, further, a new limitation to prescription was introduced, declaring prescription not to arise from the efflux of time only, but dependent likewise on what should appear in the bills of mortality; and females were altogether deprived of their inheritance.

6070. Native females had antecedently a right to succession, had they not?—By the native usages they had.

6071. Mr. *Mangles.*] Are you confident about that?—I am; how otherwise could it come to pass that you see a female patell in a village? The section enacts that land uninterruptedly held, exempt from assessment for 60 years before the introduction of the British Government, and then in the authorised possession of a grandson, in male descent of the original grantee, shall continue to be held so long as there shall be in existence any male heir tracing his lineage through males only. The next section limits possession to "one succession further" only, even if such possession existed 40 years before the British accession; but even that limited possession is encumbered by the provision that there shall have been in the interval a death between the original grantee and the possessor; and females are again excluded from inheritance. It will be remembered that 12 instead of 60 years' possession before the British accession is all that is required in other parts of Western India to constitute prescriptive title.

6072. You speak of possession here; the enamdar is not ousted; he is only obliged to pay revenue; is not that so?—Yes.

6073. But you speak of possession; he is not ousted?—I suppose he may be allowed to continue to hold his village as a common landholder.

6074. Sir *Erskine Perry.*] As a ryot, in fact?—Yes; the only liberal provisions in this Act XI. of 1852, are to be found in sections 7 and 8 of Schedule B, in favour of mosques, idolatrous temples, Mahomedan priests, and Hindoo astrologers, which are followed by a miserable compensation to the widows of those deprived of their inheritance under the operation of this Act. Then when we turn to the procedure of this Enam Commission, we find the *onus probandi* thrown on the defendant, the enamdar who is in possession; and we miss the wholesome restraint of the provision of the regulations, that "inquiry shall be conducted in the same way, and under the same rules as the general regulations prescribe for the trial of civil suits;" and the specimens of trials given in the return show how advantage was taken of this immunity to deprive men of their landed estates by summary process. Although the unfortunate landowner may have appeared before the Assistant Enam Commissioner on the original trial, the appeal to the Enam Commissioner

Commissioner is probably disposed of in the enamdar's absence, and most certainly the "final" appeal before the Governor in Council is done in a corner, and not only is the appellant excluded from the right to appeal to Her Majesty in Council, but "in all matters not specifically provided for" in the Act, the Government, a party to the suit, is to "instruct" the Court; "no order or decision of the Government is to be questioned in any court of law;" and to crown the whole, "subsequently to the passing of Act XI. of 1852, particular cases are no longer reported to the Court of Directors."

6075. Mr. *Willoughby.*] Do you mean that the proceedings of the Enam Commission are not reported to the Court?—Yes; I quote from page 7 of the Return. When we look, lastly, to the persons to whom these absolute powers of disposing of questions of title to land are entrusted, we find them to be, not the judges of Her Majesty's Supreme Court, nor the judges of the Sudder Court, nor any judicial officer whatever, but young gentlemen of the Civil Service, and captains and subalterns, taken from their regiments principally on account of their knowledge of the Mahratta language, and, at this moment, the head of the Enam Commission is a captain of Native Infantry. As if it were not sufficiently irritating to a people to be subjected to the injustice and partiality of the Act I have sketched, the snail's pace at which these enam courts move renders their operation the slowest mode of moral torture that could be applied to a nation on a subject the dearest to their pride and to their hearts, viz., the position and comfort of the widows and children they leave behind them. To the year 1856, out of one hundred and eight thousand cases on the files instituted against 100,000 landowners of Western India, seven thousand only have been disposed of, and of the most important cases, namely, claims to 1,200 villages, only 245 had been disposed of, of which the immediate profit to the East India Company is said to be (in round numbers) 43,000 *l.* a year, with a prospective profit of 15,000 *l.* per annum. After what has been said, it will not surprise any one to hear that, on a proposal to extend this Enam Commission Act from the patient and submissive inhabitants of the Deccan, to the more warlike and independent people of Guzerat, the officer conducting the survey in this province declared his opinion that the measure would produce a rebellion; and although the English public has nearly made up its mind as to what did produce a rebellion at last, it may not be irrelevant to strengthen that impression by the remark that, in the Bombay Presidency, the rebellion first broke out in the southern Mahratta country, where the Enam Commission first appeared and carried on its proceedings most vigorously for nine years, namely, from 1843 to 1852, even without the sanction of an Act of the Indian legislature. It has been said in defence of this Enam Commission, that one third of all the land in Western India has been found to be alienated, and that fraudulent titles exist. But the quantity of land alienated does not affect the question as to the principles of adjudication to be applied to the titles under which the land is held; and the stronger the case which the East India Company has against the enamdars on account of fraud, the more inexcusable it is that they should have shrunk from meeting their defendants in the ordinary courts of law; their having departed from that principle of justice by which the *onus probandi* in such cases is thrown on him who seeks to oust another; their having altered the law of prescription in their own favour, and their having constituted a court of their own for the hearing of their own claims, to which court they, a party to the suit, have the power of issuing instructions, which instructions are not to be questioned in any court of law. If the East India Company had carried their claims into the adawluts, and submitted them to the test of the general laws, nothing could have been said. It has been urged again, that the natives of India have no idea of what we call "fee simple." True it is, that an Indian monarch will resume to-day that which he granted on hereditary tenure yesterday; but such a measure only follows on crime, or at the least on some circumstance by which the enamdar has lost his sovereign's favour, and when a native of India wishes to convey to you that he has a proprietary right in anything, he says, "this is my enam;" and he has a right to consider an enam his own property, for in the title-deeds to an enam, language is exhausted in order to express that all proprietary right is thereby transferred from the Government to the enamdar; and if, under the Peshwah's government, he found himself childless in his old age, he had only to ask permission to adopt a son to succeed him, which permission, on the pay-

J. Warden, Esq.

24 June 1858.

ment of the usual nazzur or relief, was granted, even after the death of an enamdar, to his widow. This last privilege of succession to an adopted son has been taken away, in breach of a promise made by Mr. Elphinstone. As these enams are numerous, and some of them very small, the iron rule of the Enam Commission spreads alarm throughout the country, alienates from the Government the good will of its subjects, and carries dismay, distrust, and hatred into every cottage. It only remains to say that, as the operation of the Enam Commission in Western India involves a violation of public faith, and a rigorous and partial administration of the laws, this commission should be revoked. Act XI. of A.D. 1852 should be rescinded; the young gentlemen who have been constituted judges of questions of title to land should be remanded to their regiments; and all the decrees passed under authority of Act XI. of A.D. 1852, declared open to appeal in *formâ pauperis*, to the Sudder Court, and finally, to Her Majesty in Council.

6076. Did you ever know an English enamdar?—Never.

6077. Do you think that the existing difficulties of proving titles are obstructions to the creation of English enamdars?—Certainly; and I think that no person would take a mortgage of an enamdar if he knew that he would be liable to have a young gentleman come into his village and call upon him to prove his title.

6078. In the course of your experience, have you ever had an opportunity of considering the relative advantages of the administration of justice in the Queen's courts and in the Mofussil courts?—I have. I was for seven years the judge of a mofussil court; I was for six years the senior magistrate of police at Bombay, in which capacity I saw justice administered through the medium of the English language; and I was for six years a judge of the Sudder Court. I had also an opportuity of testing the acquirements of gentlemen in the native languages; I was for several years president of the committee for examining gentlemen in native languages; and I therefore have had opportunities of forming an opinion upon this point.

6079. Do you think that the mode of administrating justice in the supreme courts has been gradually acquiring the confidence not only of Europeans, but also of the natives?—I do.

6080. Do you think that confidence in the Supreme Courts, in preference to the Mofussil Courts, is gaining ground, or do you think that the Mofussil Courts are gaining ground on the Supreme Courts?—Her Majesty's Supreme Court was established in India under the greatest possible disadvantages. The natives were alarmed at its forms, its processes and its mode of procedure altogether; but I believe that at this moment they would rather part with any institution in India than with Her Majesty's Supreme Court; and that feeling is to be accounted for in my judgment by the admirable manner in which Her Majesty's judges perform their duties.

6081–2. Do you trace that to a knowledge of those great principles of jurisprudence which are independent of every country, and every language, and which even a barbarous nation is able to judge of in the long run?—Of course, the education of these gentlemen is of immense importance; but I think the great advantage is, that the suitor is always convinced that a knowledge of his case in all its bearings is brought home to the understanding of the judge, which is not the case in the moffussil courts, and for this reason; it is a very common thing to talk of a person being acquainted with "the" native language; but in the western part of India there are four or five native languages. There is the Hindostanee, which is the political and colloquial language; the Mahratta, the Guzeratee, the Scindee, the Canarese, and a little Tellingee in the South Mahratta countries: in some parts of the country so abruptly does one language cease and another begin, that I have seen the line between them marked on the map like the course of a river, and I have myself, between the rivers Kisna and Bheema, left a village in which Mahratta was spoken; and, after riding two miles only, reached a village in which Canarese was spoken, the two languages being as different as Greek and English. It is hopeless to expect that Englishmen should become, as a rule, sufficiently conversant with those four languages to administer justice in all; and yet, as judicial officers are liable to be transferred from the Deccan to Guzerat, or the Southern Mahratta country, or Scinde, it is requisite, under the system of administering justice in each country in its own vernacular, that they should be quite familiar with all.

6083. Mr.

6083. Mr. *Willoughby.*] Is it not the fact that gentlemen are selected for those provinces in the language spoken in which they have passed an examination, and with which language they are familiar?—All things being equal, they would probably be so; again, Englishmen as a rule are not quick in acquiring foreign languages, while the natives of India are remarkably so. When I first went to India, I was stationed at Dharwar, on the frontier between the Presidencies of Madras and Bombay, and whenever I went to the cutcherry, I was liable to have persons appear before me speaking, one Canarese, a second Mahrattah, and a third Tellingee. This difficulty was readily overcome by the native officials, who as they read either of these languages turned it so rapidly into Hindostanee, that it was difficult to believe this last language was not before them. But even if we had but one Indian language to master, I should still advocate the administering justice in the language of the judge. When a case is conveyed through a foreign language, the parties are never satisfied that the merits have been carried home to the understanding of the judge, nor in point of fact are they always so; the manner of the reader, even his tone of voice, may either add to or subtract from the real import of the paper read, and it is essential that the judge should not only know the native language as found in books, but should be able to understand, and correctly appreciate the dialects of the peasantry which every one knows is sometimes difficult when the language professedly spoken is one's own; how much more so when we hear the dialects of a foreign language? In Her Majesty's Supreme Court, where justice is administered in English, the business is admirably done. There are attached to that court English and native interpreters in each language, the latter watched by the former, is for the most part employed, but the instant a difficulty arises, the Englishman, who has a critical knowledge of the language of the witness, steps in and satisfies the mind of the judge as to the correct interpretation of the expressions used; the documentary evidence is translated and laid before the judge, in English; and the result is, that the suitors are always satisfied that their cases are understood by the court, and the natives have the utmost confidence in Her Majesty's Supreme Court; indeed, although nothing could have been more distasteful to them than this court on its first introduction into India, there is no institution with which they would not sooner part than with Her Majesty's Supreme Court. Their opinion of the Sudder Court is the very opposite; it is considered as "unstable as water," and this, because (receiving, as it does, appeals from all parts of the country) justice is there every day administered to persons speaking three or four different languages (all foreign to the judges) without the intervention of English. Lastly, there is this general objection to the administration of justice in a language that is foreign to the judge—and this one remark applies to the whole of India—that every person speaking a foreign language is always more or less ridiculous; I have heard Englishmen in high places in India addressing themselves to a native crowd in such Hindostanee as could not but disturb the gravity of any one acquainted with the rudiments only of the language. I am aware that the change must be gradually made; I think it should be introduced immediately into the Sudder Court, where a knowledge of three or four languages is requisite, and where much of the pleading is already in the English language; thence it should be extended to the Sessions Courts, and a class of interpreters added to the colleges established for the education of the natives. I would not be misunderstood. While I advocate the use of English in the courts of justice, I would still insist upon every civil officer becoming thoroughly acquainted with the prevailing native language of the Presidency to which he belongs; this at Bombay should be Marhattah. But the test should be very much higher than it is at present. For some years, I was President of the Committee for the examination of officers, civil and military, in the native languages, and therefore I know that the test is wholly insufficient to enable Englishmen to hold familiar conversation on all subjects with natives; and more than once I received requests from commanding officers of regiments not to pass interpreters on so low a test as we did, and I suggested to the secretary of the committee, who was himself a scholar and a linguist, that as an officer, from the moment he is declared to have passed an interpreter's examination, is bound to act as such, even in cases of life and death before courts martial, no one should be declared an interpreter who had not as full a knowledge of the native language as an interpreter of Her Majesty's Supreme Court. His answer was, "You can never get this." I would, however, insist on a second examination, after a civil servant has been

J. Warden, Esq.

24 June 1858.

five years in India, in which it should be required that he should exhibit a critical idiomatic knowledge of the language, enabling him to converse freely with the natives, and become acquainted with their habits, feelings, and manner of thought.

6084. *Chairman.*] I gather from your evidence that, in your opinion, there is an increasing confidence on the part of natives as well as on the part of Europeans in the Supreme Court?—Yes.

6085. And are you of opinion that the introduction of the English language would tend to the better administration of justice, inasmuch as the mind of the judge would then be informed through the medium of his own language?—Yes.

6086. You would be in favour, probably, of a gradual introduction of the English language, and not such a sudden introduction of it as might be considered a dangerous innovation?—Yes, a net-work of railways is essential for India; but if we were to consider the number of years that it would take to enable us to get it, we should be deterred from commencing so great a work; it must be done by degrees. I would, in the first instance, introduce the English language into the Sudder Courts, then to the Sessions Courts, and to the Magistrates' Courts; it should be, of course, a very gradual proceeding.

6087. But you would, at the same time, take care to have the judges sufficiently well instructed also in the native languages?—Yes; there is a class of gentlemen at Bombay who appear to me to be exactly such persons as are wanted for judges. I think that the gentlemen who practice at the bar of Her Majesty's Supreme Court, and who know the language of the country, are the most fit persons to sit on the bench in India; it was usual for them to plead at the bar of the Sudder Court. I remember that by one of the Acts introducing this change, if one of the opposite party objected to a suit being conducted in English, the barrister must either speak Hindostanee, or hold his tongue. On one occasion a vakeel got up and moved the court that a barrister, who was speaking, should speak Hindostanee. As it is honourable to him, there is no reason why I should not mention his name; it was Mr. Dickenson, of the Bombay bar. I said, "Mr. Dickenson, I am very sorry to say you must stop, unless you can go on with your speech in Hindostanee." He said, "Very well, so I will;" and he then finished his speech in Hindostanee, and did it extremely well. Now, I do not speak of my brother judges; but I certainly think that that gentleman was more fit to sit in my place than I was myself; because he had had a legal education, and because in that country the suitors do not have an attorney interposed between them and the barrister. It is not an unusual thing for a party in a suit himself to go to a barrister; the barrister becomes acquainted with him, and gets into his confidence, and by those means he learns the habits, the manners, the thoughts, and the usages of the natives; he also knows their language, and having had a legal education he is in every way fit to become a judge.

6088. Do you think that a previous knowledge of the principles of law is desirable for a judge?—Certainly, I do; every day of my life I have felt the want of a legal education.

6089. Do think that the civil servants who administer justice for the Company, have a sufficient knowledge of law to enable them to do so efficiently?—We struggle hard and do our best, but I think we are very far inferior as judges to gentlemen who have had a legal education.

6090. Do you think that the civil servants of the Company, who administer justice, have such a thorough knowledge of the native languages as is requisite to make them adequate administrators of justice in India?—No; I do not think it is possible for them to have an adequate knowledge of so many languages.

6091. Supposing you are in a court where the native language only is used, do you think it desirable that even the judge of such court, himself using the native language, should still have had a previous education in the principles of jurisprudence and of law?—I do.

6092. Mr. *Willoughby.*] When you say there is no intervention between a client and a barrister, do you mean that to apply to the Supreme Court of Bombay?—To the best of my knowledge a barrister in India will sometimes see a client without the intervention of an attorney, but I do not allude to open proceedings in court.

6093. *Chairman.*] I gather from what you have stated, that you do not think sufficient consideration has been given to the administration of justice in that part of India, in which you have been?—I think there has been every possible desire to administer justice well.

6094. Has

6094. Has the administration of justice been in your opinion the paramount consideration, or has it been subordinate to other considerations?—I think the misfortune on the Bombay side of India is that the magistrates are also collectors. I believe they are not so in Bengal; the consequence of that is, that magisterial business is always considered a secondary matter; a person will attend to his magisterial business if he has no other business to do. I think it is important that a magistrate should be a magistrate and nothing else; in that respect I think there has been a great defect in the system.

6095. In point of fact, you think that the administration of justice should be the primary consideration?—Yes; I think that a person who fills a judicial office should not occupy any other.

6096. Do you think that proceedings now in that part of India are sufficiently simple and summary?—No, I do not.

6097. Do you think it desirable that a more simple and a cheaper course of proceedings should be introduced?—I do; in the year 1851 I made a circuit as Judicial Commissioner from Bombay through the Deccan and Khandeish; and being impressed with the idea that the mode of proceeding under Regulation 4 of Bombay was burdensome to the natives in the way of costs, whenever I came to a mofussul court, I made the Moonsuff open his books, and from them I took at hazard different small cases; I said to him, "Show me a case of one rupee;" then he would turn to a case of one rupee, and when I came to see what the costs were, I found that they amounted probably to a rupee and a half; so that the costs amounted to 150 per cent. These facts were all stated by me officially on my return to Bombay; I think that for such cases as those to which I have referred, courts of request should be established; they would be cheaper; they could not well be dearer.

6098. Mr. *Campbell.*] That would affect Europeans as well as natives?—Yes; the cases are all mentioned in the report which I made as Judicial Commissioner to the Government in 1851, I think. It struck me as a great hardship at the time.

6099. Mr. *Villiers.*] Where is that report recorded?—At Bombay, I presume.

6100. *Chairman.*] Can you give us any information as to the state of roads in Bombay?—The circuit of which I have spoken was the last occasion on which I had an opportunity of testing the Bombay roads; that was at the period when roads are most required, during the monsoon; it was extremely rainy weather; and between Ahmednuggur and Malligaum I found for a very considerable distance no road at all. I think that will be found mentioned in the report. Ahmednuggur was the head quarters of the artillery, and Malligaum was a military station; and I observed then that if any outbreak occurred, in consequence of which it should be necessary to send a siege train of heavy artillery from Ahmednuggur to Malligaum, it could not be done.

6101. Can you give us any general opinion as to the state of the roads?—It is most important that we should have good roads in cotton ground: in fine weather the whole country may be made into a road. The ground crumbles and forms the finest road for a cart or for a gallop in the world; but the moment rains comes, the soil becomes like a sponge, and you cannot move. Then you sometimes find a road without a bridge. You do not want either a road or a bridge in fine weather; but roads without bridges are of no use.

6102. To what parts are you now referring?—To that part of the country which lies between Ahmednuggur and Dhooleea.

6103. What is the state of roads in Guzerat?—I do not know. I never was in Guzerat, but I believe there has been a great improvement there. I myself suggested that the villagers should make the road from Ahmednuggur towards Dhooleea, and that they should keep it in repair within their respective boundaries. I believe the Government adopted my suggestion, and that they have done it; but my predecessor having gone that road year by year, it was a matter of course with him to find a bad road, and he did not take any notice of it.

6104. Sir *Erskine Perry.*] With reference to your opinions as to English being the best language to be used in courts of justice presided over by Europeans, an objection to this effect has been made; that in the provinces there would be no audience capable of detecting a false transaction by the interpreter. That is an objection which has been made before the Committee. What is your opinion upon that subject?—According to the plan which has been suggested there would

J. Warden, Esq.

24 June 1858.

would be pleaders on each side watching the interpreters, who would be acquainted with both languages. I presume that education will be carried on to a great extent, and that both the pleaders would be watching the interpreter.

6105. You were President of the Board of Education at Bombay, were you not?—I was.

6106. In that institution, are there many young men brought up who would be available for offices, such as those of which you have spoken?—There are.

6107. Are those young men well acquainted with the English language?—Extremely well.

6108. Such young men, therefore, would form a very competent bar for the zillah courts of which you have spoken, would they not?—I think they would.

6109. Is it your opinion that the objection to which I have referred is one which has any validity in it?—I think there is no validity in it whatever.

6110. What is your opinion as to the power of the sheristadars over the majority of the judges in the Company's service?—There is a section of the Bombay regulations which makes it penal for a sheristadar to abuse his influence, which is a presumption that he has some influence, and my own opinion is that a sheristadar has more or less influence in all cases. On one occasion my own sheristadar in the political department at Poonah was tried for this very crime of misusing his influence. He had tried to work on one of the Sirdars, and to induce him to give him a large sum of money to use his influence with me to get a certain income settled on him out of his family property. The prosecutor described very well the means that a sheristadar had of influencing the judge. The prisoner on the other hand persisted that he was merely a reader, and that he had no influence at all. One of the first points therefore that I had to decide was, whether there was such influence as that which he was charged with having abused; and on that occasion I remember, I said on the bench that I thought every British officer in India was more under the influence of his immediate native subordinate than vanity would always admit. My having said that raised rather a storm against me. However, I never heard anybody but gentlemen in the civil service deny it. All military men with whom I have ever conversed have acknowledged and felt it; but many persons in the civil service have said they did not think it existed. For myself, however, I have no doubt of it.

6111. Where the Queen's system of justice is adopted, whether a judge is acute or stupid, he is, at all events, always known to be exercising his own judgment?—Yes.

6112. And it is known that he is not dependent upon his subordinate officer for his opinions?—Yes, not in the remotest degree.

6113. Do you not think it is to that knowledge that the appreciation of the Queen's system is to be attributed?—Yes; the people feel satisfied that the case is brought home to the judge, and that the judge gives an independent judgment. I do not wish to say a single word against the desire of the Company's judges to administer justice in the most fair and impartial manner; but the case does not come home to them in the same way as it does to the Queen's judges.

6114. Do not the Queen's judges and the Company's judges belong exactly to the same class of life, and are things not governed by exactly the same code of morality?—Yes.

6115. Therefore, the only advantage that a Queen's judge possesses over a Company's judge is, that the former has had a legal education?—Yes; they are both men of equally high principles of honour, morality, and justice.

6116. One does not hear the conduct of the Company's judges impugned, or of any other fault being found with them, except that they are liable to be misled by other people, who know the language; is not that so?—Yes.

6117. In point of fact, in India, there is no breath of suspicion attached to any of the Company's judges of anything like corruption or malversation?—No.

6118. But the objection which is made is, that they are ignorant of the principles of jurisprudence, and that they ought to have had a legal training?—Yes.

6119. It has also been stated that if English judges were to administer the law through the medium of their own language, it would be extremely distasteful to the natives; what is your opinion upon that subject?—From what I have seen at Bombay, I do not think so.

6120. Is there not at Bombay a population of six hundred thousand natives?—Yes.

6121. Those

6121. Those natives not having been born upon the spot but emigrating continually into Bombay?—Yes.

6122. If the introduction of the English language into the courts generally would be distasteful to the natives, do you think that that dissatisfaction would have been manifested in Bombay, where a perpetual stream of natives is coming in?—I should imagine that it would.

6123. It has also been objected that the expense of having interpreters in the Zillah Courts would be much greater than the expense of the present establishment of the Zillah judge; what is your opinion upon that subject; first of all tell me, if you please, what is the establishment of a Zillah judge in sheristadars?—A Mofussul judge has a sheristadar, who receives from 70 to a 100 rupees a month, and perhaps one deputy, who receives 50, and four or five men, who they call in the Deccan the karkoons, who have a graduated allowance, going down as low as 10 rupees a month.

6124. Do you think that two interpreters, one receiving eighty rupees a month, and the other fifty, would be a more costly establishment than the present one?—Under the system contemplated the sheristadars would disappear, and I do not think it would.

6125. Do you think that men such as I have described could be easily obtained from the educational establishments in India if salaries were offered such as those I have mentioned?—Certainly; particularly with the hope of advancement.

6126. I will now take you, if you please, to the Enam Commission. I gather from you that whether there have been frauds on Government or not, the error that has been committed has been extending the period of prescription to a very much longer time than is recognised in any other system of law?—Yes; that I think is a great objection.

6127. At the time when the Act of 1852 was passed, was it not necessary that ninety-five years uninterrupted possession should be shown?—Yes; that was the case when that Act was passed.

6128. It amounts now, in fact, to a hundred years, does it not?—Yes.

6129. By the operation of that Act an enamdar had no right of appeal to any court of justice, had he?—None whatever.

6130. The appeal was made to the Governor in Council, who did not hear the case by counsel or by vakeels, but heard it *ex parte*?—If the case happened to be decided by one of the assistants of the Enam Commissioner, there was an appeal to the Enam Commissioner, and from the Enam Commissioner to the Government; I cannot say whether the Enamdar was always present with the Enam Commissioner or not, but certainly he was never heard by counsel or personally before the Governor in Council, who finally decided his case, there being no appeal to the Privy Council.

6131. You were a member of the Government for some years?—Yes; off and on for two years.

6132. During that period, did any of these appeals come before you?—They did.

6133. Are you able to say whether the parties appealing had any power of making themselves heard before the Governor by vakeels or counsel?—None whatever; the Act had only been recently passed; I suggested to the Government that although it was called an Enam Commission, it was a court for adjudicating the most important questions that could come on, and that those cases should be adjudicated in the form of trials; and I sketched out a form of proceeding which was approved by the Government.

6134. By the return made to the House, which I moved for in 1857, it appears that Government in a suit of this kind is, in point of fact, judge in its own cause: is not that the fact?—It is very like that.

6135. I have here a letter from a landowner in Bombay, will you have the goodness (*handing the letter to the Witness*) to read it to the Committee, and I will examine you upon it?—It is a letter, dated "London, 8th July 1857," signed "Jafur Alee," and addressed to Sir Erskine Perry: "My dear Sir Erskine,—The debate on cotton cultivation in India is coming on in Parliament, and a few observations on the subject may not be unworthy of your attention. The late Nawab of Surat, 12 years before his demise, purchased a village called Outyadra, from one Syed Edroos, for a sum of 60,000 rupees; the Syed held that village, as well as other lands, under sunnuds from the Emperor of Delhi,

J. Warden, Esq.

24 June 1858.

paying a sum of 1,500 rupees per annum to Government for the village. The annual income of the village was 5,000 rupees, or thereabouts. The Government, on being applied to, refused to confirm the sale, under the pretence that the land could not be alienated by its owner; if it was, it escheated to Government, and a proclamation was issued for the owner, but no one came forward to claim it. Year after year passed in carrying on useless correspondence with Government, until the late Nawab's demise in 1842. I, as his son-in-law, took charge of the estate, but the Government sequestered it; and after five years' correspondence with me, and 17 years after the purchase, the Government came to a decision, which the following letter from Mr. Andrews, the Government agent at Surat, will now fully testify: 'With reference to my Persian letter to you, of the 29th ult. on the subject of the wusussa village of Vontyadra, I am directed to inform you that Government has resolved to continue to withhold its recognition of the sale of the said village to his Excellency the Nawab of Surat, and that the collector of Broach has been directed, unless some representative of original grantee be forthcoming, to claim the village as an escheat to Government. 5th October 1847.' It was with the greatest opposition and the loudest protests, that I succeeded in preventing the Government from taking possession of the village. Notwithstanding, the revenue of 15 years is in their possession, which I intend to sue them for on my return to India, unless I am debarred by the Act hereinafter alluded to. Buckshee of Surat had, some years ago, purchased some land in the collectorate from some freeholders under the Delhi Emperor's sumnuds. My brother, Meer Ackbar Alee, purchased the land from the Buckshee some years ago; Meer Ackbar Alee died, and the Government seized the land for its own use, refusing his son or family to have anything to do with it under the pretence that it could not be alienated from the original owner; if it did it must go to Government. An action is now pending in the Zilla Court for its recovery. Hundreds of cases of this description have taken place at Surat, and the Government has always taken possession of lands after the death of the original holder, be he purchaser or mortgagee, and the people are too poor to go to law against the Company, in the Company's Court, presided over by the Company's judges. Their rights are thus lost for ever. The Company is, as I have said, fast taking possession, under one pretence or other, of lands which people have, in various ways, from their former Governments; and as it does not give nor sell land to the people, it is clear that very soon will disappear from India all who once held land, and could call it their own. An Enam Commission is now appointed by Government to investigate into the rights of people who hold lands in Surat Zilla, and an Act of the Legislative Council is, it appears, proposed, that there should be no appeal against the decision of the commissioners. The people, whose interests are affected by it, are much dissatisfied, and threaten not to appear before the commission; and no wonder. The European Inquisition was nothing to this. I have alluded to my own proposed action against the Government. You are aware that I can now by law sue the Government; but this right or privilege, it seems, is to be taken away from us by an Act of the Legislative Council. What next? and next? and next? I dare not speak of it! It requires no ghost to come from the grave to tell us the result. Having troubled you so much at length upon the land system, as it affects the production of cotton, and the like, I must conclude by summing up with a view of the immediate evils we have to complain of: that the Government deprives the people of their land; that they interfere with their religion; that they place over natives European officers, incompetent from age and experience, to do the work assigned to them. The people want employment; have no trade."

6136. With reference to that letter, I will ask you what is the distinction between an enam and a jagheer?—In the Deccan jagheers are called serinjaums, and enams are quite distinct. An enam is a conveyance of the land with all upon it, in it, and everything that is to be got out of it; serinjaums are of two kinds, the one military, or which are called fouj serinjaums, and the other zaat or personal serinjaums. Under the Mahratta rule the Peshwaw gave large tracts of land on the fouj serinjaum tenure, the conditions of which were, that the chief who received the land should support a contingent of troops for the service of the State, who should be called out when their services were required.

6137. May I not state it shortly in this way; that an enam is a grant of land

in

in fee-simple, and that a jagheer is a grant of land for service rendered?—Yes. Our military system being so different from that of the Mahratta, the fouj serinjaums were resumed when we took possession, and the obligation of supporting the contingent, with some few exceptions, ceased; the zaat serinjaums were continued; some were made hereditary, some for two generations, and some for life: but a serinjaum is always supposed to lapse with the life of the holder, and if it is re-granted, it is always considered to be, what Lord Hastings called "an act of grace;" an enan, on the other hand, is hereditary, and it is better than an hereditary title would be in England, because if a man has not got a son he is able to adopt one; though that, I believe, is now prohibited.

6138. Under this enam commission, the act of resumption of land takes place by Government unless a title of the length you describe can be proved by the owner of the enan, can it not?—Yes.

6139. And the *onus probandi* is thrown upon the landowner, is it not?—Yes; it is thrown on the landowner.

6140. Is it true as stated in the letter which you have just read, that Government does not make any grant either in enam or jagheer, or sell land in the Bombay presidency?—There have been a few grants of enams made, but very few to the best of my knowledge, but no grants of jagheers; there was a man who was the commissioner's sheristadar at Poonah, who received an enam of four thousand rupees a year. Ballajee Punt Natoo, a man who was very useful to us in critical times, also had an enam given to him.

6141. Has not the principle pursued by the Bombay Government, derived I believe from home, been not to make any grants of this kind, either in jagheer or in enam?—I think where they have done so, it has been the exception.

6142. Therefore the statement contained in the letter which you have read is true, that as Government does not give or sell lands, if they resume, the natives will become gradually divested of their rights to property in land?—Yes.

6143. And the consequence will be that a capitalist going out from this country to buy land, could not obtain it because the race of landowners is disappearing under this system?—I think so; the Government unsurveyed land bears a very high rent, and nobody would take enam land unless these special courts for adjudicating titles to enams were abolished; and that is the way in which I consider that the Enam Commission bears upon the question before the Committee.

6144. If therefore a European were to buy the grant of an enam, his title would be liable to be investigated under this Act at any moment the Commissioner chose?—Yes.

6145. In your opinion, would that be sufficient to deter any reasonable man buying land under these circumstances?—Yes.

6146. How many estates does the return which I moved for, and which was ordered by the House to be printed on the 28th of August 1857, show then had their titles questioned?—The total number of claims recorded is 108,199.

6147. How many decisions have passed?—6,002.

6148. How many questions remain to be adjudicated?—100,286½.

6149. Therefore, that shows that the estates to which an indefeasible right has been granted, form but a very small portion as compared to those that are still *sub judice*?—Yes.

6150. Mr. *Willoughby.*] You do not understand, from the return to which you are referring, that these are all enam claims, do you?—Yes; they are stated to be so in the northern and southern divisions.

6151. Does it show how many of the 6,002 cases which were adjudicated were decided in favour of the claim, and how many against it?—No; it does not state the number of those that have been confirmed, and those that have been resumed.

6152. Sir *Erskine Perry.*] Under this Act, adoption, I believe, is not allowed as it used to be in the Hindoo code?—To the best of my recollection, the Act is silent upon the subject of adoption.

6153. Will you put in, if you please, the statement which is contained in the Parliamentary Return to which your attention has been called?—[*The following extract from a Return (Bombay Titles of Land Commission) ordered by the House to be printed, 28th August 1857, was put in.*]

STATEMENT showing the Number of INAM CLAIMS Received and Recorded in the Northern and Southern Divisions of the *Bombay* Presidency.

* The estimated accession of revenue from these resumptions is *Rs.* 4,31,773. 6. 2; of which *Rs.* 1,58,467. 0. 9. have been, and *Rs.* 2,73,306. 5. 5. will, after the lapse of one, two, or three lives, be recovered.

6154. Under the operation of this Enam Commission, as the grantee is not allowed to sell enams, and as the power of adoption is not allowed, does it not follow that in time all Enamdars will disappear from the Bombay Presidency? —I think they will; because I remember, in the case of the jageers, Mr. Elphinstone, in his recommendations to the Government, made a great number of them hereditary in the fullest sense of the word, but from want of heirs they lapsed very fast; and judging from that example, I think that the enams will escheat very fast.

6155. Then as the Government does not make fresh enams as a principle, the consequence will be, will it not, that no landowners, with such rights, will exist in the Bombay Presidency?—In time they will disappear.

6156. Therefore, any British capitalist going out to buy land from them will find nobody in a condition to sell him such land?—That will be the result.

6157. With respect to other land not held in enam, has land generally a saleable value in Bombay?—No; the best title is that which is called Maras, a title of perpetual occupancy; a person may come back to Maras at any time and oust a person in possession on paying his expenses of improvement, and so on.

6158. Is it not the fact, that in the Bombay Presidency the land is so heavily assessed, that it has no saleable value beyond the value of the right of occupancy and of getting subsistence from the soil?—The survey and assessment has reduced the rates on land, but not sufficiently to make it saleable to an English capitalist.

6159. Or to a native capitalist?—No.

6160. Is there enough saleable value in the land to make it an article of commerce, on which capital can advantageously be laid out?—I never heard of such a sale.

6161. Did

6161. Did you, in the course of your experience, ever know of such land being bought by a capitalist, whether European or native?—No; I never did.

6162. Are you aware, from your own knowledge of India, that the natives have just as great a desire to invest their money in land as Europeans have in this country?—Certainly.

6163. Is it not rather a remarkable feature in the native character that they have a great attachment to land?—It is.

6164. Do you think that there is any other cause to which their not purchasing land is attributable than the one you have suggested, that land is too heavily assessed to have any saleable value?—I think that that is the reason.

6165. I will read you another passage from the book to which I have already referred; the History of the Mahrattas, by Mr. Grant Duff. He says, in page 492 of the third volume: "The next claims were those of the jagheerdars; but it may be first proper to mention, that every species of hereditary right, not jagheer, all other rent-free lands, all established pensions, charitable and religious assignments and endowments, were restored." Does it consist, with your experience that that is the case?—I have not seen the enam rules for many years, nor the proclamation; but my impression is, that that is what Mr. Elphinstone did; if he found the right recognised, and the person actually in possession, he confirmed the grant.

6166. He goes on to say, "Every promise held out by the proclamation of Sattara was fulfilled without reserve or modification?"—Yes, all promises were fulfilled.

6167. Under that system, therefore, a great number of hereditary rights to land were confirmed?—Yes.

6168. Does it, therefore, appear to you that, under the circumstances you have stated, those hereditary rights to land are fast disappearing in the Bombay Presidency?—I think they are.

6169. And you conclude that such disappearance of rights in land forms a great obstacle to the settlement of Europeans or native colonists?—I do.

6170. Mr. *Villiers.*] Do you consider that the Bombay Presidency with its present resources offers an advantageous prospect to Englishmen to settle there, and employ their capital there?—I think, having regard to all the surrounding circumstances, and looking to the reforms of which we have been speaking being carried out, that a capitalist might go there and place himself in the position of an enamdar towards the ryots, superintend the cultivation of cotton or sugar, improve the cultivation of cotton, improve the cleaning of cotton, and export it to England; and labour being so cheap in that country, I should think it would be an advantageous thing for him to do.

6171. You mention cotton and sugar; is it in cultivating those products that you think a European settler would profitably employ his capital?—In the parts of the country in which I have been, cotton and sugar are the only things that I think would prove an advantageous investment.

6172. I understand you to say that no European capitalists have come out there?—No; I never met with one.

6173. Would you say that the defects in the administration of justice or any insecurity arising therefrom as regards person and property would be sufficient at present to deter them from doing so?—I certainly think that the mode of administering justice would be an obstruction; it would be an obstruction to me, for instance, if I knew I should be subject to the mode of procedure which I have described; if you hope to colonise successfully you must make some such reforms as I have pointed out.

6174. You must render the title to land more secure, and the forms of procedure in the courts of justice more intelligible and easy?—Yes, and I think there should be a more summary mode of adjudicating upon petty claims.

6175. Mr. *Campbell.*] And a more economical mode also?—Yes, and I think that after introducing English into the Suddur Court and the sessions court, you should take it into those parts of the country to which Europeans go.

6176. Mr. *Villiers.*] Still you do not know that Europeans do not go there, or that they have been deterred from going there by the imperfect mode of administering of justice to which you have referred?—No; the great difficulty staring you in the face is, that you cannot get the land.

6177. Then the Bombay Presidency labours under greater disadvantages than

J. Warden, Esq.

24 June 1858.

Madras or Bengal?—I should certainly say that, in Bombay, it is more difficult to obtain title to land than it is in Madras or Bengal.

6178. Do you know anything of these persons who have gone out there for the purpose of making experiments in the cultivation of cotton?—I do not know them personally; I should imagine that you may make some improvement in the sort of cotton grown in India; but you will never alter it so as to make it like the cotton that grows in other parts of the world; there seems to be a law of vegetation which prevents that; every man who superintends a kitchen garden in India knows that you must renew your English seed every year; and that if you do not renew it, everything deteriorates.

6179. Do you mean to say that a person could not, with advantage, improve the cultivation of cotton there?—He might improve, in some degree, the sort of cotton which India produces, and he might improve the mode of cleaning and packing it; but he could not improve the nature and kind of cotton so as to make it compete with American cotton or with the fine cotton I have seen. That is my opinion; I do not profess to know very much of these matters.

6180. You are not speaking from experiments which you yourself have made?—No; I am merely speaking from information which I have picked up, and from my own knowledge, that every foreign seed deteriorates when continued to be grown in the same soil. I would take the case of the commonest kind of seed, such as the seed of green peas; if you take them from England and plant them in a kitchen garden in India, you will the first year get the same kind of pea; but if you preserve the seed and sow it the next year, you will get an inferior kind of pea. Bombay is celebrated for its onions; I have taken onion seed to the Deccan and sown it there; the first year I have got the Bombay onion, but the next year the seed has produced only the Deccan onion.

6181. Have you ever known any experiments made for the purpose of preventing this deterioration by irrigation, or by other means?—No.

6182. Did you hear the evidence which was given here the other day by an engineer upon the subject of irrigation?—No; I did not.

6183. You think, then, that the cultivation of cotton in India is not likely to succeed, inasmuch as you think the plant must deteriorate?—I think that the cotton grown in the country will improve; but it will never be like the American cotton; I do not think that you will ever be able to alter the nature of the cotton, as some people suppose you will; I think it will gradually deteriorate into the cotton of the country.

6184. You have mentioned that the roads are in a very bad state?—Yes; they were at the time I have been speaking of.

6185. That was in 1851?—Yes.

6186. When you left the country, it would have been a hopeless thing for any capitalist to settle there, heaving no communication with the ports?—If he happened to be late with his cotton, and if the cotton had to travel during the monsoon, it would be impossible for him to get it down uninjured.

6187. Would he have to travel 300 or 400 miles?—If he came from the Hyderabad country to Bombay, he would have to travel 200 miles.

6188. There are now railways in the course of construction there, are there not, which would meet that difficulty?—Yes.

6189. I understand you to say that there is no disinclination among the civil servants in Bombay to encourage European settlers, so far as you have ever observed?—I do not think there is.

6190. Do you think that a man occupies as good a position if he comes to the Presidency, for the purpose of settling there, as he does if he is in the civil service?—No.

6191. His social position is inferior?—I think it is.

6192. What in your opinion is the ground of that distinction?—The people are almost all official in that country; and the civil part of them are all extremely well off and wealthy. I do not mean to say that if very wealthy people came there they would not hold a better position than the private Europeans one meets there now; but the best thing that ever was said of the civil service was said by Colonel Sykes before a Parliamentary Committee; that the civil service was a caste.

6193. Mr. *Campbell*] You mean an exclusive caste?—Yes.

6194. Mr. *Villiers.*] Do you think that in the courts of justice presided over by one of the Company's judges, in a question between one of the merchants and an officer in the civil service, any partiality would be shown?—Not the least. I think,

I think, as I said before, that the Company's judges do their best to administer justice impartially.

6195. Does that observation apply to the native judges; would they show the same respect for an uncovenanted person, as they would to one in the Company's service?—When we speak of an uncovenanted person now, we mean a person holding a small official situation; but supposing a European capitalist to be a a man of wealth who has acquired property in the country, he, of course, would gain a good deal of power there, and would stand on a footing equal to that of any civil or military servant or anybody else who came before the native court; I should be sorry to say anything against the natives, because, as a rule, I think they have done extremely well; but still they are too apt to think more of the sahib than anybody else. I recollect a remarkable case of that kind; a case of an attempt to murder, which was tried at Poonah: some of the Ramooses of the Deccan had waylaid an English contractor and his wife and children, and very nearly slew him, in fact, it was no fault of theirs that they did not; and when I passed sentence on one of these men at the close of the trial, the prisoner said, "I did not know he was a sahib, sir, or I should not have done it."

6196. A sahib means a gentleman?—Yes; he was a commissariat officer; he came into court and gave evidence against the prisoners.

6197. I suppose that a feeling pervades the naitves of all ranks, and under all circumstances, which makes them desirous of showing greater deference to the Company and their servants than to others?—There are so very few persons who are not in the Company's service, that it is difficult to answer that question.

6198. Do you believe that English people would be deterred from going there to settle if they had not the advantage of a covenanted service to govern the country?—I do not think they would care whether it was covenanted or uncovenanted, so long as it was efficient.

6199. You do not think it would deter English settlers from going there if the system were abolished of having a covenanted service, which is a privileged caste, to govern the country?—No, I think not.

6200. After your long experience, you come to the conclusion that it is not absolutely necessary to have the service covenanted?—I think it is not.

6201. You do not think that inefficient persons would be appointed to important offices, and that great jobs would be perpetrated?—I think that the Government of India always does its best to secure good and efficient instruments, and I think it would do the same then.

6202. Sir *Erskine Perry*.] Have they done so hitherto with regard to the uncovenanted service?—The rights or usages of the civil service interfere very much; for instance, there was the case of a young man, whom I originally knew as a domestic servant, who stood behind his master's chair (a relation of mine when I went to India); this young man rose to be appointed postmaster-general at Bombay, and his appointment was confirmed by Lord Dalhousie, subject to final confirmation in England, but the confirmation in England was refused; that was an example of a man's not having a covenant interfering with his advancement.

6203. That is a sort of notice, is it not, to everybody there not to expect or seek to deserve promotion?—He had promotion up to a certain point; he was deputy-postmaster, and Lord Dalhousie made him postmaster-general.

6204. What I understand you to say now is consistent with what you have said before, that you think barristers would make better judges than persons actually in the service who have not had that kind of practice which a professional man has in court?—Yes, I think that a barrister would be a better man to fill the office of judge than a covenanted servant who has not had the advantage of a legal education.

6205. In some respects, then, you would expect the Government to be more efficient if the covenanted system of service were done away with?—I think it would.

6206. Mr. *Mangles*.] In the case to which you referred just now, what did you understand the prisoner to mean by the term "sahib;" did you understand him to mean, that he did not know the person he attacked was a gentleman, or simply that he did not know that he was a European?—Something more than a European; otherwise, he would have called him a soldier most likely.

6207. It is said that the reason why Englishmen never suffered from Thugs, was, that the Thugs knew that the murder of an Englishmen was a crime that was never forgiven by the British Government?—I always understood that the

J. Warden, Esq.

24 June 1858.

reason given by the Thugs for not thugging Europeans was, that there would be such an immense fuss made about it, and that they sometimes carry pistols.

6208. Mr. *Campbell.*] Is not the ordinary designation of a European, who is not a sahib, "Gliora Logue"?—Yes; very often about military stations they call them soldier logues.

6209. Mr. *Mangles.*] You have spoken of Mr. Elphinstone's promise, that all rights should be treated with generosity; do you think that the word "generosity" is a word proper to be applied to a question whether men should bear their equal share of the public burthens?—I must first be convinced that the system of enam would be inconsistent with their bearing that share.

6210. With partial exceptions, bearing but upon few, and upon those slightly, is not the land revenue of India a great source of income in the country?—It is.

6211. Are you aware that Mr. Hart, or one of the Enam Commissioners, stated, that in the two districts of Belgaum and Dharwar more than half of the whole villages were held in enam, and that there were very large quantities in the remaining half, Government revenue villages?—I am not aware of those details; but, as I have already said, I do not think that the quantity that was alienated is a justification of the manner in which the Government proceeded to adjudicate on these titles.

6212. Suppose the whole of those districts had been alienated?—Then the Government should have acted before the efflux of time had created prescriptive titles under their own laws; I think it is very hard that the enamdars should suffer for the exigencies of the Government.

6213. Do you not think that, as primary consideration and as a general principle, the burthen of the country should be laid fairly and equitably upon all shoulders?—I think that, by creating a middle class of this kind you would create a class who, in other shapes, would bear the burthen; Sir John Malcolm, you will remember, had a plan by which he proposed a mode of taxing these people without interfering with their titles; that plan was very much canvassed, and I believe it was ultimately rejected by the Court of Directors.

6214. What do you suppose to be the whole revenue of Bombay; what proportion should you suppose is now alienated from the public exchequer and held by private individuals?—I think that Mr. Elphinstone estimated the alienations at a million of money; that was soon after we took the country.

6215. Have you ever inquired into that point since?—No, I think not.

6216. Is it not the case, that in Bengal and the North Western Provinces the class of landowners may be created or maintained without altogether exempting them from bearing any share of the public burthens?—But then, I think, it is for the Government to remedy that by taxing them in other shapes.

6217. If you were to tax the enamdars as jagheerdars, would not that be a mere quibble?—The exigencies of the Government would be a fair justification. We are all obliged to pay income tax, because at the time it was imposed Government was in a situation which obliged them to levy a tax upon the people.

6218. The land being almost the only source of the revenue, do you think it equitable or just that so large a proportion of the people should have an army maintained for their defence against Pindarees and marauders of all sorts, and should have courts of justice, police, roads, and bridges maintained for them, they themselves contributing nothing towards them?—I think that any mode of taxation is better than depriving them of what they consider their private property. I cannot suppose that the Government could not have devised some means of taxing them; an income tax would be one mode.

6219. Would it not be a mere evasion to say that a man should have his land rent free, and then make him pay a large property tax?—I think that the Government should have acted earlier.

6220. Are you aware that Bombay has not for many years borne its own proportion of the expenses, and that a considerable sum has been contributed by Bengal?—I am aware it is so.

6221. Do you think it equitable that the people of Bengal should be taxed for the purpose of paying the expenses of Bombay, where very large classes are allowed to go tax free?—I think that India should be treated as one kingdom, and that the distinction of Presidencies is merely imaginary.

6222. You think that the ryots of Bengal and the North Western Provinces should

should pay their share towards the expense of roads, police, and other advantages in which they participate, with other parts of India?—Yes; for instance when I travelled through the country I found there were no roads, and I said, "Why do you not make these roads, and insist on the villagers keeping them in order?"

6223. How do you suppose that Government could find funds to make roads, if these people were to remain untaxed?—I think that anything would be better than allowing such a lapse of time to pass, and then passing a law which they could not but see was a very rigorous one, when time alone had given them titles which could not be disturbed in courts of justice.

6224. You have spoken of these resumptions of the enams being a profit to the East India Company, and of their being in their own favour; do you not hold them to be trustees for the public, and are they not, as trustees of the community, bound to put the taxation fairly on all shoulders?—They are bound to do it fairly; and it is because I think that the system they have adopted is a most unfair one that I object to it.

6225. Was not the operation of the Enam Commission simply to ascertain whether these people were entitled to the rights they claimed?—But it was too late then; time had given them a title.

6226. Do you consider it fair to the rest of the community, because the Government has been engaged in wars, to allow a certain class to remain entirely tax free, when burdens are laid not only on their next door neighbours, but on the ryots of Bengal and the North-western Provinces to pay for them?—I would have taxed them, but not in this way.

6227. Would it not have been a mere evasion, and would they have liked it a bit better, if a heavy property tax had been levied upon them?—No; they gain certain advantages under our Government, and it might have been very fair to tax them for those advantages; take, as an example, the jurisdiction established by Mr. Elphinstone for the adjustment of pecuniary claims by native bankers against the Mahrattah chiefs; these sahoocars, or bankers, held the sudar's or chieftain's bonds, bearing an enormous rate of interest. Mr. Elphinstone, in founding this jurisdiction, said, when these bankers put their money to hazard, they knew that if the Peshwah were successful in the war for the prosecution of which the loan was granted, they would recover their money, but if the Peshwah were unsuccessful they would get nothing; when we came the bankers assumed a more favourable position in respect to the chiefs, for they found courts of justice in which they could sue on their bonds, and it would have been most unfair to the surdars to have made them pay the interest they had agreed to pay under a totally different state of circumstances; in the same way you may say to these enamdars, "We have given you railways and bridges, and roads, and these are advantages which you had not under the former Government, and therefore you must pay for them."

6228. You have quoted Sir Thomas Monro and Sir Charles Metcalfe as examples of great equity, and as being men of the old school, whose system of Government was most agreeable to the people?—I said that when I went to India the persons at the head of the different departments of Government were persons who could not but give the natives every confidence.

6229. But are you aware that both those gentlemen expressed themselves in very strong terms as to the justice and propriety of very largely resuming all these rent-free grants?—That was a matter of opinion with them; it might have been correct to do it, but it has been done too late; it is impossible to do it now without violating good faith; the time for doing it has gone by.

6230. Are you aware that Sir Thomas Monro said, that the reason why native princes were liberal in making grants was because they always held themselves justified and entitled to resume all the grants of their predecessors?—It might have furnished another good reason for imposing some tax upon them, that their tenure had become better under our Government than it was under the late Government. We might have made that a ground for taxing them, in the same way as we might say, "We have made roads and bridges, and given you a good administration, and you must pay for it." But I think that anything would have been better than depriving them of their property; that is the view I take of the matter.

6231. Are you aware that Sir Thomas Monro quoted the statement of the Nawab of the Carnatic with respect to rent-free tenures generally, and of royal aitumghas in particular (those being considered the most sacred grants) to the effect

J. Warden, Esq.

24 June 1848.

effect that he had resumed all the grants of his predecessors as a matter of course?—I have no knowledge of that.

6232. Are you aware that Sir Charles Metcalfe spoke very strongly as to the propriety and necessity of resuming the rent-free tenures, and stated that we could not afford to purchase a shortlived popularity by allowing the grants of our predecessors to remain unresumed?—I am not aware of that. As to Sir John Malcolm, there could not have been a more remarkable example of the way in which the natives valued him than an anecdote which is told in the second volume of his memoirs: when he went out to fight the battle of Mehidpoor, he being Commander-in-chief of the British army, Holkar, who was commanding the Mahratta army, told his troops whenever they saw Malcolm to cease firing, for that Malcolm's life should not be taken in the battle.

6233. You have spoken of the present principal enam commissioner as being a captain of Native Infantry; do you suppose that captains of Native Infantry are not often men of great ability and fitness for such offices?—I spoke of the enam commissioners comparatively with such persons as I thought ought to be entrusted with such important trials. What I said was quite consistent with the whole of the evidence I have given. I say that a gentleman who has not had a legal education is not competent to try titles to land.

6234. Was not Sir John Malcolm once a captain of infantry?—Yes; but I do not know that he was ever a judge.

6235. Did he not constantly dispose of questions of the greatest importance?—He may have done so; but if I had been a party, I would much rather have had them disposed of by Lord Campbell.

6236. Would it be possible to get a Lord Campbell to be an Enam Commissioner in India?—No.; but you might get men better adapted to fill the office than those who have been appointed; I think that barristers practising in the Supreme Court would make better judges.

6237. Will you mention the names of the persons to whom you referred when you spoke of young gentlemen being appointed Commissioners, and recommended that they should be remanded to their regiments?—I mean young officers who have been appointed Assistant Commissioners.

6238. Will you state if you please, the names and the standing of the officers to whom you allude?—I could not do so without reference to the book, and I would rather not mention their names, unless the Committee desire me to do so; I would say broadly, that any man who has not had a legal education, and who is not accustomed to weigh evidence, is not a competent person to fill such an office; I spoke of them as compared with the judges of the Supreme Court.

6239. You know Mr. Hart?—Yes; Mr. Hart is a very able man; he does me the honour to say, that I was the person who pushed him on in the service, and I have the highest respect for him; but still I think that such an appointment would have been much better in the hands of graver and older men, more accustomed to weigh evidence, considering that the matters they have to determine are so important to the interests of the people.

6240. Will you state, without naming them, the standing of the officers to whom you specially alluded, and their regiments, when you spoke of them as young gentlemen?—Mr. Hart was a very young man; he was my own assistant at Poonah when first appointed to adjudicate on enams.

6241. What is his standing at present?—Mr. Hart is at this time of three or four and twenty years' standing; he is a very able man, and I was very sorry to lose him; the Committee will remember that I spoke of these gentlemen comtively; I said they were not the sort of persons to whom so important an office should have been entrusted. I have nothing whatever to say against them personally, and that I have endeavoured throughout my evidence to impress upon the Committee.

6242. Is not Captain Cooper a man of competent age?—I should say he is under thirty: but as I said before, I would rather not mention names.

6243. You have spoken of the rebellion having first broken out in the South Mahratta country, and you say you attribute it to these enam inquiries; to what rebellion do you refer?—I speak of the dissatisfaction that has from time to time shown itself in the South Mahratta country during the last twelve-months.

6244. You spoke of a rebellion; to what rebellion do you refer?—I consider the whole thing a rebellion; I am perfectly aware of the state of mind of the natives

natives in the Bombay Presidency, and I ascribe it principally to these inquiries, the effect of which has been to shake their titles to their property, and to make them mentally fraternise with everything that has been going on against the Government.

6245. What overt acts do you allude to when you use the word "rebellion?"—I am speaking of the disaffection that has shown itself in the South Mahratta country during the last eighteen months.

6246. Are you aware that the only open rebellion that broke out was in a territory that did not belong to the British Government at all?—Were there no symptoms of rebellion at Sattara or at Kolapoor?

6247. Do you feel confident that the natives, our predecessors, allowed female succession to enams, and the adoption of heirs to enams, without question as a matter of right?—I think they did.

6248. You have spoken of the hardship of the *onus probandi* being thrown on the defendant; do you think it a great hardship where a man makes so large a claim as exemption from taxation, that he should be required to prove his right to such exemption?—I think, that to require him to prove possession for a hundred years is extremely hard; I would make him prove all that people are obliged to prove in the courts, a 30 years' possession.

6249. You say, you think it would be very desirable that there should be a second examination of civilians after five years of service?—Yes; I think it is extremely difficult for a man to acquire a sufficient knowledge of the language in a short time; he might have sufficient knowledge to enable him to do certain things, which would facilitate his acquiring the language, in the first instance to put him to perform ordinary duties with that object in view.

6250. Are you aware, that in all the Presidencies there are two successive examinations after young men have entered the service?—Yes; since I left there has been an improvement in that respect; but we have so many languages on the Bombay side that it would be impossible for any individual to be competent to sit in all the courts of the Presidency.

6251. You have spoken of Mr. Dickenson, an able barrister in the Supreme Court, being so conversant with Hindostanee that he was able to conduct a cause in that language?—Yes; he concluded his speech in Hindostanee; and Mr. Dickenson had, what civilians have not, a legal education, and he knew the practice of the Supreme Court.
